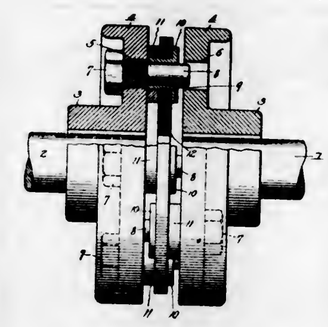
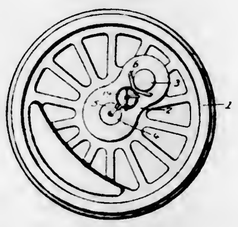
3. In a cast steel spoked wheel, a series of spokes extending from the hub in a plane and merged into the crown of arched members connected to the rim; with a continuation of the radial spoked members extending through and also connected to the rim.

1,387,530. MACHINE FOR SETTING SNAP-FASTENERS ON GARMENTS. ISADOR WOLFELD and ADOLPH KOHL, Cleveland, Ohio. Filed May 28, 1920. Serial No. 384,819. 2 Claims. (Cl. 1—3.)

1. The combination of a clenching die, a swinging arm, a pair of staple guides carried by said arm at opposite sides thereof, a plunger carried by the arm and swinging therewith toward and from the die, and adapted to force staples from said guides through the work and against the die, means carried by the arm to feed staples to each of said guides, and means carried by the arm to advance the plunger with respect to the arm.



1,387,531. CORE-BOX. SMITH B. DE VED and GEORGE C. DE VED, Baltimore, Md. Filed Mar. 17, 1921. Serial No. 453,096. 11 Claims. (Cl. 22—13.)

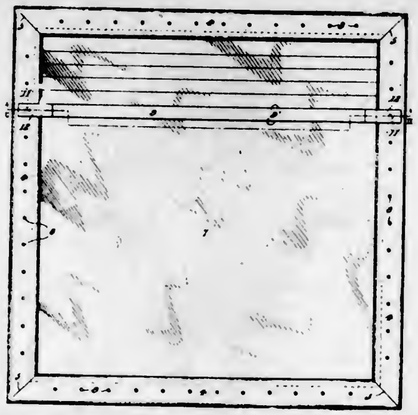


7. A core box having movable side members registering concavities in said members forming a core pocket, legs extending into the pocket, the legs being spaced apart; a rod extending diametrically across the pocket in contact with the extremity of each of said legs and a removable number plate between the legs and opposite the rod.

1,387,532. FLEXIBLE COUPLING. IRVEN H. DEXTER, Pearl River, N. Y., assignor to I. H. Dexter Co., Inc., New York, N. Y., a Corporation of New York. Filed July 8, 1919. Serial No. 309,364. 2 Claims. (Cl. 64—96.)

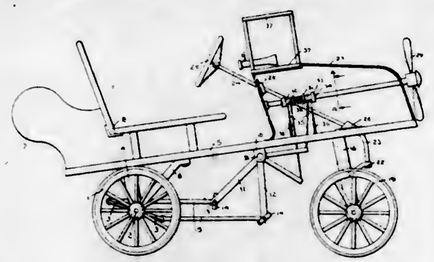
1. In a flexible coupling, driving and driven coupling members, pins or studs mounted on said coupling members and projecting axially of said coupling members, the pins or studs on one coupling member being arranged alternately with respect to the pins or studs on the other of said coupling members, a flexible disk arranged between said coupling members, and bushings slidable axially on said pins or studs, said bushings being secured to said disk.

1,387,533. DEVICE FOR QUARTERING DRIVING-WHEELS OF LOCOMOTIVES. HENRY EISELE, Decatur, Ill. Filed Feb. 28, 1919. Serial No. 279,810. Renewed May 9, 1921. Serial No. 467,932. 7 Claims. (Cl. 33—181.)



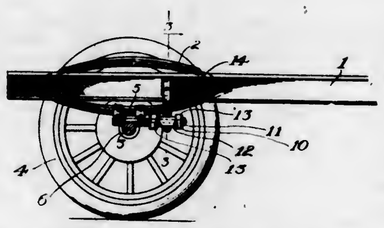
1. A device of the character described, including, in combination, an extensible bar having a fork at one end adapted to engage a pin and having a knob at the other end adapted to fit in a hole, a dial secured to said bar intermediate said fork and knob and having indications thereon, and a weighted pointer pivotally mounted on said dial and adapted to register with the indications thereon.

1,387,534. BLACKBOARD OR SLATE. ALLAN B. ELLIS, Appleton, Wis. Filed July 30, 1920. Serial No. 400,161. 1 Claim. (Cl. 35—10.)



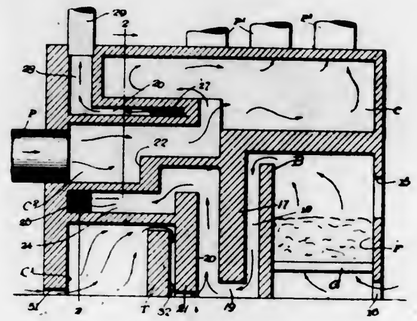
The combination with a blackboard having a rectangular frame and equi-distantly spaced openings extending through the frame midway the edges at each side thereof, of a ruler having the opposite ends thereof cut away upon the lower face to provide inner side shoulders substantially frictionally engaging the inner edges of the opposite sides of the blackboard frame, the upper walls of the cut away portions overlying the upper sides of the frame, and a pin depending from the end of the ruler into the cut away portion selectively received in transversely alined openings, the ruler being of a width

equal to half the distance between two adjacent openings whereby two parallel lines may be drawn at each mount-



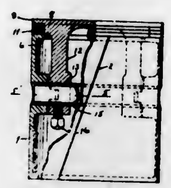
ing of the ruler with all of the lines equi-distantly spaced.

1,387,535. TOY VEHICLE. EDWIN H. L. ENGLUND, Muskegon, Mich. Filed July 12, 1920. Serial No. 395,800. 3 Claims. (Cl. 208—42.)



1. A toy vehicle including a body, supporting wheels, a crank axle revoluble with the rear supporting wheels, bell cranks mounted for oscillation, means for transmitting motion therefrom to the crank axle, operating pedals connected to the bell cranks, a propeller, a shaft therefor, and means operated alternately by the bell cranks for spinning the propeller and its shaft.

1,387,536. SHOCK-ABSORBER. CHARLES A. GLASS, Chicago, Ill. Filed July 17, 1920. Serial No. 396,922. 2 Claims. (Cl. 267—36.)

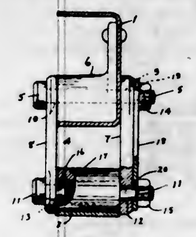


1. In a shock absorber, the combination with a vehicle frame, and the axle, of a support secured to the axle at the inner side of the frame and projecting horizontally from the axle longitudinally of the frame, a roller mounted on the projecting portion of the support, and a leaf spring rigidly secured at its upper end to the vehicle frame and having its lower portion free and curved away from the vertical plane in which the upper end is secured to the frame, said free portion extending past and bearing constantly against the roller.

1,387,537. FURNACE. MICHAEL JOSEPH GRANEY, Pittsburgh, Pa. Filed Oct. 7, 1920. Serial No. 415,433. 6 Claims. (Cl. 126—90.)

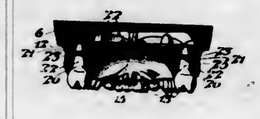
1. A furnace comprising, a fire box, a hot air chamber above the fire box and contiguous thereto, an air heating chamber communicating with the hot air chamber, and passages formed in the furnace to direct the burning gases against the bottom wall of the hot air chamber and completely around the air heating chamber.

1,387,538. ENGINE-PISTON. EDWARD J. GULICK, Elkhart, Ind. Filed June 30, 1919. Serial No. 307,527. 7 Claims. (Cl. 74—108.)



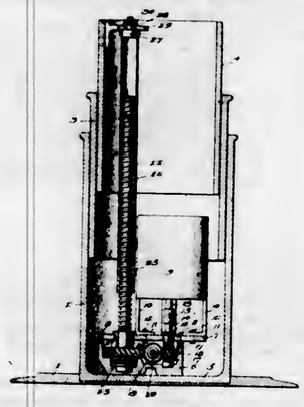
1. A piston comprising a tubular body section provided with oppositely disposed wrist pin apertures; a separate piece piston head provided with a pair of oppositely disposed transversely apertured depending members, the apertures whereof are disposed axially of said wrist pin apertures; a complementary tongue and groove connection between said depending members and the piston body; and a wrist pin arranged within said wrist pin apertures and the apertures of said piston depending members.

1,387,539. ANTIRATTLER. EDWARD J. GULICK, Elkhart, Ind. Filed Aug. 30, 1919. Serial No. 320,790. 3 Claims. (Cl. 267—54.)



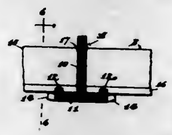
1. The combination with a vehicle spring and a spring shackle having a plurality of links and bolts and carried by the frame of a vehicle, of an antirattling device com-

prising a bent metal spring member arranged longitudinally of and adjacent one shackle link and supported by



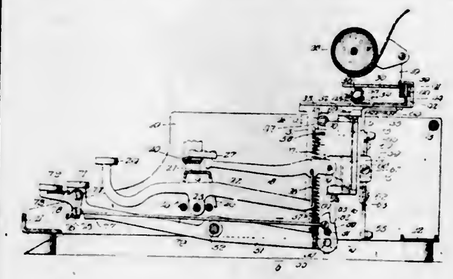
and connecting the shackle bolts; and means for compressing and flattening said spring member against the face of the shackle link.

1,387,540. TECHNICAL ANATOMICAL DENTAL MODEL. FRANK G. HAWKSWORTH, Westmont, N. J., and JOHN HENRIK EKLOF, Lansdowne, Pa., assignors to The S. S. White Dental Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1918. Serial No. 263,553. 2 Claims. (Cl. 35—16.)



1. A device of the class described, comprising a denture having tooth receiving apertures extended therethrough, teeth loosely fitted in said apertures with their root ends projecting through the inner face of said denture, and yielding material on said inner face engaging said teeth in said apertures for permitting their relative gyration.

1,387,541. DENTAL-CHAIR JACK. DONALD C. HAYDEN, Bridgeport, Conn. Filed Aug. 19, 1920. Serial No. 404,702. 4 Claims. (Cl. 155—93.)

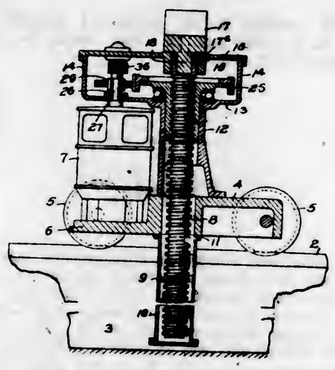


3. In an electrically operated jack for chairs, a telescopic pedestal, a gear case in the lower pedestal section, a threaded shaft journaled at its lower end in the gear case, a tubular member carried by the upper pedestal section and threadedly engaged over the shaft, a gear on the lower end of the shaft, a motor, means to removably support the motor from the gear case, a driving connection in the gear case engaged with the shaft gear and including a part extending out from the gear case, and a detachable coupling between the motor and said last named part.

1,387,542. METAL SASH. PATRICK J. HEALEY, Jersey City, N. J. Filed Apr. 15, 1920. Serial No. 374,183. 3 Claims. (Cl. 189—36.)

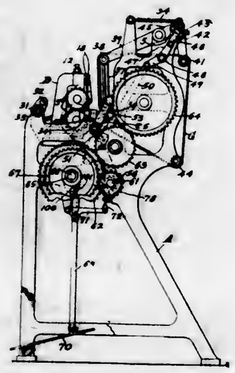
1. A metal sash comprising crossing bars, each formed with a web and a flange, one of said bars having ribs lying along the edges thereof and with a slot lying wholly within the web of said bar and adapted to receive the other cross bar therethrough, the ribs of said bar adjacent said slot notched and bent outward to form tongues lying in the general plane of the flange, the second cross bar provided with a notch in the free edge of its web and adapted to engage the web at the lower extremity of the slot of the first mentioned bar, and the flange of the second mentioned bar adapted to seat within the notches formed by the tongues of the first mentioned bar.

1,387,543. TYPEWRITING-MACHINE. HUBERT K. HENRY, Detroit, Mich., assignor, by mesne assignments, to Rex Typewriter Company Incorporated, Fond du Lac, Wis., a Corporation of Virginia. Filed Jan. 18, 1918. Serial No. 212,444. 18 Claims. (Cl. 197—72.)



1. In a front-strike typewriting machine, the combination with a main frame, of a vertically shifting frame comprising uprights having rearwardly projecting arms at their outer ends, a carriage bed mounted on said arms, a platen carriage on said bed, a key actuated rocking frame mounted in said main frame and connected at its rear end to the lower ends of said uprights, guiding means on said main frame engaging said uprights for holding said shifting frame against movement in fore-and-aft direction, and depending adjustable guide shoes on said shifting frame and engaging said main frame to take up lateral play in transverse direction, substantially as described.

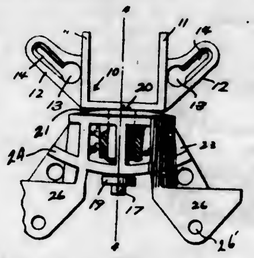
1,387,544. DROP-PIT JACK. ROBERT L. HIBBARD, Pittsburgh, Pa. Filed Oct. 4, 1919. Serial No. 328,372. 6 Claims. (Cl. 254—7.)



1. In a drop-pit jack, in combination, a truck frame comprising a base and a standard provided with a vertical opening, said standard being provided with an enlarged

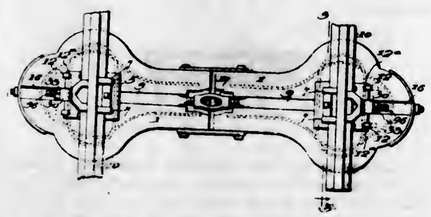
overhanging chambered head, a nut rotatably mounted in said chamber and journaled in said standard form a closure therefor, a lifting screw engaged by said nut, an electric motor mounted on the base at one side of the standard and having its armature shaft projecting up

through the bottom of the overhanging head and into the chamber therein, a pinion on the motor shaft, a pair of vertical stub shafts mounted in said chamber and geared together, one thereof being geared to the motor pinion and the other being geared to the nut.



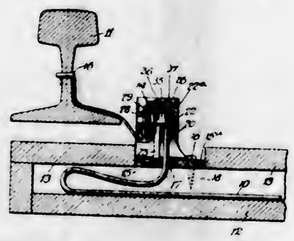
1,387,545. TOBACCO STEM ROLLING AND LEAF BOOKING MACHINE. GRAHAM H. JACKSON, Newark, N. J., assignor to Universal Tobacco Machine Company, a Corporation of New York. Filed Mar. 25, 1919. Serial No. 284,964. 27 Claims. (Cl. 131—58.)

1. The combination with stem crushing rolls between which the tobacco leaf is fed, of a booking drum, a booking belt coacting with the drum and of such width as to properly support the whole leaf, said belt being arranged at one side of the crushing rolls with no part of the belt touching the rolls, and a belt roll closely adjacent to the delivery side of said stem crushing rolls and around which said booking belt passes to receive the leaf from the crushing rolls.



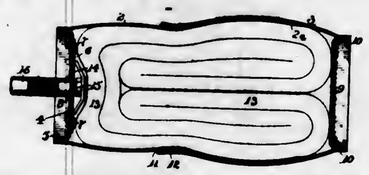
1,387,546. SLED. CHARLES J. JOHNSON, Elk River, Minn. Filed Feb. 1, 1919. Serial No. 274,426. 1 Claim. (Cl. 280—27.)

In a sled, runners, a bunk connecting said runners, a box shaped to fit and receive each end of the bunk and provided on its outer face at opposite ends with upwardly and outwardly inclined ears, each having an aperture with



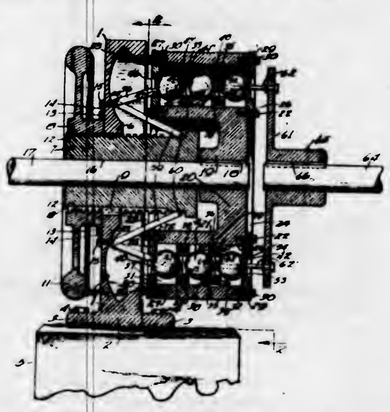
a slot extending longitudinally toward the free ends of the ears to form chain locking means.

1,387,547. CONCRETE RAILWAY-TIE. WILLIAM J. LANKFORD and WALTER H. CHAPPELL, Chanute, Kans. Original application filed Oct. 30, 1920, Serial No. 420,605. Divided and this application filed Mar. 14, 1921. Serial No. 451,967. 6 Claims. (Cl. 238—30.)



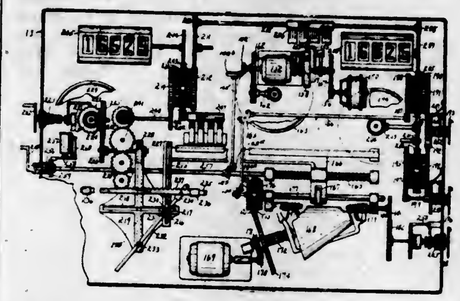
2. In a railway tie structure, two body sections, means for holding said sections in endwise relation, other means embedded in each tie section for engaging the inner flanges of the rails, further means for engaging the outer flanges of the rails, the said further means comprising a cross bar having its opposite ends extended under the opposite rail members and clamps adjustably mounted on said opposite ends of the cross bar, the said clamps having portions for engaging and forcing the rails against the inner rail flange clamping means.

1,387,548. ELECTRICAL CONNECTOR DEVICE. HAROLD K. LOWRY, Chicago, Ill. Filed Oct. 3, 1918. Serial No. 256,676. 6 Claims. (Cl. 173—262.)



1. An electrical connector device of the character described comprising a metallic base adapted to rest upon a trunking conduit adjacent to a track rail, said base having an opening therethrough for a wire leading out of said conduit, a pair of oppositely disposed protective sides integral with the base and extending upward therefrom, a top integral with the sides, said base, sides and top forming an arch defining an interior open space for wires, and means including a plurality of holes and wedging pins therefor in said arch for securing to the device and in electrical communication with each other a wire extending through said opening in the base and a second wire adapted to lead from the device to the track rail.

1,387,549. PROTECTIVE STORAGE-CASING FOR INNER TUBES. JOHN F. LUNGREN, Philadelphia, Pa., assignor of one-half to Samuel P. Kentworthy, Philadelphia, Pa. Filed Mar. 6, 1920. Serial No. 363,663. 4 Claims. (Cl. 206—46.)

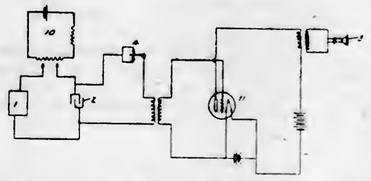


1. An extensible storage casing for inner tubes of automobile tires, comprising two telescoping portions respectively closed at one end and open at the other and providing soft pliable side walls extending from the closed end to the open end and telescopically arranged and expansible into frictional engagement, and in which the closed end of one of said portions is provided with a central aperture, the casing being adapted to receive a folded inner tube with the valve extending through the aperture and upon partial inflation expands the flexible walls of the telescoping portions into tight engagement.

1,387,550. FRICTION TRANSMISSION MECHANISM. HENRY MCDERMOTT, Electra, Tex. Filed MAR. 28, 1921. Serial No. 456,066. 3 Claims. (Cl. 74—26.)

1. In a friction transmission mechanism, a drive shaft, means for supporting the drive shaft for rotation, a drive disk rigidly mounted on the drive shaft, said drive disk being formed with a laterally extending rim, means carried by the rim to provide an inner ball race member fixed to said rim, a freely movable outer ball race member, balls arranged in separated parallel series between said race members, means for preventing the revolution of the balls in one series about the axis of the drive shaft while permitting free rotation thereof about their respective axes, a shaft to be driven, a disk rigidly mounted thereon, and means rigidly connected with the axis of the series of balls remote from the first named series of balls for rotating the last named disk.

1,387,551. RANGE-PREDICTING APPARATUS. ELEMER MEITNER, Brooklyn, N. Y., assignor, by mesne assignments, to Ford Instrument Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 4, 1915. Serial No. 25,695. 13 Claims. (Cl. 235—61.)

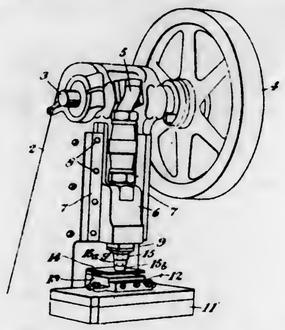


1. The method of determining the rate of change of the range, which consists in mechanically recording as a single vector the relative course and speed of the target and resolving such a vector in the direction of the instantaneous target bearing as indicated on the chart as a single vector.

3. In a range indicator, the combination with means whereby the relative velocity and bearings of the target may be determined, of means for mechanically obtaining therefrom the rate of change of range comprising a cam slot adapted to be set to the angle between the relative course and the target bearings, a slide adapted to be set to a position indicating the relative speed of the target, a pivoted lever having a pin engaging said cam slot and pivoted to said slide and a slide at an angle to said other slide connected with said lever, and means whereby the position of said last mentioned slide may be observed.

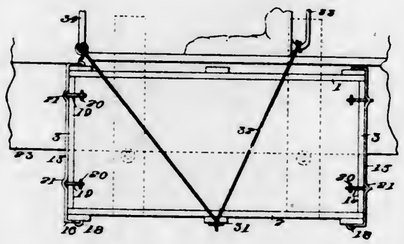
6. In variable range apparatus, consisting in the combination of means for initially setting the apparatus to the present range, of a repeating device adapted to be actuated from a rate of change indicator, a continuously actuated member, means for compounding the movements of said setting means, said member and said repeating device, whereby the variable range is automatically indicated.

7. In optical indicating apparatus, a differential gear train including three arms, an indicator proper, driven by one arm of said train, automatic means for driving a second arm, a normally operative lock for the third arm, a normally inoperative manual setting means adapted to drive on actuation said third arm, and means whereby said lock is rendered inoperative on actuating said setting means.



1,387,552. METHOD AND APPARATUS FOR DETECTING OR MEASURING SMALL ELECTROMOTIVE FORCES. ERNEST MERRITT, Ithaca, N. Y. Filed Sept. 6, 1919. Serial No. 322,228. 6 Claims. (Cl. 175—183.)

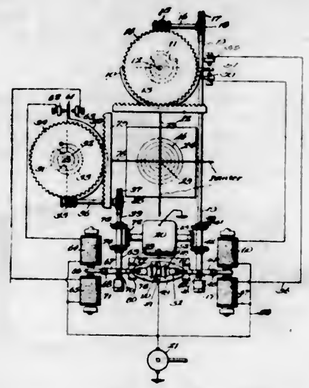
1. The method of measuring a small electromotive force which consists in connecting the source of the electromotive force to a condenser through a potentiometer, periodically short circuiting the condenser through a cur-



rent detecting means, and adjusting the potentiometer until no current is detected in the detecting means, substantially as described.

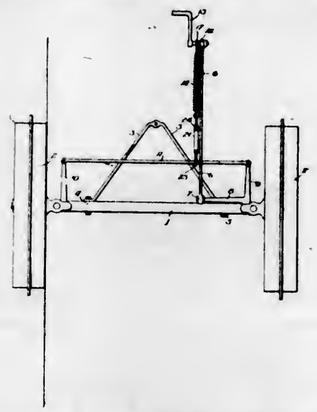
1,387,553. PROTECTIVE GUARD FOR THE TOOLS OF CUTTING AND PUNCHING MACHINES, &c. ISIDORE LEO MILLER, New York, N. Y., assignor of one-fourth to Herman Miller, one-fourth to Norman Miller, and one-fourth to Nathan Miller, New York, N. Y. Filed Feb. 28, 1920. Serial No. 361,990. 7 Claims. (Cl. 74—105.)

1. In a machine of the class described, the combination with a tool-holder and tool and with a plate adapted for the passage of the tool therethrough, of a sheath inclosing said tool from the tool-holder to the plate.



1,387,554. CRATE. MORRIS RALPH MOFFITT, Peck, Kans. Filed Nov. 28, 1919. Serial No. 341,116. 2 Claims. (Cl. 217—36.)

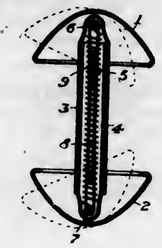
1. A crate comprising side and end walls and a top and bottom wall, the end walls having inwardly extending flanges at their bottoms for engaging beneath the ends of the bottom wall, and having stops for engagement by the top wall, and the side walls having stops for engagement by the end walls to limit their inward movement, a common means for clamping the sides and the ends in place and for clamping the top to the ends, said means comprising rods extending transversely of the ends and having angular portions engaging over the sides, the angular portions having depending lugs, and the sides having staples for engagement by the lugs, and angle bars pivoted at one end to the top and extending at the other between the rods and the ends, said rods having outwardly bent portions for receiving the angle bars.



1,387,555. AEROPLANE SPEED-INDICATOR. ARTHUR F. POOLE, Kenilworth, Ill. Filed July 8, 1918. Serial No. 243,996. 6 Claims. (Cl. 175—183.)

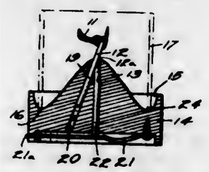
1. In a speed indicating apparatus, the combination of a movably mounted element adapted to be displaced from its normal position by motion through the earth's magnetic field, and automatic means to hold said element in

an approximately constant angular position with respect to the earth's magnetic field.



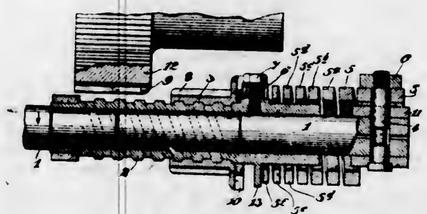
1,387,556. DEVICE FOR GUIDING TRACTORS. ELTON ELMER PYLE, Morris, Ill. Filed Mar. 27, 1920. Serial No. 369,408. 2 Claims. (Cl. 280—87.)

1. In combination with a steering apparatus of a tractor comprising a shiftable steering arm, steering knuckles, a tie rod connecting the steering knuckles, a steering rod operatively connecting the steering arm and a steering knuckle, a device for guiding the tractor to maintain the ground wheels at one side thereof in constant contact with the furrow comprising a tension member having one end secured to the steering arm and the other end secured to the tie rod in said steering apparatus.



1,387,557. CUFF-LINK. VICTOR B. ROGERS, New York, N. Y. Filed Jan. 25, 1919. Serial No. 273,011. 3 Claims. (Cl. 24—102.)

1. In a cuff link, heads and an intermediate expansible shank, such shank comprising telescoping members, and a spring within said shanks extending substantially from end to end thereof to hold the telescopic sections in the telescope position, said heads being in the form of relatively deep domes or cups with the rims of the cups arranged as clamping surfaces for the cuff, the respective telescoping sections being secured at the deepest point of the dome or cup, and the depth of the cup at said point being such that the distance of separation of the cuff clamping surfaces when the telescoping sections are

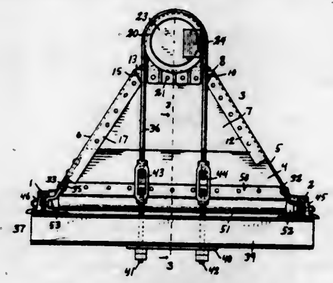


in the expanded position is much more than twice the separation of said clamping surfaces when the telescoping sections are in the normal contracted position.

1,387,558. SPRUE-FORMER. ELLING I. ROSHEIM, Roland, Iowa. Filed Apr. 11, 1921. Serial No. 460,403. 4 Claims. (Cl. 22—97.)

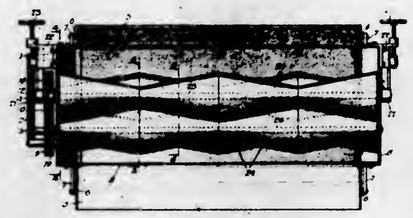
1. A sprue former having a central upper dome-shaped member with a channel surrounding said dome-shaped member, said dome-shaped member having an opening inclined from its upward central portion downwardly and away therefrom, and means for engaging a pin in any position of the longitudinal adjustment of said pin in said opening.

1,387,559. STARTER. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Dec. 20, 1920. Serial No. 431,852. 9 Claims. (Cl. 74—7.)



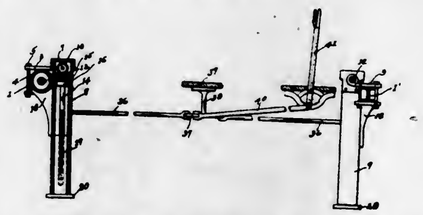
1. A starting device comprising a driving element, a rotatable element driven thereby, a power receiving and transmitting device mounted to travel longitudinally on said rotatable element, and a yielding driving connection between said elements, comprising a spring having a stiff portion and a more flexible portion for the purpose described.

1,387,560. PROCESS OF PREPARING WHOLE RICE. AIMÉE MOUILLAND SAINT, Kaplan, La. Filed May 26, 1921. Serial No. 472,869. 1 Claim. (Cl. 99—10.)



The herein described process of preparing a cereal food which consists in washing whole uncoated rice, placing the same, while wet, in a pan where it is heated, thereby to bake and dry the rice, then cooling the rice, and finally reducing the rice to a granular form.

1,387,561. BUMPING-POST. JOHN M. SCOTT, St. Petersburg, Fla. Filed Feb. 7, 1921. Serial No. 442,962. 6 Claims. (Cl. 104—254.)

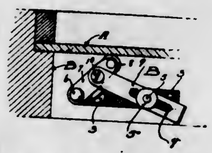


1. The combination in a bumping post of a standard, a spring box provided with a plunger and resilient or yieldable backing means, splicing members for securing the standard to rails, and a tie rod and an anchor for securing the front end of the bumping post to the rails.

1,387,562. NUT-BLANCHING MACHINE. HARRY E. SPIKER, Chicago, Ill., assignor, by direct and mesne assignments, of one-half to John W. Chapman and one-half to William H. Brown, Chicago, Ill. Filed Mar. 12, 1921. Serial No. 451,906. 3 Claims. (Cl. 146—14.)

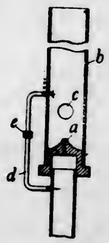
1. In a nut blanching machine, a pair of oppositely disposed coacting resilient cones, between which the nuts are fed for the purpose of removing skins therefrom.

1,387,563. AUTOMOBILE-JACK. VINCENT STAWICKI, Milwaukee, Wis. Filed Mar. 25, 1921. Serial No. 455,534. 7 Claims. (Cl. 254—86.)



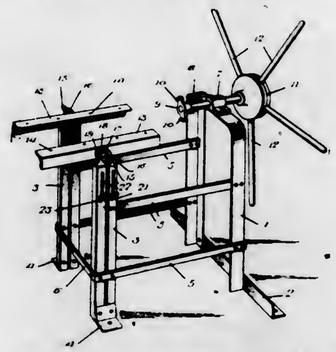
1. A motor vehicle, a plurality of jacks permanently attached to said vehicle, means for moving said jacks into and out of operative position, and means for applying the power of the motor of said vehicle to operate the jacks.

1,387,564. WINDOW-CLAMP. HERMAN W. STRUEBING, Milwaukee, Wis. Filed Oct. 28, 1920. Serial No. 420,144. 1 Claim. (Cl. 292—239.)



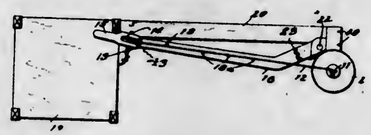
A clamp adapted to be fastened to a window comprising a narrow strap bracket, having an intermediate perforated loop, an arm in pivotal union with one end of the

bracket having a gripping roller at its free end, a slotted strap having one end in pivotal union with the arm, a clamping bolt extending through the apertured bracket loop and arm slot, the strap bracket, arm and strap being



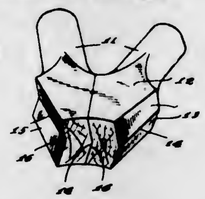
of the same general width, whereby when they are folded to inactive position, they come in nested alinement, the roller carrying end of the arm being in juxtaposition to the bracket loop and the strap overhanging the same to form a casing for the parts thereunder.

1,387,565. INJECTOR FOR GAS-BURNERS. FRANKLIN THORP and HARVEY THOMAS THORP, Whitefield, near Manchester, England. Filed Jan. 20, 1921. Serial No. 438,767. 1 Claim. (Cl. 158—118.)



In gas burners, the combination with a gas orifice or orifices permitting of the inflow to the burner of a definite quantity of gas in a given time and exerting an injective action to draw air into the burner at a fixed uniform rate, of a supplementary gas inlet to the burner, the gas from which exerts no injective action on the air inlet or inlets to the burner so that the rate of air inflow is not materially varied by the supplementary gas supply, as set forth.

1,387,566. ENGINE-OVERHAULING STAND. WILLIAM R. VAN TRUMP, Philadelphia, Pa. Filed Jan. 27, 1920. Serial No. 354,336. 6 Claims. (Cl. 29—89.)



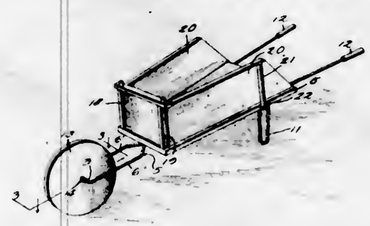
1. An engine overhauling stand comprising a frame, engine-supporting means within the frame, bearings carried by the frame and supporting said means for tilting movement about a transverse axis, a longitudinal shaft having means to move into engagement with the engine crank shaft and having means for manually turning same, and a bearing supporting said shaft for rotary and sliding movement from the frame, some of said bearings being vertically adjustable on the frame to adjust said means and shaft vertically relatively to one another.

1,387,567. STRINGED INSTRUMENT. WILLIAM ALONZO VINSON, Baltimore, Md. Filed Dec. 27, 1919. Serial No. 347,783. 7 Claims. (Cl. 84—296.)

1. An instrument comprising a sound box having one wall thereof formed by a flexible diaphragm and having an opening at the opposite wall, an amplifying horn detachably connected with the sound box at the opening and a cord connected with the diaphragm at the center thereof for vibrating said diaphragm when the cord is struck or plucked, a support for the sound box and amplifier, and a neck pivoted to the support and having a key at the end remote from the sound box upon which the end of the string is wound, said neck being pivoted to swing laterally parallel with the plane of the diaphragm, the pivotal connection being lateral to the line of the string to vary the tension of the string when the neck is swung, said neck being also pivoted to swing at right angles to the plane of the diaphragm, the neck having a series of openings spaced longitudinally thereof and a peg adapted to engage one of the openings and the string for the purpose specified.

1,387,568. WOOD WHEEL. CHARLES NAHUM WATERHOUSE, Muncie, Ind. Filed Apr. 25, 1921. Serial No. 464,376. 1 Claim. (Cl. 301—85.)

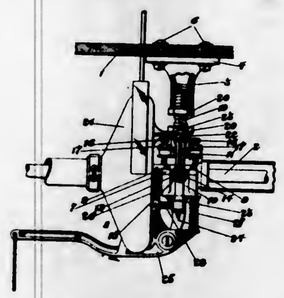
As an article of manufacture, a wheel comprising felly and spokes united at their inner wedge ends into an arch, the radial faces of said wedge ends being coöperatively mated by divergent surfaces serving to determine axial position of the inner ends of the spokes when the same are mated into a circular arch, the said divergent surfaces being at such angle to each other that the wedge ends will slip upon each other axially to proper position.



1,387,569. COMPOSITION. ELWYN M. WATT, Summerton, S. C. Filed Feb. 26, 1919. Serial No. 279,468. 2 Claims. (Cl. 167—10.)

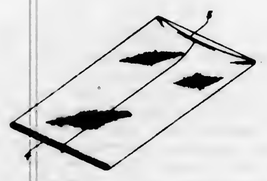
2. A composition for the purposes described consisting of linseed oil, sulfur, spirits of camphor and spirits of turpentine the oil constituting more than 50% of the mixture.

1,387,570. TOY WHEELBARROW. CHARLES L. WECHT, Logansport, Ind. Filed Jan. 3, 1920. Serial No. 349,336. 1 Claim. (Cl. 280—52.)



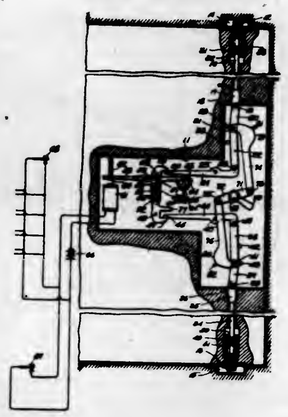
A wheelbarrow including a frame formed of a single metal rod bent intermediate its ends to provide an axle

and two side bars, the side-bars extending rearwardly from the axle in parallel relationship to each other for a short distance, then crossing and diverging to the extremities of the rods, the diverging portions of the side-



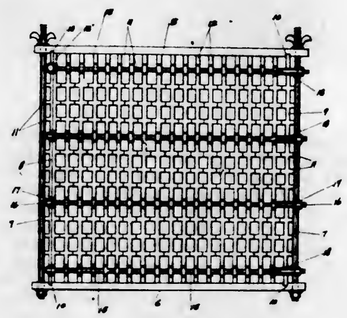
bars being bent downwardly to form parallel U-shaped members, a wheel mounted on said axle, a body mounted on the frame, and fastening means securing the crossed portions and the diverging portions of the side-bars to said body.

1,387,571. SHAFT-HANGER. BENJAMIN WEINBERGER, St. Louis, Mo., assignor to Marx & Haas Clothing Co., St. Louis, Mo., a Corporation. Filed June 14, 1920. Serial No. 388,730. 3 Claims. (Cl. 64—14.)



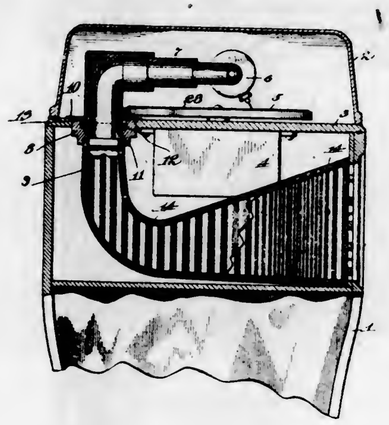
1. A device of the character described, comprising a support, clamping elements carried by said support, a hanger movable to different lateral adjustments on said clamping elements, a bracket, a member having right and left hand threaded connection with said hanger and with said bracket for adjusting said bracket in different adjusted positions relative to said hanger, a journal bearing pivotally supported by said bracket, and a shaft journaled in said bearing.

1,387,572. SWATCH. BENJAMIN WEINBERGER, St. Louis, Mo., assignor to Marx & Haas Clothing Co., St. Louis, Mo., a Corporation. Filed Oct. 18, 1920. Serial No. 417,676. 3 Claims. (Cl. 211—34.)



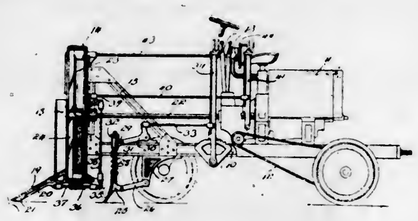
1. A swatch, comprising a section of cloth folded upon itself and having the side edges of the folded cloth folded inwardly; a line of stitching uniting the four layers of cloth provided by said folding, and a connection uniting the folded ends of the side edge portions.

1,387,573. LOCK-CONTROL FOR EMERGENCY EXIT-DOORS. JOSEPH F. WILSON, Lawrence, Mass. Filed Aug. 13, 1917. Serial No. 186,072. 14 Claims. (Cl. 292—85.)



1. A door, a bolt mounted on said door, a toggle linkage connected at one end to said bolt, a guide retaining said linkage extended substantially in the line of movement of the bolt, a movable abutment for the other end of said linkage, a latch for holding said abutment fixed in a position whereby said bolt is projected, means for releasing said latch, and other means for displacing the knuckle of said linkage and thereby permitting retraction of the bolt.

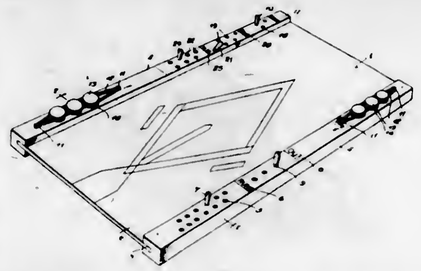
1,387,574. CANDY-MOLD. PETER WITTY, Evanston, Ill. Filed June 28, 1920. Serial No. 392,360. 3 Claims. (Cl. 107—19.)



1. A mold comprising a plurality of bars assembled together in substantially parallel relation, each bar having fins on opposite sides thereof registering and coöperating with those on adjacent bars to constitute mold spaces; means for detachably securing said bars together, and a frame surrounding said bars and detachably holding same in position, substantially as described.

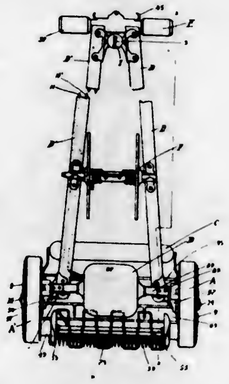
1,387,575. TALKING-MACHINE. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Sept. 1, 1915. Serial No. 48,492. 5 Claims. (Cl. 274—23.)

1. A sound conveying device for talking machines, defined by walls comprising a plurality of sections secured together side by side, each section consisting of a plurality of narrow strips, the strips of adjoining sections being arranged at different angles.



1,387,576. SNOWPLOW. LEWIS A. WORTH, Merton, Wis. Filed Dec. 3, 1919. Serial No. 342,065. 2 Claims. (Cl. 37—63.)

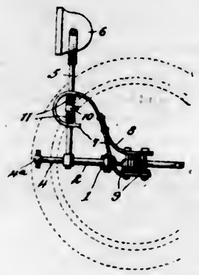
1. A machine of the class described comprising a vehicle, a casing mounted at the front of the vehicle, radial blades rotatably mounted in the casing on a longitudinal horizontal axis for discharging material laterally from the casing, deflector members disposed in advance of the lower portion of the casing for directing snow into said casing and having their corner portions extended to form a straight lower edge, a scoop pivoted at said straight lower edge of the deflector members, a lug depending from said scoop, a longitudinally extending link pivotally connected to said lug, and means for shifting said link longitudinally to adjust said scoop vertically about its pivot.



1,387,577. GAME APPARATUS. GEORGE A. WRAITH, Zanesville, Ohio. Filed Mar. 26, 1920. Serial No. 369,011. 3 Claims. (Cl. 46—63.)

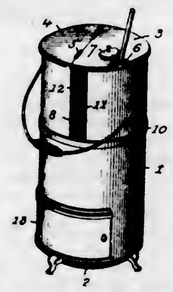
1. In game apparatus, the combination with a game board and a movable game piece, of a retaining means for the game piece comprising pins upon the board, and an elastic band engaged over and extending between the

pins and between the stretches of which the game piece may be placed and gripped.



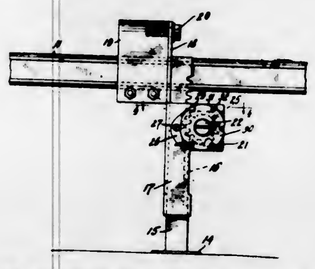
1,387,578. POWER-DRIVEN LAWN-MOWER. EMIL E. YOST, St. Paul, Minn. Filed June 7, 1920. Serial No. 387,114. 3 Claims. (Cl. 56—25.)

1. A power driven lawn mower, comprising a frame, a pair of supporting wheels therefor rotable thereon, a propelling handle pivoted on said frame, a trailer roll to the rear of said wheels to hold said frame in fixed relation to the ground, a rotary rake axially parallel with said wheels, spindles on opposite ends of said rake rigidly connected thereto and axially alined therewith, grass cutting mechanism forward of and below the axis of said wheels, a switch controlled electric motor connected with a source of electric current and operatively connected with said spindles to rotate them, and driving means for said grass cutting mechanism extending from said spindles to the latter for the purpose set forth.



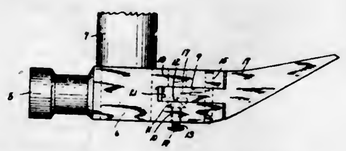
1,387,579. AUTO-LIGHT-CONTROLLING DEVICE. JOHN ZENISHEK, Solon, Iowa. Filed Dec. 2, 1920. Serial No. 427,816. 2 Claims. (Cl. 240—62.)

1. In a head-light control means, the combination of spaced parallel bars adapted to be secured to the front axle of a vehicle, brace members secured at one end to the bars, a head-light receiving member supported by the brace members and adapted to rotate with respect to the brace members, a collar secured to the head-light receiving member, springs surrounding said member and confined between the one brace member and the collar, a rod secured to said light-receiving member, an arm secured to the rod, a second rod secured to the arm at one end and to another arm at its opposite end; said



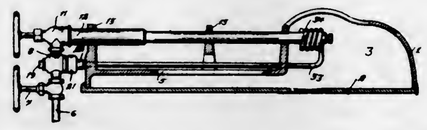
last-named arm being secured to and movable with respect to the spindle of the motor vehicle.

1,387,580. MOP CLEANER AND HOLDER. JESSIE LEIGH ALLEN, New York, N. Y. Filed May 17, 1920. Serial No. 381,965. 1 Claim. (Cl. 15—25.)



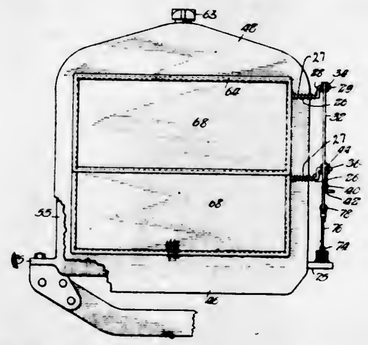
A cleaner and holder for household mops, comprising a casing having a closed bottom, an open top closed by a cover, and a vertical opening in its side wall extending from the top to near the mid-height of the wall, and a grating arranged within the casing in adjacent relation to the lower end of the aforesaid slot, said grating having a space or passage for a mop head, substantially as set forth.

1,387,581. AUTOMOBILE-JACK. JOHN BELLAY, Belleville, N. J. Filed Dec. 27, 1920. Serial No. 433,435. 1 Claim. (Cl. 254—86.)



A lifting jack comprising a tubular frame, a standard slidably extending therethrough, a base on said standard, said standard being provided with rack-teeth, a spindle rotatably mounted on said frame, a pinion fixed to said spindle meshing with said rack-teeth, a second pinion rigidly fastened to said spindle, a spring-pressed pawl pivoted to said frame in engagement with said second mentioned pinion, said two pinions having the same number of teeth, a star-wheel fixed to said spindle, and a lug on said pawl in engagement with said star-wheel, said star-wheel in its rotation intermittently disengaging said pawl from the pinion coöperating therewith.

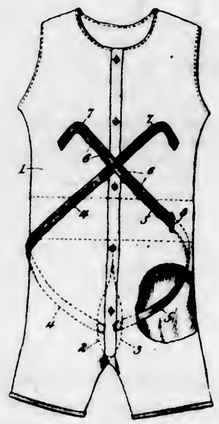
1,387,582. HAMMER. ANTONIO BERGAMINI, North Haven, Conn. Filed Mar. 21, 1921. Serial No. 453,993. 3 Claims. (Cl. 254—26.)



1. A hammer of the claw type having a head provided with a transverse slot and with a vertical opening, a cam located in said opening, a pair of jaws pivotally connected with the said head and extending into said slot and adapted by the inward movement of the cam to have their outer ends forced together.

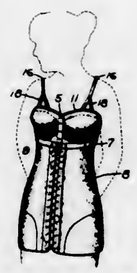
1,387,583. AUTOMATIC FUEL CONTROL. GEORGE N. BLANCHARD, San Francisco, Calif., assignor to Colmar Burner Co., Inc., San Francisco, Calif., a Corporation of California. Filed Jan. 31, 1920. Serial No. 355,361. 8 Claims. (Cl. 158—53.)

5. In a device of the character described, the combination of a burner, a generator tube overlying the same and subjected to the heat of said burner and adapted to form a passage for a fluid fuel discharging into said burner, a valve for controlling the supply of fuel to the generator tube, a spring for normally maintaining said valve closed, and a thermostat subjected to a temperature corresponding to that of the generator tube and opposing the pressure of said spring for operating said valve to open on the generator tube attaining a generating temperature.



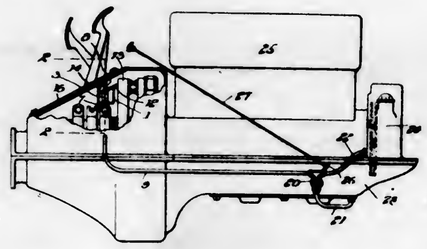
1,387,584. ADJUSTABLE VENTILATOR-HOOD FOR AUTOMOBILES. EDWARD BOWMAN, Dubuque, Iowa. Filed Oct. 27, 1919. Serial No. 333,543. 7 Claims. (Cl. 257—132.)

5. In mechanism of the class described, a main frame, a plurality of door frame mechanisms pivoted on the



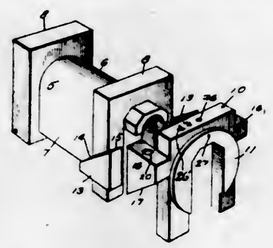
main frame, a reciprocating bar in pivotal connection with one of said door frame mechanisms so that reciprocating the bar operates that particular door frame, a pin and slot connection between said bar, and another of the door frame mechanisms whereby the bar may reciprocate without removing said door frame, and means for detachably rigidly connecting the second door frame mechanism to the bar.

1,387,585. UNDERWEAR. SANFORD S. BOYD, Laurens, S. C. Filed July 12, 1920. Serial No. 395,643. 1 Claim. (Cl. 2—144.)



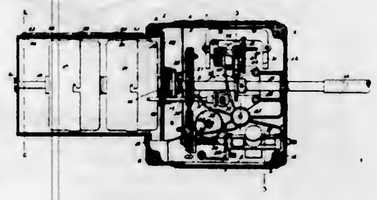
In an undergarment having an opening in the rear thereof, a closure for said opening, a tape stitched on the outside of the closure at the longitudinal center thereof and having button-holes formed in its free end; said tape encircling the body of the wearer and extending upwardly outside the undergarment, a second tape stitched on the inside of the closure adjacent the first tape and having button-holes in its free end; said tape adapted to extend upwardly on the inside of one leg portion of the garment to the waist-line thereof and further adapted to pass through a slot in the waist-line of the garment and continue upwardly outside the body portion of the garment and buttons arranged on the outside of the body portion of the garment to receive the button-holes of the free ends of the tapes.

1,387,586. BUST-PAD HOLDER. LOUISE L. BRADFORD, Allston, Mass. Filed Oct. 29, 1919. Serial No. 334,161. 1 Claim. (Cl. 2—73.)



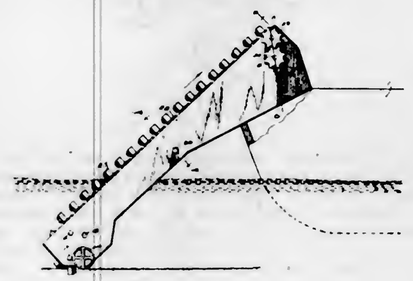
A bust pad device comprising a pliable and conformable pad holding member constructed to be drawn tightly in the vicinity of its upper and lower edges and beneath the arms, and fulled between its top and bottom edges, pad holding means within the fulled area of said holder, shoulder straps engaging the top edges of said holder, fastening devices distributed along the bottom edge of said holder to secure the latter to a corset or other article encircling the waist, the whole providing a device reliably securable against vertical displacement, said device being free from stiffening means, thereby presenting entire absence of restriction or binding of the wearer's body between the top and bottom secured edges, whereby the pad holding means, and any pads carried thereby move with the body as if a natural part thereof.

1,387,587. LUBRICANT-DISTRIBUTER FOR INTERNAL-COMBUSTION ENGINES. WILBUR L. BROWN, Santa Ana, Calif. Filed June 17, 1920. Serial No. 389,744. 1 Claim. (Cl. 184—11.)



In combination with an auto vehicle engine and transmission, a lubricant trough mounted in the transmission casing to receive lubricant from the engine fly wheel, an outlet pipe leading from said lubricant trough, a valve through which said outlet pipe is connected, a second pipe leading from said valve to the engine crank case, and a third pipe leading from the valve to the timing gear casing, said valve when open permitting the lubricant to pass from said outlet pipe through said second and third pipe into the crank case and the timing gear casing, and when closed shutting off the lubricant from the outer pipe through the second pipe into the crank casing by allowing the lubricant to flow from the valve into the timing gear casing.

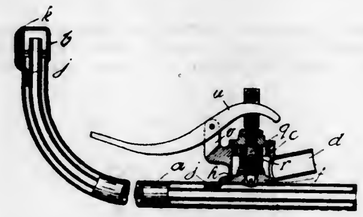
1,387,588. REMOVABLE BEARING-PLATE. BUEL H. CANADY, Winslow, Ariz. Filed Aug. 14, 1920. Serial No. 403,500. 4 Claims. (Cl. 64—25A.)



2. The combination with a journal box having a flange near one end, of laterally extending lugs secured to the flange and extending longitudinally beyond one face of the flange for a substantial distance, said lugs having upper inclined faces extending throughout substantially their entire length and substantially vertical openings, a vertically movable bearing plate to engage the flange, laterally extending lugs carried by the bearing plate and extending longitudinally beyond one face of the bearing plate for a substantial distance, said second named lugs having lower inclined contact faces extending throughout substantially the entire length of the lugs and adapted to engage the first named inclined faces, the second named lugs having substantial vertical openings, and bolts passing through the openings of the first and second named lugs.

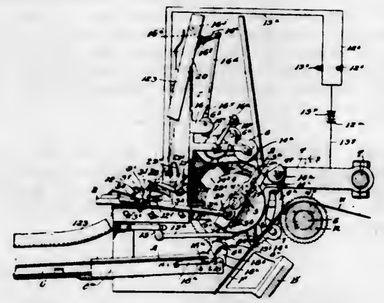
1,387,589. SPRING-MOTOR. PLINY CATUCCI, Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed June 8, 1918. Serial No. 238,982. 18 Claims. (Cl. 185—37.)

13. In a talking machine, driving means comprising one or more units, a covering for said driving means, the dimensions of said covering being variable with the number of power units used.



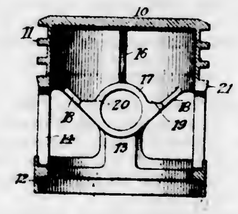
1,387,590. CLAM-DIGGER. WILLIAM D. COLLIER, Marco, Fla. Filed May 29, 1920. Serial No. 385,207. 6 Claims. (Cl. 37—24.)

1. A clam digger comprising an inclined frame, a plurality of shafts journaled in said frame, an endless conveyer mounted on said shafts, two of said shafts being arranged to cause the conveyer to travel in a plane substantially parallel to the frame during the greater portion of its movement, a lower shaft disposed in the same vertical plane with the lower of said two shafts, whereby the conveyer is caused to travel in a vertical plane during a portion of its movement, digging elements secured to said conveyer, and means for supporting said conveyer during its return flight.



1,387,591. BLOWPIPE-BURNER. WILLIAM JAMES COOPER, Smethwick, England. Filed Nov. 5, 1919. Serial No. 335,828. 2 Claims. (Cl. 158—27.4.)

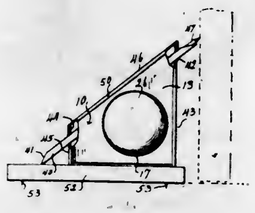
1. A blow pipe burner comprising in combination a valve chamber secured directly on the blow pipe, a gas supply pipe leading into said chamber, a closure plate for the top of the chamber and a valve seating at the bottom communicating directly with the blow pipe, a valve in the chamber having a stem projecting through the said closure plate for engagement by a hand lever, and a rubber sleeve spring around the stem and in compression between the valve and the closure plate to seat



the valve and to act as a stuffing box to prevent leakage of the gas.

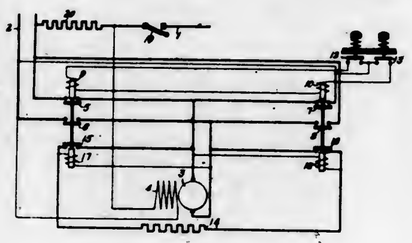
1,387,592. ADDRESSING APPARATUS. PAUL F. COX, Chicago, Ill. Filed May 21, 1920. Serial No. 383,240. 54 Claims. (Cl. 101—53.)

1. In a machine of the character specified; the combination of a feed chute, means for ejecting slugs therefrom, a rotary carrier adjacent the feed chute adapted to take an ejected slug and carry same past the printing point; a clamp on the carrier adapted to clamp said slug flatwise; with a rotatable cam mounted on the carrier, and means for rotating the cam on its axis as it is carried around by the carrier to permit the said clamp to engage the slug when it is taken by the carrier and to cause it to release the slug after the printing operation.



1,387,593. LIGHT-WEIGHT PISTON OF SKELETON CONSTRUCTION. CLARENCE G. CRISPIN, East Berwick, Pa. Filed Aug. 11, 1920. Serial No. 402,833. 4 Claims. (Cl. 74—108.)

1. In a piston, the combination of a body portion having openings in the walls thereof, and wrist pin bosses having lower substantially flat and extended surfaces disposed

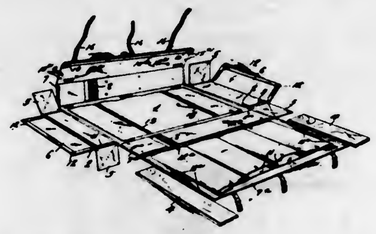


at an angle to the vertical for deflecting lubricating oil splashed from below laterally through the said openings onto the walls of the cylinder.

1,387,594. COMBINED BURGLAR LOCK AND ALARM. ANDREW S. CUMMINGS, Tacoma, Wash. Filed Aug. 7, 1920. Serial No. 402,008. 5 Claims. (Cl. 116—13.)

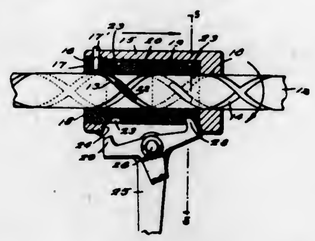
1. A safety locking device for doors comprising a supporting frame adapted to be disposed upon a door and having spikes extending longitudinally through the frame at an inclination to the horizontal, the spikes being sharpened at opposite ends and being longitudinally adjustable through the frame each independently of the other.

1,387,595. CONTROL SYSTEM. RAY E. DE CAMP, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 6, 1919. Serial No. 336,012. 9 Claims. (Cl. 172—179.)



2. In a motor-control system, the combination with an electric motor and a controlling switch therefor, of means for retaining said switch in its open position when the voltage across the armature of said motor exceeds a predetermined value, said means comprising a coil in shunt relation to said motor armature and which is energized only when said switch is in its open position.

1,387,596. DYESTUFFS AND PROCESS OF MAKING THE SAME. GUILLAUME DE MONTMOLLIN and HEINRICH JOSEPH SPIELER, Basel, Switzerland, assignors to "Society of Chemical Industry in Basle," Basel, Switzerland. Filed Sept. 21, 1920. Serial No. 411,737. 10 Claims. (Cl. 8—1.)

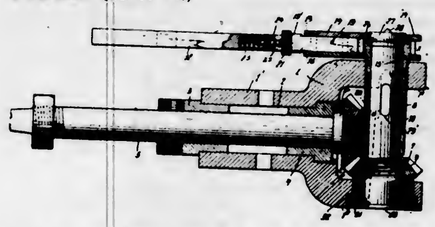


1. The herein described process for the manufacture of new dyestuffs consisting in reacting with a tetrahalogenmethane on an alphanaphtholic compound having its 4-position not substituted, in presence of an agent capable of combining with acids and of a catalyst.

1,387,597. COLLAPSIBLE SUITCASE. CHARLES A. FETTERS, Washington, D. C. Filed Jan. 21, 1921. Serial No. 438,890. 5 Claims. (Cl. 190—43.)

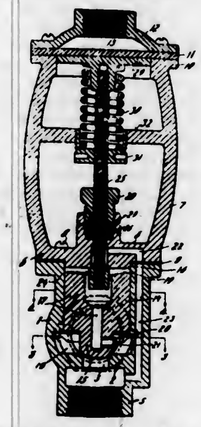
1. A collapsible suitcase formed from pliable material, the top and bottom of said suitcase being provided with stiffening means, the ends of said suitcase being provided with removable stiffening members thereby allowing the case to be rolled into a compact package.

1,387,598. ACTUATING DEVICE FOR WINDSHIELD-CLEANERS. WILLIAM M. FOLBERTH, Cleveland, Ohio. Filed Dec. 13, 1919. Serial No. 344,628. 4 Claims. (Cl. 74—40.)



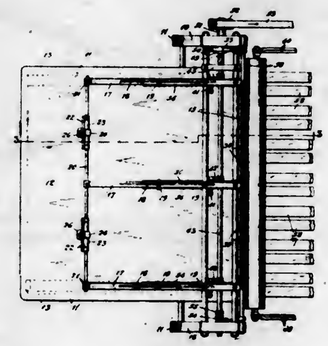
1. In a motor for windshield cleaners and the like, a rotatably mounted shaft provided with a pair of oppositely disposed spirals, a supporting member slidably mounted on said shaft, a driven element secured to said supporting member, a pair of sleeves mounted in said supporting member, a substantially T-shaped lever pivotally mounted on said supporting member, said T-shaped lever being adapted to alternately engage said sleeves and lock them against rotation, each of said sleeves being provided with a lug engaging one of said spirals, a longitudinally shiftable bar connected to said T-shaped member and adapted to move it on its pivot to disengage one of said sleeves and to engage the other of said sleeves, and means for moving said bar to operate said T-shaped member.

1,387,599. RULE. HARRY KEEPERS GROUT, Muscatine, Iowa. Filed Jan. 29, 1920. Serial No. 354,926. 5 Claims. (Cl. 33—127.)



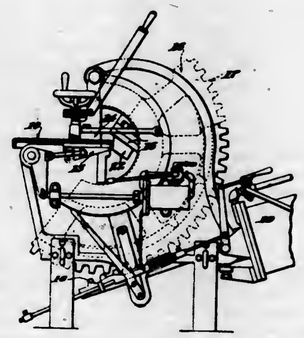
1. A computing rule comprising a flat elongated stick of a standard length, said stick being provided with transverse ribs or projections on its working face at predetermined locations intermediate its length and at the opposite ends, said stick having its working face provided with measure designations and with a computing chart, and a transparent protective covering for said chart secured upon the stick whereby a smooth surface is presented over which the material to be measured may be laid, the ribs extending above the working face of the stick throughout their length and extending from one edge across to the other.

1,387,600. ANGULAR DRILL. PER F. HOLMGREN, Brooklyn, N. Y. Filed May 29, 1919. Serial No. 300,684. 5 Claims. (Cl. 77—7.)



1. A drilling device comprising a spindle adapted to carry a drill, a shaft extending at an angle to said spindle and operatively connected thereto, a yoke carrying said shaft and spindle and forming an abutment and a support for the latter a sleeve freely surrounding said spindle and threaded into said yoke, means carried by said sleeve adapted to engage an abutment for the drilling device and means for rotating said sleeve.

1,387,601. VALVE. HUGH W. KIMES, Dayton, Ohio, assignor to The Valle-Kimes Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 5, 1916. Serial No. 76,324. 6 Claims. (Cl. 103—98.)

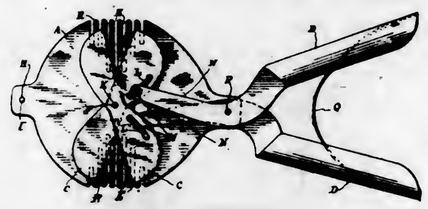


2. In a water supply system, a valve under the control of the pressure developed by the pumping apparatus thereof and for controlling the operation of said pumping apparatus, said valve comprising a casing providing a piston chamber having a valve seat, said casing having a water supply inlet of said system and a water supply outlet thereof at opposite sides of said valve seat, a piston slidable in said chamber and having a reduced valve end to take against said valve seat, said piston having a passage therethrough communicating at one end with said water supply inlet, a by-pass in said casing communicating with said water supply outlet, said by-pass adapted to communicate with the passage through the piston, a pilot valve for controlling the communication between said by-pass and said piston passage, and means for controlling said pilot valve by pressure of water from a source other than that of said water supply.

1,387,602. PAPER-CATCHER. LOUIS LA VECK, Brooklyn, N. Y., assignor to Paul H. Horwitt, Brooklyn, N. Y., and himself. Filed Oct. 22, 1920. Serial No. 418,852. 4 Claims. (Cl. 271—89.)

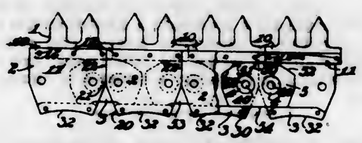
1. In a paper catcher, means for stacking sheets of material comprising a rock-shaft, a member carried thereby, a slide-shaft, a connection between said rock-shaft and slide-shaft and means for reciprocating said slide-shaft whereby said rock-shaft is actuated to vibrate said member.

1,387,603. FLANGING-MACHINE. HUGH MCCABE, Lawrence, Mass. Filed July 3, 1919. Serial No. 308,513. 8 Claims. (Cl. 153—16.)



1. A flanging machine having, in combination, an anvil over which the flange is turned, means for holding the work against the anvil, and a bender having two work engaging faces arranged at an angle to one another, the bender being movable in a path of such curvature that the apex of the angle formed by said faces moves on a surface concave with respect to the corner of the anvil.

1,387,604. HAIR-CUTTING MACHINE. HENRY L. MENDAL, Baltimore, Md. Filed May 3, 1920. Serial No. 378,669. 5 Claims. (Cl. 30—13.)

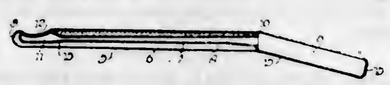


1. In a hair cutting machine; comprising a pair of comb-plates; a pair of adjustable slotted shear blades pivoted between said comb-plates by a bolt; a pair of lever-handles transfixed between one side of the comb-plates by means of a bolt through same, said lever-handles being provided at one end of each, with a pivot; said pivots

being adapted to engage the slots in said shear-blades to actuate same, said lever-handles being further provided

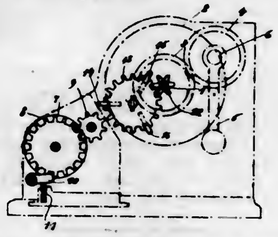
with an adjustable spring-plate adapted to operate between the hollow sections of said lever-handles, for a purpose specified.

1,387,605. CHAIN SAW. GEORGE MEYER, Seattle, Wash., assignor to Lena Meyer, Seattle, Wash. Filed July 27, 1920. Serial No. 399,373. 4 Claims. (Cl. 143—135.)



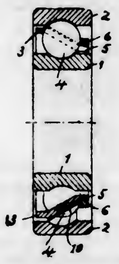
1. A chain saw comprising one set of links each composed of a toothed plate, two side plates overlapping the inner edge of the toothed plate and a filler plate between the opposite edges of the side plates, and another set of connecting links entering between the side plates, pivots connecting the connecting links and said side plates, the inner edge of the toothed plate and the outer edge of the links being engaged at the ends of said toothed plates when the chain sections are in a straight line, the outer edge of the connecting links having a curved sector which maintains substantial engagement with the inner edge of the toothed plate when the chain bends inward and a tangent extending from said curved sector and engaging the inner edge of the toothed plate to limit the inward bending of the chain.

1,387,606. THREAD-WAXING DEVICE. WILLIAM C. MEYER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Feb. 7, 1916, Serial No. 76,721. Patent No. 1,341,065. Divided and this application filed Nov. 4, 1918. Serial No. 260,943. 8 Claims. (Cl. 91—32.)



2. A wax stripping device having, in combination, two peripherally engaging rolls between which the thread passes, means for holding the rolls from rotation, and means for supporting one of the rolls for yielding movement toward and from the other roll.

1,387,607. THERAPEUTIC APPARATUS. WILLIAM MEYER, Chicago, Ill. Filed June 24, 1920. Serial No. 391,273. 12 Claims. (Cl. 174—89.)

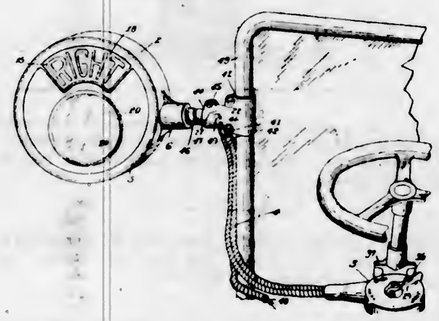


1. An electrode having, in combination, insert and handle end portions, separated by an intermediate portion, telescoped tubes with closed inner ends, forming said intermediate and insert end portions, the inner tube being enlarged to hermetically seal the other tube, and extending beyond the same to form the handle end portion.

1,387,608. CALCULATING-MACHINE. VALENTIN JAKOB ODHNER, Stockholm, Sweden. Filed June 11, 1919. Serial No. 303,412. 1 Claim. (Cl. 235—73.)

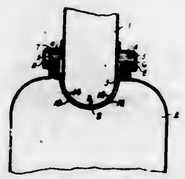
Mechanism for indicating the number of operations of a machine comprising an element operated the same distance at each operation of the machine, a reducing gear wheel connected thereto, a larger gear wheel engaging the reducing gear and having projecting teeth, the ratio of said gearing being so adapted that the larger gear is turned for only a portion of a revolution during a complete revolution of said element, an indicator, a wheel normally out of gear with the other gear wheels but operable by the projecting teeth at each operation of the machine to operate the indicator whereby the indicator may be gently moved without over throw and only at the end of the operation of the machine.

1,387,609. BALL-BEARING. JOHAN ABRAHAM OHLSSON, Stockholm, Sweden, assignor to Klosters Aktie Bolag, Stockholm, Sweden, a Corporation of Sweden. Filed Oct. 23, 1918. Serial No. 259,329. 3 Claims. (Cl. 64—59.)



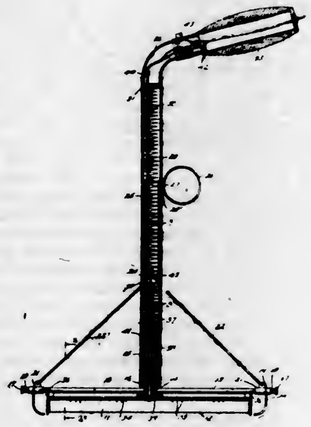
1. In a ball bearing the combination with inner and outer rings and a plurality of balls of a ball cage constructed of relatively flat material and arranged in the form of a conical ring having its edge portions lying in parallelism of the axis of the ring and provided with a plurality of recesses each of which communicate with one of the edges for permitting of the insertion of balls therein, the edge portions of the ring being positioned to insure of proper action of the balls, and a retaining ring engaging the small edge portion of the conical ring for preventing displacement of the balls.

1,387,610. WINDOW-SHADE BRACKET. PETER J. OTHS, East Haven, Conn. Filed June 9, 1921. Serial No. 476,185. 3 Claims. (Cl. 156—24.)



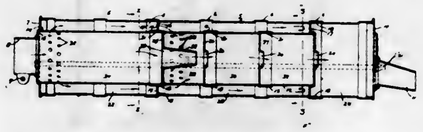
3. A window shade bracket comprising a housing, adapted to be secured in position, formed on opposite sides with vertical slots, a window shade bracket having an arm extending through said slots, a latch engaged with one side of said housing, formed with clearance-slot for said arm, and with a finger, the adjacent faces of said finger and arm roughened, said latch also formed with a nose adapted to hook over the opposite side of said housing.

1,387,611. AUTOMOBILE-SIGNAL. FRANK PEKAR, Bridgeport, Conn. Filed Mar. 16, 1921. Serial No. 452,817. 7 Claims. (Cl. 116—49.)



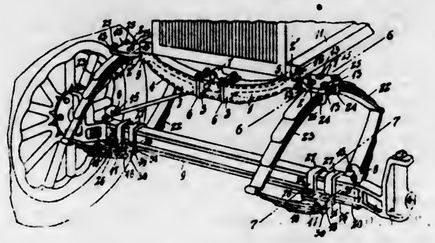
1. In a signaling device, a casing, a signal disk rotatably mounted in the casing, a sheave fast on the disk, a flexible cable fast around the sheave with the ends secured thereto, a second flexible cable passed around the sheave in the opposite direction to the other cable with its end fast thereto, whereby alternate draft on these cables will oscillate the signal disk in the casing, a control member, a sheave rotatable in the control member, one of said cables having its other end passed around the latter sheave and secured thereto, said second cable having its other end passed around the control sheave in the opposite direction to said cable and secured thereto, a tubular guide connecting the signal casing and the control member arranged to receive said cables for passage therethrough, whereby swinging of the control sheave will oscillate the signal in the casing, said guide member being extensible to tension the cables.

1,387,612. OIL-CAN. JOHN WILLIAM PEPPERS, Calgary, Alberta, Canada. Filed Aug. 13, 1919. Serial No. 317,158. 1 Claim. (Cl. 221—44.)



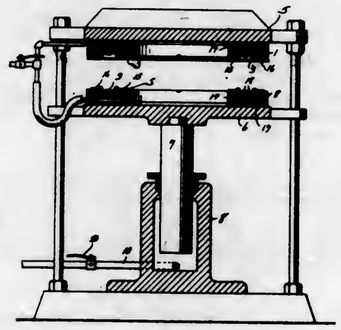
In an oil can, the combination of a spout having its lower end closed except for orifices, which said spout is mounted in a base provided with orifices similar in size and number to those in the lower end of the spout, the said spout having limited rotary motion within the said base, so that the orifices may be made to correspond with those in the said base, a cylindrical jacket around the spout formed by turning up the base, a coil spring within the said hollow jacket one end of which spring is secured to the spout and the other end passing through an orifice in the upper end of the cylindrical body of the base and engaging in holes in a covering member secured around the spout of the oil can to operate the spout for automatically cutting off the flow of oil from the container, and means for securing the base to the oil container, all substantially as described.

1,387,613. ICE-CREAM-SANDWICH MACHINE. RUSSELL H. PROPER, New York, N. Y. Filed Apr. 2, 1920. Serial No. 370,736. 5 Claims. (Cl. 107—1.)



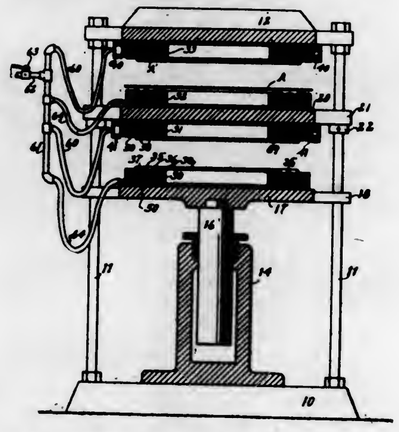
1. A device for making ice cream sandwiches comprising a mold, means to manipulate the mold into and out of a mass of ice cream, said mold being adapted to receive first an ice cream biscuit against one face of which a film of ice cream is received and delivered in the mold from the mass, and means movable over the biscuit and ice cream film to retain the same within the mold during the withdrawal of the device from the mass.

1,387,614. MUFFLER. DAVID REID, Buffalo, N. Y. Filed Feb. 27, 1919. Serial No. 279,661. 12 Claims. (Cl. 137—160.)



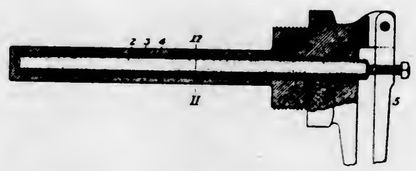
1. A muffler comprising an outer cylinder provided with a plurality of circumferentially arranged corrugations, heads for the outer cylinder, an inner cylinder, a plurality of plates mounted within the corrugations of the outer cylinder for supporting the inner cylinder and for dividing the outer cylinder into a plurality of expansion chambers, and means for dividing the inner cylinder into a plurality of expansion chambers.

1,387,615. ATTACHABLE VEHICLE-SPRING. ELMER R. RITTER, Cincinnati, Ohio. Filed Dec. 26, 1919. Serial No. 347,534. 10 Claims. (Cl. 267—36.)



10. In combination with a full-elliptical vehicle-spring, a bolster element adapted to fit in a channeled vehicle bolster and to extend out past one end of said channeled bolster with its inner end extending not quite to a point midway of the length of said channel, and having a foot near said inner end with its lower side notched to receive the transverse part of a clip embracing the bolster element and the channeled bolster, whereby said bolster element is anchored by said clip, and said outwardly extending part having a lower bearing surface extended in opposite directions to lie along the top of the vehicle spring, and curved to fit the top of the spring part, means to embrace the spring part and engage with said outwardly extending part, for holding said bolster element and said spring together, an anchor-plate having a lateral extension with an opening, to lie against the under side of the vehicle axle with said extension receiving anchoring means through its opening, and having a lower bearing surface extended from opposite sides of said anchor-plate to lie along the upper side of the bottom of said spring, and curved to ... said upper side, and a clip straddling the bottom of said spring and secured to said anchor plate, for holding said spring bottom to said anchor plate.

1,387,616. APPARATUS FOR MAKING PNEUMATIC INNER TUBES. FRED THOMAS ROBERTS, Cleveland, Ohio, assignor to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 15, 1919. Serial No. 323,851. 34 Claims. (Cl. 18—35.)



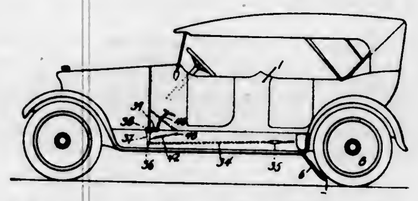
1. In an apparatus of the character described, the combination of a pair of coöperating mold members each having a single cavity and each having an annular clamping groove surrounding the cavity, and means for applying suction to said groove.

1,387,617. APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES. WILLIAM E. ROBERTS, Andover, Mass., assignor to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 29, 1919. Serial No. 348,093. 28 Claims. (Cl. 18—19.)

1. In an apparatus of the class described, the combination of a press, a mold adapted to be operated thereby, and means for so supporting the mold that it may be inverted when desired.

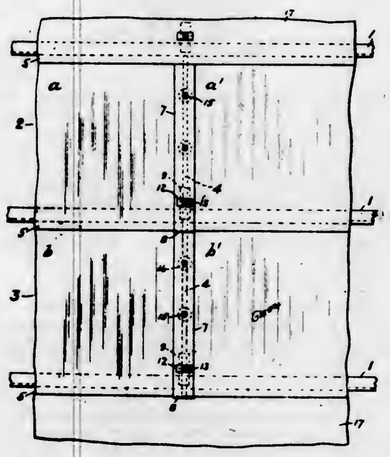
1,387,618. THERMOSTAT. FREDERICK W. ROBERTSHAW, Pittsburgh, Pa. Filed June 3, 1920. Serial No. 386,218. 2 Claims. (Cl. 297—14.)

2. A thermostat comprising a non-expansible element consisting of a carbon rod, an expansible metal element surrounding said rod, and a protective covering for said rod interposed between the said elements, said covering consisting of a metal which will prevent chemical reaction between said elements, substantially as described.



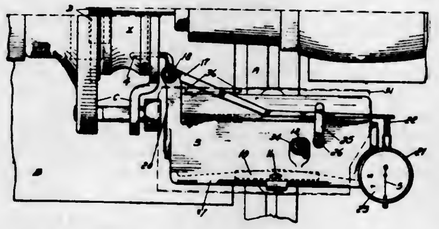
1,387,619. SEWING-MACHINE. MORRIS G. ROSENTHAL, Cincinnati, Ohio. Filed July 26, 1919. Serial No. 313,546. 4 Claims. (Cl. 112—104.)

1. The combination in a sewing machine, of a reciprocating needle, a manually manipulated work shoe having label opening therein, and a frame-like label holder coacting with said work shoe to clamp a label, a needle plate having a needle hole therein, and a bushing for said needle hole tapered downwardly to a relatively small throat toward its lower end, said bushing being disposed with its upper end projecting above the face of the needle plate, within the label opening of said work shoe to support the work at the stitching point, said needle and label holder being arranged so that the needle reciprocates within the said label holder.



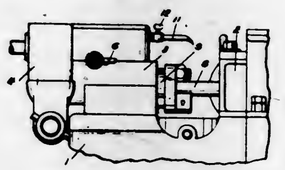
3. The combination in a sewing machine of a reciprocating needle, and a needle plate having a needle hole therein provided with a bushing for said needle hole tapered downwardly to a relatively small throat and upwardly beveled to said throat.

1,387,620. SANDING DEVICE FOR AUTOMOBILES. PAUL R. SHAILER, Washington, D. C. Filed Aug. ..., 1920. Serial No. 401,931. 1 Claim. (Cl. 291—36.)



A sanding device, comprising a hopper having an exit, a removable top for said hopper, carrying a depending, open-ended tubular member, a valve controlling the escape of sand through said exit and carrying a valve stem slidable in said tubular member, and projecting through said top, said projecting end being provided with rack teeth, a gear meshing with said rack teeth, and means for rotating said gear through the arc of a circle.

1,387,621. GLASS ROOFING OR WALL. ARNO SHUMAN, Philadelphia, Pa., assignor to Pennsylvania Wire Glass Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Nov. 25, 1918. Serial No. 263,983. 6 Claims. (Cl. 108—10.)

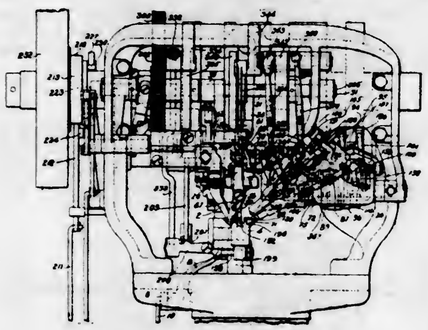


1. In glass roofing or walls the combination of rows of glass sheets laterally unsupported and arranged edge to edge with space between and horizontally lapped at their ends, the bottom sheet constituting the sole support for the top sheet, a horizontal purlin underlying the lapped portions and directly supporting the sheets at their lapped ends, batten strips covering said space and lapped over the purlin, a clip resting on the top edge of the purlin and having a heel engaging the underface thereof and a toe underlying the lap, a saddle on the batten strip, and a single bolt disconnected from the purlin and connecting the toe and the saddle and arranged through the space and passing through the batten strip, substantially as described.

1,387,622. MEASURING INSTRUMENT. CHARLES B. SIMMONS and FREDERICK G. HUGHES, Bristol, Conn., assignors to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Sept. 11, 1916. Serial No. 119,335. 15 Claims. (Cl. 33—172.)

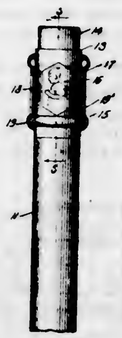
1. In a measuring instrument, a support, measuring-device-carrying means carried by said support, means connecting said first named means to said support for both longitudinal and oscillative movement with respect thereto, means automatically operable during one of said movements for clamping said carrying means to said support, and a measuring device carried by said carrying means; substantially as described.

1,387,623. HIGH-PRESSURE PUMP. KARL D. SMITH, Battle Creek, Mich., assignor to Union Steam Pump Company, Battle Creek, Mich. Filed May 13, 1919. Serial No. 296,898. 2 Claims. (Cl. 103—77.)



1. In a pressure pump, the combination of a plurality of integrally formed cylinders disposed side by side and having valve casings formed integrally therewith, a cooling tank above said cylinders, said cylinders and valve casings constituting walls of said tank, piston rods, packing glands for said piston rods, and a series of drip pipes projecting from said tank over said piston rods to drip water thereon, said pipes being provided with valves for the purpose specified.

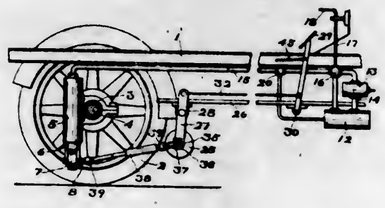
1,387,624. THREAD-HANDLING MACHINE. WILLARD A. SMITH, Melrose, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 8, 1916. Serial No. 96,126. 38 Claims. (Cl. 112—35.)



1. A thread handling machine, having, in combination, work positioning members, a needle, mechanism for actuating the needle to pass two spaced loops of thread through the work, means for gripping the first loop of

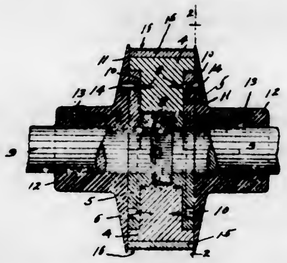
thread, devices for engaging with one side of the first loop of the thread between the gripping member and the work and means for actuating said devices to twist the thread to form a closed loop therein, means for position-

ing the loop thus formed in the path of the needle to cause the second loop to be passed therethrough, and means for passing the first loop of thread through the second loop beyond the encircling loop.



1,387,625. CHANGEABLE EXHIBITOR. WILLIAM L. STEIN, New York, N. Y., assignor of one-half to Edward A. Stein, New York, N. Y. Filed Oct. 21, 1920. Serial No. 418,477. 1 Claim. (Cl. 40—68.)

An exhibitor attachment for pencils, comprising a tubular body on the upper end of a pencil bearing upon its outer face characters, said tubular body being provided on its outer face with a bead in a plane at right angles to the longitudinal axis thereof, and a sleeve rotatably mounted upon said tubular body having a sight opening in alinement with said characters, said sleeve being provided in its inner face with a groove in which said bead is seated, said sleeve being also provided with a longitudinal slot adjacent its groove to permit of a mounting thereof on said tubular body.

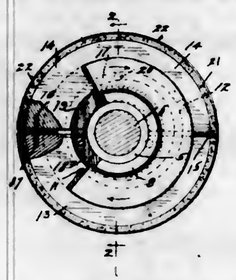


1,387,626. PARKING-DEVICE ATTACHMENT FOR AUTOMOBILES. ANDREW W. SWANSON, Seattle, Wash. Filed July 15, 1920. Serial No. 396,396. 2 Claims. (Cl. 180—1.)

2. In a wheeled vehicle of the class described, in combination with a vehicle axle, cylinders mounted on said axle adjacent its opposite ends, pistons mounted in said cylinders and extendible downwardly therefrom, rollers mounted at lower ends of said pistons, means for forcing a pressure medium into said cylinders to actuate the pistons outwardly to raise and support the vehicle on said rollers, hangers pivotally fixed to the vehicle frame, friction rollers mounted on said hangers movable into engagement with the driving wheels of the vehicle, telescop-

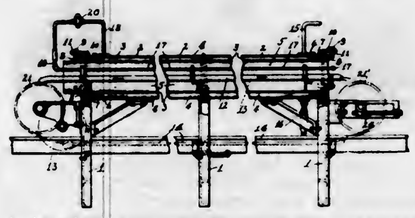
ing shaft sections operatively connecting said friction wheels with said rollers whereby operation of the former will actuate the rollers to move the vehicle in a lateral direction, lever mechanism operable to move the hangers to cause the friction rollers to engage or disengage the driving wheels, and means for controlling the admittance of the pressure medium into and from the cylinders.

1,387,627. EDGE-SCOURING ROLL. GEORGE ORVILL TERRY, Minneapolis, Minn., assignor to Economy Shoe Machinery Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 7, 1920. Serial No. 408,608. 6 Claims. (Cl. 51—194.)



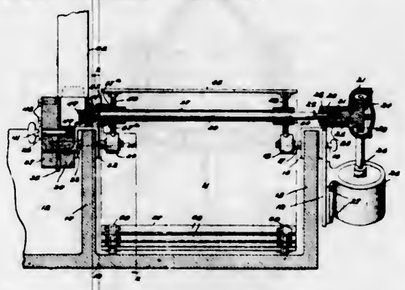
1. An edge scouring roll comprising laterally spaced axially alined rigidly connected rotary hub flanges, at least one of which has a lateral cam projection, and a split scouring wheel one section of which is rotatively mounted between said flanges and the other section of which is movable to and from working position and is provided on at least one side with a cam surface, which under rotation of the closed wheel coöperates with said cam projection to lock the two wheel sections together.

1,387,628. HEEL-SCOURING ROLL. GEORGE ORVILL TERRY, Minneapolis, Minn., assignor to Economy Shoe Machinery Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 7, 1920. Serial No. 408,609. 2 Claims. (Cl. 51—194.)



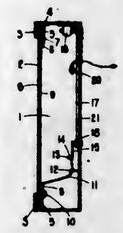
1. A heel scouring roll comprising a rotary hub member, relatively fixed and movable hub flanges on said hub members, at least one of which has a face cam surface with a peripheral entrance notch, and a split scouring wheel one section of which has metallic rings set flush into the sides thereof and by means of which it is rotatively mounted on said hub member and the other of which is movable to and from said hub member, and is provided on at least one side with a cam projection that

is movable through the entrance notch of said cam surface, and under rotation of the closed wheel on said hub



coöperates with the said cam surface to lock said wheel sections together, said wheel sections being connected at one side by a hinge.

1,387,629. EXHAUST-BOX. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Apr. 30, 1919. Serial No. 293,588. 7 Claims. (Cl. 126—272.)



1. An exhaust box comprising concentric spaced metallic pipes, means for admitting steam to the space between the pipes, a perforated pipe communicating with the space between the first-mentioned pipes and extending through the length of the inner pipe, means in said perforated pipe for controlling the passage of steam therethrough, and means for conveying cans through the inner pipe.

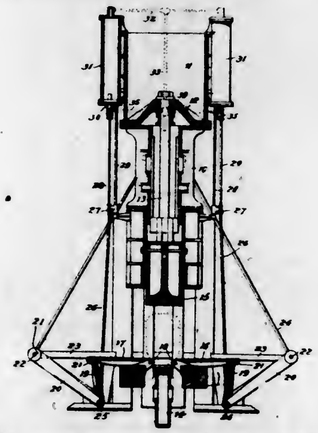
1,387,630. WASHING-MACHINE. JOHN N. THORNTON, New Britain, Conn. Filed Sept. 11, 1920. Serial No. 409,612. 14 Claims. (Cl. 68—37.)

1. In a washing device adapted to be applied to and used with a tub, the combination with an endless longitudinally flexible washing belt pervious to water of rotary means for supporting and driving said belt, means for mounting said supporting and driving means in fixed position slightly above and across the top of the tub, the said belt being of such length as to hang down in said tub toward its bottom in an expanded loop and rollers in a line parallel to said supporting means but removed therefrom a material distance laterally along the top of the tub over which the side edges of the belt pass to expand the loop.

1,387,631. METHOD OF AND MEANS FOR PRODUCING AN OPTICAL ILLUSION. PERCY THOMAS TIBBLES, London, England. Filed Oct. 27, 1920. Serial No. 419,930. 4 Claims. (Cl. 40—102.)

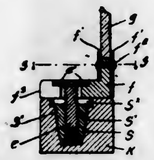
1. A method of producing an optical illusion by changing the picture design or like effect characterized by the fact that semi-transparent mask or masks are gradually moved toward and away from the picture and between the picture and a source of light, substantially as described.

1,387,632. PRESSED-STEEL DETACHABLE WHEEL. GEORGE WILLIAM WATSON, London, and NEVILLE BROUGHTON LUDLOW, Worcester, England. Filed June 2, 1920. Serial No. 385,978. 5 Claims. (Cl. 301—63.)



1. A detachable disk wheel comprising in combination, two dished wheel parts, each of which has at its outer periphery a flange to accommodate the edge of a tire, and each formed with an opening in the disk portion to accommodate the tire valve, the wheel parts being shaped to contact one with the other completely around the margins of the valve opening, and also around the peripheries of the disks, but to be spaced apart at the hub, and means for securing the wheel parts face-to-face to contact one with the other in said manner, said securing means comprising two sets of securing devices, one arranged near the periphery of the wheel, and the other near the hub thereof, substantially as described.

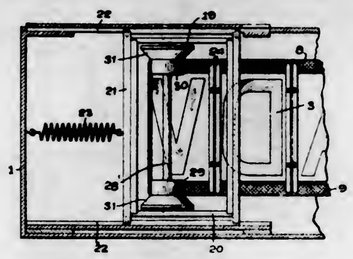
1,387,633. COTTON-COMPRESS. ROBERT D. WEBB, Minden, La. Filed Feb. 2, 1918. Serial No. 215,159. 4 Claims. (Cl. 100—19.)



1. In a cotton compress of the class described, the combination with upper and lower platens and means

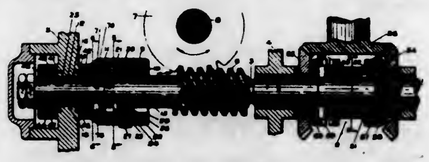
for moving them relatively, of two movable plates for pressing the sides of a bale located between the platens, separate cylinders and pistons for operating said plates, respectively, and valve means for simultaneously admitting motive fluid to said cylinders, simultaneously exhausting it from said cylinders, and simultaneously bringing the ends of said cylinders into communication, whereby the plates are caused to move toward and from each other simultaneously.

4. In a cotton compress of the class described, the combination with upper and lower platens and means for moving them relatively, of two movable plates for pressing the sides of a bale located between the platens, separate cylinders and pistons for operating said plates, respectively, and valve means for simultaneously admitting motive fluid to said cylinders, at corresponding ends and at the same time simultaneouly exhausting steam from said cylinders through passages restricted in size relatively to the steam inlet passages.



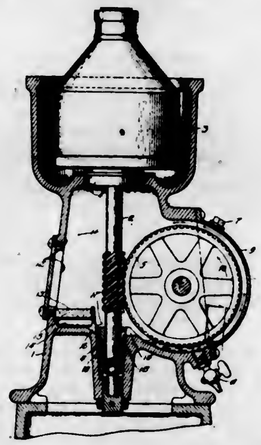
1,387,634. SECURING MEANS FOR INCLOSURES FOR AUTOMOBILE-TOPS. HARRY E. ADAMS, New York, N. Y. Filed Aug. 5, 1919. Serial No. 315,558. 3 Claims. (Cl. 296—103.)

1. Securing means for automobile top closure sashes, comprising a screw nut socket member countersunk in the car sill, a recessed sash base flange, and a coupling screw extending therethrough and engaging with the said screw nut socket member, the head of the said screw being countersunk in the sash base flange and bearing directly thereon when in use, and said screw nut socket member being formed with a recess adapted to receive the head of said coupling screw when the sash is removed from the sill, for the purpose set forth.



1,387,635. MOVING SIGN. JACOB AISENBERG, Corona, N. Y. Filed Sept. 10, 1919. Serial No. 322,838. 4 Claims. (Cl. 40—96.)

1. In an exhibiting apparatus, the combination of transparent flexible members having characters formed thereon, said members adapted to have relative movement with the frame of said apparatus, and supporting means for said members attached to the edge thereof



and exceeding the length of the edge to which attached for holding purposes.

1,387,636. EASY-START DRIVING AND REVERSING MECHANISM. GEORGE I. ALDEN, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 22, 1918. Serial No. 224,073. 19 Claims. (Cl. 74—36.)

4. A machine having a reciprocating member and a driving and reversing mechanism therefor, comprising a rotatable driving worm, a worm gear operatively connected with the load and driven by the worm, means to start the worm gear gradually and means whereby the load may come gradually to rest under its own momentum without material shock when the mechanism is reversed.

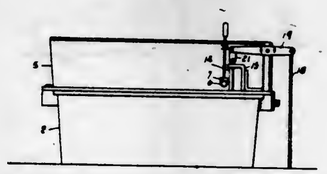
1,387,637. OILING SYSTEM. GUSTAF M. ANDERSSON, Waterloo, Iowa, assignor to Associated Manufacturers Company, Waterloo, Iowa, a Corporation of Iowa. Filed May 23, 1919. Serial No. 299,271. 5 Claims. (Cl. 64—56.)

5. A centrifugal separator comprising a casing having an oil reservoir at its bottom side; a bearing in said casing; a substantially vertical shaft in said bearing, there being a passage in the bearing along said shaft with one end of said passage opening in said reservoir; a well in the casing above oil in said reservoir and communicating with the other end of said passage; a wheel running in the oil of said reservoir and adapted to move said oil to said well; and a filter in the well.

1,387,638. PROCESS OF MAKING CUP AND CONE MEMBERS FOR ROLLER-BEARINGS. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed July 16, 1917. Serial No. 180,802. 26 Claims. (Cl. 29—156.)

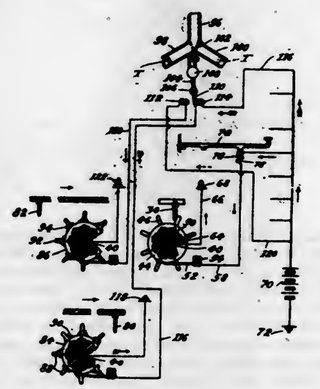
1. The process of making the coacting cup and cone members of roller bearings, which consists in shaping a metal blank to form integrally connected cylindrical portions of different diameters suitable to set one within the other, forming the external surface of the smaller portion and the internal surface of the larger portion with tapered male and female bearing surfaces, respectively, and then severing the two portions adjacent to their inner ends.

1,387,639. MOLDING FOR UPHOLSTERING. JOEL D. BOLENDER and EDGAR R. CREAMER, Connersville, Ind., assignors to The George R. Carter Company, Connersville, Ind., a Corporation of Indiana. Filed Apr. 11, 1921. Serial No. 460,485. 14 Claims. (Cl. 155—184.)



1. In a device of the character described, a flexible body arranged to be folded, and a layer of flexible stiffening substance inclosed by said body and folded therewith of a character to maintain said body in folded position.

1,387,640. PROCESS OF PRODUCING AND UNITING HEADS TO BARRELS. GEORGE C. BRAINARD, East Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 20, 1917. Serial No. 192,295. 12 Claims. (Cl. 113—112.)

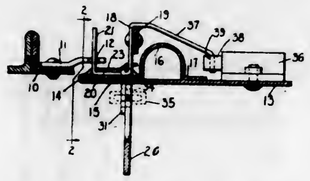


1. The process of forming a head and securing the same to a metal barrel which comprises drawing a metal blank into cup shape, telescoping the said blank to provide a skirt surrounding the side wall thereof, inserting the head thus formed within the open end of the barrel body so that the edge of said skirt abuts the edge of said barrel body and homogeneously uniting the abutting edges of said skirt and barrel body.

1,387,641. GLUING-MACHINE. FRED C. DOBBERTEEN, Sturgis, Mich. Filed Mar. 19, 1921. Serial No. 453,795. 4 Claims. (Cl. 144—280.)

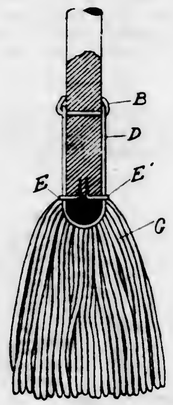
1. In a gluing machine, the combination of a glue receptacle, a reciprocating glue applier support mounted in said receptacle, a plurality of rod-like glue appliers having downwardly tapered heads with concave tips mounted on said support so that they may be projected from the glue or lowered to submerge their heads, a guide bracket through which said glue appliers reciprocate, a spring for normally retracting said glue applier support, and actuating means for said support.

1,387,642. RECORDING APPARATUS. GIBSON L. DOUGLASS, Duluth, Minn. Filed Aug. 5, 1918. Serial No. 248,368. 12 Claims. (Cl. 234—12.5.)



4. A recording apparatus comprising a member secured in fixed position on a vehicle, said member being adapted to hold a multiplicity of selectively positioned elements, electrical contact members located in the roadway and operable in either direction of travel of the vehicle for completing circuits corresponding to said selectively positioned elements, means connected with said contact members whereby a record identifying the vehicle may be made and a source of electrical energy for operating said means when the circuits are completed.

1,387,643. LATCH AND LOCK. AXEL F. ERICKSON and DANIEL W. SHIEK, Aurora, Ill., assignors to Allsteel-equip Company, Aurora, Ill., a Corporation of Illinois. Filed Nov. 5, 1919. Serial No. 335,838. 9 Claims. (Cl. 292—334.)

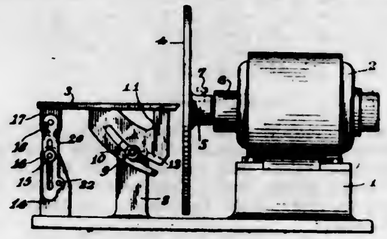


1. A latch for doors and the like comprising a longitudinally movable latch clip, a jamb-plate adapted to be engaged thereby when in latched position, means for moving said clip, and a spring element adapted to engage

said clip when the latter is out of latched position and to be disengaged therefrom through contact with said

jamb-plate, said spring element provided with an extension projecting through the door and adapted to be locked to the means for moving said clip.

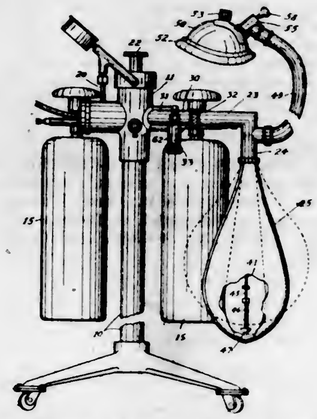
1,387,644. MOP. ALEXANDER FISCHER, Jr., Cincinnati, Ohio. Filed July 9, 1919. Serial No. 309,590. 1 Claim. (Cl. 15—56.)



In a mop the combination of a handle, bent staples having their ends disposed within one end of the handle and having that portion intermediate the ends extending beyond the handle, a U shaped wire loop having its ends extending through the staples, eyes formed on the end of the wire loop, a cross pin extending through the handle and through the eyes formed on the ends of the wire loop, and having its ends bent upon itself to secure the wire loop, and a mop head mounted on the loop intermediate the ends thereof and being fixedly retained upon the end of the handle thereby.

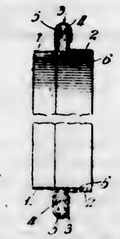
1,387,645. METHOD OF AND COMPOSITION FOR CLEANING METALS. JAMES H. GRAVELL, Elkins Park, Pa. Filed Feb. 27, 1920. Serial No. 361,699. 8 Claims. (Cl. 148—8.)

1. The method of cleaning metal consisting in subjecting it to the action of an etching acid in the presence of benzol.



1,387,646. SURFACE-GRINDING MACHINE. JULIUS C. HANSEN, Chicago, Ill., assignor, by mesne assignments, to Hansen Grinder Company, Cook county, Ill., a Corporation of Illinois. Filed Oct. 25, 1920. Serial No. 419,508. 3 Claims. (Cl. 51—240.)

1. In a grinding machine of the class described, the combination of a grinding disk, a base provided at the inner portion with a pair of spaced upwardly extending rigid brackets, a horizontal rod connecting the brackets and provided with clamping means, a table provided at its inner portion with rigid depending arms having inclined slots to receive the said rod and engaged by the said clamping means, said table being supported at its inner

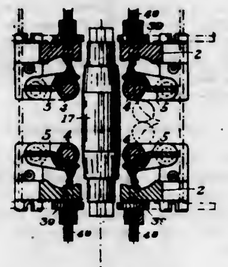


portion by the upper walls of the said slots and adjustable supporting means connecting the outer portion of the table with the base.

1,387,647. ANESTHETIZING-MACHINE. JAY A. HEIDBRINK, Minneapolis, Minn. Filed Sept. 10, 1917. Serial No. 190,525. 4 Claims. (Cl. 128—203.)

1. An anesthetizing machine comprising sources of supply of nitrous oxid and oxygen respectively, means for forming a mixture of said gases in fixed and predetermined proportions, a receptacle for receiving a predetermined quantity of said mixture in excess of a full breath of the patient, and means controlled by expansion of the receptacle caused by the inflow of mixture for cutting off such inflow of mixture when it reaches such predetermined amount in the receptacle.

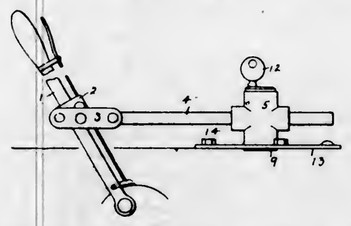
1,387,648. GASKET. JOSEPH HOLLE, Newark, N. J., assignor to McCord Manufacturing Company, Inc., Detroit, Mich., a Corporation of New York. Filed Oct. 4, 1920. Serial No. 414,485. 3 Claims. (Cl. 288—1.)



1. A gasket of the character described, comprising a metallic body portion formed to provide two tubular guide

flanges extending in opposite directions on opposite sides of an outwardly extending annular section forming a chamber to receive and retain a ring of fibrous material, and means for holding one of said guide flanges against bending inward.

1,387,649. ABRASIVE FOR GRINDING AND SMOOTHING GLASS. WILLIAM L. KANN, Pittsburgh, Pa. Filed Mar. 26, 1920. Serial No. 369,068. 3 Claims. (Cl. 51—278.)

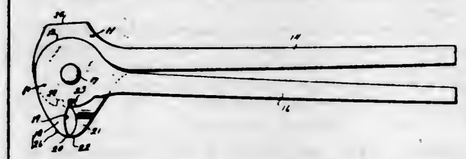


1. The method of grinding, smoothing and finishing glass preparatory to polishing, comprising supplying to the glass a natural crystalline abrasive of such character that as it is crushed and broken the smaller grains or particles thereby produced are of distinct crystalline form, and continuously collecting and supplying to the glass such abrasive during the grinding, smoothing and finishing operations, substantially as described.

1,387,650. UNIVERSAL ROLLING-MILL. CARL W. A. KOELKEBECK, Alliance, Ohio. Filed Aug. 26, 1919. Serial No. 319,949. 7 Claims. (Cl. 80—34.)

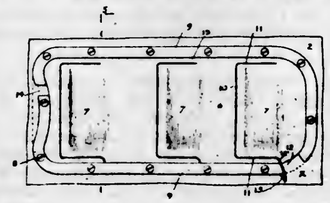
1. In a universal mill, the combination of roll housings and horizontal rolls, a set of vertical rolls, and horizontally swinging supports in which the vertical rolls are journaled, substantially as described.

1,387,651. LOCKING DEVICE FOR AUTOMOBILES. ALBERT H. LARDESKEY, Baltimore, Md. Filed Mar. 7, 1919. Serial No. 281,198. 1 Claim. (Cl. 70—128.)



A locking device for automobiles comprising a casing having a key slot in its upper end and recesses in its lower end, a reciprocating locking plate within said casing and having an aperture therein and provided with two shoulders on its lower end adapted to fit within the recesses in the lower end of said casing, a brake handle, a rod pivoted at one end to said brake handle and having its opposite end projecting through said casing and through the aperture in the locking plate, a spring surrounding said rod between the locking plate and the inner surface of the casing, and a key adapted to fit within the key slot of the said casing and to coöperate with the said plate to hold in the unlocked position.

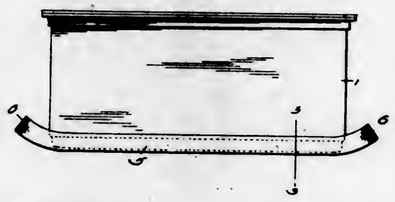
1,387,652. COUNTERBORING-TOOL. CHARLES W. LIPE, San Jose, Calif. Filed May 13, 1920. Serial No. 381,071. 7 Claims. (Cl. 90—12.5.)



1. A tool of the character indicated comprising a tubular supporting member, a shaft revolubly mounted therein, laterally movable cutting elements operatively connected to said shaft and adjustable thereby, means for rotating said shaft in said member, and means for locking said last mentioned means and said member against rotating with respect to each other.

1,387,653. NAIL-PULLER. IVER LORENTZEN, Clear Lake, S. D. Filed Mar. 21, 1921. Serial No. 454,126. 1 Claim. (Cl. 254—22.)

An implement of the character described comprising two heads recessed upon their confronting faces and having handles, the heads being pivoted to each other for rotation around a common axis, both of said heads having integral outwardly projecting, confronting jaws, the confronting faces of the jaws being concavely curved, the extremities of the jaws being thereby formed with confronting biting teeth, one of said heads being thickened at its rear end immediately above the pivotal axis of the heads and formed with a flat face whereby a hammer may be applied to the implement, the wall of the recess in the head having the thickened portion resting at all times upon the periphery of the other head.

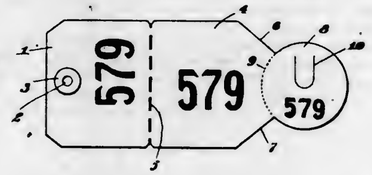


1,387,654. AUTOMOBILE-ENGINE-OILING DEVICE. GRIFFIN Y. MCCLATCHIE, Palo Alto, Calif. Filed July 26, 1920. Serial No. 399,035. 2 Claims. (Cl. 184—13.)

1. The combination with an automobile engine having a crank case and rotating parts of the engine in said

crank case, there being pockets provided on the bottom wall of the crank case for the reception of pools of oil, into which pockets said rotating parts dip, of walls disposed along the sides and rear edges of said pockets to obstruct the flow of oil out of said pockets when said crank case is inclined forwardly and upwardly, the walls on one side of each pocket being substantially lower than on the opposite side.

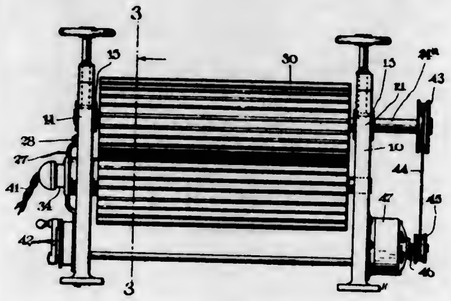
1,387,655. TOOL-BOX. OSCAR B. SHAW and FRANK L. MCKENNA, Parkersburg, W. Va. Filed Jan. 29, 1920. Serial No. 354,771. 3 Claims. (Cl. 220—97.)



1. The combination with a metal tool box, of wood runners attached to the box, angular metal shoes on the runners, said shoes being extended beyond the ends of the box and curved upwardly to provide means for pulling the box over the ground when heavily loaded without straining the box.

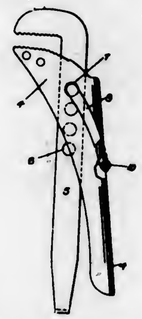
1,387,656. PROCESS OF MAKING PERMANGANATES. JOHN R. MACMILLAN and JOSEPH L. K. SNYDER, Niagara Falls, N. Y., assignors to Niagara Alkali Company, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,428. 5 Claims. (Cl. 23—13.)

1. In the manufacture of permanganate from materials containing manganates and of the nature of a manganate roast the process which comprises making a magma of such a material with a liquid containing dissolved permanganate and chlorinating the mixture.



1,387,657. TAG. WELLINGTON S. MIX, Chicago, Ill., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed Mar. 31, 1921. Serial No. 457,559. 6 Claims. (Cl. 40—2.)

6. A tag comprising a portion having a perforation for fastening means whereby to attach it to a container, a detachable portion provided with a space for the entry of a record, and a detachable portion of substantially circular form constructed and arranged to form a receptacle closure.



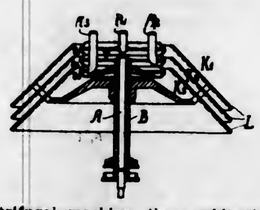
1,387,658. PLAITING-MACHINE. OPHELIA ODLE and LEO ESTELLE ODLE, Waco, Tex. Filed Oct. 29, 1920. Serial No. 420,463. 9 Claims. (Cl. 223—42.)

1. In a plaiting machine of the character set forth, a frame including standards and cross rods extending therebetween and secured thereto, adjustable journals arranged upon the upper portions of said standards, a spindle having trunnions rotatably received in said journals, and an extension exteriorly of one of said standards, a roller keyed to said spindle and having longitudinally disposed ribs on its periphery, a hollow spindle carried by and secured to the lower portions of said standards, a coacting roller rotatably mounted on said hollow spindle and having longitudinally disposed ribs on its periphery adapted to be intermeshed with the ribs of the first mentioned roller, said rollers being adapted to receive between them

the material to be plaited, means for driving said rollers including a pulley secured to the spindle extension and means for electrically heating the coacting roller including a tube of di-electric material arranged in said hollow spindle and an electric heating element arranged in said di-electric tube.

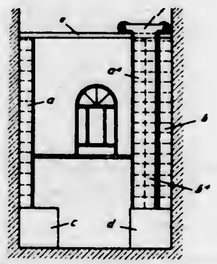
1,387,659. FOOTPRINT-SPANNER. JOHN JOSEPH O'KEEFE, Kensington, near Sydney, New South Wales, Australia, assignor of one-half to Frank Hartrup Pilcher, Kensington, New South Wales, Australia. Filed May 15, 1920. Serial No. 381,733. 1 Claim. (Cl. 81—83.)

An adjustable spanner comprising a jaw member having a handle portion, a second jaw member embracing the first member and coöperating therewith, a spring pivotally mounted on the back of the second member and curved to lie flat against the second jaw member and a pivot pin carried by the spring to connect the two jaw members together, the pivots at opposite ends of the spring lying in planes substantially at right angles to each other.



1,387,660. CENTRIFUGAL PUMP. PONTUS OSTENBERG, San Jose, Calif. Filed Jan. 9, 1920. Serial No. 350,347. 8 Claims. (Cl. 253—199.)

1. In a centrifugal pump, a bowl comprising a cylindrical wall section adapted to be attached to upper and lower sections, and have a runner mounted therein, a flange arranged on said wall section adjacent to and within one end thereof and extending within the radius of the runner mounted therein, a diffusion vane arranged on one side of said flange and extending within the radius of the said runner, and a diffusion vane arranged on the opposite side of said flange and extending inwardly

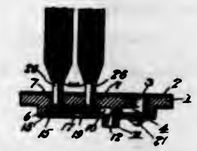


to a point adjacent the outer perimeter of the said runner, both of said vanes being formed integrally with said flange.

1,387,661. CENTRIFUGAL MACHINE. OTTO PANKRATH, Raunheim, Main, Germany. Filed May 1, 1920. Serial No. 378,280. 1 Claim. (Cl. 233—7.)

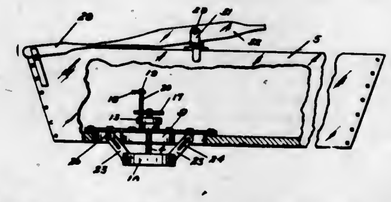
In a centrifugal machine, the combination with the wing-shaped centrifugal surfaces of the latter, of a distributer for a uniform supply of the filling-mass onto the former having a different circumferential speed to that of the former and consisting of cones in contact with said wings and having slots at said contact points of a length corresponding to that of the latter, substantially as and for the purpose set forth.

1,387,662. LOCKER FOR TICKETS IN TICKET-SELLING ROOMS OF RAILWAY-STATIONS. HERMANN PAUTZE, Berlin, Germany. Filed Sept. 18, 1920. Serial No. 411,342. 1 Claim. (Cl. 211—27.)



A locker for ticket selling rooms of railway stations, comprising, in combination, two stationary shelves with their open fronts directed toward one another, a two-part shelf with a middle partition having its open sides directed toward said stationary shelves and movable between and upon the latter, and means to lock said two-part shelf with either of said stationary shelves, substantially as and for the purpose set forth.

1,387,663. PROCESS OF MAKING AN ALLOY OF NICKEL AND ZIRCONIUM. NAPOLEON PETINOT, New York, N. Y. Filed Aug. 18, 1919. Serial No. 318,324. 8 Claims. (Cl. 75—1.)

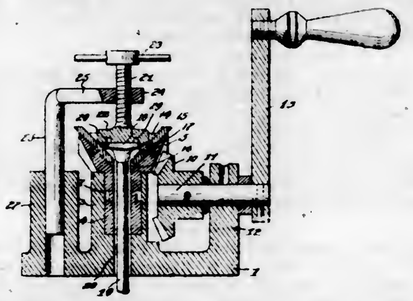


1. The process of making an alloy of nickel and zirconium comprising the melting of nickel in an electric furnace so as to form a molten bath and then introducing in such bath zirconium in a nascent state.

1,387,664. MAGNETIC VALVE FOR ORGANS AND THE LIKE. WILLIAM H. REISNER, Hagerstown, Md., assignor to The W. H. Reisner Manufacturing Company, Hagerstown, Md., a Corporation of Maryland. Filed Mar. 31, 1921. Serial No. 457,256. 4 Claims. (Cl. 84—330.)

1. A valve for organs and the like comprising a base having a port and a recess therein constituting a windway, an electromagnet supported by the base with its poles adjacent said recess, a plate engaging the base and covering said recess having a port and an opening therein, a valve coöperating with the port in the plate and actuated by said magnet, a stud on said base engaging the opening in said plate, and means coöperating with said stud for locking the plate to the base.

1,387,665. SAFETY WATER-CRAFT. LEWIS J. RING, Wakefield, Nebr. Filed Nov. 29, 1920. Serial No. 426,941. 1 Claim. (Cl. 114—124.)

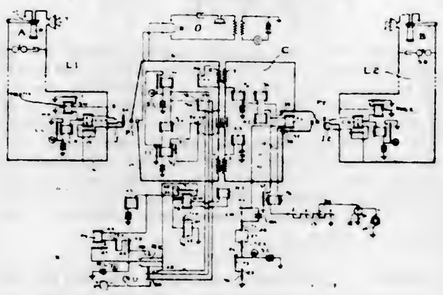


A safety water craft having a bottom provided with an opening therein, a plate covering the opening and providing a recess within the opening, a weight adapted to normally lie within said recess flush with the bottom of the boat, a post mounted to reciprocate substantially vertically through said plate and carrying said weight, links connected between said weight and plate and adapted to act as guards for preventing weeds from getting access to said post, a handle in the upper end of said post, and a detent for engaging beneath said handle to hold the weight within the recess.

1,387,666. VALVE-REFACING TOOL. WALTER ROTHER, Detroit, Mich., assignor to R. F. L. Tool and Die Company, Detroit, Mich., a Copartnership comprising Walter Rother, Elmer J. Fox, and Lewis W. Lovet. Filed Aug. 4, 1920. Serial No. 401,094. 5 Claims. (Cl. 82—1.)

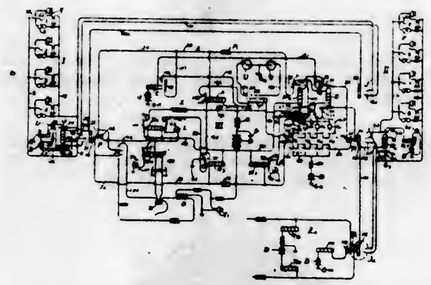
1. A valve refacing tool comprising a shaft, driving means for said shaft, a plurality of cutting blades carried

by said shaft, and conically inclined to the axis thereof, the cutting edges of said blades providing a seat for a



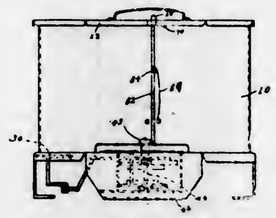
tappet valve, and means for maintaining an axial pressure upon a tappet valve engaging said blades and for restraining said valve from rotation.

1,387,667. COOKING SET. WILLIAM HUNTINGTON RUSSELL, New Haven, Conn. Filed May 2, 1921. Serial No. 466,213. 3 Claims. (Cl. 53—1.)



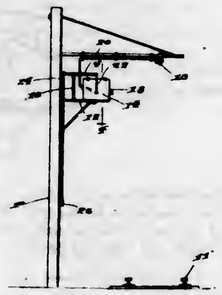
1. A kettle with a vertical passage through it, means for regulating the size of the passage between the lower and upper part of said vertical passage and a cover for the top of said vertical passage, substantially as set forth.

1,387,668. CALL-METERING SYSTEM. FRANK M. SLOUGH, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 26, 1918. Serial No. 255,736. 16 Claims. (Cl. 179—10.)



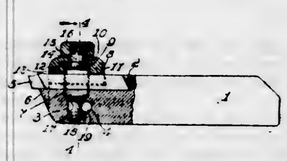
1. In a telephone system, the combination with a telephone line, of a central office connection switch, a line meter having a circuit adapted to be completed by said connection switch, the said line meter having contacts adapted to be closed when the said line meter s energized, an operating winding for the said line meter, a second winding therefor, and adapted to be placed in multiple with the said first winding when the said contacts are closed, a marginal relay and a source of registration current adapted to be connected to the said line meter when a connecting circuit is associated with the said telephone line, by the operation of the said connection switch, an armature for the said marginal relay adapted to be operated when the said line meter contacts are closed, but not operated prior to the closure of the said contacts, means under the control of the said armature to cause the said registration source of current to be disassociated from said line meter when the said armature is operated, and a holding circuit for the said marginal relay including a normally short circuited winding thereof.

1,387,669. TELEPHONE SYSTEM. FRANK M. SLOUGH, Elyria, Ohio, assignor, by mesne assignments, to Stromberg-Carlson Telephone Mfg. Co., Rochester, N. Y., a Corporation of New York. Filed July 20, 1914, Serial No. 851,908. Renewed Jan. 27, 1921. Serial No. 440,528. 26 Claims. (Cl. 179—35.)



1. In a telephone system, the combination of a main station, a plurality of substations, telephone lines leading from the substations to the main station, one of said lines having a plurality of substations on the same, multiple terminals at the main station for said telephone lines, a cord circuit at the main station for connecting the lines together, means for connecting the cord circuit to the terminals of the lines, busy test signaling means for giving a signal when a busy line is tested, and means for disabling said busy test signaling means when a test is made upon a multiple conductor of a line already connected to the link conductors.

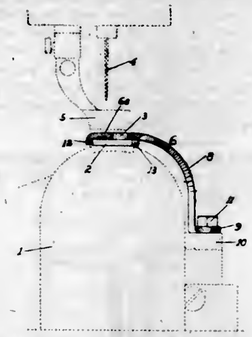
1,387,670. BREAD-TOASTER. CHARLES P. STRITE, Minneapolis, Minn. Filed May 29, 1919. Serial No. 300,677. 8 Claims. (Cl. 219—19.)



1. A bread toaster comprising a casing, heating means in said casing, and means for cutting off the supply of heat after the bread has been toasted for a predetermined length of time.

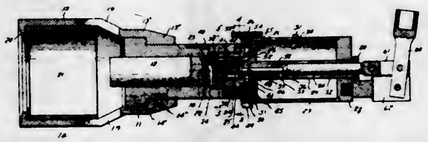
1,387,671. CAR-SIGNAL. SADIE WIDEMAN, Niles, Mich. Filed Dec. 8, 1920. Serial No. 429,216. 1 Claim. (Cl. 246—209.)

A signaling device comprising an inclosing box mounted on a suitable support, a source of light within the box, vertically swinging spring held doors on opposite ends of the box and arranged to open toward an approaching car on a railway, reflectors on the inner faces of the doors, vertical supports on the first named support, rock levers pivotally supported on the supports, depending links pivotally connected to the inner ends of the rock levers and adapted for manual manipulation, and depending links pivotally carried by the other ends of the rock levers and pivotally connected with the respective doors.



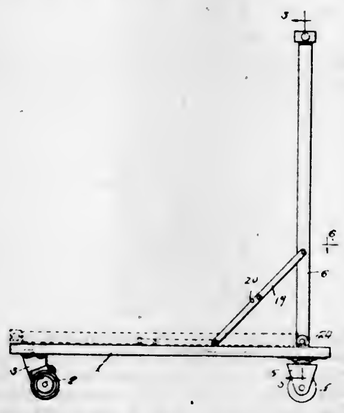
1,387,672. TOOL-HOLDER. WALTER O. WILLE, Waterloo, Iowa. Filed Apr. 8, 1920. Serial No. 372,181. 2 Claims. (Cl. 29—96.)

2. A tool holder, embodying a transversely shouldered member having an upper channel to receive the lower part of a bit therein, said member having a vertically arranged bottom socket traversing said channel, and adjustable clamping means, comprising a transversely slotted body seated in said socket rockingly to project above said member and having its slot in line with said channel of greater height than the latter, said body having an annular groove positioned within said socket, said member having a transverse orifice traversing part of said groove, and a pin mounted in said orifice engaging the walls of said groove, permitting the body to be rocked in said socket while secured therein, and a clamp with corners truncated adjustably mounted and secured removably to said body to clamp said bit in an adjusted position upon said member.



1,387,673. KNIFE-PROTECTOR FOR SHOE-STITCHING MACHINES. ANTONE M. WIRTH, Stockton, Calif., assignor of one-half to Frank J. Mackey, Stockton, Calif. Filed June 9, 1920. Serial No. 387,697. 5 Claims. (Cl. 112—45.)

1. In a shoe stitching machine, the combination with the shuttle door, a needle knife plate thereon and a vertical pivotal bolt on the machine on one side of the door; of a plate projecting over the knife-plate and provided with a slot in which the knife is inclosed, and an arm formed with the plate and projecting down alongside



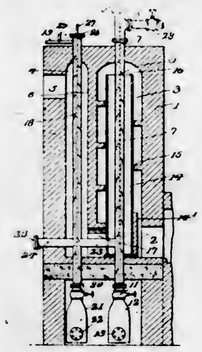
the door to said bolt thereof and being pivotally held by the latter.

1,387,674. HYDRAULIC WHEEL-PULLER. CHARLES W. WOOD and EDGAR C. KELLY, Hampton, Va. Filed June 4, 1920. Serial No. 386,619. 6 Claims. (Cl. 138—10.)

1. A wheel puller comprising a casing having a wheel engaging member at one end and a reservoir at its other end, a ram slidably mounted in the casing for projection therefrom in wheel pulling active relation to the wheel engaging member, a pump within and communicating with the reservoir and ram chamber of the casing in position to force liquid under pressure against the ram, and a manually controlled vent from the casing at the head of the ram to the reservoir.

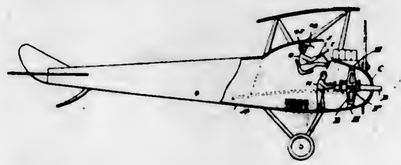
1,387,675. FOLDABLE PUSHMOBILE. DAVID WOROBOW, Chicago, Ill. Filed Mar. 15, 1920. Serial No. 365,822. 5 Claims. (Cl. 280—87.5.)

4. In a vehicle of the class described, a platform having a vertical perforation, a single forward wheel swiveled



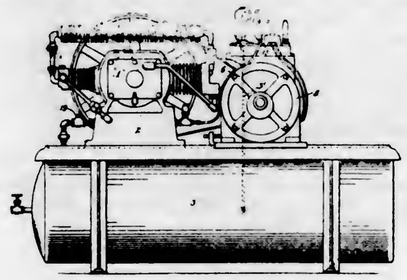
under the platform in axial alinement with said perforation, a riser normally extending upward from the said perforation and swiveled to the platform on a horizontal axis disposed above the platform and transversely of the vehicle, a steering rod carried by the riser and swiveled thereto on an axis longitudinal of the latter, and a connecting member extending through the perforation and having at its opposite ends tangs respectively engaging corresponding socket formations in the steering rod and in the mounting of the forward wheel.

1,387,676. STEAM-GAGE. PHILIP IGNACIOUS WRIGHT, Oakland, Calif. Filed Nov. 24, 1920. Serial No. 426,145. 7 Claims. (Cl. 73—54.)



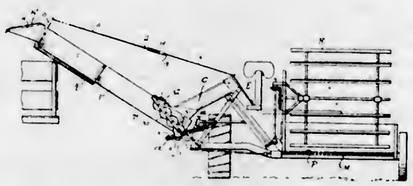
1. The combination with the glass tube of a steam gage fixture, having securing nuts for the upper and lower ends thereof, of a water shedding protector secured on the tube to lie intermediate the securing nut for its upper end and the normal water level designation of the tube.

1,387,677. PROCESS OF HEATING OIL-RETORTS AND APPARATUS THEREFOR. CLIVE M. ALEXANDER, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Mar. 14, 1916. Serial No. 84,212. 8 Claims. (Cl. 196—3.)



1. The method of heating oil converting devices, which comprises leading fire gases in contact with a heat conductive partition spaced away somewhat from such oil converting device but in heat radiating relationship throughout substantially its entire length and thereafter leading such fire gases between such partition and such device.

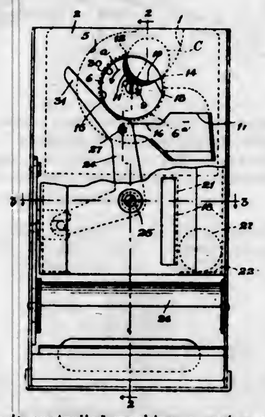
1,387,678. GUN MOUNT AND CONTROL. GILBERT V. ANDERSON, Philadelphia, Pa. Filed July 5, 1917. Serial No. 178,568. 57 Claims. (Cl. 89—40.)



1. The combination with an air ship, of a gun thereon, a sighting device adapted to be secured to the operator's head, and fluid pressure means compelling the gun to move in unison with the sighting device.

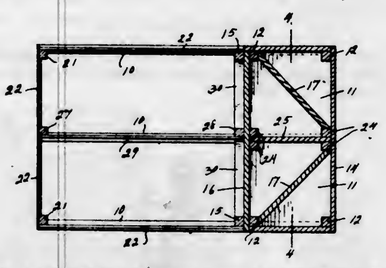
1,387,679. PRESSURE-RELEASE. ROLLIN L. BACHER, Cleveland Heights, Ohio, assignor to The United States Air Compressor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 3, 1919. Serial No. 342,158. 6 Claims. (Cl. 230—24.)

1. In apparatus of the character described, the combination with an air compressor, a suitable chamber for retaining the air under pressure, and means for controlling the actuation of said compressor including a motor and a switch for governing the latter; of an air conduit communicating with said chamber, an unloading valve, means for supporting the latter, said valve adapted to communicate with said conduit and provided with an outlet to the atmosphere, and means actuated by said switch adapted to close the outlet, said means adapted to be held by the switch in outlet closing position against the pressure of air in said chamber.



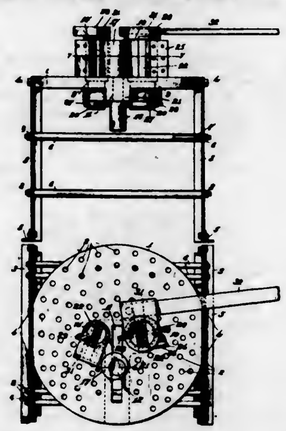
1,387,680. HARVESTER ATTACHMENT. BURTON W. BAKER, Silesia, Mont. Filed Oct. 24, 1919. Serial No. 332,940. 6 Claims. (Cl. 193—14.)

1. In combination with a supporting structure, a conveyer comprising side boards, a shaft rotatably supported by said side boards adjacent one end, connections between the shaft and the supporting structure, said connections including a member engaged with the shaft, said member being provided with an opening, a strap slidably disposed



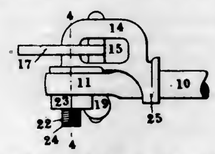
through the opening and engaged with the supporting structure, means for clamping the member on the shaft to the strap, and an endless member in driven connection with the shaft.

1,387,681. COIN-TESTING MECHANISM FOR COIN-CONTROLLED MACHINES. LOUIS BERTRAM, Long Island City, N. Y., assignor to Automles Corporation, New York, N. Y., a Corporation of New York. Filed May 3, 1918. Serial No. 232,205. 5 Claims. (Cl. 194—102.)



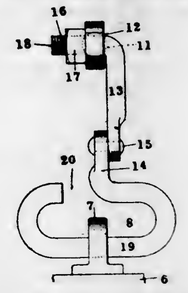
1. In a coin-controlled machine, a casing adapted to be supported in a substantially upright position and having a downwardly extending coin-passage, the width of said coin-passage being substantially equal to the thickness of a proper coin, a hand-operable coin-disk mounted to rotate in said coin-passage and having a curved seat or recess for receiving a proper coin and carrying the same into operative position, and a beveled surface leading downwardly from said coin-seat, whereby checks of less than prescribed thickness or diameter automatically slide down said beveled surface out of the coin-seat.

1,387,682. COMBINED SETTING AND BROODING COOP. DAVID W. BUSH, Jr., Bartley, Nebr. Filed Nov. 11, 1920. Serial No. 423,256. 4 Claims. (Cl. 119—19.)



1. In a setting and brooding coop, a rectangular floor, vertical uprights secured to said floor at the corners thereof, side walls secured to said uprights, a removable diagonally disposed partition within the coop and abutting the side faces of diagonally opposed vertical uprights at their junction with the side walls, and a roof for said coop comprising pairs of rafters adapted to abut and rest upon the vertical ends of said uprights, spaced transverse members having their ends secured to the rafters of each pair and a weather-proof covering for said rafters, said covering being provided with a hinged portion forming a door through which said partition may be removed.

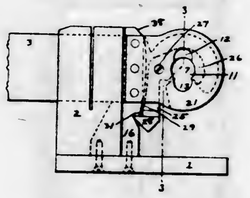
1,387,683. METAL-WORKING DEVICE. HERMAN BUSSEL, El Paso, Tex. Filed June 17, 1919. Serial No. 304,753. 8 Claims. (Cl. 153—40.)



1. A bed plate provided with a pair of circular sockets, rotary posts mounted therein and each provided with a stock-receiving slot, said plate also being provided with an elongated slot extending between said sockets, a pin adjustably mounted in said slot with relation to said posts, and means for turning said posts, substantially as described.

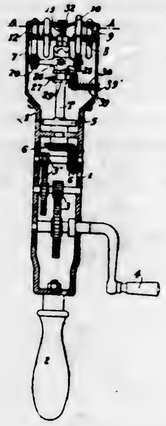
1,387,684. ATTACHMENT FOR PIN-LIFTERS. STERLING H. CAMPBELL, St. Louis, Mo. Filed Oct. 15, 1919. Serial No. 330,874. 2 Claims. (Cl. 213—59.)

1. The combination with an operating rod provided with a horizontal opening, of an attachment carrying an integral stud extending through said opening said attachment being provided with a vertical eye, and means carried by the attachment for engaging with the rod to prevent its pivotal movement relative to the rod.



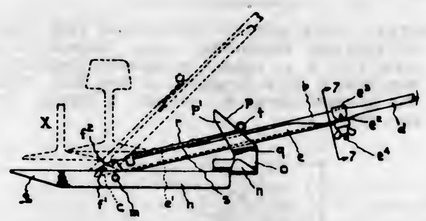
1,387,685. COUPLING-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed Apr. 6, 1921. Serial No. 458,891. 4 Claims. (Cl. 213—59.)

4. In a device of the class described, the combination with a coupler locking pin, of an operating lever therefor, and a link comprising two pieces pivoted together, the



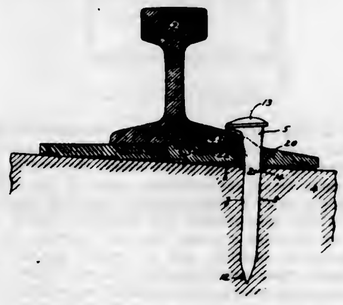
ends of said links being pivoted to the lever and locking pin respectively to move in a vertical plane, the axes of all of said pivots being substantially parallel.

1,387,686. ELECTRIC SWITCH. PHILIP H. CHASE, East Orange, N. J. Original application filed Feb. 28, 1916, Serial No. 80,923. Divided and this application filed Nov. 4, 1916. Serial No. 129,610. 13 Claims. (Cl. 200—169.)



1. An electric switch combining a blade member adapted to close a circuit and comprising two spaced parts substantially in the plane of the blade and having registering apertures adapted to receive an operating implement, means comprising a fixed shield extending between said spaced parts, and means controlled by said shield and adapted to blanket said apertures throughout a portion of the movement of said blade, to prevent removal of the implement from said apertures throughout said portion of the movement of the blade.

1,387,687. MASSAGING APPARATUS. PAUL LOUIS FRANÇOIS HIPPOLYTE CHAUSSINAND, St. Dizier, France. Filed Apr. 2, 1913. Serial No. 758,418. 12 Claims. (Cl. 128—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

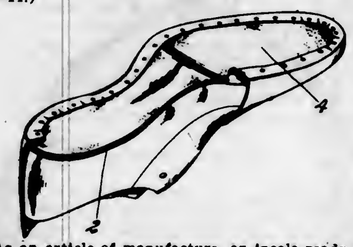


1. A vibratory massaging apparatus comprising in combination with a driven shaft, a cross-member carried thereby, rollers mounted on said cross-member, and a series of fingers actuated by said rollers, as and for the purpose set forth.

1,387,688. TRACK-LINER BAR. LOUIS P. CHICOINE, Vaudreuil, Quebec, Canada. Filed Sept. 16, 1920. Serial No. 410,803. 15 Claims. (Cl. 254—43.)

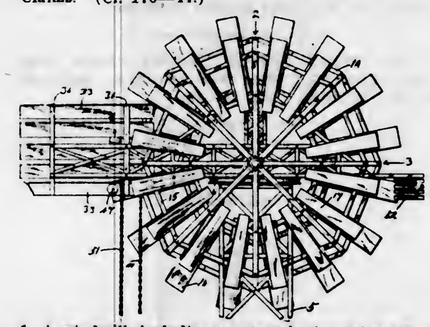
1. A track liner comprising a lever, a shoe of trough form in cross-section adapted to fit upon the lever; means rigidly securing the shoe to the lever; a pointed foot; and means pivotally connecting the foot to the shoe.

1,387,689. TRACK-SPIKE. LOUIS P. CHICOINE, Vaudreuil, Quebec, Canada. Filed Sept. 16, 1920. Serial No. 410,804. 3 Claims. (Cl. 238—295.)



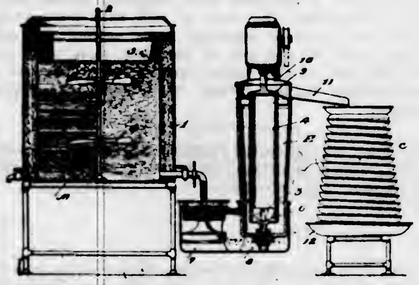
1. A track spike of rectangular cross-section having a projection upon its side which is farthest from the rail and an enlargement on its opposite side adjacent the throat thereof, such enlargement being adapted to engage the rail when the spike is being driven whereby the latter is shifted in a direction away from the rail for the purpose set forth.

1,387,690. PACKING-BOX. OLE DAHL, Muskegon, Mich. Filed Mar. 1, 1920. Serial No. 362,634. 3 Claims. (Cl. 286—37.)



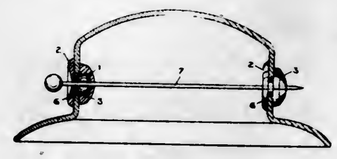
1. A packing box having serrations upon its periphery, and an anchoring element consisting of an annular body open at one side, a right angled spring arm projecting upwardly from one side of the opening in the body and engaging the serrations and so anchored as to prevent the box from unscrewing from its bearings and arranged to allow the box to be screwed farther into the barrel if desired.

1,387,691. INSOLE. HERMAN A. DAVENPORT, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 23, 1918. Serial No. 251,112. 7 Claims. (Cl. 36—44.)



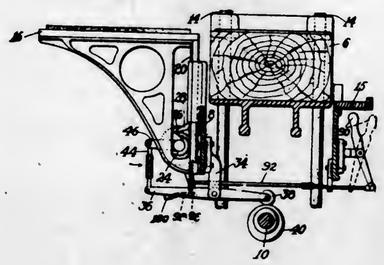
1. As an article of manufacture, an insole ready for incorporation in a shoe comprising a sole-shaped body of unvulcanized vulcanizable material, and a body of fibrous material which is capable of being molded and retaining the mold imparted to it attached to one surface of the said vulcanizable material.

1,387,692. WINDMILL. JOHN J. DONNELLY, Denver, Colo. Filed Jan. 2, 1920. Serial No. 348,844. 5 Claims. (Cl. 170—44.)



1. A windmill, including a rotary horizontal shaft, two windwheels of different size, fast thereon and spaced from each other, a vane extending across the shaft between the wheels and having a controlling member deflected toward the smaller wheel for balancing purposes when the direction of the wind is between the wheels.

1,387,693. PROCESS OF FORMING BAKERS' MIX. FRANK ANTONE DOYLE, West Chester, Pa., assignor to The Sharples Separator Co., West Chester, Pa., a Corporation of Pennsylvania. Filed July 20, 1920. Serial No. 397,651. 4 Claims. (Cl. 99—10.)

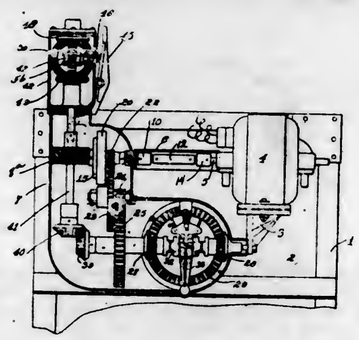


1. The process of forming a baker's mix consisting of mixing a shortening fat and a wetting and emulsifying the mixture whereby the shortening fat is divided into relatively small particles and a thoroughly homogeneous liquid mass produced.

1,387,694. HAT AND FASTENER FOR SAME. BERTRAND ISAAC EADDY, Remuera, Auckland, New Zealand. Filed Feb. 26, 1921. Serial No. 448,080. 1 Claim. (Cl. 132—70.)

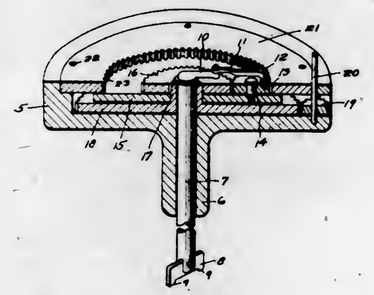
A device of the character described adapted for application to a hat, a compressible spring dome having a central pin receiving aperture, a laterally projecting flange carried by the relatively small terminal of the dome having a countersunk portion, and an aperture adapted to receive a pin, and a socket member having a recess decreasing in diameter toward its open end adapted to receive and compress the dome, said socket member having a relatively narrow edge presented to and of less diameter than the flange and disposed in close relation to the latter whereby to firmly clamp a portion of the material of a hat to maintain the device in position thereon.

1387,695. WORK-SUPPORT FOR CUTTING-MACHINES. HARRISON H. EATON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 9, 1918. Serial No. 265,902. 24 Claims. (Cl. 164—19.)



1. In a sole cutting machine, a cutting bed, power means for operating on work on the bed, a work support, and power means for moving the work support at intervals determinable by the operative to present the pieces of work supported thereon successively in selected positions closely adjacent to the plane of the upper surface of the cutting bed.

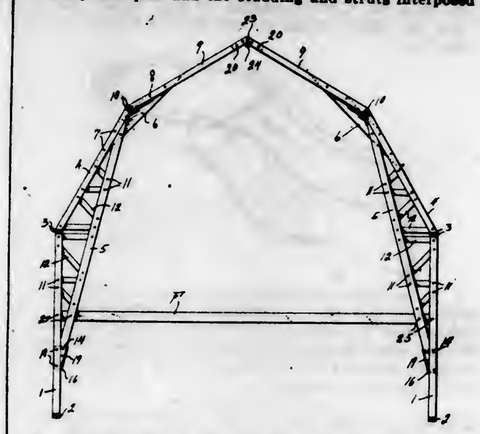
1,387,696. WASHING-MACHINE DRIVE. HAROLD W. EDEN, Alton, Ill., assignor, by mesne assignments, to Gillespie-Eden Corporation, a Corporation of Delaware. Filed Aug. 13, 1917. Serial No. 185,896. 2 Claims. (Cl. 74—7.)



2. Transmission mechanism for washing machines comprising a casing adapted to be attached on the side of a washing machine and having a plurality of shaft bearing portions therein, a plurality of shafts supported by said bearing portions, intermeshing gears mounted on said shafts, one of said gears being rotatably mounted upon

one of said shafts and having an extension, a clutch member secured on said extension, and centrifugal clutch

mechanism connecting said last mentioned shaft and said clutch member.

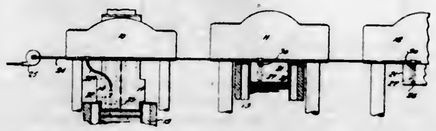


1,387,697. MECHANISM FOR IMPARTING AN OSCILLATORY MOVEMENT TO A DRIVEN ELEMENT. WILLIAM T. EDWARDS, San Diego, Calif. Filed Nov. 29, 1920. Serial No. 427,157. 2 Claims. (Cl. 74—14.)

1. A device of the character described comprising an oscillatory shaft, a crank thereon, a rotative gear wheel, a wrist pin carried by said gear wheel, a connecting rod between said wrist pin and said crank, a floating disk, a stud carried by said floating disk upon which the gear wheel is journaled for rotation and a pair of gears with which the first named gear wheel meshes, one of which lies inwardly of said first named gear wheel and the other of which lies outwardly thereof and all of which gears lie in substantially the same horizontal plane, one gear of the pair being fixed and the other gear of the pair being mounted for rotation and means for imparting rotation to said rotative one of the pair of gears.

1,387,698. BUILDING STRUCTURE. INGVALD E. ERICKSON, Osakis, Minn., assignor of one-half to Frank S. Blochowick, Osakis, Minn. Filed Aug. 9, 1920. Serial No. 402,123. 6 Claims. (Cl. 20—1.)

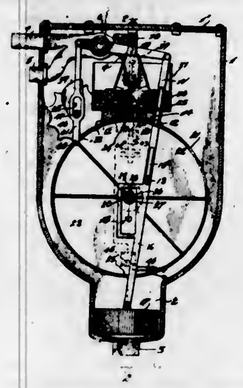
1. In a building structure, the combination of an upstanding studding, a plate on the upper end of the studding, a rafter having its lower end portion mounted upon the plate, a plate arranged at the upper end of the rafter, a second rafter having its lower end engaged with the last named plate, a plate connecting the adjacent ends of the first and second rafters, a purlin post connected to said last named plate and the lower portion of the studding, struts interposed between and connected to the purlin post and the studding and struts interposed



between the purlin post and the first named rafter and secured to both the rafter and the purlin post.

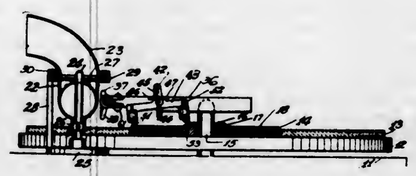
1,387,699. TYING DEVICE. GEORGE ALFRED FORD, Kansas City, Mo. Filed Nov. 10, 1919. Serial No. 337,097. 4 Claims. (Cl. 24—18.)

3. A tying device comprising an elongated base plate having its ends rounded and its edges all around turned downward and disposed in the same plane so as to rest in gripping relation upon a package to hold the device against twisting during the tying of the package, said turned down edges being formed in part at one end by an annular bead providing for the reception and retention of the thumb within the bead, said turned down edges being formed in part at the other end by a button-carrying elevation on the base plate, and said turned down edges intermediate the ends of said base plate being formed by means of marginal beads uniting the said annular bead at one end of the base plate with the marginal part of said button-carrying elevation, and a string-holding button carried by said button-carrying elevation.



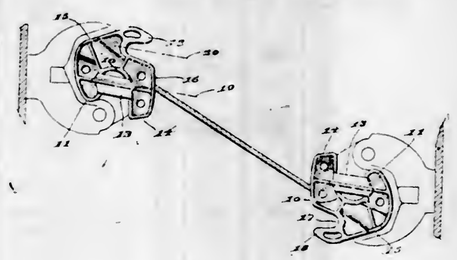
1,387,700. EXPRESSING-PRESS. ALFRED W. FRENCH, Piqua, Ohio. Filed Apr. 12, 1919. Serial No. 289,689. 8 Claims. (Cl. 100—50.)

1. In a press, the combination of a cage in which the material is confined, a pressure device at one end of the cage provided with an oil escape passage communicating with the adjacent portion of the cage, and suction means connected with said escape passage for withdrawing oil from the portion of the cage adjacent said pressure device.



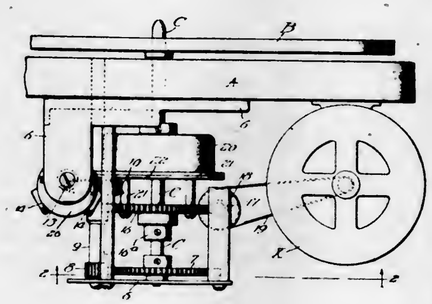
7. In a press, the combination of a cage in which the material is confined, and a pressure device adapted to enter the upper end of the cage and having an oil passage therethrough, of oil receiving grooves in the lower face of said pressure device and in communication with said oil passage, and suction means connecting with said passage for withdrawing oil from the upper portion of said cage.

1,387,701. FLUID-MEASURING APPARATUS. NORMAN B. GARDINER, Staten Island, N. Y. Filed Dec. 20, 1916. Serial No. 138,120. 33 Claims. (Cl. 221—106.)



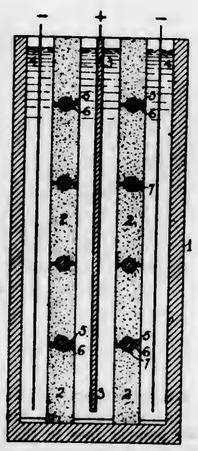
1. In a fluid measuring apparatus, in combination, a means of fluid supply, a measuring container automatically operated by the fluid itself to receive and discharge fluid, and means coöperating with said fluid supply means for assuring to said container upon each operation thereof a supply of fluid equal to but not exceeding the volumetric capacity of the container.

1,387,702. DRIVING MEANS FOR PHONOGRAPH ATTACHMENTS. WILLARD H. GILMAN, New York, N. Y., assignor, by mesne assignments, to John A. McVickar, New York, N. Y. Filed Mar. 29, 1920. Serial No. 369,571. 9 Claims. (Cl. 274—13.)



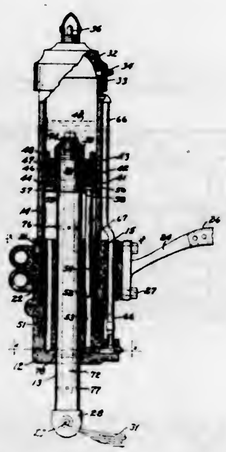
1. In a phonograph mechanism, the combination of a turntable mounted for rotation, a spiral plate and a record placed on said turntable, a tone arm arranged to move across the face of said record and a plurality of engaging means connecting said spiral plate with said tone arm, whereby said tone arm moves over a wider space on said record than the width of said spiral.

1,387,703. SWITCHING-CABLE HOOK. DAVID T. GOODMAN, Altoona, Pa. Filed Nov. 8, 1920. Serial No. 422,562. 3 Claims. (Cl. 213—65.)



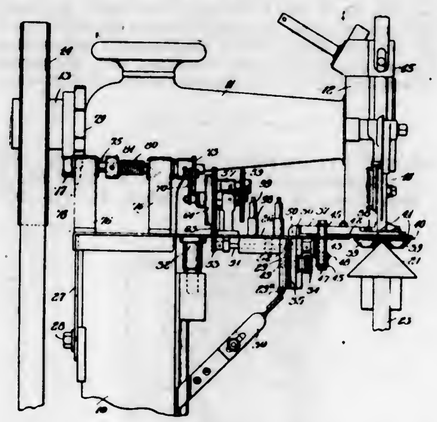
1. A hook for switching cables having a bumper face at the free end of its stem, cable attaching means, spaced materially from the bumper face in the direction of the bill of the hook, and a cable connected with the attaching means and of such flexibility as to permit it to hang therefrom rearwardly of the bumper face.

1,387,704. SPEED-EQUALIZING DEVICE FOR PHONOGRAPHS, &c. CLIFFORD H. GREEN, Grand Rapids, Mich., assignor to National Piano Manufacturing Company, Grand Rapids, Mich., a Corporation of Illinois. Filed June 14, 1918. Serial No. 239,981. 9 Claims. (Cl. 185—40.)



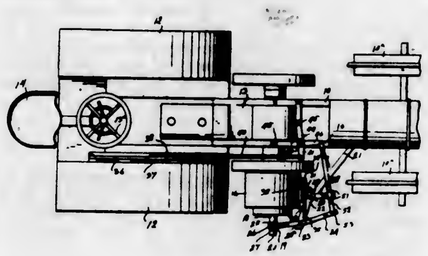
9. In speed equalizing devices for phonographs, the combination with a revoluble turntable, a shaft on the upper end of which said turntable is mounted, and a spiral spring the inner end of which is permanently secured to said shaft, of an annular casing surrounding said spring concentric to said shaft and having an inner annular surface adapted to be frictionally engaged by the outer convolution of said spring, a gear connected to said casing, a motor and gearing for transmitting motion from said motor to said first mentioned gear, a gear securely mounted on said shaft, and governor mechanism driven thereby.

1,387,705. ELECTROLYTIC DIAPHRAGM. WILLIAM E. GREENAWALT, Denver, Colo. Filed May 25, 1920. Serial No. 384,143. 6 Claims. (Cl. 204—28.)



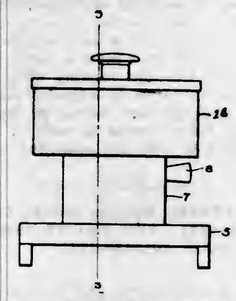
1. An electrolytic diaphragm composed of a plurality of porous sections having grooved edges and metal rods inclosed in rubber tubing inserted in the grooves between the porous sections to support them.

1,387,706. SHOCK-ABSORBER. GEORGE H. GRUSS, San Francisco, Calif., assignor, by direct and mesne assignments of one-fourth to L. E. Bedford and one-fourth to Cachot Therkelsen, San Francisco, Calif. Filed Oct. 20, 1919. Serial No. 331,907. 13 Claims. (Cl. 267—64.)



3. In a shock absorber, a base block having a portion tapered inwardly from a cylindrical end, a tube adapted to fit over the cylindrical end and tapered portion of said base and having that part opposite the tapered portion of the base tapered outwardly, and a clamp ring adapted to inclose the tube to compress the outwardly tapered end thereof into locked engagement with the inwardly tapered portion of the base.

1,387,707. FEEDING MECHANISM. GEORGE H. GUNN, Rochester, N. Y., assignor of one-half to Charles E. French, Rochester, N. Y. Filed June 24, 1920. Serial No. 391,496. 5 Claims. (Cl. 1—7.)

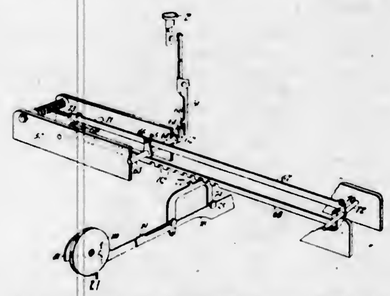


1. In a feeding mechanism for a stitching machine having a signature supporting saddle, a bed, work feeding rolls coöperating with the inclined sides of said saddle, a shaft for actuating said rolls, and operative means for intermittently rotating said shaft arranged for actuation by said machine.

1,387,708. TRACTOR. WALTER B. HALL and TOM MERRILL, Stratton, Nebr. Filed Dec. 1, 1920. Serial No. 427,536. 6 Claims. (Cl. 180—53.)

1. The combination with a tractor embodying the usual driver's seat, power unit, control for the power unit adjacent the driver's seat, a shaft driven by the power unit, a pulley rotatably mounted upon the shaft and a member when shifted in one direction to hold the pulley against rotation, of a brake engaging said pulley, a bracket secured to the frame of the tractor and embodying a portion extending adjacent the periphery of the pulley, a lever pivotally mounted upon said bracket, a shiftable member operated by the lever when moved in one direction for shifting the first named member to hold the pulley against rotation with relation to the shaft, a bell crank lever pivotally mounted upon the portion of said bracket adjacent the periphery of the pulley and embodying an arm extending in a direction away from said lever to which said brake is pivotally connected, a bar connecting said lever and the other arm of said bell crank lever and means for shifting said arm disposed adjacent the driver's seat.

1,387,709. AGITATOR. HOBART HALSTEAD, Buffalo, N. Y. Filed Aug. 19, 1919. Serial No. 318,587. 2 Claims. (Cl. 259—122.)



1. An agitator comprising a base, a casing supported on the base, a rotor disposed within the casing, a receptacle removably mounted on the casing, and a dasher disposed within the receptacle and fixed to rotate with the rotor, said dasher serving to limit the upward displacement of the receptacle, by contact with the bottom thereof.

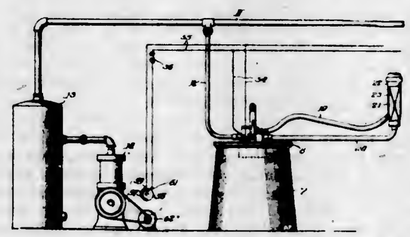
1,387,710. METHOD OF DRYING VEGETABLES AND FRUITS. BURT S. HARRISON, Brooklyn, N. Y., assignor to Carrier Engineering Corporation, New York, N. Y. Filed Aug. 3, 1918. Serial No. 248,113. 5 Claims. (Cl. 99—5.)

2. The hereindescribed method of drying fruits and vegetables consisting in slicing the material, treating the sliced material with a saline solution which prevents oxidization of the material, and then drying the material in the presence of an inert or non-oxidising gas.

1,387,711. COMBINED TYPEWRITING AND COMPUTING MACHINE. FREDERICK A. HART, Jersey City, N. J., assignor, by mesne assignments, to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1911. Serial No. 656,696. 105 Claims. (Cl. 235—60.)

1. In a combined typewriting and computing machine, the combination with typewriting mechanism including numeral types, of computing mechanism including denominational computation members, levers to operate said types and control said computing mechanism, and mechanism for controlling said typewriting mechanism from said computing mechanism, comprising devices whereby the action of said levers is governed by said computing mechanism, according to the position of said computation members.

84. The combination, with a typewriting machine, of a computing device including a series of cams, a series of bars positioned by said cams, and means for actuating said bars to control the operation of the numeral key levers of the typewriter.



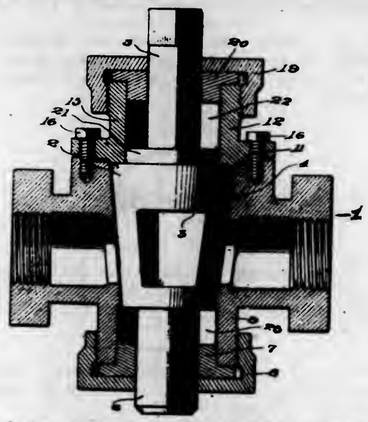
94. The combination of a set of independently settable computation devices, a series of numeral type-bars, means for operating said type-bars, and type-bar selecting devices controlled by said computation devices.

1,387,712. SHOE AND METHOD OF MAKING THE SAME. GUSTAF E. HEDLUND, Brockton, Mass. Filed Mar. 7, 1921. Serial No. 450,379. 8 Claims. (Cl. 36—30.)

1. A shoe provided with an outsole and an upper and having a wedge-shaped member interposed between said outsole and upper at one side of a median line extending from toe to heel.

1,387,713. MILKING-MACHINE. PALMER B. HEWLETT, San Francisco, Calif. Filed July 19, 1920. Serial No. 397,157. 5 Claims. (Cl. 31—101.)

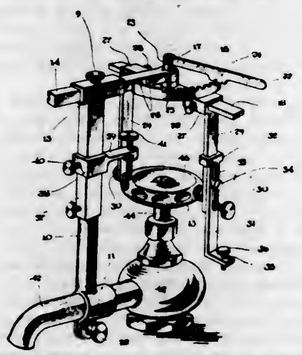
1. In a milking machine, the combination of a milk receptacle cover provided with a depending annular flange, an electromagnet disposed within said flange, a cover engaged with said flange to inclose said magnet, a pulsator casing mounted upon said cover, pulsator valves disposed within said casing, means actuated by said magnet for operating said valves, vacuum producing means, and means for intermittently energizing said magnet.



2. In a milking machine, the combination of a milk receptacle cover, an electromagnet mounted on the lower face of said cover, means for inclosing said magnet, pulsator valves arranged to be actuated by said magnet, and a vent opening through said cover into the magnet inclosure.

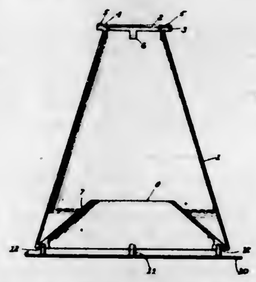
3. In a milking machine, the combination of a milk receptacle cover, an electromagnet mounted on the lower face thereof, a chamber inclosing said magnet, a vent opening from said chamber to said cover, pulsator valves arranged to be actuated by said magnet, means for periodically energizing said magnet, and means for producing a vacuum in said receptacle.

4. In a milking machine, the combination of a milk receptacle cover provided on its lower face with a depending annular flange, an electromagnet arranged within said flange, a cover threaded onto the lower end of said flange, an armature disk adapted to be actuated by said magnet, a post carried by said disk, a pulsator valve disposed above said cover and adapted to be actuated by said post, and a hardened wear-resisting element interposed between said post and the stem of said valve.



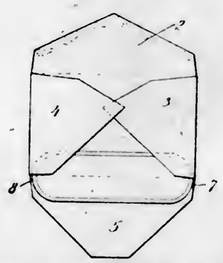
5. In a milking machine, the combination of a milk receptacle cover, an electromagnet attached to the lower face of said cover, an electrical socket projecting above said cover and connected with said magnet, a pulsator valve, operative connections between said valve and said magnet, vacuum inducing means, and means for periodically energizing said magnet.

1,387,714. STOPCOCK. FREDERICK C. HEYLMAN, Martinez, Calif. Filed Dec. 10, 1918. Serial No. 266,108. 2 Claims. (Cl. 251—91.)



1. A device of the character described comprising a body casting having alining ways therethrough, and a central chamber communicating therewith, said chamber having a frusto-conical wall, a conical plug fitted to turn in said chamber and having a port adapted to register with said ways, a stem projecting upwardly from said plug, said casting provided with an internal groove at its upper end having an external shoulder, said body casting having screw threaded sockets opening out on its upper face, a gland placed upon said body casting and having an annular flange provided with openings above said sockets, said gland provided with a depending ring adapted to slidably enter said groove, screws fitted through the openings in said flange and engaging the threads in said sockets, a gasket of narrow width compared to said groove seated therein and adapted to be compressed by said gland, said gland extending inwardly above the plug chamber and having a depending central portion engaging the upper end of the plug for holding the same tightly seated in the frusto-conical wall of the casing, said plug having a reduced upper portion extending upwardly into the interior of the gland, a packing ring extending about the upwardly projecting stem of the plug, and a screw cap engaging the gland for securing said packing ring in place.

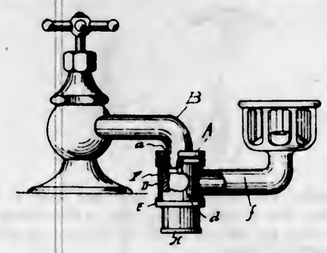
1,387,715. CONTROLLING MEANS FOR SPRING-OPERATED FAUCETS. GEORGE ALBERT HICKMAN, Pearl River, N. Y. Filed June 28, 1920. Serial No. 392,194. 9 Claims. (Cl. 251—163.)



1. Controlling means for faucets having a nozzle and a spring closed valve and operating handle, consisting of a standard having its lower end adapted to be clamped to the nozzle and having a bearing at its upper end, a supporting arm slidably mounted in the bearing of the standard, means for securing said supporting arm in adjusted position in said bearing, a swinging cross head carried by the outer end of said supporting arm, an operating bar for said cross head, a rack segment carried by the supporting arm and coacting with the operating bar to maintain the same in adjusted position, a pair of adjustable clamping bars carried by the cross head, and a clamping screw carried by each of the clamping bars and engageable with the operating handle of the faucet.

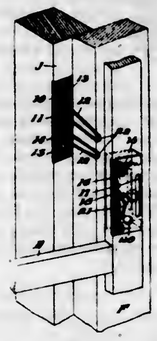
1,387,716. FLYTRAP. FRANCES HOPLEY, Lampman, Saskatchewan, Canada. Filed Sept. 15, 1920. Serial No. 410,458. 1 Claim. (Cl. 43—122.)

A fly-trap comprising a hollow smooth-sided body of frusto-conical form, a foraminous cover for said body, resilient prongs on said cover holding the latter upon the said body, a base plate of resilient material provided with pockets, claws projecting up from said base plate into said pockets, and coöperating projections upon said body adapted to interlock with said claws to secure the base plate to the body at a distance from the latter.



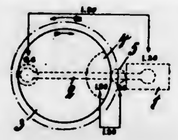
1,387,717. ENVELOP. GEORGE FRANCIS HOGAN, Chicago, Ill. Filed Oct. 3, 1919. Serial No. 328,175. 2 Claims. (Cl. 229—71.)

1. An envelop formed from a blank having at the junction line of the back flap and body a cutout or opening, symmetrical on opposite sides of the said junction line and of a length such that the end flaps will extend across the ends of the opening when the blank is folded whereby to form at each end of the opening in the completed envelop supports for the rear face of an article within the envelop.



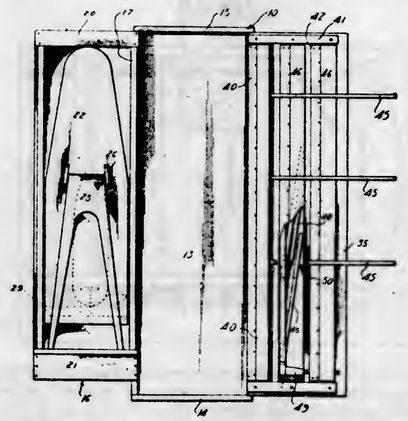
1,387,718. DRINKING ATTACHMENT FOR FAUCETS. WALTER S. HOLLAENDER, Cincinnati, Ohio. Filed June 30, 1919. Serial No. 307,726. 1 Claim. (Cl. 299—9.)

In a drinking attachment for faucets the combination of a pipe section having an opening in its side and an unobstructed passage within it, means for securing the pipe section to a faucet, a sleeve having a bubbler secured thereto and being mounted upon the pipe section so that the bubbler may be brought to register with or



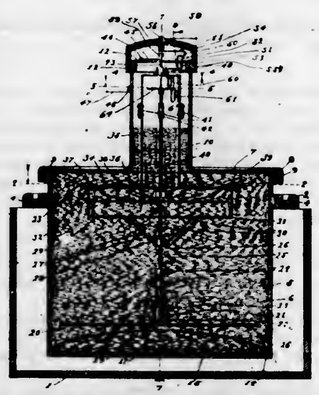
be out of registration with the opening in the side of the pipe section and a wire mesh mounted on the pipe section at the lower end of the unobstructed passage therein and adapted to divert water through the bubbler.

1,387,719. DOOR-FASTENER. OSCAR HUFFMAN, Portsmouth, Ohio. Filed Sept. 2, 1920. Serial No. 407,803. 4 Claims. (Cl. 292—76.)



1. A device of the class described comprising a looped resilient member permanently positioned on a door jamb and embodying a resilient receiving portion, a door and a latch mechanism upon said door, said latch mechanism being formed with alined openings through which said resilient member projects, a stud carried by said latch mechanism which coöperates with said looped resilient member to frictionally retain the door in closed position, and means for positively engaging a projecting end of said resilient member, substantially as described.

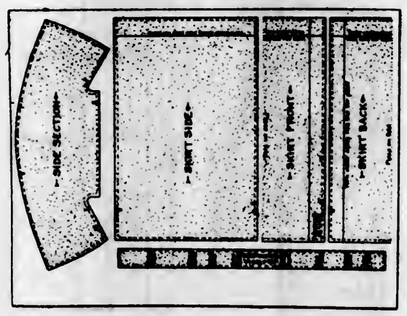
1,387,720. BALANCING DEVICE FOR MOTORS. OSKAR OLOF HULT, Stockholm, Sweden. Filed Apr. 1, 1920. Serial No. 370,565. 8 Claims. (Cl. 74—5.)



2. The combination with a motor provided with a shaft which is journaled at both sides of the crank portion of the shaft, of a balance weight mass rotatable with the motor shaft, and a balance weight mass rotatable in an opposite direction to and with the same angular velocity as the motor shaft, characterized in that the last mentioned balance weight mass rotates around the axis of the motor shaft.

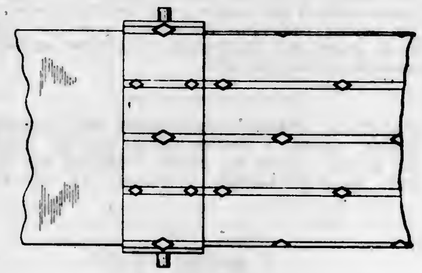
1,387,721. IRONING-CABINET. FREDERICK W. HURST, Logan, Utah. Filed Feb. 18, 1920. Serial No. 359,488. 3 Claims. (Cl. 68—34.)

1. A device of the class described including a support U-shaped in horizontal section and mounted for swinging movement in a horizontal plane, a standard slidably carried by and within the support for movement in a vertical plane, a plurality of spaced arms pivoted to said standard and extending through the open side of the support, and inclined guiding and bracing strips secured in said support at the open side of the same to engage the under sides of said arms whereby vertical movement of the standard will cause the arms to rock upon said strips to project from the support or be housed entirely between the sides of the same.



1,387,722. FIRING INSTRUMENT FOR MARINE MINES. LEMUEL J. HUSTED, Kansas City, Mo. Filed Oct. 20, 1917, Serial No. 197,724. Renewed Apr. 21, 1921. Serial No. 464,007. 10 Claims. (Cl. 102—3.)

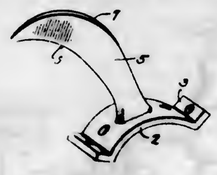
9. In a contact making device, two magnetized bodies arranged one above the other, said bodies mounted to



rotate around an approximately vertical and common axis, and electrical circuit closing contact arranged so that a movement of either of said bodies in a rotary direction will connect said contacts and close said electrical circuit.

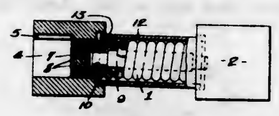
1,387,723. GARMENT-PATTERN. FRANCIS HUTTER, New York, N. Y., assignor to The McCall Company, a Corporation of New York. Filed Nov. 27, 1920. Serial No. 426,781. 5 Claims. (Cl. 33—12.)

1. An article of commerce consisting of a paper pattern for a garment comprising a number of separate pattern pieces having printed thereon the outline to be followed in cutting the fabric, and having a margin outside of said outline.



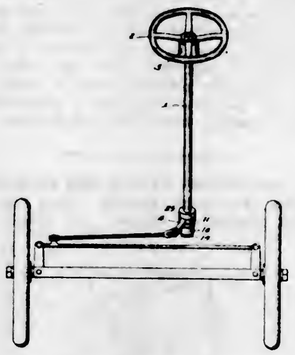
1,387,724. MANUFACTURE OF WALL-PAPER. HERBERT C. JARVIS, Toronto, Ontario, Canada. Filed Nov. 29, 1920. Serial No. 426,985. 2 Claims. (Cl. 101—426.)

1. A process of printing a strip of wall paper with a repeat pattern which consists in employing a printing roller formed with a repeat pattern and having its printing surface wider than the exposed width of the strip of paper when hung and printing said strip with the printing surface of the roller overlapping one edge of the strip, the paper being of a width not less than a suitable repeat of the pattern.



1,387,725. QUACK-GRASS DESTROYER. ALFRED L. JOHNSON, Boardman, Wis. Filed Sept. 15, 1920. Serial No. 410,575. 1 Claim. (Cl. 97—62.)

A blade adapted to be used for destroying grasses, comprising an arcuate shoulder portion, the ends of the said shoulder portion being flattened and forming a plane surface in alinement with the radius of the arc of the shoulder portion, a blade extending outwardly from the shoulder portion and located at a point approximately midway between the ends of the arcuate portion, the inner portion of the blade being disposed approximately in alinement with the radius of the arc of the shoulder portion and the outer portion of the blade being curved

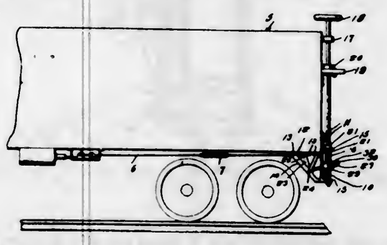


longitudinally, the blade being provided with a curved cutting edge and a curved rear edge, which edges intersect each other and the outer end of the blade in the form of an acuminate angle.

1,387,726. CUSHION POWER-TRANSMITTING ELEMENT. MAXWELL R. KARGE, Phoenix, N. Y., assignor to The Citizens National Bank, Fulton, N. Y. Filed Mar. 28, 1919. Serial No. 285,762. 15 Claims. (Cl. 64—30.)

15. A power transmitting element comprising a resilient coiled member having its coils so arranged that they bind on each other as friction plates when torque is applied to said member in one direction, a floating means within the coiled member and on which the coils contract when torque is applied to said member in one direction, and a floating sleeve encircling the coils and against which the coils expand and bind when torque is applied to said member in the opposite direction, substantially as and for the purpose specified.

1,387,727. STEERING-GEAR FOR MOTOR-VEHICLES. MAXWELL R. KARGE, Phoenix, N. Y., assignor to The Citizens National Bank, Fulton, N. Y. Filed July 9, 1920. Serial No. 395,002. 7 Claims. (Cl. 280—95.)



1. A steering gear comprising a steering column, an element for transmitting the movement of the steering column, and a torsion spring coiled about the steering column and connected at one end thereto and at its other end to said element, substantially as and for the purpose described.

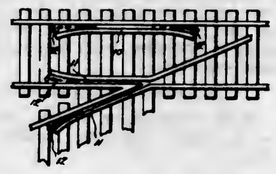
1,387,728. HAND-COVERING. EDWARD KRAMER, Mishawaka, Ind. Filed Feb. 20, 1920. Serial No. 360,076. 1 Claim. (Cl. 2—9.)

A hand covering initially shaped to conform substantially to the shape of the human hand in repose and therefore having a cupped palm portion and curved finger portions, the said covering comprising a foundation of fabric, and a coating of rubber applied and intimately united thereto and continuously covering the back, palm, and finger portions of the foundation, the coating at the palm and inner sides of the finger portions being considerably thicker than at the back and the outer sides of the finger portions, whereby the relatively thick portion of the ocating and its intimate union with the non-elastic fabric foundation at the cupped palm portion and inner sides of the curved finger portions will serve to retain the hand covering in its initially molded shape.

1,387,729. RAILWAY-CAR BRAKE. EMMETT J. MCGORRY, Mauch Chunk, Pa. Filed Oct. 22, 1919. Serial No. 332,434. 4 Claims. (Cl. 74—120.)

2. The combination with a longitudinally movable actuating rod, of a supported plate provided with a longitudinal slot, a shaft journaled on the plate, a sleeve engaged with the shaft and movable longitudinally of the same, and a bell crank lever having one end operatively connected with the actuating rod and its opposite ends disposed in the slot and slidably connected with the sleeve.

1,387,730. TRAY FOR PHONOGRAPH-RECORDS. JOHN A. MCVICKAR, New York, N. Y. Filed Mar. 8, 1920. Serial No. 364,151. 1 Claim. (Cl. 274—1.)



In combination, a phonograph with a turntable, a tray placed on said turntable, a record placed within said tray, a stylus cutting a shaving from said record, a deflecting member supported by said tray for collecting said shavings.

1,387,731. FILTER FOR CARBURETERS. JOHN A. MCVICKAR, New York, N. Y. Filed May 8, 1920. Serial No. 379,706. 2 Claims. (Cl. 183—62.)

1. In a device of the class described, the combination of an intake pipe for carbureters, an air filter secured to said pipe consisting of a casing having an opening in front covered with wire gauze, a pair of rollers placed in the rear of said casing, a filter fabric passing between said rollers, an arch-shaped, flat spring, said spring secured in said casing in front of said rollers and having its ends arranged to engage and hold said fabric taut against said wire gauze.

1,387,732. SAFETY DEVICE FOR USE IN CONNECTION WITH GUARD-RAILS AND SWITCH-FROGS ON RAILWAYS. JAMES A. MALOY, Columbus, Ohio. Filed Mar. 11, 1921. Serial No. 451,513. 2 Claims. (Cl. 238—379.)

1. A safety plate for guard rails and switch frogs formed in one piece and wider at one end than the other, having a downwardly inclined flange across its widest end and having a downwardly projecting slotted side flange adjacent to and connected with one side of the end flange.

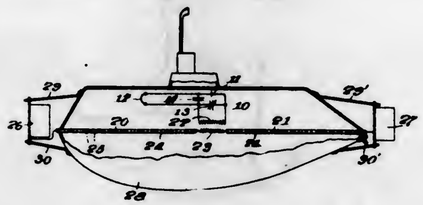
1,387,733. WELL-DRILLING BIT. PENELTON G. MIDGETT, Dallas, Tex. Filed Feb. 15, 1921. Serial No. 445,089. 3 Claims. (Cl. 255—61.)

1. In a well drilling bit, a head having spiral cutting edges and receding faces, and a point member removably inserted axially of the head and having a drilling point projecting from the head.

1,387,734. ENTRANCE FOR BEEHIVES. FREDERICK L. NITSCH and AUGUST MEIER, Syracuse, N. Y. Filed Aug. 27, 1919. Serial No. 320,159. 3 Claims. (Cl. 6—4.)

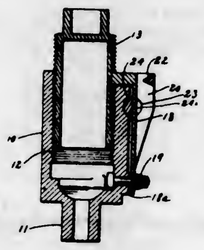
1. An entrance for bee hives comprising a housing in the general form of a quadrangle in cross section and being folded from a blank to have top, front, rear and end walls, the top wall forming the body and the front, rear and end walls being flaps bent downwardly at an angle to the body, the front and rear walls being formed with passages therethrough, substantially as and for the purpose set forth.

2. The combination of a bee hive having an elongated entrance slot at the bottom thereof, of an entrance comprising a housing extending along said slot and including a top, front and rear and end walls, the front wall being formed with a central entrance slot and the rear wall being formed near its ends with slots communicating with the slot of the hive, the slots of the front and rear walls of the entrance being out of alinement, substantially as and for the purpose described.



3. An entrance for bee hives comprising a housing in the general form of a quadrangle in cross section folded from a blank to have a downwardly inclined top, and front, rear and end walls, the inclined top forming a body and the front, rear and end walls being flaps bent downwardly at an angle to the body, the front and rear walls being formed with openings therethrough, and the portion of the front wall displaced to form the opening therein being bent upwardly to form a canopy or cover for the opening in the front wall, substantially as and for the purpose described.

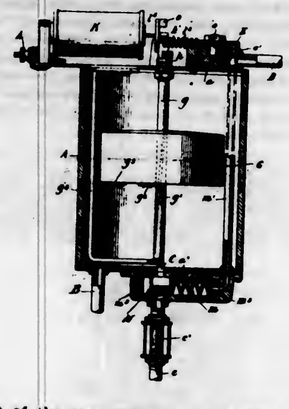
1,387,735. TRAP. SAMUEL R. PAYNE, Oxford, Kans. Filed Nov. 26, 1920. Serial No. 426,536. 8 Claims. (Cl. 43—89.)



8. A trap including a barrel provided at its lower end portion with slots, bell cranks pivoted in said slots and carrying jaws, a sleeve slidable upon the barrel and provided with slots to receive the uppermost of the arms of the bell cranks therethrough, pins extending across the slots in the sleeve to coact with the bell crank arms for opening and closing the jaws, the barrel being provided with slots at its upper end portion, a cross pin carried by the sleeve to extend through said last mentioned slots, a spring within the barrel acting against said pin for projecting the sleeve and closing the jaws, a catch upon the barrel to coact with the sleeve for holding the sleeve retracted and maintaining the jaws open, means rotatable upon the sleeve for releasing the catch, and means reciprocable upon the sleeve for actuating the first means.

1,387,736. RADIOSIGNALING SYSTEM. JAMES HARRIS ROGERS, Hyattsville, Md. Original application filed May 2, 1917, Serial No. 165,875. Patent No. 1,349,103, dated Aug. 10, 1920. Divided and this application filed Mar. 8, 1920. Serial No. 364,224. 16 Claims. (Cl. 250—33.)

13. The combination with a vessel having a metallic hull, of a radio conductor extending longitudinally thereof substantially from one end of the vessel to the other and having its ends grounded, and radio signal instruments associated with said conductor at a point between its ends.

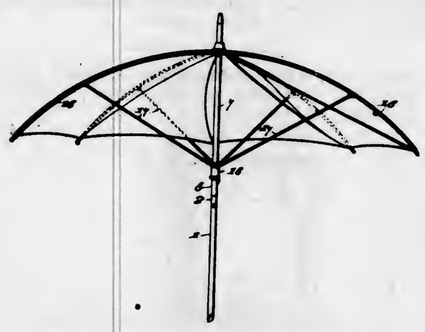


1,387,737. GREASE-CUP. OSMON ROYAL, Boston, Mass., assignor to Joseph A. Mahoney, Boston, Mass. Filed Nov. 27, 1918. Serial No. 264,455. 3 Claims. (Cl. 184—48.)

3. The combination with a grease cup of a plunger plug threaded therein formed with a notch extending the length thereof presenting an abrupt shoulder at the forward side thereof and a sloping shoulder at the rear side thereof, and a spring mounted dog to engage such notch, the cup having projecting cheek portions at each side of the dog housing and guarding the same, and a transverse turning pin for operating said dog mounted in said cheek portions.

1,387,738. AUTOMATIC VACUUM OIL-FEED FOR INTERNAL-COMBUSTION ENGINES. PAUL SCHINDLER, Jersey City, N. J. Filed Dec. 20, 1917. Serial No. 208,173. 8 Claims. (Cl. 123—196.)

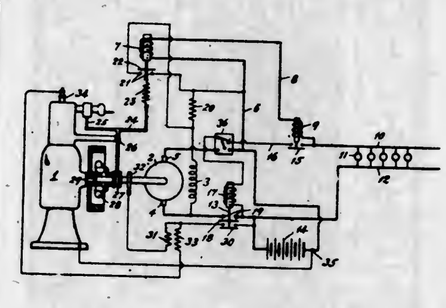
1. In a device of the character described, a reservoir having an oil inlet communicating with the sump of an engine, an outlet communicating with the forward end of the crank case, and a duct communicating with the intake manifold of the engine, in combination with means controlled by the level of oil in the reservoir for placing the reservoir in suction communication with the intake manifold to draw oil from the sump into the reservoir through the inlet thereof and thereafter shutting off such suction communication to allow the oil to flow through



the outlet of the reservoir into the forward end of the crank case.

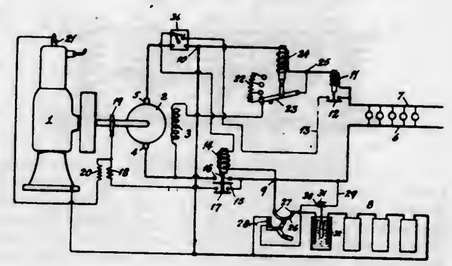
1,387,739. METHOD OF PREVENTING THE PASSAGE OF GASES OF COMBUSTION THROUGH THE WALLS OF FURNACES OR OTHER CONTAINERS. CHARLES M. SHIPMAN, Newark, N. J. Filed Dec. 26, 1916, Serial No. 138,959. Renewed Nov. 24, 1920. Serial No. 426,306. 4 Claims. (Cl. 18—60.)

1. The herein described method of rendering the walls of furnaces or other containers impervious to the passage of hot gases of combustion or the like, which consists in treating the said walls to a slurry of clay, silica, and water glass, and subjecting the so-treated walls to the action of hot gases of combustion, or the like.



1,387,740. PARASOL. SIDNEY STEVENS, Millinocket, Me. Filed Aug. 23, 1920. Serial No. 405,357. 8 Claims. (Cl. 135—20.)

5. In a parasol, a sectional stick with a swivel joint, a swivel joint lock device and vanes within the top to cause rotation of the same.

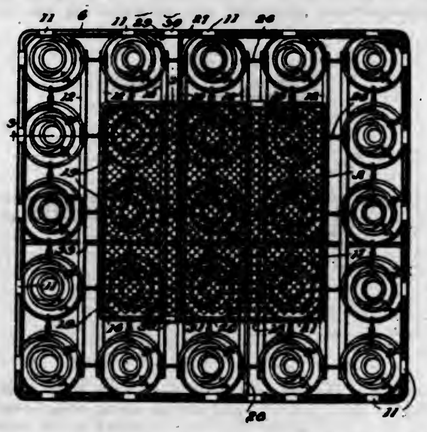


1,387,741. ELECTRIC GENERATING SYSTEM. CHESTER F. STRONG, New York, N. Y. Filed Mar. 31, 1920. Serial No. 370,064. 8 Claims. (Cl. 290—30.)

1. In an electric generating and distributing system, the combination of mains and translating devices thereon, an electrical generator having a field winding, a prime mover therefor, a storage battery in parallel with the translating devices on the mains, means controlled by the load for placing said battery in parallel with the generator, and means controlled by the load for speeding up the prime mover by increasing the fuel charge and correspondingly increasing the resistance of the field

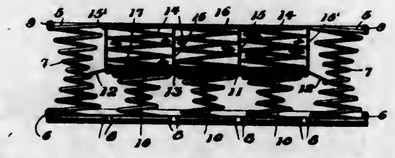
winding of the generator, said first means being responsive to small load and said second means being responsive to a load beyond the torque capacity of the engine on its first speed.

1,387,742. ELECTRIC GENERATING SYSTEM. CHESTER F. STRONG, New York, N. Y. Filed Mar. 31, 1920. Serial No. 370,065. 6 Claims. (Cl. 290—30.)



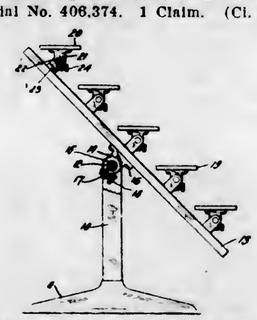
1. In a generating and distributing system, the combination of a generator having a shunt winding, a prime mover therefor having a nearly uniform torque at any charge for each speed over a considerable range, said prime mover being rigidly connected to the generator, a resistance adapted to be placed in series with the field winding of the generator, a load circuit, a storage battery in multiple with said load circuit, and a solenoid in series with the load and not with said battery, said solenoid being adapted to cut in one or more sections of said resistance as the load increases.

1,387,743. SPRING STRUCTURE. DESIRE H. VAN HOVE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich. Filed Jan. 27, 1921. Serial No. 440,450. 7 Claims. (Cl. 5—29.)



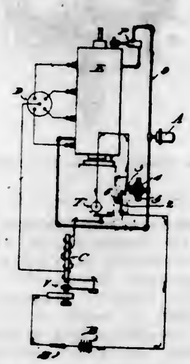
1. In a spring structure, a frame, border springs connected to the frame, a group of upper and lower springs arranged within the border springs, the upper springs of said group being of lighter gage wire than the lower set of springs and of lighter gage wire than the border springs, a frame arranged within said border springs and connected to said group of springs, a wire netting stretched across the last mentioned frame and secured

thereto and arranged between the upper and lower sets of springs of said group of springs, and connections be-



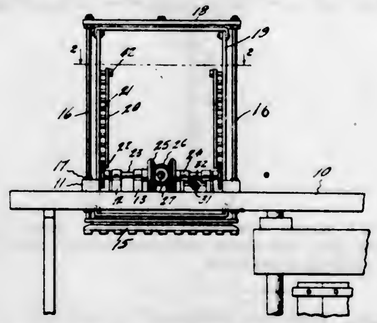
tween said second mentioned frame and certain of the border springs.

1,387,744. SPRING STRUCTURE. DESIRE H. VAN HOVE, Jackson, Mich., assignor to The Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed Feb. 25, 1921. Serial No. 447,754. 10 Claims. (Cl. 5—29.)



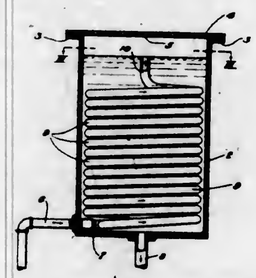
1. In a spring structure, an upper frame, a lower frame, border springs arranged within the upper and lower frames, a group of lower springs arranged between the frames and within said border springs, a group of upper springs arranged within the frame and within the border springs and mounted upon said lower group of springs, the upper springs of said group being of lighter gage wire than the springs of the lower group, and strips of fabric arranged between the springs of said upper group of springs to prevent noise.

1,387,745. DISPLAY-RACK. FRANK S. WALTON and REINHOLD SCHULTZ, New York, N. Y. Filed Aug. 27, 1920. Serial No. 406,374. 1 Claim. (Cl. 211—14.)



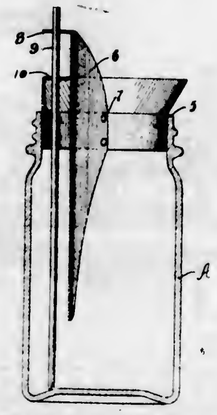
A display-rack comprising a stand, a horizontally extending cylindrical bar fixed thereto, a plate member, a plurality of split blocks fastened to the underface of said plate member having each a cylindrical horizontally disposed hole in which said bar is seated, a clamping screw extending through the split portion of each block for fixing said plate member in any adjusted position, a plurality of leg pairs projecting from the upper face of said plate member and fastened thereto, a horizontal spindle secured to each leg pair, a shelf-board associated with each spindle, a split block fixedly attached to the underface of each shelf-board having a horizontally disposed hole through which the respective spindle extends, and a clamping screw passing through the split portion of each of said last mentioned blocks.

1,387,746. ENGINE-STOPPING DEVICE. WILLIAM F. WEBB, Garden City, Kans., assignor of one-half to Elbert A. Orr, Garden City, Kans. Filed Apr. 5, 1920. Serial No. 371,340. 5 Claims. (Cl. 200—83.)



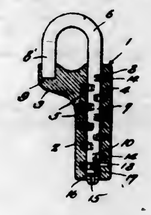
1. An engine stopping device comprising a support, relatively fixed and movable switch members mounted on said support and forming an engine controlling switch, a case mounted on said support and adapted for communication with a liquid circulating system of the engine, a stem extending slidably from the interior of said casing for moving said movable switch member to engine-running position and holding it normally in such position, and a pressure operated device in said casing acting on said stem to normally hold the latter in position to hold said switch in engine-running position.

1,387,747. COTTON-TRAMPER. JOSEPH E. WHITT, Italy, Tex. Filed Mar. 6, 1920. Serial No. 363,795. 4 Claims. (Cl. 100—25.)



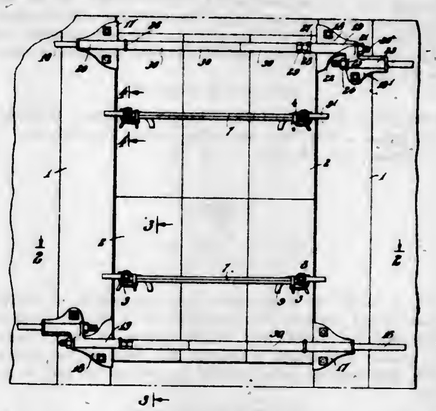
1. In a tramper, a reciprocating tramper head, a frame connected with the tramper head and longitudinally movable, means to guide the frame in its longitudinal movement, a shifting frame arranged within the first named frame and pivotally connected with the ends of the first named frame to turn upon an axis extending longitudinally of the first named frame, racks extending longitudinally of the shifting frame and connected therewith, toothed wheels arranged near the racks to engage therewith, said toothed wheels being adapted to effect a longitudinal travel of the racks and to engage with the opposite ends of the racks and when engaging with such opposite ends to shift the racks and their shifting frame upon the pivots of the shifting frame, stationary supporting means for the toothed wheels, means to drive the toothed wheels, and means to limit the longitudinal movements of the tramper head.

1,387,748. APPARATUS FOR REMOVING GASES FROM WATER. JOHN J. WILSON, McKeesport, Pa., assignor to Anti Corrosion Engineering Company, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1921. Serial No. 447,542. 5 Claims. (Cl. 183—3.)



1. In an apparatus of the class described a tank having inlet and outlet connections and a gas escape vent, a helical conduit connected with said inlet connection, and arranged to deliver the liquid into said tank at approximately the water level, to thereby collect the dissolved gases during the passage of the liquid through said conduit and to discharge said gases at approximately the liquid level so that they will escape through said escape vent.

1,387,749. PROTECTING DEVICE FOR FRUIT-JARS AND THE LIKE. CHARLEY W. YOUNG, San Jose, Calif. Filed Mar. 21, 1921. Serial No. 454,167. 1 Claim. (Cl. 226—29.)

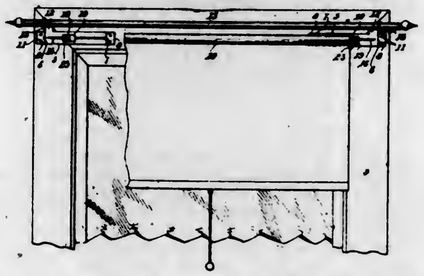


In a device of the class described, a funnel adapted to be applied to a fruit jar or the like, an elongated protecting shield supported within said funnel and curved in cross section to correspond to the curvature of the funnel, a rod supported behind said protecting shield and adapted to extend into a fruit jar to which the device may be applied.

1,387,750. COMBINATION-LOCK. JAMIE FULLER APPLETON, Keokuk, Iowa, assignor to Iowa Lock and Manufacturing Company, Burlington, Iowa. Filed July 16, 1919. Serial No. 311,371. 5 Claims. (Cl. 70—118.)

1. A lock having an integral casing provided with a longitudinal bore, and a transverse slot intersecting the bore, a shackle movable in said bore, the shackle having a transverse groove registering with the slot in the casing, the shackle at the base of the groove extending into the slot and a tumbler having right line movement in the slot into and out of engagement with the shackle.

1,387,751. SILO. VICTOR S. BAUDER, Fort Plain, N. Y. Filed Jan. 8, 1920. Serial No. 350,199. 5 Claims. (Cl. 20—1.4.)

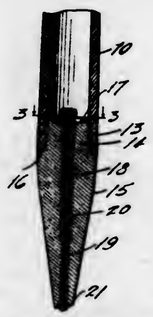


5. In a silo, the combination of door frame members, a door adapted to be secured between the same, a latch member loosely pivoted to said door, so as to be free to swing over the same and the adjacent door frame member, and to move inwardly toward and into engagement with the latter, said member having a tail, and means, comprising a pivoted step member, having a surface adapted to engage the tail of said latch member, for swinging said latch member about its pivot over said door frame member, and at the same time forcing said tail outwardly, to swing said latch member toward the face of said door frame member.

1,387,752. SHADE AND CURTAIN BRACKET. JULIAN BARANSKI, Trenton, N. J. Filed Feb. 18, 1921. Serial No. 445,967. 1 Claim. (Cl. 156—24.)

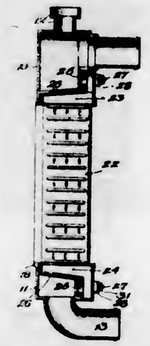
A combined shade roller and curtain pole supporting bracket including a main bracket member formed from a piece of sheet metal in general U-form so as to provide an elongated base and a pair of end legs with outwardly directed attaching flanges, the base being provided with an upward extension adjacent one of the legs, a curtain pole supporting member integral with and projecting forwardly from a side edge of said extension, and a shade roller supporting bracket member attached to and longitudinally slidable on said base, the other leg of said main bracket

member having an enlarged slot, the base being provided with an elongated longitudinal slot which is relatively narrow and which communicates at one end with the slot of said leg, and said shade roller supporting bracket member including a base or block form having grooves in its upper and lower edges for reception of the portions of the base at opposite sides of the slot of the latter, said block being insertible through the slot of said leg, said block



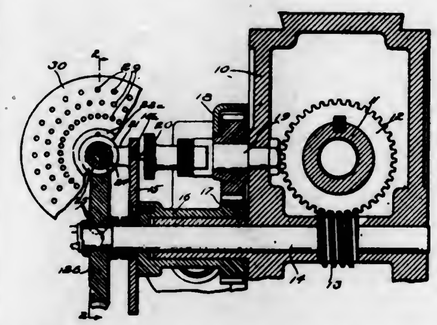
being provided with a plate-like extension bearing flatly against the outer face of said base, a headed bolt with its head engaging the rear face of the base and with its shank passing through the slot of the base and through the extension of the block, and a nut upon the outer end of the bolt shank so as to bear upon the outer face of the block extension and adjustable for clamping the roller supporting bracket member at any desired adjusted position relative to the base.

1,387,753. SPECTACLES. EDWIN BARNES, Sheffield, England. Filed May 17, 1920. Serial No. 382,029. 8 Claims. (Cl. 88—53.)



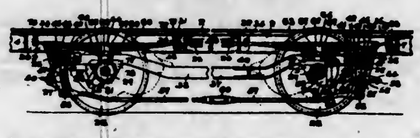
1. A hinge for a spectacle side comprising a flanged sheet metal member of approximately T-section forming flanges and a central web; the flanges being curved about a common axis which intersects the plane of the central web, said member being rigidly secured to the end of the side.

1,387,754. FOUNTAIN-BRUSH. WILLIAM P. BATES, Dallas, Tex. Filed Dec. 6, 1920. Serial No. 428,551. 2 Claims. (Cl. 15—49.)



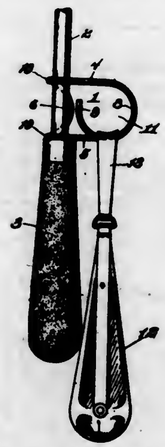
1. In a fountain brush, a reservoir for holding the liquid ink or dye and having a nozzle at its forward end, said nozzle being provided with a longitudinal duct extending through the forward end of the nozzle, said nozzle being provided at its forward end with a recess surrounding said duct and forming a surrounding contact edge spaced from the duct, an absorbent element extending longitudinally within the duct and having its forward end projecting into the recess, said surrounding contact edge being adapted to engage and compress the fabric while the fabric is in contact with the wick so that the liquid is prevented from spreading upon the fabric exterior of the surrounding edge.

1,387,755. AUTOMOBILE-RADIATOR. JACOB B. BEAM, Punxsutawney, Pa. Original application filed July 30, 1917, Serial No. 183,552. Divided and this application filed Aug. 17, 1918. Serial No. 250,397. 5 Claims. (Cl. 257—130.)



1. A radiator for motor vehicles embodying a casing comprising upper and lower water chambers and side walls connecting said chambers, removable independent tube sections communicating with said chambers and means including spanners adjustable laterally for engagement with the adjacent tube sections for holding the latter in position.

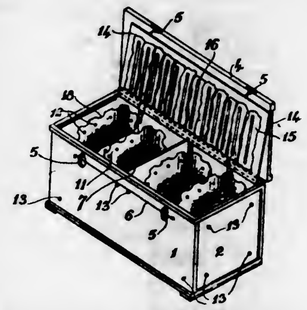
1,387,756. INDEXING DEVICE. JOHN R. BECKETT, Somerville, Mass. Filed May 16, 1919. Serial No. 297,702. 2 Claims. (Cl. 29—56.)



1. The combination with a work spindle, of an indexing device therefor consisting in a worm wheel fixed on said spindle, a worm in mesh therewith, a shaft on which said worm is fixed having fixed on the outer end thereof a relatively large worm wheel, a plate mounted adjacent said second worm wheel equipped with a bearing projection overhanging said worm wheel, a second worm mounted in such bearing projection to engage said second worm, an index arm mounted to turn with said second worm, and a relatively fixed index plate associated therewith and mounted transversely of the second worm wheel.

1,387,757. UNDERHANG FRAMEWORK OR CHASSIS CONSTRUCTION. HERSHEL A. BENEDICT, East Orange, and EDWARD M. MOLLER, Jersey City, N. J. Filed Feb. 7, 1920. Serial No. 356,888. 7 Claims. (Cl. 105—213.)

1. In an underhang frame-construction for railway-cars, and the like, a main body-frame consisting of a pair of longitudinally extending side-members, a plurality of laterally extending cross-bars between said side-members and secured at their end-portions to the respective side-members, angularly disposed bracing members secured at their respective end-portions to the respective end cross-bars of the frame and to the next intermediately disposed cross-bars, and a plurality of brackets extending laterally and outwardly from said side-members for securing thereto the frame-work of the car-body, brackets likewise secured to others of said cross-bars, a plurality of leaf-springs, and means connected with the said last-mentioned cross-bars for pivotally mounting the respective end-portions of said leaf-springs with relation to said frame-body.



1,387,758. ATTACHMENT FOR UMBRELLAS. CARL W. BENNETT, Duboistown, Pa. Filed Apr. 16, 1921. Serial No. 462,021. 2 Claims. (Cl. 24—73.)

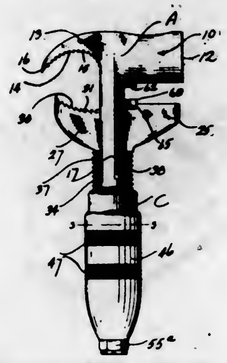
2. A device of the character described comprising a single length of wire bent to provide a pair of parallel arms, a clasp connecting said arms at one end and extending transversely between the same, lapping members at the opposite ends of the arms curved in opposite directions and forming a retaining space and a normally closed entrance way thereto, and a guard extending from one of said members into said space and between the same and the clasp.

1,387,759. BOX OR CARRIER FOR LIVE BIRDS. ALFRED ERNEST BERSEY, Dobwalls, Liskeard, England. Filed Dec. 27, 1918. Serial No. 268,569. 3 Claims. (Cl. 119—19.)

1. A case for the transit of live birds comprising a box, a lid hinged thereto, means for securing said lid, air holes in the sides and end of the box, a vertical division member, ledges on the ends of the box and on said division member, horizontal division members detachably resting on said ledges, and a plurality of strips of fabric secured to the undersides of the lid and the horizontal

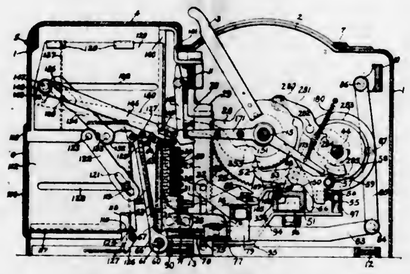
division members, the ends of said strips depending loosely and freely.

1,387,760. ROTARY AUTOMATIC VALVE-CONTROLLING MECHANISM. ROBERT LEE BRIDGES, Lake Charles, La. Filed Aug. 16, 1919, Serial No. 317,959. Renewed June 28, 1921. Serial No. 481,166. 5 Claims. (Cl. 137—68.)



1. In an apparatus of the class described, the combination with a reservoir, a valve for controlling passage of fluid with regard to the reservoir, a valve stem adapted to be rotated to open and close the valve, a tubular plunger projected into said reservoir and having a direct screw connection with said valve stem and adapted to be forced in one direction by the pressure of the fluid in the reservoir to effect a closure of the valve, and a spring for forcing said tubular plunger in the opposite direction when the pressure of the fluid in the reservoir is less than the pressure of the spring.

1,387,761. WRENCH. JOHN CANELLES, Superior, Wis. Filed Dec. 2, 1920. Serial No. 427,830. 7 Claims. (Cl. 81—172.)

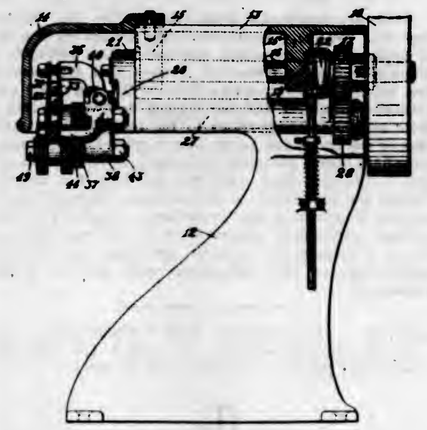


3. In a wrench, the combination, of a stationary frame including a wrench jaw and a pair of spaced guide legs; a movable frame, including a wrench jaw, and a screw threaded shank for engagement intermediate the guide legs; detachable means for preventing disconnection of

the movable frame from the stationary frame; and an advancing sleeve for engagement with the screw threaded

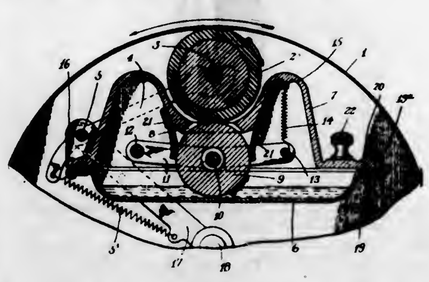
shank of the movable frame to advance the movable frame longitudinally with respect to the stationary frame.

1,387,762. PERFORATING MECHANISM FOR CASH-REGISTERS. THOMAS CARROLL and JOHN C. LOCKYER, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, (Incorporated in 1906), a Corporation of Ohio. Original application filed Feb. 5, 1915, Serial No. 6,244. Divided and this application filed July 5, 1919. Serial No. 308,887. 16 Claims. (Cl. 235—61.)



1. In a machine of the class described, the combination of accounting mechanism; manipulative means for controlling the entry of an item in the accounting mechanism; card punching mechanism; means for controlling the effectivity of the card punching mechanism from the manipulative means so that the card will be punched in correspondence with the entry made in the accounting mechanism; means for locking the accounting mechanism until a card is brought to punching position; and means for transferring a card when punched from the punching mechanism.

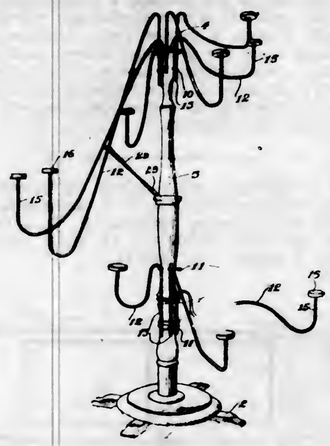
5. In a machine of the class described, the combination of accounting mechanism; card punching mechanism; common amount manipulative means for determining amounts to be entered in the accounting mechanism and the card punching mechanism; and means for effecting a relative adjustment between a card to be punched and its punching mechanism so that the latter will punch the card in any one of a number of fields in the card to be punched, said means also effecting the classification of the amount in the accounting mechanism.



9. In a machine of the class described, the combination of accounting mechanism; means for entering an item through the accounting mechanism, on a card; means for transferring a card into position to receive the entry of an item through the accounting mechanism; and means for preventing an operation of the accounting mechanism unless a card is in position to be operated upon by the accounting mechanism.

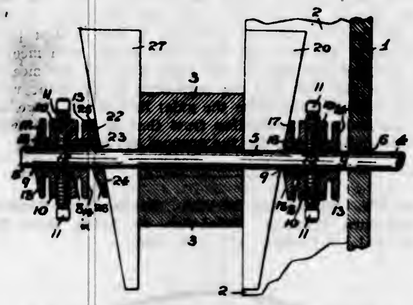
1,387,763. MACHINE FOR LASTING RUBBER-SOLE FOOTWEAR. LOUIS A. CASGRAIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 6, 1919. Serial No. 269,839. 23 Claims. (Cl. 12—12.)

1. A lasting machine having a pair of wipers movable toward and from each other between which the shoe to be lasted may be inserted, and means for positively rotating the wipers.



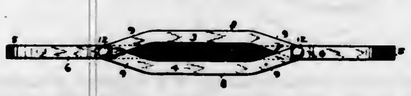
1,387,764. INKING DEVICE FOR DUPLICATING-MACHINES. WALTER CHIPPERFIELD, Hornchurch, England, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1920. Serial No. 403,446. 6 Claims. (Cl. 101—120.)

1. In a rotary duplicating machine, the combination of an ink container having a slot therethrough, an ink roller within said container and adapted to extend partly through said slot, and spring means mounted to press said roller toward said slot, said roller being adapted to close said slot when pressed into contact with the edges thereof.



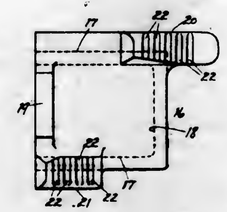
1,387,765. DISPLAY-STAND. RUDOLPH B. COLONNA, Hazleton, Pa. Filed Aug. 28, 1920. Serial No. 406,591. 3 Claims. (Cl. 211—24.)

1. A display stand comprising a post, vertically alined retainers on the post, a cup on the post below the retainers, display arms having depending terminals at their upper ends to be inserted through the retainers, and bracing arms having their lower ends engaged in said



cup and their upper ends engaged with intermediate portions of the display arms.

1,387,766. HOLDING OR TYING MEANS FOR MOLDING APPARATUS. SAMUEL S. COLT, Orange, N. J. Filed Nov. 20, 1920. Serial No. 425,528. 16 Claims. (Cl. 25—131.)



1. In a form or cribbing for use in the erection of concrete and similar structures, in combination with a cribbing wall, a wall-retaining member, a stringer-piece, and a tie-rod, a holding or tying means mounted upon said rod, said means being provided with an angular wedge-receiving surface, and a wedge movable upon said surface for bringing the assembled elements into holding alinement.

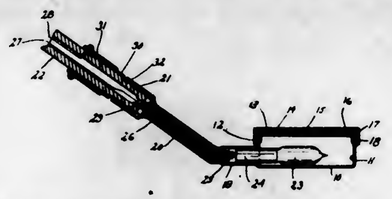
1,387,767. AUTOMOBILE-BUMPER. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed May 20, 1921. Serial No. 471,163. 9 Claims. (Cl. 293—56.)

4. A bumper made of a plural number of metal bars, each having a reversely bent portion adapted to provide spring loops, said bars being assembled with the loop of one bar interengaged with the reversely bent portion of another bar.

1,387,768. BRAKE-BEAM. SETH A. CRONE, East Orange, N. J. Filed Dec. 15, 1920. Serial No. 430,909. 6 Claims. (Cl. 188—231.)

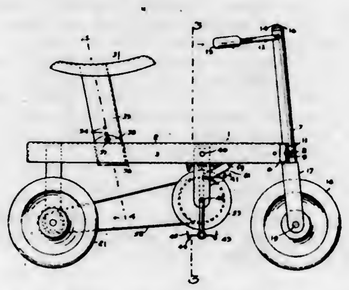
1. In a brake beam, a flanged compression member, a strut formed of a forged metal folded bar encompassing said compression member and deflected angularly adjacent to said flanges to form angularly disposed parallel sides for the brake lever, and a securing plate driven between said flanges and the adjacent angular portions of the strut and having at opposite sides on one face thereof wedges engaging the diagonally opposite inwardly turned portions of the strut.

1,387,769. MOLDING APPARATUS. FRANK BROUGHTON DAVIS, Erie, Pa. Filed Aug. 1, 1919. Serial No. 314,746. 11 Claims. (Cl. 22—69.)



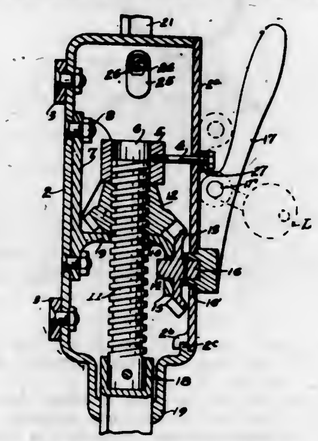
1. In a molding apparatus, the combination of a mold; a movable air compressor adapted to be moved and operated manually; and means carried by the compressor and movable therewith for connecting the compressor with the mold.

1,387,770. DENTAL MIRROR. HARRY S. DOLBEY, Providence, R. I. Filed Mar. 20, 1920. Serial No. 367,311. 3 Claims. (Cl. 32—27.)



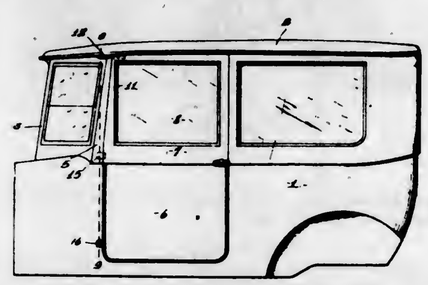
1. An instrument of the class described, comprising an operating handle, an electric lamp supported at one end thereof, an opaque member adapted to be positioned between said lamp and the eye of the observer to cut

off the direct rays, a mirror on the outer surface of the opaque member serving to reflect the image of the work,



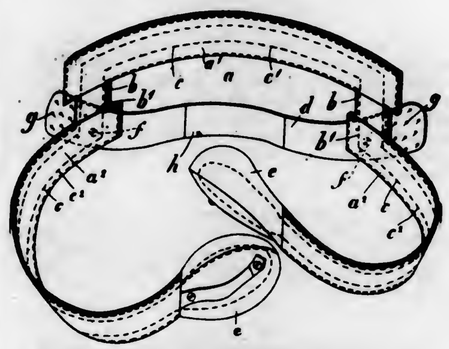
and a space being provided about the edge of said member to permit the passage of light rays thereabout.

1,387,771. CHILD'S VELOCIPEDE. GEORG EKLUND, Berkeley, Calif. Filed Apr. 2, 1919. Serial No. 287,028. 4 Claims. (Cl. 208—32.)



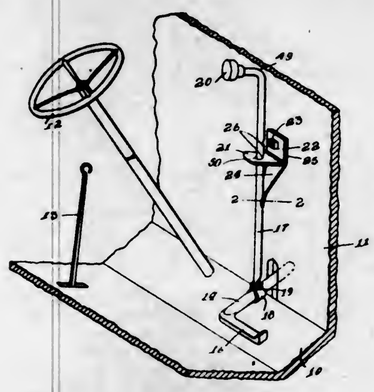
1. In a velocipede, the combination with a body, of a yoke secured to and extending downwardly therefrom, a wheel carrying shaft journaled in said yoke, a pulley on said shaft, a second yoke pivoted to said body, a second shaft journaled in said second yoke, a pulley on said second shaft, an endless member connecting said pulleys, means for rotating said second shaft, and means connected to the body and to said second yoke for effecting pivotal movement of the latter to adjust the tension of said endless member.

1,387,772. TIRE-CARRIER. EDWARD E. ELLIS and HERBERT A. THOMAS, Alhambra, Calif. Filed Mar. 4, 1920. Serial No. 363,152. 2 Claims. (Cl. 224—29.)



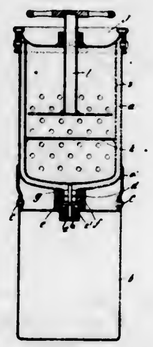
1. In a tire carrier, a housing, fixed arms projecting radially therefrom, a bracket fixed within said housing, a bearing member positioned above said bracket, a radially arranged arm having its inner end adapted to move through the wall of the housing, a threaded shank secured to the inner end of said movable arm and disposed within said housing, a beveled pinion screw-seated on said threaded shank and positioned between said bracket and bearing, a handle having a portion rotatably arranged in the wall of the housing, and a beveled pinion carried by the inner end of said handle and engaging the teeth of the first mentioned beveled pinion.

1,387,773. VEHICLE-BODY-DOOR CONSTRUCTION. WILLIAM H. EMOND, Syracuse, N. Y., assignor to H. H. Franklin Mfg. Company, Syracuse, N. Y., a Corporation of New York. Filed Nov. 15, 1919. Serial No. 338,254. 3 Claims. (Cl. 296—44.)



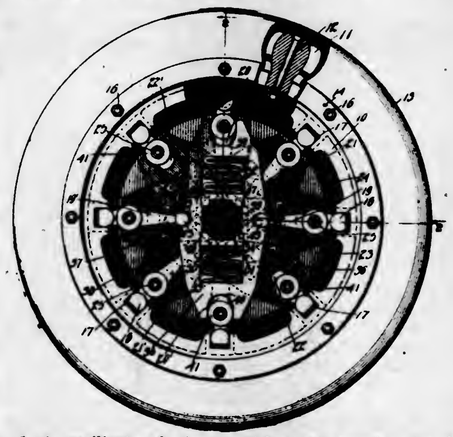
1. A vehicle body including a top having a rearwardly inclined front wall and a door including a lower portion in the body and an upper portion in the top, the door being hinged at its front edge and the upper portion of the door in the top including a sash and a panel movable in the sash, the front edge of the sash meeting the inclined rear edge of the front wall and the meeting edges of the sash and the rear edge of the front walls being inclined away from the axial line of the hinge and at less rearward inclination from that of the front wall, substantially as and for the purpose set forth.

1,387,774. SURGICAL TRUSS. BRUNO PAUL FAIRDEN, Hamburg, Germany. Filed Jan. 23, 1918. Serial No. 213,441. 2 Claims. (Cl. 128—105.)



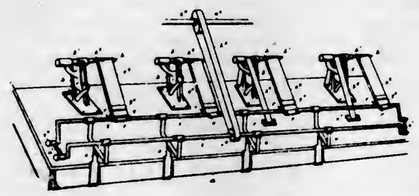
1. A truss frame consisting of a plurality of sections, flat in the same general plane, one of said sections adapted to extend across the human back, and two sections adapted to run across the hips and connected to the ends of the back section by upwardly extending sections.

1,387,775. ATTACHMENT FOR AUTOS. CLARENCE H. HEADLEY, Sherburn, Minn. Filed Apr. 9, 1920. Serial No. 372,537. 1 Claim. (Cl. 74—81.)



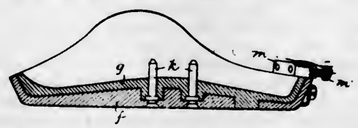
In a device of the class described, a vertical dash board; a vertically movable clutch pedal; a guide projecting rearwardly from the dash board; a vertical rod disposed approximately parallel to the dash board and slidably mounted in the guide, the rod being pivoted at its lower end to the pedal, and having a notch in that edge which is adjacent to the dash board, the notch coacting with the guide to hold the rod and the pedal depressed, the rod being provided at its upper end with a handle projecting away from the dash board; and a depending spring having its upper end bound between the guide and the dash board, the lower end of the spring exerting a pressure on the rod, the lower end of the spring being trough-shape in cross-section, to receive the rod and to direct the notch into engagement with the guide.

1,387,776. WASHING OR CLEANING MACHINE. ALBERT HENNING, Leytonstone, England. Filed Sept. 9, 1919. Serial No. 322,747. 2 Claims. (Cl. 68—37.)



2. In a washing or cleaning machine, a lower chamber adapted to contain cleaning fluid having a valved opening in its top, means for holding the valve closed, a receptacle having an opening communicating with the said first named opening, a basket in the said receptacle, and means whereby the said basket operates the valve controlling the passage between the receptacle and chamber for opening said valve.

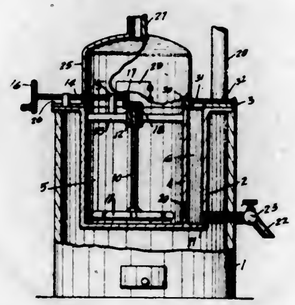
1,387,777. RESILIENT WHEEL. FERDINAND G. HENRY, New York, N. Y. Filed Mar. 3, 1920. Serial No. 363,036. 16 Claims. (Cl. 152—28.)



1. A resilient wheel comprising an annular tread structure, a radially yieldable bearing structure and positive atop centering mechanisms.

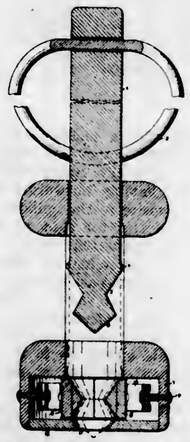
1,387,778. MANUALLY-OPERATED BUFFING DEVICE FOR THE INNER FACES OF RINGS. MARTIN JELALIAN, Cranston, R. I. Filed Nov. 18, 1920. Serial No. 425,022. 4 Claims. (Cl. 51—79.)

4. In combination with a buffing bench having standards arranged upon the top of the same and provided with spindles, an oscillatory crank shaft forwardly to said standards and having outwardly projecting flat portions arranged opposite to the spindles of said standards, a ring casing device for said spindles each comprising two sections connected together and adapted to receive setting rings therein and mounted upon said spindles, an operating strap, passing over said ring casing and having a clip holder at each end thereof and connected to the outwardly projecting flat portions of said shaft, and a collar secured upon the end portion of each of said spindles of said standards to keep the operating straps in position upon said ring casing.



1,387,779. DIES FOR USE IN THE MANUFACTURE OF THE TOPS OF CYCLE AND SIMILAR SADDLES. JAMES JELLEY, Coventry, and HENRY JELLEY, Birmingham, England. Filed July 6, 1918. Serial No. 243,721. 4 Claims. (Cl. 18—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

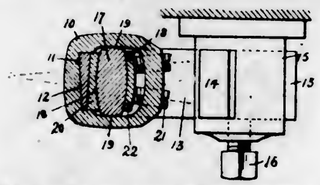
1. A composite female mold or matrix for use in the manufacture of cycle and like saddle tops comprising an



outer shell of hard metal and a lining of soft metal cast thereon and constituting the matrix proper and laterally adjustable abutments on the edge of the mold.

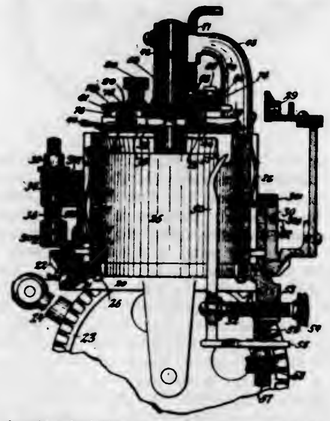
1,387,780. MELTING-POT. LOUIS W. JONES, Los Angeles, Calif. Filed Dec. 6, 1920. Serial No. 428,731. 1 Claim. (Cl. 22—71.)

A melting pot having a melting chamber and a reservoir chamber with an annular flange surrounding said chambers, and a hood received over said melting chamber and having a flange received over the reservoir chamber and coöperating with the first flange to form an air tight closure, the flange of the hood having an opening therein communicating with the reservoir chamber, and a closure for said opening.



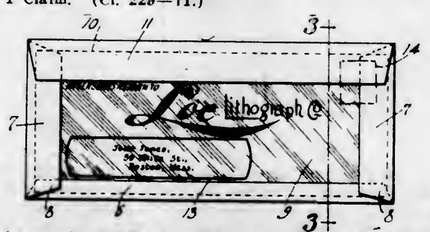
1,387,781. SAFETY-CLEVIS. JOSEPH EDGAR KING, Nantyffyllon, near Bridgend, and BENJAMIN MORGAN, Caerau, near Bridgend, Wales. Filed July 6, 1920. Serial No. 394,264. 4 Claims. (Cl. 97—4.)

1. The combination, in the D links of a shackle for mine cars, of the recessed and tapered pin 1, with the bored and countersunk lock 8, housed in the lower eye 7 of the shackle, substantially as specified.



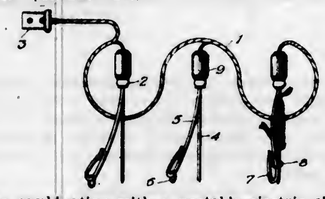
1,387,782. TOOL-HOLDER. GEORGE F. KRIEGER, Grand Rapids, Wis. Filed Oct. 18, 1919. Serial No. 331,579. 6 Claims. (Cl. 29—96.)

1. A tool holder comprising a hollow head having an internal tool seat, a support extending into the head with reversely curved faces, a pad member having one face curved to correspond to and bear against one of the curved side faces of the support and the other face adapted to bear against a tool when engaging in the seat, and clamp screws tapped through the head with their center



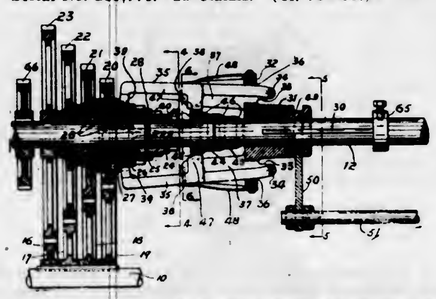
lines radially of the curvature of the support and operating to hold the same in the head.

1,387,783. KNITTING-MACHINE. OSCAR F. C. KUNAU, Buffalo, N. Y. Filed Sept. 12, 1919. Serial No. 323,335. 7 Claims. (Cl. 66—22.)



1. A circular knitting machine comprising a cylinder provided with a plurality of vertical needles, a shell rotatable about said cylinder and provided with a cam which actuates said vertical needles, a dial arranged above the cylinder and provided with a plurality of horizontal needles, and means for actuating said horizontal needles comprising a tappet plate rotatable with said shell and having a fixed section which is radially immovable relatively to the axis of rotation of said plate, an adjustable section which is connected with the fixed section but adjustable thereon in a direction radially to the axis of said tappet plate, a cam mechanism for actuating said horizontal needles comprising inthrow cam sections which are mounted on said radially adjustable section of the tappet plate, and an interchangeable outthrow cam section mounted on said fixed tappet plate section.

1,387,784. DISPLAY-ENVELOP. AARON LEVAUR, New York, N. Y. Filed July 12, 1919. Serial No. 310,314. 1 Claim. (Cl. 229—71.)

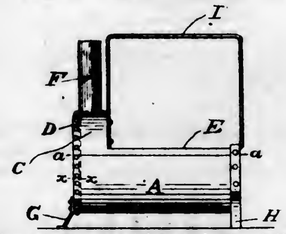


An envelop having a window extending substantially its entire area and having return instructions printed on the window thereof, a letter sheet having a business head at one end and the addressee's name in proximity thereto, the sheet being folded to disclose the business head and addressee's name in the window so that the business head will serve as a return address to be read in connection with the "return" instructions, and an inclosure frame printed on the window and inclosing the addressee's name and address.

1,387,785. HAIR-CURLER. ELIN M. LINDBERG, Duluth, Minn. Filed Apr. 2, 1921. Serial No. 457,846. 4 Claims. (Cl. 219—24.)

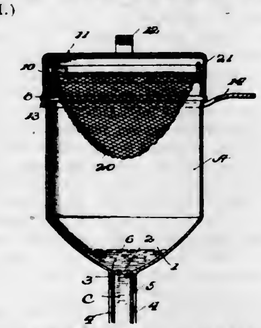
1. The combination with a portable electric circuit, of a plurality of spaced curling irons within said circuit.

1,387,786. CHANGE-SPEED MECHANISM. HARMON E. LINDBLADH, Boston, Mass. Filed Apr. 14, 1919. Serial No. 289,776. 13 Claims. (Cl. 74—59.)



7. The combination with change-speed mechanism having pairs of gears any one of which may be brought into driving relation, each pair having an engaging portion, of a connecting member arranged to move into coöperation with any one of the engaging portions to render the corresponding pair of gears effective, and means including a contact member movable independently of the connecting member and arranged to successively aline said connecting member with the engaging portions.

1,387,787. SWITCH-LOCK. HORACE P. LIVERSIDGE, Bala, Pa. Filed Aug. 8, 1918. Serial No. 248,853. 25 Claims. (Cl. 200—169.)



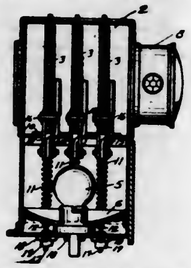
13. In a switch lock, a knife switch blade, a contact engaged thereby, a pair of locking jaws wholly on the outer side of the blade, and bearings for the jaws extending in planes parallel to the width of the knife switch blade.

1,387,788. PORTABLE STOVE FOR ORCHARDISTS. HALL LIVINGSTON, Auburn, Calif. Filed Nov. 19, 1920. Serial No. 425,063. 1 Claim. (Cl. 126—66.)

A portable stove comprising a horizontally disposed body portion fashioned to form a horizontal top plane surface above the firebox for a part only of the length of the said body portion, the part of the body portion at the rear of the top plane surface being extended upwardly above said plane surface and with the lower part of the extended body portion inclosing a relatively large combustion space, a smoke or draft pipe secured to the said upwardly extending rear part of the body portion, means as legs for supporting the body portion in a horizontal position, and a suitable handle for carrying the stove.

1,387,789. COMBINED STRAINER AND FAT-SEPARATOR. HARVEY E. LYONS, Baltimore, Md. Filed Feb. 6, 1920. Serial No. 356,657. 1 Claim. (Cl. 210—161.)

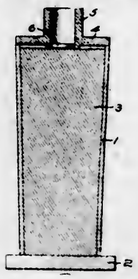
A strainer and fat separator for soups, comprising a container having an exterior circumferential reinforcing rib and an interior circumferential reinforcing rib, both ribs being located adjacent the top of the container whereby a reinforced rim is provided, a cover telescoping over said container and seating at its lower edge on said exterior rib, a container support receiving the said container as far as the exterior rib, and a strainer within the container and having handles and supported on the interior reinforcing rib whereby said handles project above the top edge of the reinforced rim of said container, said cover having a depth sufficient to permit the top thereof to clear said handles.



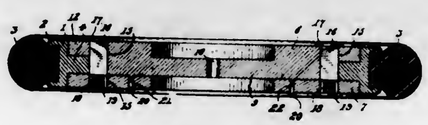
1,387,790. COLLAPSIBLE CENTER MOLD FOR HOLLOW WALLS. PETER MCCAFFERY, San Bernardino, Calif. Filed Apr. 7, 1920. Serial No. 372,071. 1 Claim. (Cl. 25—131.)

A collapsible mold comprising four separately formed members each of which is substantially L-shaped in cross section, the inner vertical edges of the short legs of said L-shaped members being cut away to facilitate assembly and separation of the members, hooks and hook engaging members arranged on the inner faces of both legs of each member for retaining said members in assembled

relation, a hook arranged on the inner face of the long leg of each section, a hook engaging member seated in the long leg of the opposite section, which last mentioned hooks and hook engaging members retain the assembled members in proper spaced relation, and a closure member adapted to be removably positioned in the upper end of said mold.

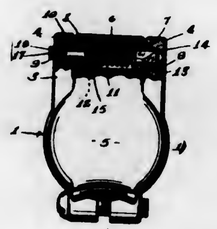


1,387,791. DIRECTION-INDICATOR. RODNEY N. MCCLURE, Los Angeles, Calif. Filed Jan. 2, 1920. Serial No. 348,970. 11 Claims. (Cl. 116—44.)



3. A housing that is provided with a transparent top, a vehicle direction signal apparatus having a plurality of sign members arranged within said housing and movable through the transparent top thereof, a retractile spring connected to each sign member for resisting its outward movement and tending to return it to the housing, a source of light and a reflector arranged beneath said sign members for illuminating the faces thereof; a main setting instrument; a series of operating connections for the said members selectively operable by the said instrument; a locking mechanism for the said instrument; which locking mechanism includes a pair of pivotally mounted spring actuated detents that are adapted to engage movable parts of the setting instrument when said parts are shifted to move one of the signs into signaling position; and means actuated by movable parts of the vehicle with which the device is associated for tripping the locking mechanism, the said instrument having individual parts for respective of the connections and coöperative therewith irrespective of the others.

1,387,792. ART OF CASTING INGOTS. FRANK E. MCKENNA, Lockport, N. Y. Filed Mar. 17, 1916. Serial No. 84,924. 2 Claims. (Cl. 22—216.)

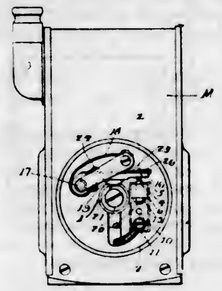


1. A process of casting steel ingots applicable in particular to crucible steels comprising the following steps:—teeming a body of metal substantially to fill the mold, adding neutral fluxing material before complete solidification of said body and teeming a second volume of like metal providing a sink head centrally of the ingot homogeneously united with the metal of the first teeming through the action of said fluxing material.

1,387,793. AUTOMOBILE-WHEEL. STEPAN MADJAR, Ogdensburg, N. J. Filed Nov. 24, 1920. Serial No. 426,180. 2 Claims. (Cl. 301—63.)

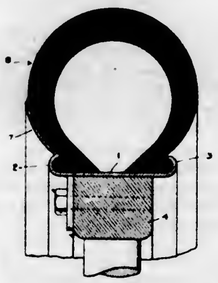
1. A vehicle wheel of the type described comprising a pair of disk web sections, transverse bolts for securing the web sections against relative movement, a rim section having a relatively short inwardly directed flange clamped between said web sections and a tire mounted on said rim section.

1,387,794. SPRING-BARREL CONSTRUCTION. FLORIAN J. MANTEL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Sept. 7, 1918. Serial No. 252,993. 5 Claims. (Cl. 220—35.)



1. The combination of a pair of bearings spaced apart, a spring barrel located between the bearings and formed with a slot opening through one end thereof, a spring located in the barrel and having an arm at one end for entering the slot as the spring moves in the barrel and thereby anchoring one end of the spring to the barrel, the spring also having an arm at its other end, and a spindle extending through the bearings, the barrel and the spring therein, and having a slot opening through its ends for receiving the last mentioned arm of the spring during axial movement of the spindle through the spring and thereby anchoring the spring to the spindle, substantially as and for the purpose specified.

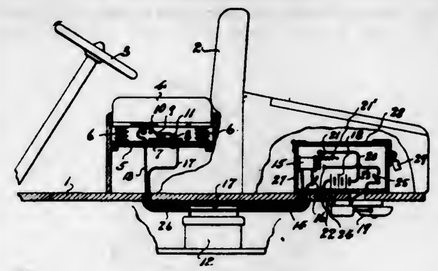
1,387,795. DOOR-STOP. GEORGES GUSTAVE OCTAVE MARICHAL, Paris, France. Filed Oct. 6, 1919. Serial No. 328,713. 1 Claim. (Cl. 200—54.)



A door stop comprising a base plate having an upturned end provided with an opening, and also having upturned side lugs at the opposite end; an insulating block secured on said upturned end, and provided with electrical contacts; an upper plate having a downturned end arranged in said opening, an inclined inner end, and downturned side lugs on opposite sides of said inclined end and pivotally connected to the first-named lugs, and a circuit-closing plate attached to the front end of said upper plate, extending through said opening and arranged to engage the electrical contacts when the inclined end of said upper plate is depressed by a door.

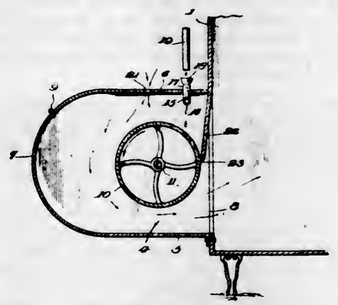
1,387,796. INTERRUPTER FOR IGNITION DEVICES. CHARLES THOMAS MASON, Sumter, S. C., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 2, 1918. Serial No. 226,292. 10 Claims. (Cl. 200—19.)

1. An interrupter mechanism for ignition systems, comprising a pair of main contacts one of which is movable for breaking a circuit for producing an ignition spark, a pair of auxiliary contacts in multiple with said main contacts and one of which is movable, said auxiliary contacts being timed so as to open before and close after said main contacts, means for supporting and operating said contacts whereby said auxiliary contacts are caused to rub one on the other after they are in engagement.



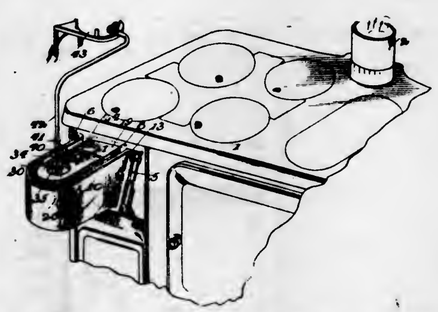
1,387,797. TIRE-GUARD. HENRY M. A. MILLER, San Francisco, Calif. Filed Apr. 5, 1921. Serial No. 458,802. 1 Claim. (Cl. 152—13.)

Means for protecting or guarding the outer side of a vehicle tire from being injured or unduly worn incident to its contact with curbing or other objects, which means comprises a thin, resilient, annular and smooth metal guard plate adapted to be carried by the rim of a tire and to extend around the outer side of and in close engagement with the outer side of the tire throughout the entire area of the inner side of said guard member, the outer edge of said guard member being of less thickness than the remaining portion thereof and disposed approximately half way between the base of the tire and the tread portion thereof.



1,387,798. AUTOMOBILE THIEF-ALARM. WILBUR J. MILLER, Newark, N. J. Filed Dec. 17, 1919. Serial No. 345,475. 2 Claims. (Cl. 200—85.)

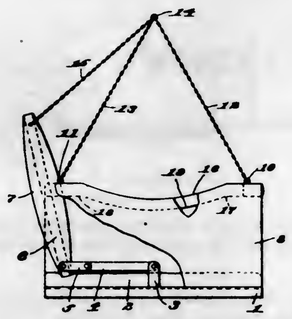
1. In a circuit breaker for use in automobile thief alarm actuating circuits, the combination with an automobile seat of a fixed contact, a fulcrum lug adjacent to said fixed contact, a seat cushion, springs intermediate said seat and said cushion for holding the latter in normally raised position, and a leaf-spring contact on the under side of said cushion, said leaf-spring contact normally extending across said fulcrum lug with its free end in engagement with said fixed contact but adapted to be rocked on



said fulcrum lug by a downward movement of said cushion to raise said free end away from said fixed contact.

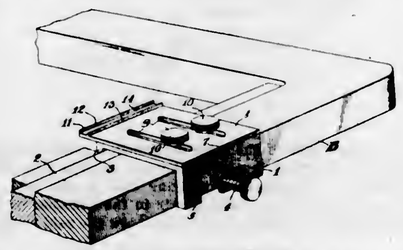
1,387,799. OIL-BURNER. VIRGIL H. MILLS and JOHN H. T. MILLS, Hubbard, Tex. Filed Jan. 14, 1920. Serial No. 351,375. 5 Claims. (Cl. 158—28.)

1. In apparatus of the class described, a generating and combustion chamber, a moving thermal flashing element in said chamber, means for supplying fuel to the said element, and means for admitting air to the chamber in currents flowing downwardly over and above the said element.



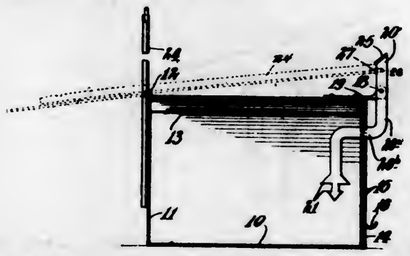
1,387,800. OIL-BURNER. VIRGIL H. MILLS, Hubbard, Tex. Filed Feb. 6, 1920. Serial No. 356,658. 5 Claims. (Cl. 158—91.)

1. In apparatus of the class described, a combustion chamber having upper and lower intake and outlet draft passages, a thermal flashing element rotatably mounted with relation to the intake passage and embodying [illegible]



to be acted upon by the air currents entering the passage and thereby effect rotation of the said element, and means for supplying fuel directly to the said flashing element.

1,387,801. HAMMOCK. HARRY MINTZ, Mattapan, Mass. Filed Oct. 8, 1920. Serial No. 415,542. 5 Claims. (Cl. 5—61.)

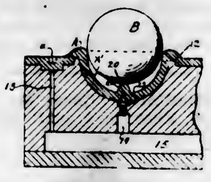


1. A hammock of the class described comprising a seat frame and an end bar, a strip of fabric secured to said frame at the bottom and to said bar at the top, and said bar having a downwardly curved central portion whereby the vertical dimensions of said fabric is greater at the ends than at the central portion.

1,387,802. GAGE FOR MAKING PRINTING EQUIPMENT. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Sept. 27, 1919. Serial No. 326,768. 13 Claims. (Cl. 33—184.5.)

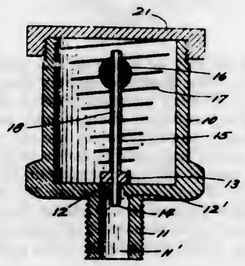
1. A gage comprising a base, means for clamping the base to a suitable support, a sliding member adjustably mounted on the base, means for fastening the member on the base in a selected position, and a marking element projecting from the plate.

1,387,803. ANIMAL-TRAP. ONUFRY PALAHNUK, Ford, Ontario, Canada. Filed Jan. 11, 1921. Serial No. 436,411. 5 Claims. (Cl. 43—61.)



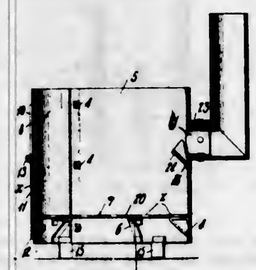
3. An animal trap comprising a box having a vertical slot in one end, a bait lever fulcrumed between its ends outside said slotted end of the box, said lever occupying a generally vertical position with one arm thereof presenting a horizontally projected intermediate portion extending through said slot, said arm being adapted to carry bait, a hinged door on the opposite end of said box, a spring normally urging said door to closed position, a fixed arm on said door extending rearwardly over the box when the door is open, and means on the other arm of said lever adapted to engage said door arm to retain the door open.

1,387,804. SAWDUST SOAP. FRANK W. RAICY, Modesto, Calif. Filed Feb. 2, 1920. Serial No. 355,670. 4 Claims. (Cl. 87—5.)



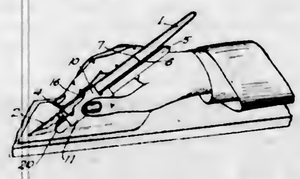
1. A cleansing compound comprising a paste, containing particles of water saturated wood fiber, and protective fragile coatings surrounding said particles, a soap distributed in said paste, and soapy water globules incorporated in the paste and surrounded by fragile coatings, the quantity of water contained in the paste being sufficient to permit the paste to be used for a cleansing operation without employing extraneous water.

1,387,805. PROCESS OF MAKING RUBBER ARTICLES HAVING CORES AND APPARATUS THEREFOR. FRED THOMAS ROBERTS, Cleveland Heights, Ohio, assignor to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 29, 1919. Serial No. 348,095. 26 Claims. (Cl. 18—19.)



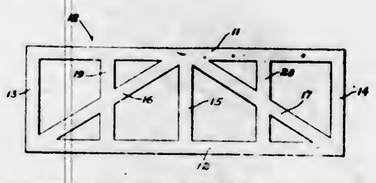
1. The method of making rubber articles having cores, comprising seating rubber stock for the shell of the article in two mold cavities, bringing such rubber-lined cavities into conjunction with an interposed core occupying one of the cavities and exhausting the air between the rubber shell and core.

1,387,806. LUBRICATING DEVICE. WATSON B. RULON, Philadelphia, Pa., assignor to Harold Perot Keen, Bellevue, Del. Filed Sept. 20, 1920. Serial No. 411,656. 3 Claims. (Cl. 184—69.)



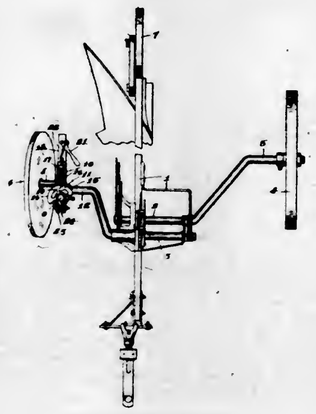
2. A lubricating device comprising a lubricant containing receptacle including a discharge duct, a tiltably mounted spring pressed valve having a passage therethrough for controlling the passage of lubricant through said duct, a hollow staff connected to and projected above said valve into said receptacle, a hollow stem connected to and projected below said valve into said discharge duct, the opening through said staff valve and stem being in register and a weight adjustably mounted upon the free end of said staff.

1,387,807. KETTLE-FURNACE. OSCAR PERDUE SANDERS, Waco, Tex. Filed June 1, 1920. Serial No. 385,796. 1 Claim. (Cl. 126—345.)



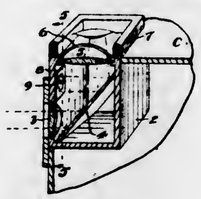
A kettle furnace comprising a sheet metal member having bolt openings disposed in pairs near the vertical edge and a pipe opening, of a crescent shaped deflector held below said opening, a door section having a suitable opening held to said member, bolts adjustably holding said door section, a door slidably held to said section, the metal below said door opening being formed into an outstanding lip to provide a rest for said door, a grate circular in outline, and brackets held to said member to support said grate, all as and for the purpose set forth.

1,387,808. ADJUSTABLE SUPPORT FOR PENS AND THE LIKE. SAMUEL SCHRAGO, Los Angeles, Calif. Filed Oct. 11, 1920. Serial No. 416,164. 6 Claims. (Cl. 120—107.)



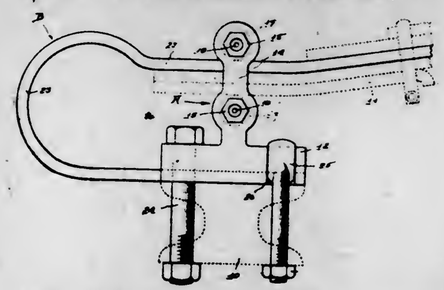
6. The combination with a penholder, of a sleeve having a portion that passes around said penholder, said sleeve being arranged to slide for a limited distance on the penholder, a supporting rod carried by said sleeve and arranged below and parallel with the penholder, and said supporting rod being grooved longitudinally for the reception of parts of said sleeve.

1,387,809. BUILDING-TILE. REUBEN G. SIMONS, Los Angeles, Calif. Filed Oct. 6, 1917. Serial No. 195,124. 2 Claims. (Cl. 72—41.)



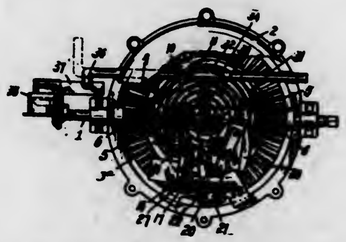
2. A building tile including parallel side walls, parallel end walls, a brace wall parallel to the end walls and disposed midway therebetween, two diagonal walls extending respectively from the corners formed by one side wall and said end walls to the corners formed by the other side wall and said brace wall, and intermediate brace walls interposed between the end walls and the middle brace wall and intersecting and formed integral with said diagonal walls.

1,387,810. SULKY-PLOW. SHELDON S. SPIER, Syracuse, N. Y., assignor to Syracuse Chilled Plow Company, Syracuse, N. Y., a Corporation of New York. Filed Nov. 28, 1919. Serial No. 341,072. 1 Claim. (Cl. 97—36.)



In a sulky plow, the combination of a caster wheel at one side thereof, an axle on which the caster wheel is mounted having an upwardly extending portion, a bearing in which the upwardly extending portion is journaled, a support mounted on the bearing and having clamping means by which it is secured to the bearing, the support being adjustable to different radial positions about the bearing, a sector mounted upon the upper end of said portion of the axle and overlying the said support, the sector having a notch and plane faces on opposite sides of the notch, a spring pressed pawl mounted on the support and coacting with the sector and movable into the notch thereof, and a handle mounted on said support and connected to the pawl to withdraw the same against the action of its spring, substantially as and for the purpose described.

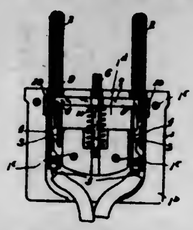
1,387,811. EXPOSURE-METER AND FINDER FOR CAMERAS. PETER W. STONEA, Pasadena, Calif. Filed Mar. 16, 1920. Serial No. 366,345. 3 Claims. (Cl. 88—23.)



1. The combination with a camera having a compartment in its front upper corner, an object lens in the front wall of said compartment, a view lens in the top of said compartment, a light excluding wall disposed on the top of the camera about said view lens, a reflector within the compartment between the object lens and the view lens, means for regulating the size of the opening in which the object lens is located, and there being a distinctive mark formed on the front wall of the compartment above the object lens and below the view lens.

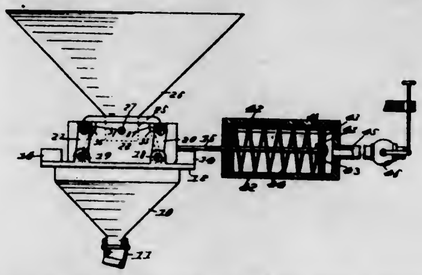
1,387,812. SHOCK-ABSORBER. JAMES ISAAC SUMNER, Minneapolis, Minn., assignor of one-half to Anton G. Schimming, Minneapolis, Minn. Filed Apr. 5, 1920. Serial No. 371,247. 6 Claims. (Cl. 267—41.)

2. In a device of the class described, the combination with a cantilever spring and axle of a vehicle of shackle secured to said axle and designed to receive said spring and permit the same to move horisontally with respect to said axle and a looped member connected to the spring at one end and to the axle at the other end thereof, said member being designed to yieldingly hold said spring and axle in normal horisontal relation.



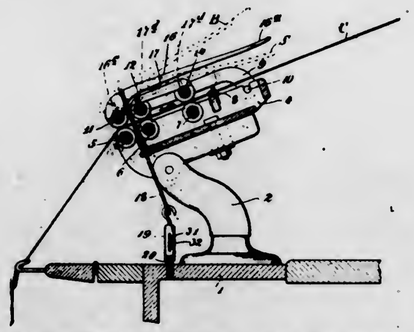
1,387,813. GEARING. JULES BYRON TAYLOR, Toledo, Ohio. Filed Aug. 13, 1919. Serial No. 317,168. 3 Claims. (Cl. 74—50.)

1. In a mechanism of the class described, a disk having in its side a spiral groove, a gear wheel connected to said disk and operable when rotated to impart rotation to said disk, a drive shaft having constant rotation in one direction, pinions loose on the shaft and in mesh with the gear wheel at opposite sides of its axis, a clutch member adapted to operatively engage either of said pinions with said shaft, a shifter element operable to move said member to engage first one and then the other of said pinions, a movable gravity member operable when at a predetermined point in its movement in either direction to act by gravity on said element to effect a shifting thereof, a lever having a part traveling in the groove of said disk, a link connected to the lever and having a longitudinally extending slot therein in which a part of said gravity member works whereby a tipping of the gravity member in one direction or the other to gravity operating position is effected by a movement of said link first in one direction and then the other, and members adjustably carried by the link at the ends of its slots to vary the permissible relative movement of the gravity member relative to the link.



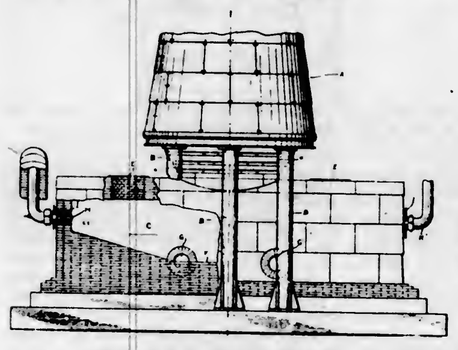
1,387,814. WALL-PLUG. ABRAHAM TEN BOSCH, The Hague, Netherlands. Filed Oct. 25, 1920. Serial No. 419,480. 3 Claims. (Cl. 173—361.)

3. A wall plug including a holder, a plurality of pins mounted in said holder and each consisting of a plurality of sections, one section of each pin being movable relatively to the other section of the pin, a cross-head cooperating with said pins to move the movable sections of the pins away from the other sections of said pins,



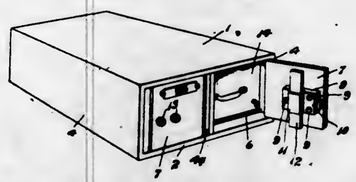
and a sliding pin engageable with said cross-head and adapted to actuate the same when the first mentioned pins are inserted in a contact socket and the cross-head pin engages said contact socket.

1,387,815. SANDING DEVICE. GEORGE M. TOWLE, Middletown, R. I. Filed Jan. 11, 1921. Serial No. 436,459. 3 Claims. (Cl. 291—24.)



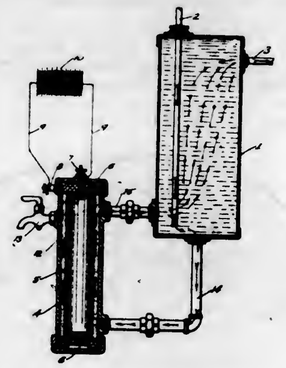
1. In a sanding apparatus, a discharge chute, a hopper, an element between the hopper and the chute for carrying the hopper, means for movably mounting the element on the chute, means for discharging sand from the element to the said chute and for moving the said element, and means for operating the sand delivering and element operating means.

1,387,816. PRESSURE MECHANISM FOR ROLL-STANDS. EDWARD J. VALES and JAMES T. BISHOP, Augusta, Ga. Filed Oct. 7, 1919. Serial No. 329,116. 4 Claims. (Cl. 19—33.)



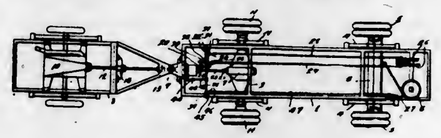
4. In a pressure mechanism for roll stands the combination of a primary pressure applying member comprising an extended hand lever and a secondary pressure applying member both effective upon rolls the primary member having a fulcrum portion arranged to engage the secondary member and a separate fulcrum portion arranged to engage a roll, a pressure sustaining member effective upon the primary pressure applying member to transmit pressure to the secondary member, said secondary member including a longitudinal guide forming a restricted seat for the fulcrum of said primary pressure applying member, while said primary and secondary pressure applying members are under the influence of said pressure sustaining member.

1,387,817. APPARATUS FOR THE MANUFACTURE OF PHOSPHORIC ACID AND COMPOUNDS OF THE SAME. WILLIAM H. WAGGAMAN and THOMAS B. TURLEY, Washington, D. C. Filed July 15, 1920. Serial No. 396,611. 4 Claims. (Cl. 263—27.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



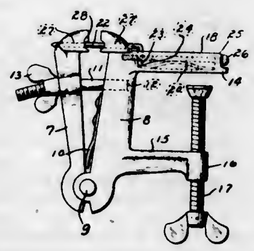
1. A combination blast and open hearth furnace for producing phosphorus and phosphoric acid provided with a shaft or charge chamber in which the reacting charge is heated to a smelting temperature, by means of fuel introduced, discharging into a slag chamber which slopes from each end toward the center and the length of which is greater than its width, and the width at its base greater than the width at its top, a hearth in said slag chamber sloping from each end toward the center on which the material discharging from the shaft is maintained in a molten condition by means of flames and hot blasts introduced into said slag chamber and playing above the slag, means for withdrawing the gaseous products of the reactions from the shaft and hearth, and means for removing the slag exhausted of its phosphoric acid content, substantially as described.

1,387,818. SAFETY-DEPOSIT APPLIANCE. PETER M. WEGE, Grand Rapids, Mich., assignor to Invincible Metal Office Furniture Company, Manitowoc, Wis., a Corporation of Wisconsin. Filed Dec. 7, 1920. Serial No. 428,868. 4 Claims. (Cl. 109—12.)



1. In a device of the character described, a receptacle having an open side, a door for closing said open side, a lock attached to the rear side of the door, a bar permanently connected to the rear side of the lock and positioned vertically, and stop means on the upper and lower sides of the receptacle against which the upper and lower ends of the bar come when the door is closed, substantially as and for the purposes described.

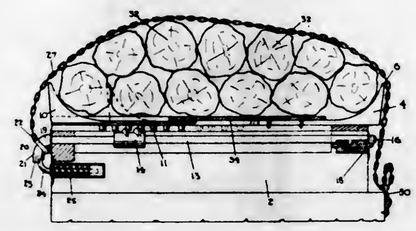
1,387,819. ELECTRIC WATER-HEATER. ARTHUR MAX WERNER, San Jacinto, Calif. Filed Sept. 23, 1920. Serial No. 412,128. 4 Claims. (Cl. 219—39.)



1. A heater for fluids including a casing, an electrode in said casing, connections to said casing for fluid circulation upwardly through the same, a tank, means for withdrawing fluid from the top of said casing into said tank, and an auxiliary discharge means at the top of said casing for directly withdrawing the heated fluid.

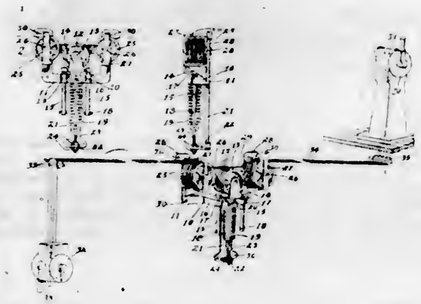
1,387,820. MOTOR-VEHICLE, TRAILED POWER. HOWARD WILCOX, Woodstock, N. Y. Filed Jan. 9, 1920. Serial No. 350,399. 5 Claims. (Cl. 180—14.)

1. A motor driven vehicle comprising a main load carrying vehicle getting its tractive power from its load and a trailing vehicle, an engine carried by the trailing vehicle and means whereby the entire power will be transmitted from the engine to the differential of the rear axle of the main load carrying vehicle thereby driving the wheels of the main vehicle.



1,387,821. VISE. DAVID A. WILKINSON, Overland Park, Mo. Filed Nov. 29, 1920. Serial No. 426,937. 2 Claims. (Cl. 81—32.)

1. A vise comprising a movable jaw and a stationary jaw, a guide slidably mounted in said jaws and extending entirely therethrough, a bolt and a nut mounted thereon for operating the movable jaw, means for holding



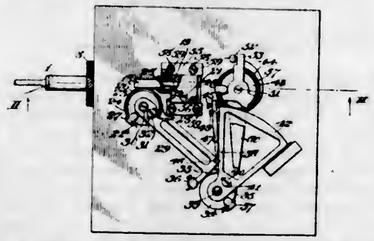
the guide to the vise, and clamping means carried by the stationary jaw for securing the device to a work bench.

1,387,822. LOGGING-CAR. HAYDN OSWALD WILLIAMS, Sperling, and WILLIAM JOSEPH MILLER, Vancouver, British Columbia, Canada. Filed Aug. 13, 1920. Serial No. 403,292. 10 Claims. (Cl. 105—385.)

8. In a logging car, a laterally movable log chock provided with teeth, and a rotary locking member provided with teeth adapted to mesh with the teeth of said chock to hold the latter in adjusted position.

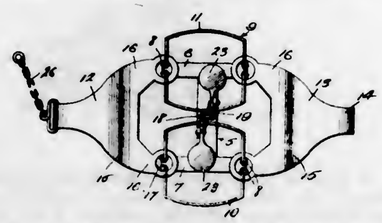
1,387,823. SLACK-WIRE COMPENSATOR FOR SHIPS' TELEGRAPHS. FRANK W. WOOD, Montclair, N. J., assignor to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,472. 12 Claims. (Cl. 64—5.)

1. For use in a mechanical ship telegraph comprising a transmitting and a receiving station, and relatively long stretches of transmission cords connecting the stations, a unitary tensioning apparatus adapted to be located at a suitable point between or remote from the stations and comprising a guide pulley engaging one of the cords, a tensioning pulley engaging the cord and movable to take up slack, and resilient means applied to said tensioning pulley to take up the cord slack.



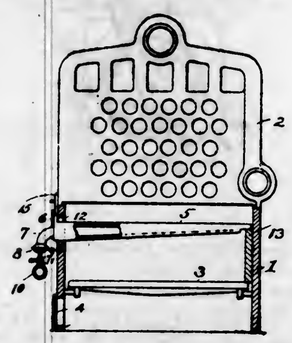
1,387,824. STOVE. JOHN ZUKOWSKI, Hamtramck, Mich. Filed Mar. 4, 1919. Serial No. 280,653. 1 Claim. (Cl. 126—68.1.)

In a heating stove, a tapering magazine suspended therein, having an air chamber surrounding the magazine, a grooved guide-way formed in the lower end of the magazine, a horizontal slide mounted in the grooved guide-way and closing the lower end of the magazine, and a curved shoulder formed on the inner wall of the magazine at the side thereof opposite the inner end of the slide and having a flat lower face frictionally engaging the upper face of the slide to scrape the upper face of the



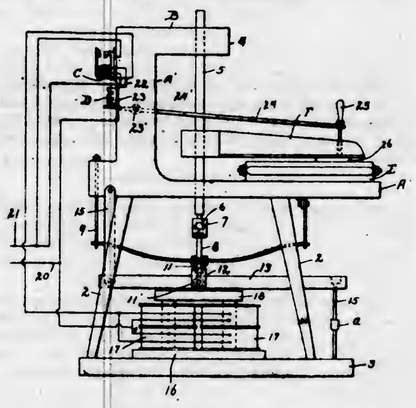
slide during movement thereof for directing the discharge of coal in the magazine into the fire pot.

1,387,825. MECHANICAL MOVEMENT. ERIK H. ALDEBORGH, Poughkeepsie, N. Y., assignor to C. E. Johansson, Inc., Poughkeepsie, N. Y., a Corporation of Delaware. Filed Nov. 5, 1920. Serial No. 422,041. 17 Claims. (Cl. 74—14.)



8. Means for converting a slight rectilinear motion into an extended circular motion comprising a reciprocating member having a plane surface, a rocking member having a concentric surface arranged to coact with said plane surface, a flexible connecting element located between and extending along said conting surfaces, means for adjusting the plane surface toward and away from the concentric surface and for squaring the plane surface with respect to said concentric surface.

1,387,826. ANIMAL-TRAP. JOHN F. ARNETH, Washington, D. C. Filed Mar. 22, 1921. Serial No. 454,592. 6 Claims. (Cl. 43—90.)

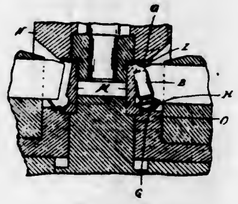


1. A trap comprising a plurality of pairs of jaws, spring means for closing the jaws, latch means for each pair of jaws, and means connecting said latch means whereby movement of one latch means operates the other latch means.

1,387,827. GAS-BURNER-ATTACHING MEANS. JOSEPH H. BACON, Lakewood, Ohio, assignor to The Bacon Heater Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 30, 1917. Serial No. 165,346. 5 Claims. (Cl. 158—99.)

5. A combustion chamber having an opening in a wall thereof, a burner extending through said opening, the forward end of the burner being supported in the said opening, a second support within the combustion chamber and adapted to support the rear end of the burner, the said opening in the combustion chamber being slightly higher than the height of the burner of the corresponding portion thereof, said burner having a flange adjacent its forward end which lies upon the outside of said opening and engages the wall of the combustion chamber to close said opening when the burner is inserted, a downwardly extending pipe carried by the burner, a mixer carried by said pipe, a gas header and valved pipe associated therewith, the said valved pipe having a slip connection with the mixer.

1,387,828. UPPER-LEATHER-CUTTING MACHINE. STANLEY J. BEERS, Union, N. Y. Filed Nov. 29, 1919. Serial No. 341,457. 2 Claims. (Cl. 164—25.)

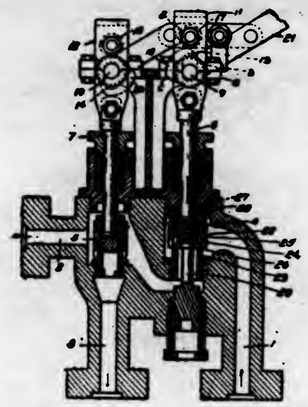


1. In an upper leather cutting machine, a table, a standard from the rear portion of the table surface and having a forwardly projected arm alined with said surface, a shaft vertically mounted in said arm and table and slidable therethrough, a leaf spring carried by the table, pivotal connection between said shaft and spring for support of said shaft, solenoids disposed beneath said pivotal connection and connected thereto for downward actuation of said support and shaft against the tension of said spring, a cutting block on said table, a hammer carried by said shaft and laterally adjustable thereon over said block, a circuit including said solenoids, and a manually operable circuit closer on said standard for energizing said solenoids whereby the hammer is actuated.

1,387,829. ROLLER-BEARING CAGE. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 28, 1917. Serial No. 193,716. 2 Claims. (Cl. 64—62.)

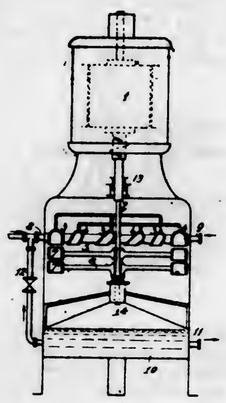
1. In a roller bearing cage, cooperating connector rings each comprising a pressed sheet metal annulus having a bearing portion and a relatively narrow grooved portion, said grooved portion having slits or apertures predeterminedly spaced therein, and means engaging in said slits or apertures for connecting said rings to each other, said means bearing at spaced points upon the walls of said grooved portions.

1,387,830. METHOD OF ASSEMBLING ROLL-HOLDING-CAGES. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 28, 1917. Serial No. 193,718. 7 Claims. (Cl. 29—84.)



1. The method of assembling roller-holding cages, comprising the clamping of a series of individual roller holding cells with their axes in exactly predetermined relation to each other and rigidly connecting said cells while in that relation.

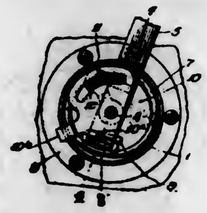
1,387,831. VALVE. CHARLES A. BORCHERT and MICHAEL G. O'NEIL, Woodlawn, Pa., assignors to Protected Seat Valve Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1920. Serial No. 410,982. 4 Claims. (Cl. 138—16.)



1. The combination with a valve casing provided with an inlet and an outlet and with a port affording communication therebetween, of means for controlling flow through said port, said means comprising a sleeve member provided with a valve seat and a closure member provided with a corresponding valve surface, said closure member being further provided with a flange adapted when the parts are assembled and the valve is approaching closed position to engage the exterior surface of said sleeve in continuous contact around the whole extent thereof and as to move telescopically thereon, and with

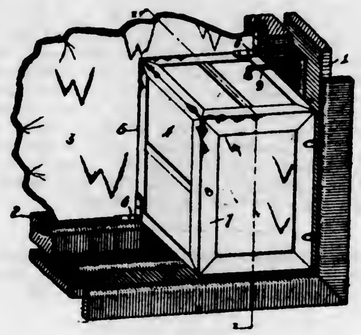
a second extension adapted when the valve is approaching closed position to engage in continuous circumferential contact the interior surface of said sleeve and to move

telescopically thereon, and means for moving one of said members relatively to the other, substantially as described.



1,387,832. MEANS FOR INTERMIXING FLUIDS. OTTO F. BRUMANN, Leysin-Village, Switzerland. Filed Sept. 18, 1919. Serial No. 324,550. 4 Claims. (Cl. 259—108.)

1. In a device of the character described, a shaft, a turbine wheel thereon to which a driving medium is fed, means for feeding the driving medium to the wheel, whereby the wheel is rotated and the medium is mixed, and means coupled to the turbine to compensate for any change in speed due to the pressure fluctuations in the driving medium.

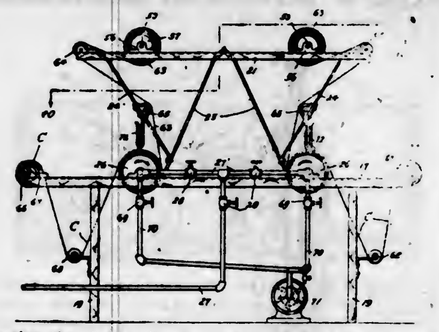


1,387,833. LEVER-COUNTERBALANCE. FOREST CHENEY, Chicago, Ill., assignor to Cheney Talking Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1919. Serial No. 340,814. 8 Claims. (Cl. 217—60.)

1. In a lever counterbalance, a lever, a fulcrum for said lever, a mounting carrying said fulcrum, an anchoring member carried by said mounting, and a coil spring having its respective ends connected with the lever and said anchoring member; said anchoring member being

adjustable about the lever fulcrum and having means for holding it to its adjustment.

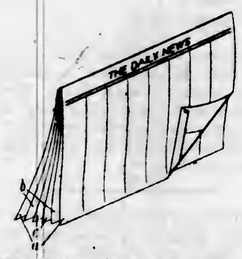
1,387,834. COOLING APPARATUS. CHARLES S. CLARKSON, Toledo, Ohio. Filed Nov. 20, 1920. Serial No. 425,311. 3 Claims. (Cl. 45—104.)



1. The combination with a window pane exposed at its outer side to the outside atmosphere, of means forming a cooling chamber and having an open side bearing closely against the inner side of the window pane and closed thereby.

1,387,835. PROCESS OF PURIFYING HYDROCARBON OILS. ERNEST B. COBB, Jersey City, N. J., assignor to Standard Oil Company (of New Jersey), Bayonne, N. J., a Corporation of New Jersey. Filed Apr. 28, 1920. Serial No. 377,264. 6 Claims. (Cl. 196—26.)

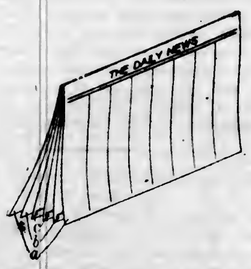
1. The process of treating and purifying hydro-carbon oils which consists in subjecting the oil to the action of strong sulfuric acid, removing oil soluble sulfonated compounds from the treated oils, again treating the oil with strong sulfuric acid and washing the treated oil with isopropyl alcohol.



1,387,836. CLOTH-SPONGING MACHINE. BATTISTA CORTESE, New York, N. Y. Filed Dec. 22, 1920. Serial No. 432,560. 1 Claim. (Cl. 26—7.)

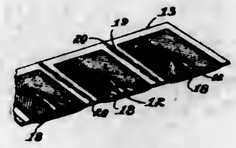
In a cloth sponging machine, the combination with a main frame, a steam drum journaled thereon, an auxiliary frame above the main frame, a leader roller journaled thereon, and a leader attached to the roller, of means to actuate the leader to unwind it from the drum, and a pair of open ended supports above the drum and attached to the auxiliary frame, said supports being adapted to

receive the cloth roller for rewinding the same thereon coincident with the unwinding of the leader from the drum.



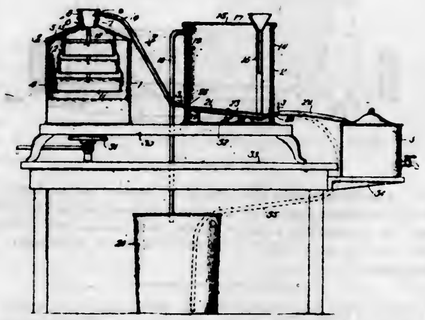
1,387,837. NEWSPAPER. EDGAR H. COTTRELL, Westerly, R. I. Filed Jan. 25, 1915. Serial No. 4,228. 2 Claims. (Cl. 283—1.)

1. A newspaper comprising a plurality of sheets, each sheet having two printed pages on each side thereof, and a fold line between the pages, the columns of printed matter running at right angles to the fold line, the two printed pages on each side of each sheet reading in the same direction when the newspaper is unfolded.



2. A newspaper comprising a plurality of sheets, each sheet having two printed pages on each side thereof, and a fold line between the pages, the columns of printed matter running at right angles to the fold line, the two printed pages on one side of each sheet reading in one direction and the two printed pages on the other side of each sheet reading in the opposite direction when the newspaper is unfolded.

1,387,838. NEWSPAPER. EDGAR H. COTTRELL, Westerly, R. I. Filed Jan. 25, 1915. Serial No. 4,229. 3 Claims. (Cl. 283—1.)

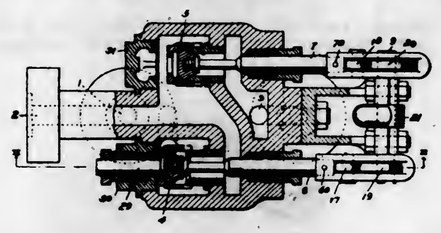


1. A newspaper comprising a plurality of sheets, each side of each sheet having two printed pages, and a fold line between the pages, the columns of printed matter running at right angles to the fold line, the two printed pages on one side of a sheet reading in the same direction and the two printed pages on one side of a sheet reading in opposite directions when the newspaper is unfolded.

1,387,839. PACKAGE. CHARLES T. DAVIS, New York, N. Y. Filed Mar. 9, 1920. Serial No. 364,565. 9 Claims. (Cl. 206—63.2.)

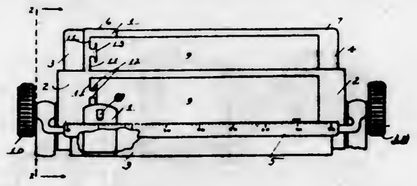
1. A sealed package comprising a container and an article entirely inclosed therein, a portion of the container being closely pressed about the article to cause an outline of the latter to appear in relief on a surface of the package, whereby the size and contour of the article may be readily determined by an inspection of the package.

1,387,840. EVAPORATOR. JOHN H. DAVIS, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,763. 1 Claim. (Cl. 203—5.)



An evaporator comprising a receptacle having a cover member secured thereto, said cover member having an inlet opening formed therein, a battery of pans suspended one above the other in said receptacle with their centers in vertical alinement with said opening, said battery being disposed in spaced relation to the closed bottom and side walls of said receptacle and to said cover member whereby said receptacle and pans are each adapted to contain water to be evaporated, each of said pans being larger than the successive pan above, whereby the water contained in each pan is adapted to overflow into the next lower pan, said receptacle being adapted to have heat applied thereto, said battery being adapted to be heated by the vapor generated in said receptacle for evaporating the water in said pans, and a plug detachably seated in said inlet opening and having a vent for conducting away the vapor generated in said evaporator.

1,387,841. VALVE. GEORGE P. DEMPLER, Pittsburgh, Pa., assignor to Protected Seat Valve Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 3, 1920. Serial No. 393,864. 5 Claims. (Cl. 138—16.)

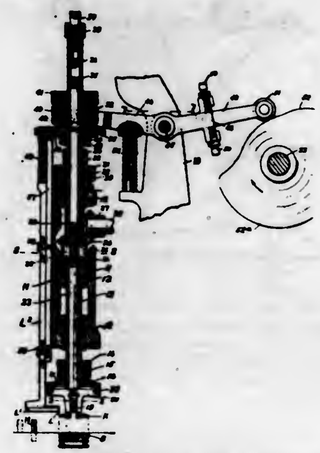


1. A valve structure for an hydraulic cylinder consisting of an essentially cubical casing provided at its base with inlet and waste passages, and in one end with a cylinder passage, two valves arranged within the casing and controlling one of them the line of flow from the inlet passage to the cylinder passage and the other the line of flow from

the cylinder passage to the waste passage, said valves being carried upon the stems extending through the end of the casing opposite that wherein the cylinder passage is formed, means for engaging said valve stems for shifting

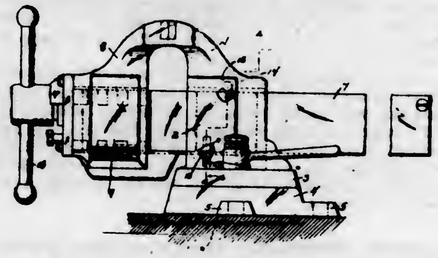
the valves, two openings normally covered with removable closures formed in the end of the casing in which the cylinder passage also is formed, said openings affording access to the said valves for purposes of removal and replacement, substantially as described.

1,387,842. TYPEWRITER. WILLIAM H. EDWARDS, Grand Rapids, Mich. Filed May 1, 1918. Serial No. 231,788. 4 Claims. (Cl. 197—143.)



1. A flexible shield adapted to be drawn by the turning of the rotatable platen of a typewriter between said platen and the typewriter's paper guide, and means for holding the strip in said indrawn position against movement by the platen.

1,387,843. LUBRICATING SYSTEM. DOUGLAS F. FESLER, Evanston, Ill., assignor, by mesne assignments, to The Bassick Manufacturing Company, a Corporation of Delaware. Filed Nov. 18, 1918. Serial No. 262,930. 8 Claims. (Cl. 184—45.)

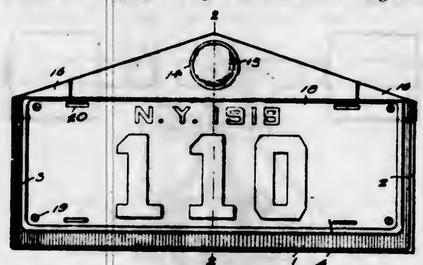


1. A lubricating system comprising a cylinder, a plunger in said cylinder, a spiral spring between said plunger and one end of said cylinder, means for establishing communication between the other end of said cylinder and the bearing comprising a tubular member, means for supplying lubricant to the last named end of said cylinder comprising a second tubular member having an outwardly closing closure, a lubricant pump, and co-acting means on said lubricant pump and on said tubular member for detachably connecting said lubricant pump and said second tubular member to deliver lubricant to said cylinder under pressure greater than the pressure of said spring, the first mentioned end of said cylinder acting as a support for said plunger when lubricant is forced into said cylinder under a pressure greater than the tension of said spring.

1,387,844. CHUCK. FREDERICK ELLIOTT FISHER, Sudbrook Park, Md., assignor to Eugene K. Plumly, Philadelphia, Pa. Filed Jan. 26, 1921. Serial No. 439,932. 19 Claims. (Cl. 93—54.)

1. A chuck having a body portion, a movable sleeve to which the body is connected, a plurality of jaws mounted in the body, a longitudinally movable spindle centrally mounted in the sleeve and body, actuating devices for the sleeve and spindle, actuating connections between the spindle and jaws, and actuating connections between the sleeve and spindle.

1,387,845. QUICK-ACTING VISE. EDWIN W. FULTON, Lowville, N. Y., assignor to Velox Vise Co., Inc., Lowville, N. Y. Filed Jan. 29, 1920. Serial No. 354,924. 5 Claims. (Cl. 81—17.)

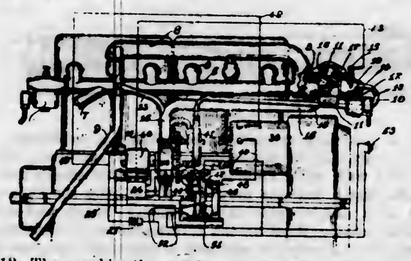


1. In a vise, the combination with a fixed jaw having an opening therethrough, of a tail stock slidable through the opening, a fulcrum block secured in the bottom of the opening and having its top surface raised above the plane of said bottom, a grip pin secured at the top of the opening and having its lower surface lower than the plane of said top and out of alinement with the fulcrum block, a movable jaw carried upon the tail stock, and means to move the jaw upon said tail stock.

1,387,846. LICENSE-BRACKET. ALBERT WM. GABEL, Rochester, N. Y. Filed Nov. 8, 1919. Serial No. 336,577. 1 Claim. (Cl. 40—131.)

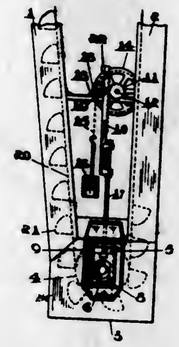
A device of the character specified comprising a flat plate slotted at predetermined points to define a space for locating a license plate thereon and having side edges beyond the space beveling to a point on one side of the plate, one beveled side having upstanding flanges angularly inclined with respect to each other to provide

reflectors for reflecting light upon the license space and illuminating means between the said reflector and a cap-plate bridging the space between the flanges and



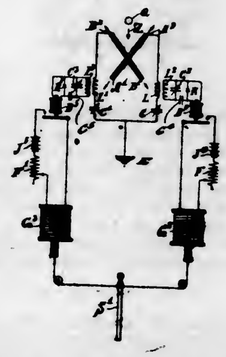
supported by the latter for incasing the illuminated means, said cap-plate having lens-opening in line with the illuminating means.

1,387,847. TOOL FOR DRESSING EMERY-WHEELS AND THE LIKE. ARTHUR A. GLASS, New York, N. Y. Filed Feb. 18, 1921. Serial No. 446,069. 3 Claims. (Cl. 125—39.)



1. A tool for dressing emery wheels and the like comprising an externally threaded hollow body, a tube partly within said hollow body and adapted to support a cutting stone, an open end cap on said tube and an internally threaded clamp ring over said cap engaging the body threads whereby the cutting stone is clamped between the tube and cap and projects through the latter.

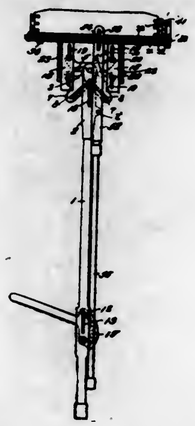
1,387,848. INTERNAL-COMBUSTION-ENGINE POWER PLANT. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 30, 1916. Serial No. 117,567. 20 Claims. (Cl. 290—38.)



12. The combination with an internal combustion engine, an engine-turning motor, a preheating device for the engine and means whereby the operation of said device for a predetermined definite period automatically causes the operation of said engine-turning motor.

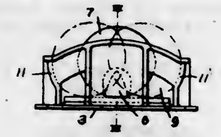
1,387,849. ADJUSTING DEVICE FOR ELEVATOR BOOT-PULLEYS. GEORGE LEWIS GLASS, Toronto, Ontario, Canada, assignor to Dodge Manufacturing Company of Canada, Limited, Toronto, Canada. Filed Nov. 21, 1919. Serial No. 339,578. 3 Claims. (Cl. 64—52.)

1. In a belt adjusting device, the combination of a supporting frame; a bearing located at each side of said frame movable relative to the frame and to each other; a shaft journaled in said bearings; a pulley carried by said shaft between said bearings; a suitably guided rack connected to each of said bearings; a second shaft journaled on the supporting frame; a pinion secured adjacent each end of the last mentioned shaft and each meshing with a rack; weights; and means whereby the weights tend to rotate the last mentioned shaft.



1,387,850. SYSTEM OF RADIODIRECTIVE CONTROL. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed June 7, 1912. Serial No. 702,174. Renewed Jan. 18, 1921. Serial No. 438,260. 12 Claims. (Cl. 250—2.)

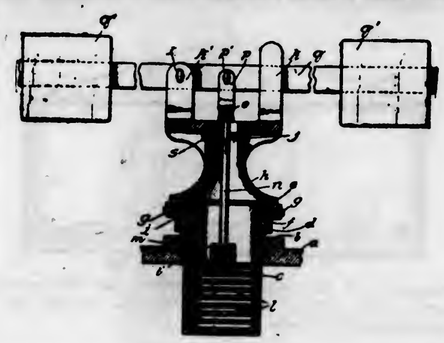
1. In a system of radio control, a receiving station comprising a plurality of antennæ arranged to receive radiant energy in different degrees respectively, controlling devices respectively arranged to be rendered operative when said antennæ are simultaneously and equally exposed to radiant energy, a rudder, and means for actuating said rudder, said means being operative to shift said rudder in one direction or the other ac-



cording as one or the other of said controlling devices is rendered inoperative by an unequal distribution of the received radiant energy upon said antennæ.

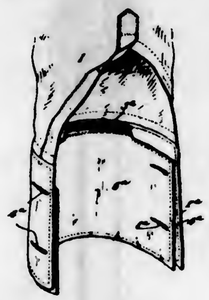
1,387,851. NOTCHING DEVICE. EMMETT M. KEY, Tulsa, Okla. Filed Jan. 23, 1918. Serial No. 213,406. 13 Claims. (Cl. 144—2.)

1. A notching device of the class described comprising a saw carrying frame, said saw carrying frame provided with track grooves formed therein, gripping jaws carried by said frame, lugs slidably mounted upon said gripping jaws, means formed upon said lugs and working within said track grooves for constituting a guide for said jaws, and means for yieldably supporting said lugs.



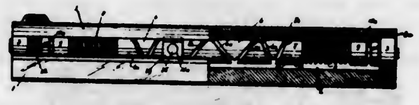
1,387,852. SIDE BEARING FOR RAILWAY-CARS. WILLIAM J. KNOX, Dubois, Pa. Filed June 21, 1919. Serial No. 305,859. 10 Claims. (Cl. 64—64.)

1. In combination in a side bearing, a cage having side walls, centering pins projecting inwardly from said walls, a roller in the cage having its end walls provided with recesses extending radially from the periphery of the roller inward, and stops at the end of the cage for limiting the movement of the roller, the clearance between the centering pins and the sides of the recesses being such as to permit the roller to move to engagement with the stops without interference by the centering pins.



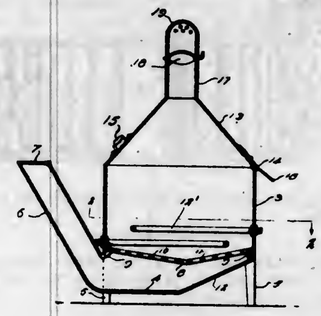
1,387,853. BOILER AND DAMPER REGULATOR FOR BOTH STEAM AND HOT WATER. JOHN M. LARSON, Chicago, Ill., assignor to National Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1917. Serial No. 197,799. 2 Claims. (Cl. 236—20.)

1. In a device of the class described, a well adapted to be screwed within the outer shell of a boiler, a tubular open-ended cap removably mounted on said well and containing a dust-excluding packing, a series of diaphragms fitting within said well, a stem secured at its lower end to said diaphragms and extending through said tubular cap and packing and means whereby the



expansion and contraction of said diaphragm may be utilized to operate a damper or like device.

1,387,854. CUFF. HERBERT H. LEDERER, Cleveland, Ohio. Filed Dec. 18, 1918. Serial No. 267,347. 2 Claims. (Cl. 2—79.)

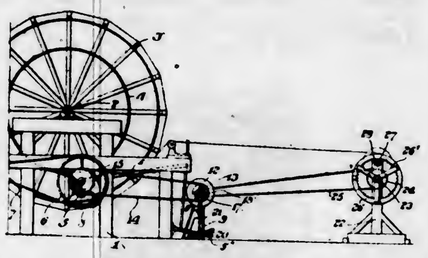


1. The combination, with a shirt sleeve, of a foldable cuff member having a slit whose periphery lies entirely within the cuff body below the upper portion thereof, said cuff member being connected along substantially its entire upper portion, above the upper periphery of said slit, to the sleeve, and a second foldable cuff member having a tab at its upper end secured to the first member adjacent to the said slit.

1,387,855. REVERSING MECHANISM. ELIHU LIPPITT and STEPHEN W. LIPPITT, Cleveland, Ohio. Filed June 3, 1919. Serial No. 301,436. Renewed June 25, 1921. Serial No. 480,483. 6 Claims. (Cl. 74—1.)

3. A reversing mechanism comprising a guideway, a shaft journaled in parallelism with the guideway and provided with spiral grooves crossed at intervals throughout its length, extreme portions formed upon the ends of said shaft and movable axially relative thereto and containing continuations of the spiral grooves and yielding means for holding the sections in organized relation to the shaft.

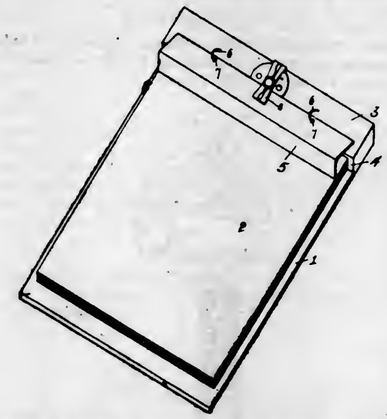
1,387,856. HEATER. HOWARD LOCKHART, Falls City, Nebr., assignor to E. R. Hays and R. A. Heacock, Falls City, Nebr. Filed Nov. 5, 1920. Serial No. 421,979. 2 Claims. (Cl. 126—367.)



1. A tank water heater comprising a casing adapted to be submerged in a water tank and having its bottom spaced from the bottom of said water tank, said casing provided with a clean-out-chute communicating with the bottom thereof, a grate in said casing, and the bottom of the casing opposite the clean-out-chute being inclined downwardly and toward the end of the clean-out-chute for directing ashes toward the end thereof.

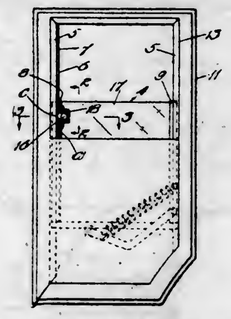
1,387,857. PROCESS FOR SEPARATING SULFUR DIOXID FROM GAS MIXTURES. RALPH H. MCKEE, New York, N. Y. Filed May 26, 1919. Serial No. 299,693. 6 Claims. (Cl. 23—1.)

4. In the process of separating sulfur dioxid from furnace gases, the steps of scrubbing said gases with water, further cooling said gases, reducing the moisture content of said gases to a point below saturation, and bringing said gases into contact with a material containing a silica gel.



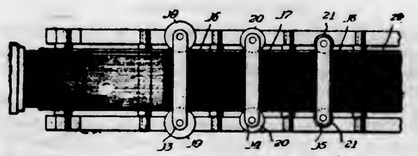
1,387,858. WARPING-MILL APPARATUS. ALEXANDER MCMUNN, Philadelphia, Pa. Filed Sept. 16, 1920. Serial No. 410,675. 3 Claims. (Cl. 28—14.)

1. In apparatus of the character described, the combination with a warping mill having a reel and means for rotating it, of a roller journaled in bearings independent of said mill, clutching mechanism through which said roller is connected with said reel rotating means, a spooling jack having a pulley, and a belt connecting said pulley and roller.



1,387,859. LOOSE-LEAF BINDER. ELMER C. MAHON, Toledo, Ohio. Filed Apr. 5, 1920. Serial No. 371,180. 1 Claim. (Cl. 129—35.)

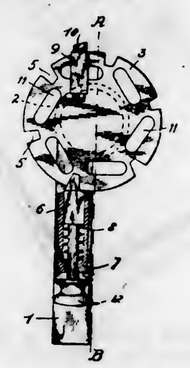
A loose-leaf binder comprising a stiff backing member having a cross ledge at its upper end, a clamping member L-form in cross-section hinged at one edge to the ledge for vertical swinging movements and when in clamping position having its hinged flange projecting on an incline from the ledge and its other flange projecting toward the backing member in clamping engagement with sheets disposed thereover, and a holding arm pivoted to the



ledge for swinging movements over the inclined flang of the clamping member to adjustably hold it in clamping position.

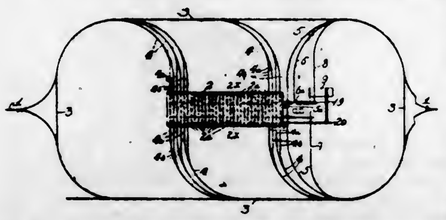
1,387,860. WINDOW-FASTENER. WILLIAM MILLER, Amesbury, Mass., assignor to Amesbury Brass & Foundry Company, Amesbury, Mass., a Corporation of Massachusetts. Filed June 2, 1920. Serial No. 385,881. Claims. (Cl. 292—228.)

1. In a device of the character described and in combination with a window frame having a notched bar secured thereto, a window sash, a latch pivotally mounted on the said sash, the axis of the pivot being parallel with the notched bar and a spring acting on the said latch to cause the point of the latch to engage a notch in the said bar and by its reaction to restrain the sash from movement in and out relatively to the frame.



1,387,861. METHOD OF AND APPARATUS FOR MAKING FACING-BRICKS. JAMES H. MITCHELL, Danville, Ill. Filed Oct. 4, 1920. Serial No. 414,392. 6 Claims. (Cl. 25—1.)

1. The method of making ornamented bricks which consists in moving a bar of plastic clay in surface con-



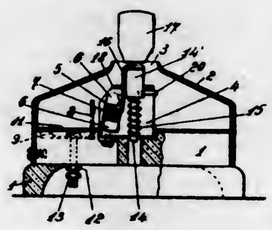
tact with a plurality of sucessive rolls of different diameters, each roll adding a portion of the complete design to the clay, substantially as described.

1,387,862. TOOL-HOLDER. ERNST ORTWIG, Cologne-Ehrenfeld, Germany. Filed Aug. 15, 1919. Serial No. 317,724. 2 Claims. (Cl. 29—48.)

1. In a device of the character set forth, a supporting member adapted to be secured to a lathe or other machine, a tool supporting revolver head having in coacting relation a series of peripheral notches and a corresponding number of elongated slots therethrough, screw and nut means allowing and preventing rotation of said revolver head on and relative to said supporting member, latch bolt means coacting with said peripheral notches for locking said revolver head in a plurality of predetermined operative positions, and a tool clamping member for each of said elongated slots and adjustably securable therein, substantially as set forth.

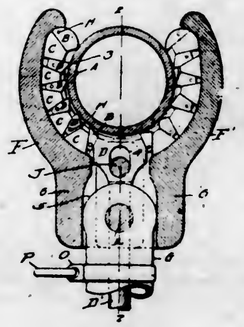
1,387,863. LOCOMOTIVE-TERMINAL FOR RAILWAY SYSTEMS. SPENCER OTIS, Chicago, Ill. Filed June 10, 1921. Serial No. 476,429. 18 Claims. (Cl. 104—26.)

1. In a locomotive terminal plant for railway systems, main tracks, a terminal house provided with stations for locomotives and equipped for treatment of locomotives in said stations, and spur tracks connecting both ends of each of said stations with said main tracks so that locomotives may be routed continuously from service through the terminal house and back to an assigned track without reversing.



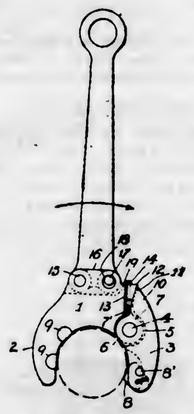
1,387,864. METHOD AND APPARATUS FOR CASTING METAL CUPS. DAVID PEPPER, Philadelphia, Pa. Filed Dec. 19, 1919. Serial No. 346,138. 6 Claims. (Cl. 22—200.)

1. The method of casting metal cups which consists of first filling a cup mold by placing it in communication with a reservoir of fluid metal, then forcing a plunger having the form of the inside of the cup into the mold, so as to press the excess of melted metal in the mold back into the reservoir, then cutting off the molten metal above the top of the plunger to form the bottom of the cup allowing



the casting to solidify and finally stripping the cup from the plunger.

1,387,865. ELECTRIC SWITCH. CARLO PRADA, Milan, Italy. Filed Aug. 13, 1919. Serial No. 317,115. 2 Claims. (Cl. 200—64.)

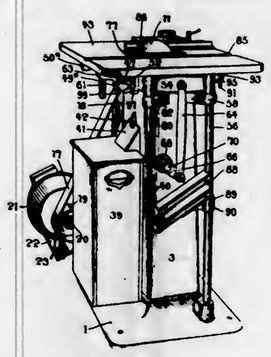


1. An electric switch, comprising a casing, contact members therein, a rotary make and break device comprising a reduced body portion and enlarged end portions, a push button spindle reciprocable in the casing, and means carried by the spindle for moving said make and break device into and out of contact with said contact members, said means having a portion which engages one part of said make and break device to rotate it and another portion to keep it properly registered.

1,387,866. PIPE-WRENCH. CLARENCE E. REED, Houston, Tex. Filed July 14, 1920. Serial No. 396,070. 3 Claims. (Cl. 81—91.)

1. In combination, in a wrench, a jaw, a series of grips on the jaw, an opposing jaw, a master wedge for setting the grips, a main handle provided with a bearing, a stem for the master wedge extending along the main handle and a finger lever carried by the main handle for operating the stem to set the master wedge, said finger lever being self locking and maintained in locked position by the back pressure from the master wedge, said finger lever having a cam shaped portion working on said bearing on the main handle and being pivotally connected to the stem, substantially as described.

1,387,867. WRENCH. CLARENCE E. REED, Houston, Tex. Filed Mar. 9, 1921. Serial No. 451,054. 7 Claims. (Cl. 81—91.)

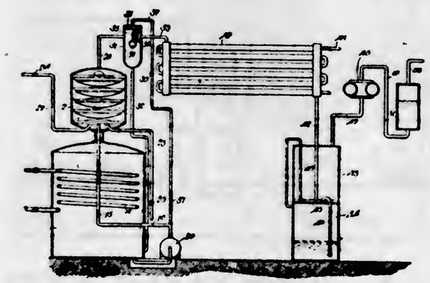


1. A wrench comprising a head with a rigid jaw and an opposed pivoted jaw, means for adjusting the pivoted jaw, and grips carried by the rigid and pivoted jaws, one of said grips being pivotally mounted, substantially as described.

1,387,868. PURIFYING HYDROCARBON OILS. CLARENCE I. ROBINSON, Staten Island, N. Y., assignor to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 13, 1920. Serial No. 365,617. 8 Claims. (Cl. 196—26.)

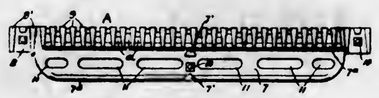
1. The process of purifying acid-treated petroleum oils which consists in admixing iso-propyl alcohol therewith and subsequently separating the iso-propyl alcohol therefrom, thereby removing sulfonated compounds from the oil.

1,387,869. POWER-SAW. VERNON ROYLE, Paterson, N. J. Filed Dec. 21, 1917. Serial No. 208,242. 30 Claims. (Cl. 143—33.)



1. Apparatus of the character described comprising a main pedestal, a saw and its spindle, said spindle being provided with an enlarged hub arranged to serve as a means or driving the spindle and saw, and a bearing box having bearings therein for the spindle located on opposite sides of the hub, said box being removably mounted on the top of the pedestal, whereby the saw, spindle, hub, bearing and box may be removed as a unit.

7. Apparatus of the character described comprising, a main frame, a work table supported thereon, a saw mounted in the upper part of said frame and projecting through said table, and a chip deflector removably secured adjacent one edge of the saw, said deflector having a channel through which the saw travels.

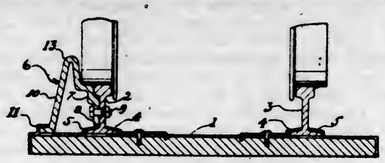


22. Apparatus of the character described comprising, a main frame, a cross-head carried by said frame, a work table supported thereon, a saw mounted in the frame to project through the table, said table being mounted for adjustment with respect to the saw in a horizontal plane, and means for elevating and depressing the cross-head and table with respect to the saw while maintaining the table in a horizontal plane.

1,387,870. VAPOR-FILTER. WILLIAM J. RUFF, Quincy, Ill. Filed June 21, 1916. Serial No. 104,870. 5 Claims. (Cl. 195—16.)

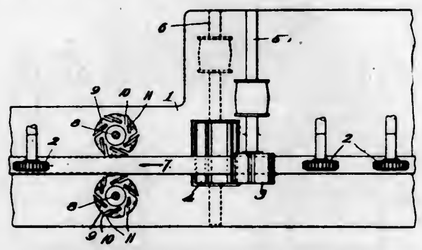
1. A dealcoholizing device comprising a receptacle having a drain opening in its bottom and inlet and discharge openings directed toward each other in the sides thereof; a filter over the discharge opening; a course of alhoholic and other vapors connected with the inlet opening; and means for moving said vapors from the inlet opening directly against said filter, the latter being adapted to permit the passage of alcoholic vapor and arresting the passage of other vapors therethrough.

1,387,871. GRATE. LOUIS A. STATES, Gastonia, N. C. Filed Aug. 11, 1917. Serial No. 185,644. 2 Claims. (Cl. 126—167.)



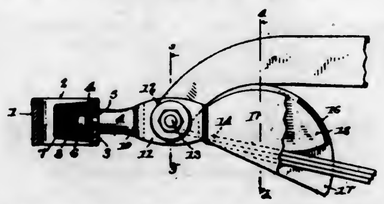
1. A grate comprising a plurality of grate bar members each comprising a truss provided with a plurality of stools spaced apart and projecting thereabove, the truss member extending more nearly to the top in the spaces between certain of the stools than between others whereby to reinforce the stools.

1,387,872. ANTIDERAILING RAILWAY-TRACK. AUSTIN F. STOCKWELL, Los Angeles, Calif. Filed Jan. 20, 1921. Serial No. 438,619. 8 Claims. (Cl. 238—17.)



1. A railway comprising surface plates, T-rails fixed to said plates, a guard rail on the outer side of one of the T-rails, said guard rail having limbs one of which extends obliquely above the level of the crown of the T-rails and adjacent to the tread of said rail and adapted to receive the outer end of the flanged wheel in case the flange of

the wheel should ride onto the ball of the T-rails and the other limb being adapted to rest upon the surface plates



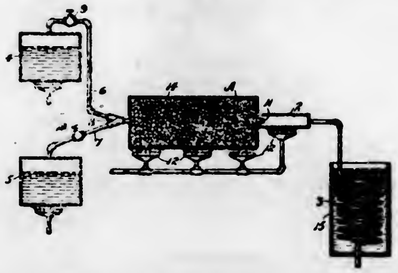
of the railway; and means to fasten said guard rail to the track.

1,387,873. PROCESS OF ROUGHENING THE SIDE EDGES OF FLOORING-BOARDS AND THE LIKE. WILLIAM H. WALKER, Pine Bluff, Ark., assignor to Arkansas Short Leaf Lumber Company, Kansas City, Mo., a Corporation of Missouri. Filed Mar. 20, 1919. Serial No. 283,827. 1 Claim. (Cl. 144—309.)

The process of producing closely-arranged longitudinally extending broken shallow parallel grooves in the side edges of a board, the same consisting in feeding the board endwise between and in engagement with toothed cutters and in rotating such cutters at such a rate of speed as shall cause them to successively engage the board at points in longitudinal alinement but slightly spaced apart.

1,387,874. BUFFER FOR MOTOR-DRIVEN VEHICLES. EDGAR E. WARNER, Milwaukee, Wis. Filed Jan. 10, 1920. Serial No. 350,529. 9 Claims. (Cl. 293—55.)

6. In a buffer bar mechanism for motor driven vehicles, a set of bar supporting members each having rearwardly extending apertured portions adapted to receive a spring hanger between them with the shackle bolt engaged in the apertures, and having another portion adapted to engage in the space between the vehicle spring and its main frame adjacent to the hanger, said last mentioned portion comprising a saddle, having its upper surface curved in conformity to the under surface of the main frame bar and having depending flanges between which the spring is received.



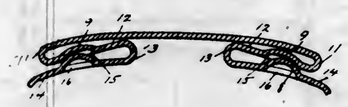
1,387,875. EXCAVATING-MACHINE. ADOLPH H. WELLENSIEK, Stockton, Calif. Filed Dec. 26, 1917. Serial No. 208,726. 63 Claims. (Cl. 37—39.)

3. In an excavating machine a main frame; running gear mounted on the opposite ends of said frame; means on one of said running gears for operating said other running gear; a carriage reciprocatingly mounted on said

frame; a plow on said carriage; a scraper on said carriage and an independent prime mover on said carriage for driving said carriage and operating said plow and scraper.

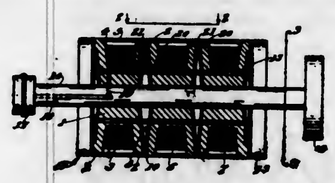
1,387,876. METHOD OF LOWERING THE BOILING AND FLASHING POINT OF KEROSENE AND LIKE HYDROCARBON OILS. WILLOUGHBY MACBAIN WHEELER, Melbourne, Victoria, Australia, assignor of one-half to Ozmo Oil Refining Company, San Francisco, Calif., a Corporation of California. Filed Aug. 7, 1918. Serial No. 248,706. 3 Claims. (Cl. 196—25.)

1. A method of lowering the boiling and flashing point of kerosene and like oils, which consists in converting the oil to be treated to a vapor, mixing said oil vapor with steam, subjecting said mixed vapors to a low pressure, gradually increasing the temperature of said vapors while subjected to pressure, then expanding the vapors to atmospheric pressure, further increasing their temperature after expansion, and finally condensing the vapors and gravity separation of the oil from the liquid.



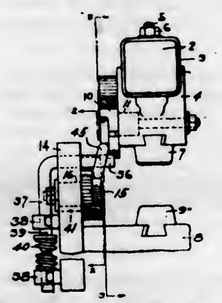
1,387,877. OIL-BURNER. ERNEST L. WOOLLEY, Providence, R. I. Filed Nov. 10, 1919. Serial No. 336,796. 3 Claims. (Cl. 299—120.)

1. A two-part oil-burner for attachment to a fuel feed-pipe comprising a cap adapted to be applied to the end of the pipe, said cap formed with a contracted discharge opening at its end, and a disk-like plug fitted within the cap to be held thereby against the end of the pipe, said



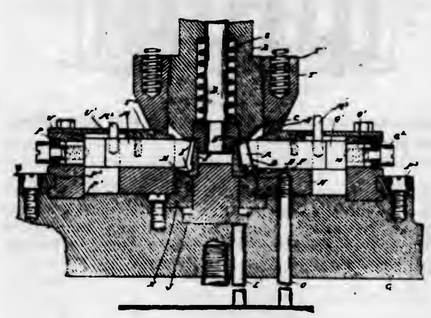
plug formed with a central cylindrical recess communicating with the contracted discharge opening in the cap, with oil-ducts leading from the periphery of the plug into said central recess, and passages leading from the rearward side of the plug into the oil-ducts to form a connection between the feed-pipe and the central recess of the plug.

1,387,878. COLLAR-HOLDER. CHARLES H. ALLEN, Attleboro, Mass. Filed June 6, 1921. Serial No. 475,297. 2 Claims. (Cl. 24—81.)



1. In a collar holder, an oblong body, inwardly directed arms upon the ends of the body, outwardly directed arms upon the inner ends of the first arms, arches cut from intermediate portions of the first arms and raised from the planes thereof, and similar arches cut from intermediate portions of the second arms and raised from the planes thereof in the direction of the first arches.

1,387,879. MAGNETIC PULLEY. JOHN P. BETHKE and ROSWELL H. STEARNS, Milwaukee, Wis., assignors to Magnetic Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 22, 1920. Serial No. 353,345. 6 Claims. (Cl. 83—71.)

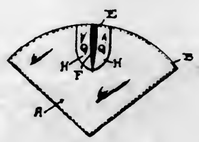


1. A magnetic pulley comprising a shaft, a plurality of separate magnetic elements each independently supported from said shaft, said elements being so related that circulation of air therebetween is secured.

1,387,880. DEVICE FOR BENDING CHAIN-LINKS. JACOB J. BEYER, McKees Rocks, Pa. Filed Feb. 4, 1920. Serial No. 356,341. 10 Claims. (Cl. 59—27.)

1. Chain-making apparatus comprising a welding hammer, a horizontal forming mandrel resiliently mounted adjacent to the said hammer and pivotally movable bending means carried by the said hammer and adapted to coöperate with the said forming mandrel to bend chain-links preparatory to welding.

1,387,881. MACHINE FOR ACCURATELY ALINING AND CLOSING ROLL-HOLDING CAGES FOR ROLLER-BEARINGS. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 28, 1917. Serial No. 193,719. 9 Claims. (Cl. 29—84.)

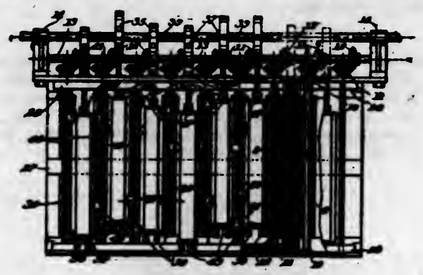


1. The combination with means for holding a loosely-assembled series of individual roller holding cells and a connector therefor, of means for accurately alining said cells, and means for rigidly attaching said cells and connector while thus alined.

1,387,882. MANUFACTURE OF ARTIFICIAL SILK. EMILE BRONNERT, Mulhausen, France. Filed Sept. 2, 1920. Serial No. 407,753. 5 Claims. (Cl. 18—54.)

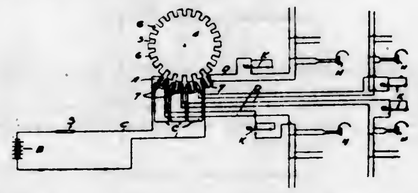
1. The process of making artificial viscose silk, which comprises treating viscose in a precipitating bath comprising a solution of sodium benzene sulfonate and sulfuric acid monohydrate.

1,387,883. HOE. JAMES ROBT. CLARK, Sadler, Tex. Filed June 26, 1919. Serial No. 306,838. 1 Claim. (Cl. 55—39.)



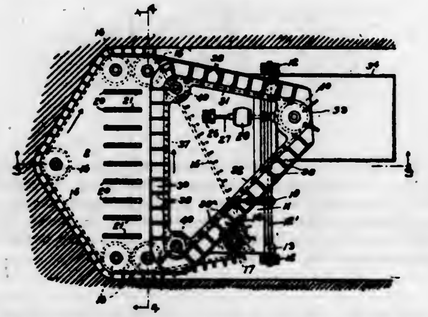
In a hoe, a handle socket provided with a narrowed portion and a depending portion sharpened at its lower edge and terminating in a blade attaching flange, the narrowed portion being between the flange and the closed end of the socket, and a blade attached to the flanged portion co-planar with the top of the narrowed portion.

1,387,884. APPARATUS FOR CLEANING BOOK-COVERS AND THE LIKE. JAY E. CROSS, Takoma Park, Md. Filed May 27, 1920. Serial No. 384,707. 6 Claims. (Cl. 41—7.)



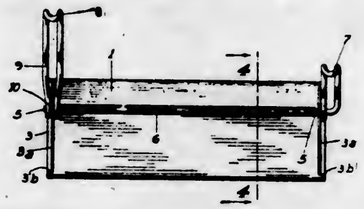
1. In an apparatus for cleaning book covers and the like, a feed mechanism comprising a plurality of resilient feed rollers and pressure rollers coöperating therewith for conveying the book covers through the machine, and a

plurality of cleaning devices having a reciprocatory motion in a direction transverse to the direction of feed of



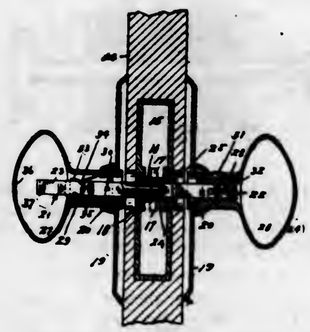
said covers for cleaning said covers during their passage through the apparatus.

1,387,885. RADIOSIGNALING APPARATUS. WILLIAM RAY DAVIS, Minneapolis, Minn., assignor to The William Hood Dunwoody Industrial Institute, Minneapolis, Minn., a Corporation. Filed Mar. 9, 1918. Serial No. 221,569. 3 Claims. (Cl. 178—115.)



1. An apparatus of the class described comprising a series of U-shaped magnets, a winding on each pole of said magnets, the windings on one pole of each of said magnets being connected in series in an electric circuit, independent conductors connected with the other windings of said magnets and each having a sending key and a number of receivers therein, and a series of armatures mounted to revolve in the field of said magnets.

1,387,886. COAL-MINING MACHINE. THOMAS DONOHOE, Edgewood, Pa. Filed Oct. 18, 1915. Serial No. 56,372. 5 Claims. (Cl. 262—9.)

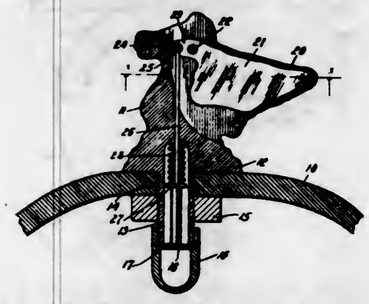


2. In a mining machine adapted for use for coal blasting operations, a horizontal vertically shallow coal receiving platform, undercutting means mounted below the upper face of said platform and adapted upon the forward movement of said platform to form an undercut, an endless conveyer movable across and arranged to convey coal from said platform and to carry the same to a point above and in the rear of said platform, and reciprocating means protruding through said platform for moving coal from said undercutting means to said endless conveyer.

1,387,887. ADJUSTABLE VIEW-REFLECTOR. HAROLD J. GAGE, Stockton, Calif. Filed Jan. 9, 1919. Serial No. 270,390. 6 Claims. (Cl. 45—97.)

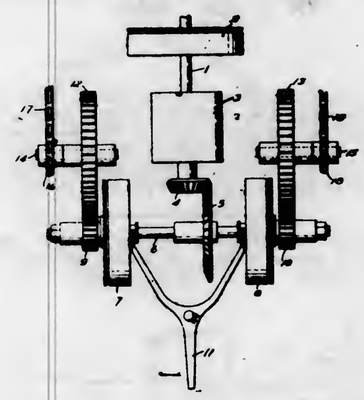
6. A reflector for vehicles comprising a reflecting unit, rearwardly extending ears disposed at the opposite ends of the back of the unit, supporting clips of different lengths one pivotally mounted to each of said ears whereby a change in the relative angular positions of the clips will cause one end of the reflector to swing vertically and horizontally in relation to the opposite end, at the same time permitting the reflector to pivot around the longitudinal axis of the two clips.

1,387,888. DOOR-LATCH. ANSON W. HOLT, Menomonie, Wis. Filed Oct. 26, 1920. Serial No. 419,674. 6 Claims. (Cl. 292—169.)



1. A latch having inner and outer operating knobs, one of said knobs being movable axially toward and from the other to thereby render the latter temporarily inoperative.

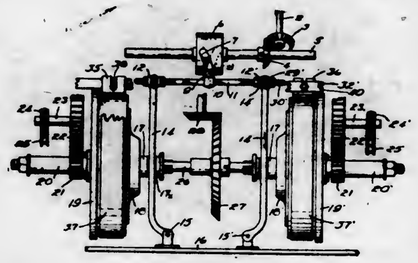
1,387,889. GAS-DELAYER FOR FIREARMS. JAMES S. JOHNSTON, Utica, N. Y. Filed Nov. 20, 1916. Serial No. 132,248. 2 Claims. (Cl. 42—3.)



2. In a gas delayer for firearms, a tube, a removable cylinder disposed in said tube, a spiral groove formed in said cylinder, whereby to delay the progress of the gases of explosion for actuating the reloading mechanism of the firearm, and an annular recess in said cylinder adapted to form an air cushion.

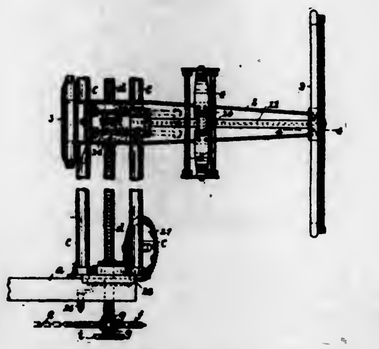
1,387,890. INDICATING INSTRUMENT FOR AUTOMOBILE-RADIATORS. JOSEPH KLEIDMAN, New York, N. Y., assignor to Pegasus Indicator Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 28, 1920. Serial No. 433,639. 2 Claims. (Cl. 116—114.)

1. In an indicator for the radiators of internal combustion engines, the combination with the closure member for the filling opening of a radiator, of a signal support rising from said closure member, a signal member pivoted to said support, a fusible body held in fixed position below said closure member, and a spring-pressed plunger resting upon said fusible body and connected to said signal member, said signal member being concealed from view by said support as long as said fusible body prevents a movement of said plunger.



1,387,891. TRANSMISSION MECHANISM. JOHN MINOR KROYER, Stockton, Calif. Filed May 21, 1920. Serial No. 383,182. 1 Claim. (Cl. 180—17.)

A transmission mechanism comprising a drive shaft, a driven shaft set at right angles thereto and beyond one end thereof, gearing operatively connecting said shafts, a pinion loosely mounted on each end of the driven shaft, a clutch member secured to each pinion, a companion clutch member for each first named member splined on the driven shaft and facing each other, and a rocking lever for shifting said splined members fulcrumed in line with but beyond the drive shaft.

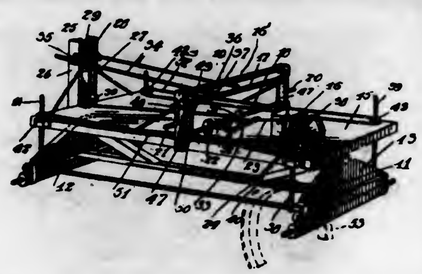


1,387,892. STEERING MECHANISM FOR TRACTORS. JOHN MINOR KROYER, Stockton, Calif. Filed May 21, 1920. Serial No. 383,183. 8 Claims. (Cl. 180—17.)

1. In a tractor steering mechanism, a drive shaft, a pair of clutches associated therewith, means connected with each clutch for transmitting power to the wheels on one side of the tractor, a steering wheel, a cam operated by said steering wheel, a lever for disengaging each clutch, a rigid connection between said levers, means carried by said

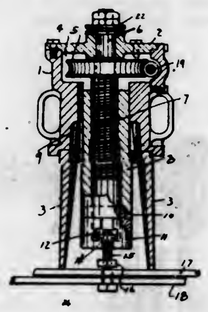
rigid connection and arranged to be moved by said cam, a brake for each clutch, and means connected with said rigid connection for applying the brake through the movement of said rigid connection.

1,387,893. WARPING-MACHINE. GEORGE W. KUENNETH, Paterson, N. J., assignor, by mesne assignments, to Jeannette Kuenneth, Paterson, N. J. Filed Nov. 15, 1918. Serial No. 262,665. 2 Claims. (Cl. 28—14.)



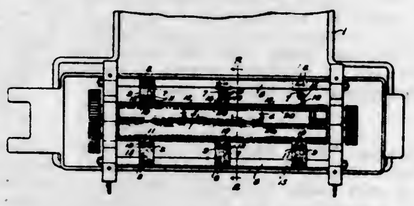
2. In combination, with the frame, a reel journaled therein, a reed carriage arranged to traverse in the frame, a rotary feed-screw operatively engaged with and adapted to traverse the carriage, means to transmit motion from the reel to the feed-screw having a disconnective clutch connection, means to manually rotate the feed-screw, means to indicate the length of warp wound on the reel and the extent of traverse of the carriage including a moving member, and means, connecting said member with the feed-screw, to move said member in sychrony with the rotating feed-screw and traversing carriage.

1,387,894. POST-DRIVING APPARATUS. CONSTANT EUGÈNE LAMOISE, Namur, Quebec, Canada. Filed Jan. 27, 1921. Serial No. 440,416. 4 Claims. (Cl. 61—74.)



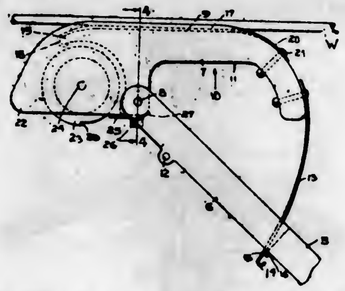
1. A machine of the character described including a wheeled frame, bolsters at the end of said wheeled frame, a platform pivoted at its ends to the upper ends of said bolsters for tilting movement thereon, threaded rods secured to the bolsters, guides carried by the opposite sides of the platform for receiving said rods, said guides having openings with curved surfaces formed therein, sprockets threaded upon the said rods, extensions on the sprockets and fitting in the said openings, means for rotating said sprockets in opposite directions upon opposite sides of the

frame, and tilting the platform laterally relative to the frame, a driving apparatus mounted upon said frame, and



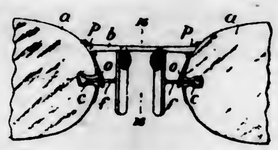
means for tilting the driving apparatus longitudinally relative to the frame.

1,387,895. BOLTING-UP AND PLATE-TIGHTENING MACHINE. JAMES P. MCBRIDE, Seattle, Wash. Filed Nov. 26, 1918. Serial No. 264,448. 9 Claims. (Cl. 29—84.)



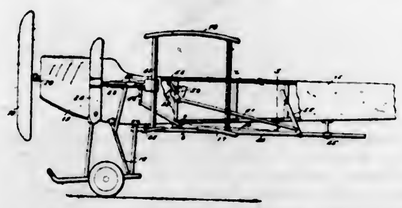
1. In a portable tool for clamping together a pair of perforated plates, a housing, and a nut and screw mechanism carried by said housing including means engageable through perforations of the plates and with the plate remote from the housing, and operable to clamp the plates together.

1,387,896. ROLL-SCRAPER. ARTHUR J. MASKREY, Canton, Ohio. Filed Nov. 9, 1918. Serial No. 261,777. 2 Claims. (Cl. 91—59.2.)



1. In a tin coating device comprising a grease pot and superposed pairs of rolls therein, a pivoted arm adjacent to each roll, a radially disposed blade on each arm formed from a single rigid steel plate and provided with a chisel edge arranged to contact evenly with the face of the roll and tension means common to the pivoted arms upon each side for holding the chisel edges of the blades in contact with the rolls.

1,387,897. SLIDING TROLLEY. OTTO MOORE, Frankfort, Ind., assignor of one-half to Giles S. Moore, Frankfort, Ind. Filed Apr. 26, 1920, Serial No. 376,765. Renewed July 11, 1921. Serial No. 483,951. 3 Claims. (Cl. 191—59.1.)



1. A device of the class described including a trolley harp, a shoe pivotally secured to the said harp, a detachable wear-plate carried by the shoe and adapted to slidably engage the trolley wire when the trolley is moving in a forward direction, and a trolley wheel carried by the shoe and adapted to engage the trolley wire when the trolley is moving rearwardly.

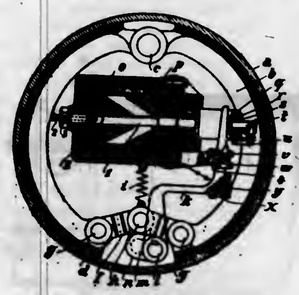
1,387,898. RIMLESS-EYEGLASS MOUNT. HARRY NEWBOLD, St. Albans, England. Filed June 21, 1920. Serial No. 390,643. 3 Claims. (Cl. 88—42.)

1. A rimless eyeglass mount of the kind herein referred to, comprising lens straps and placket arms, a bridge furnished with a pair of slots at the root of said lens straps leaving a bar between the slots which serves as a pivot for the placket arms, and a lens provided with a peripheral notch to receive said pivot and placket arms.

1,387,899. AEROPLANE. WALTER FREMONT OSBORNE, Wagon Mound, N. Mex. Filed Nov. 26, 1919. Serial No. 340,743. 2 Claims. (Cl. 244—25.)

1. A pair of supplemental propellers for aeroplanes, shafts upon the forward ends of which said propellers are mounted, having flexible joints intermediate their ends, driving connections leading to the rear ends of the shafts, a pair of supporting brackets, bell cranks having pivots on the brackets substantially in line with the said joints of the propeller shafts, studs outstanding from one end of the bell cranks and movably engaging and supporting the propeller shafts forwardly of their joints, and adjusting connections leading to the opposite ends of said bell cranks, as described.

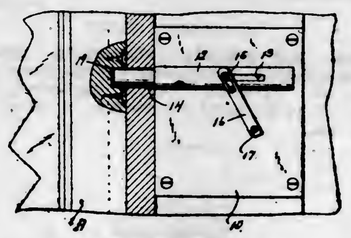
1,387,900. ALLOY. ALADAR PACZ, Cleveland Heights, Ohio. Filed Feb. 13, 1920. Serial No. 358,555. 13 Claims. (Cl. 75—1.)



1. A casting alloy capable of being machined containing between about 8 per cent. and about 20 per cent. of silicon and at least about 98 per cent. of the balance being aluminum.

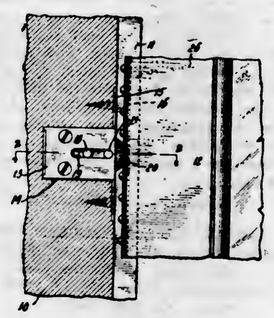
1,387,901. METHOD OF PACKING CONDENSERS. FRANK E. PAYNE, Glencoe, Ill. Filed Apr. 24, 1920. Serial No. 376,300. 10 Claims. (Cl. 285—46.)

9. The combination with a tube sheet having an opening therein, of a tube passing therethrough and terminating near the outer plane of said sheet, an enlarged annular recess forming part of said opening, John Crane packing compressed within said recess to form an air-tight joint and to electrically connect said tube and sheet, and means for maintaining the end of said tube near said outer plane as it moves under the influence of temperature changes.



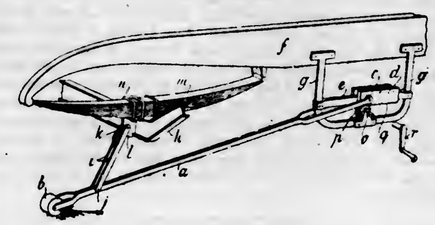
1,387,902. ELECTROMAGNETIC CLUTCH. MAX PREUSS, Charlottenburg, Germany. Filed Feb. 6, 1920. Serial No. 356,667. 7 Claims. (Cl. 192—40.)

1. An electro-magnetic clutch comprising two frictional clutch members, one of said clutch members having a friction surface and the other having friction jaws adapted to engage with said surface, an electro-magnet for moving said friction jaws into engagement with said surface, power transmission mechanism interposed between said magnet and said friction jaws, said magnet being separate from said transmission mechanism but adapted to engage therewith to apply said friction jaws to said surface, and means for locking said friction jaws in engagement with said surface.



1,387,903. WINDOW-LOCK. CLEO PRICE, Falun, Kans. Filed Aug. 28, 1920. Serial No. 406,621. 2 Claims. (Cl. 292—143.)

1. The combination with a window casing and a sash operating therein, of means for locking the sash including a base, an open-ended barrel carried thereby, a bolt shiftable through the barrel, the barrel having a slot, the bolt having a pin extending through the slot, an arm oscillatably mounted on the base plate and having a slotted end engaging said pin, and a knob on the



exterior of the casing operatively engaging said arm to oscillate it.

1,387,904. SASH-HOLDER. MAX RACHLIN, New York, N. Y. Filed Mar. 12, 1920. Serial No. 365,187. 1 Claim. (Cl. 292—72.)

A sash-holder comprising a casing having registering horizontal slots in its sides, a bearing-head slidably arranged in said casing having lugs seated in said slots, a spindle in said bearing-head carrying a roller adapted to project through an opening in said casing, the ends of said spindle being seated in said slots, a spring in said casing abutting against said bearing-head, and washers upon the ends of said spindle having projections extending into said slots, said projections being disposed between said spindle ends and the adjacent slot ends.

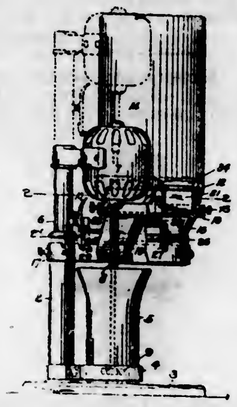
1,387,905. LIFTING-JACK. FREDERICK LIONEL RAPSON, Liverpool, England. Filed July 11, 1918. Serial No. 244,448. 2 Claims. (Cl. 254—86.)

1. In a lifting jack for vehicles, a chassis, a leg pivoted at its inner end adjacent the axle of the chassis, a bracket secured to the chassis, a bar connected to the bracket, a sleeve slidable on said bar and provided with a rack, a connection between said leg and the sleeve, a pinion journaled on the bracket and having mesh with

the rack of the sleeve so that on operation of the pinion the sleeve is moved along said bar to raise and lower said leg.

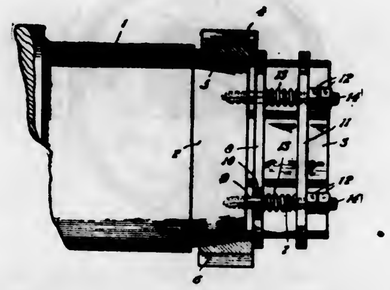
1,387,906. KEY-OPERATED FUSE-PLUG. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Nov. 10, 1919. Serial No. 336,924. 5 Claims. (Cl. 200—130.)

1. A removable, key-operated, headless, screw fuse-plug comprising a headless plug-body having a fuse-chamber, a screw-shell in which the said body is mounted, a fuse located within the said chamber, and making contact at its outer end with the said shell, a contact located at the inner end of the body for the inner end of the fuse, and a mica window closing the outer end of the said fuse-chamber, the said body being adapted in length to substantially fit within the screw-shell of a standard receptacle, and being manually removable by means of a removable key.



1,387,907. MINIATURE LAMP-SOCKET FOR CHRISTMAS TREES. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Dec. 12, 1919. Serial No. 344,429. 1 Claim. (Cl. 173—358.)

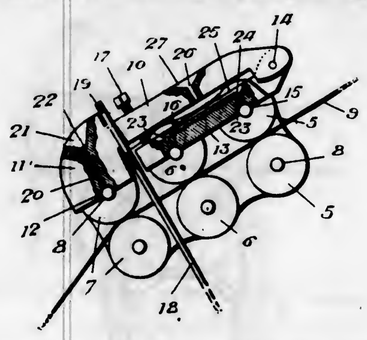
A miniature lamp-socket for Christmas trees, having a socket-body made of insulating material and formed with a concentric chamber having a longitudinal groove leading out of it and terminating in a recess, a screw-shell located in the said chamber and formed at its outer end with a tubular offset entering the said recess to prevent the shell from turning therein, an electric conductor entering the inner end of the said body and passing through the said groove and having its bared end entered into and secured in the said tubular offset, a center contact insulated within the inner end of the shell, and means for connecting the other terminal cord with the said contact.



1,387,908. DISPENSING ATTACHMENT FOR BEVERAGE-MIXING DEVICES. ROBERT W. RIEDEL, Ault, Colo. Filed June 9, 1920. Serial No. 387,650. 6 Claims. (Cl. 221—108.)

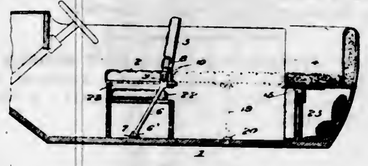
5. The combination of a beverage mixer having a mixing element mounted for downward adjustment, a dispenser adapted to support an inverted container and capable of operation to discharge the contents of the container in determinate portions and means for the

operation of the dispenser by downward movement of the mixing element.



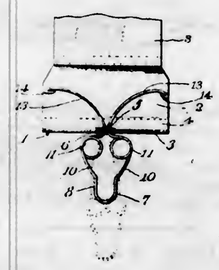
1,387,909. FRICTION-GEAR. HENRY A. ROEMER, Canton, Ohio. Original application filed Apr. 16, 1920, Serial No. 374,284. Divided and this application filed Feb. 7, 1921. Serial No. 443,111. 8 Claims. (Cl. 74—29.)

1. In combination with a shaft having a conical portion, an internally coned gear-ring mounted upon the conical portion of the shaft, pins mounted in the outer end of the conical portion of the shaft, a plate slidably mounted upon said pins, a second plate spaced from the first plate and mounted upon said pins, and springs upon said pins interposed between said plates for normally holding the first named plate in contact with the gear-ring.



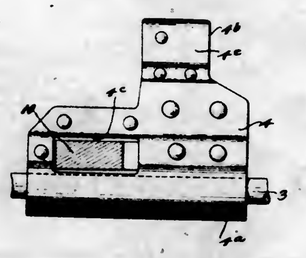
1,387,910. ROLLER-PRESSURE DEVICE. CHARLIE M. ROGERS, Mayo, S. C. Filed June 16, 1920. Serial No. 389,404. 2 Claims. (Cl. 19—33.)

1. In a roller pressure device, the combination with a stirrup bar, of a pair of hingedly connected bars having bearing portions, the last named bars being arranged to swing apart for insertion through the stirrup bar and to be swung together to operative position for retaining



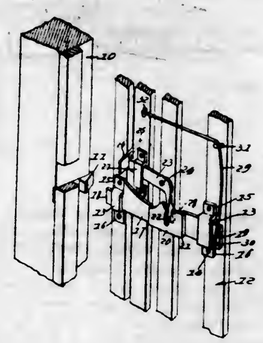
the stirrup bar and second named bars in place relatively to one another.

1,387,911. MOTOR-VEHICLE BODY. GEORGE SHEETS, Washington, D. C. Filed Mar. 26, 1921. Serial No. 455,879. 8 Claims. (Cl. 155—7.)



1. A vehicle body of the character described, comprising a plurality of separated front seats and rear seats in alinement therewith, each front seat having a back pivotally secured thereto, means secured to each front seat back for pivotally securing said back to the upper end portion of a bar pivotally secured to the floor of the vehicle body, means formed on said bar near its upper end for rigidly securing said back in upright position, and means for securing said back in a horizontal position.

1,387,912. GARMENT-SUPPORTER. JESSE R. SMITH, Greenfield, Ill., assignor of twenty-five per cent. to Carson A. Linder and twenty-five per cent. to Floyd L. Owens, Greenfield, Ill., and twenty-five per cent. to Dean Corsa, White Hall, Ill. Filed Sept. 15, 1920. Serial No. 410,410. 4 Claims. (Cl. 241—25.)

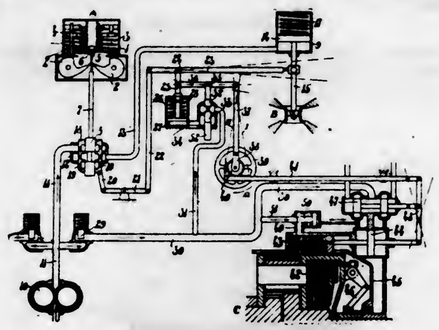


1. The combination with a supporting strap embodying a loop, said loop having an opening formed therein, of an attaching member embodying arms extending through the opening of the loop and normally disposed within the loop, said arms resiliently resisting their withdrawal through said opening by a pull on said member and returning to their normal position within said loop when said pull is discontinued.

1,387,913. LOOM-PICKER. LORAN R. SWAN, Bennington, Vt. Filed May 26, 1920. Serial No. 384,292. 2 Claims. (Cl. 139—21.)

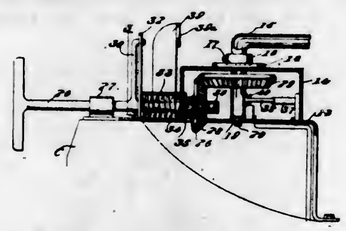
1. A loom picker of the class described, comprising a body formed with an eye at one side and a head at its opposite side, said body being provided with a picker stick opening intermediate said eye and head and adjacent the opposite end of the body from the head.

1,387,914. GATE-LATCH. JAMES L. THOMPSON, Allen, Okla. Filed Nov. 12, 1920. Serial No. 423,600. 4 Claims. (Cl. 292—173.)



1. In a gate latch, a guide adapted to be secured to the gate, a bolt having ends slidable in the guide, the said bolt having recesses in its edge, the said recessed portion being offset with relation to the bolt, a bolt engaging member comprising a lever consisting of an elongated plate adapted to be pivotally connected to the closure and having the latch engaging end twisted with relation to the said lever, the said latch engaging end being bifurcated to straddle the edge of the bolt and enter the recess thereof to bear against the shoulder formed by the said recess, and means for holding the bolt in normal position.

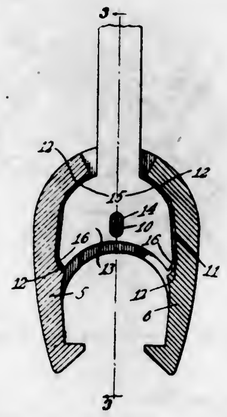
1,387,915. REGULATING MECHANISM FOR TURBO-MECHANICAL-MACHINE PLANTS. OSCAR ANTON WIBERG and GEORG KARLSSON, Finspong, Sweden. Filed May 7, 1920. Serial No. 379,613. 4 Claims. (Cl. 137—158.)



1. Regulating mechanism for turbo-mechanical machine plants, comprising in combination a mechanical reversing device, a hand-wheel for controlling said reversing device, a turbine speed governor, a connection between said hand-

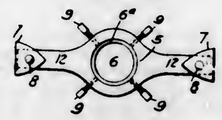
wheel and said speed governor so designed that in turning the hand wheel for effecting a reversal an adjustment

of the governor to operate for a distinct reduced speed will take place previous to the said reversal.



1,387,916. DIRECTION-INDICATING SIGNAL FOR AUTOMOBILES. ALBERT EUGENE BELLER, Ogden, Utah. Filed July 12, 1919. Serial No. 310,306. 3 Claims. (Cl. 116—47.)

1. An auto signal, comprising an angular base plate adapted to be secured to the cowl of an auto, a casing on the plate, an L-shaped tubular shaft journaled in the casing and adapted to swing horizontally over the hood of an auto, an arm telescopically associated with said shaft, a signal carried by the arm, means for actuating said shaft, comprising, a shaft mounted for longitudinal and rotary movement on said plate, a bevel gear keyed to the second shaft and capable of sliding movement thereon, a bevel gear fixed to the first shaft and meshing with the first gear, a locking plate on the base plate, a spring surrounding the second shaft and engageable with the locking plate and with the first gear for biasing the latter into engagement with the second gear, abutment members on the plate for limiting the movement of the first shaft in either direction, and a locking arm fixed to the second shaft and normally engageable with the locking plate under the biasing action of said spring.



1,387,917. CLAMP. DAVID W. BOWE, Detroit, Mich. Filed June 3, 1920. Serial No. 386,374. 1 Claim. (Cl. 294—106.)

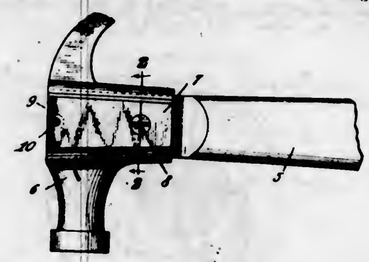
In a hoisting hook, a supporting member having a head, formed at one end thereof, said head having an elongated opening formed therein, opposed jaw sections having pivotal connections with the head, said jaw sections having openings registering with the elongated opening in the head, a bolt passing through the opening, for securing the jaw sections to the supporting member, said jaw section having curved surfaces, said head having curved surfaces, the curved surfaces adapted to coöperate to move the free ends of the jaw sections with relation to each other, when

the head is moved within the jaw sections, and means for locking the jaw sections in an open position.

1,387,918. APPLIANCE FOR MENDING BROKEN VEHICLE-WHEELS. DANIEL J. BROWN, Northport, Nebr. Filed Nov. 24, 1919. Serial No. 340,317. 8 Claims. (Cl. 301—111.)

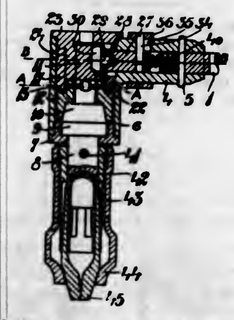
4. An appliance of the character described comprising a brace having means for securing it to the hub of a vehicle wheel, and means to connect with spokes of the wheel at opposite sides of the hub.

1,387,919. BELT-BUCKLE. SAMUEL BUCHSBAUM, Chicago, Ill. Filed Jan. 31, 1921. Serial No. 441,232. 8 Claims. (Cl. 24—191.)



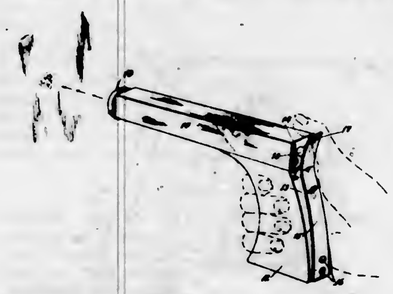
1. A belt buckle of the character described comprising a front plate, a clamping plate having a smooth curved belt engaging portion mounted for movement toward and away from said front plate, and means for moving said clamping plate toward said front plate, said clamping plate being mounted independently of said last mentioned means.

1,387,920. HAMMER. EMIL F. BUSSE, Jerome, Ariz. Filed Feb. 15, 1921. Serial No. 445,200. 1 Claim. (Cl. 145—29.)



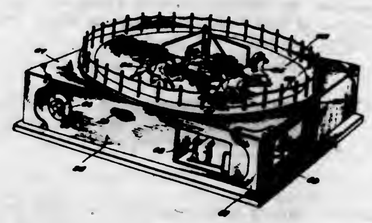
In a hammer, a head having a groove formed in one of the side faces thereof, the groove tapering toward one end of the head, the walls of said groove being inclined, a block of fibrous material having inclined side edges and tapering to conform to the taper of the groove, said block

adapted to be positioned in the groove, means for securing the block within the groove, and said block having a cut



out portion formed at one end thereof to accommodate a nail.

1,387,921. BREAST-DRILL. GUNNAR ELIAS CASSEL, Stockholm, Sweden, assignor to Aktiebolaget Gyro, Stockholm, Sweden, a Corporation of Sweden. Filed Feb. 17, 1920. Serial No. 359,478. 7 Claims. (Cl. 145—70.)

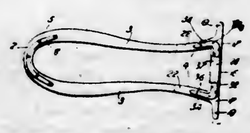


4. In a breast-drill, the combination of a brace, a casing rigidly connected to said brace, a spindle mounted in said casing and carrying a chuck outside thereof, a cone on said spindle, a ring loosely mounted on said cone and having in its upper end one set of inclined friction surfaces for each direction of movement, another ring rigidly connected to said casing and having corresponding sets of inclined friction surfaces for engagement with said first mentioned surfaces, and means for operating the said first-mentioned ring to bring it into contact with the one set of inclined surfaces or the other on the said other ring.

1,387,922. FLY-SWATTER. CHARLES RAYMOND COFF, McKeesport, Pa. Filed Jan. 7, 1921. Serial No. 435,683. 4 Claims. (Cl. 124—12.)

1. A device of the character described including a hand grip having a rear face, a projectile receiving barrel upon the grip having a rear face merging into the rear face of the grip, and a spring hammer mounted upon and closely overlying said rear face of the grip normally resting at one end against the rear face of the barrel, the hammer being manually retractable to permit exposure of a projectile at said rear face of the barrel whereby when the hammer is released the projectile will be struck and discharged from the barrel.

1,387,923. MECHANICAL TOY. JASPER S. COXEY, Spokane, Wash. Filed Jan. 19, 1920. Serial No. 352,270. 2 Claims. (Cl. 46—56.)



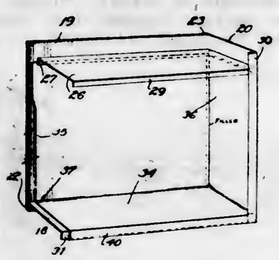
1. A toy comprising a plurality of superposed pulleys, each having a central opening, means for rotating said pulleys simultaneously at relatively varying speeds, standards rising from the several pulleys through the openings in the superposed pulleys, figures carried by said standards, a brake device arranged below the paths of the several figures, star wheels in the respective paths of the several figures and provided each with an elongated tooth to actuate said brake device, and means on the several figures to actuate the respective star wheels.

1,387,924. METHOD OF MANUFACTURING SHELLS. FRANCIS S. DENNEEN, Cleveland, Ohio. Filed Oct. 4, 1918. Serial No. 256,863. 14 Claims. (Cl. 29—1.21.)

1. In the manufacture of shells, providing a blank with an aperture to receive a mandrel, shaping the end of said blank to provide a pilot-portion substantially coaxial with the axis of the mandrel aperture, and hammering said blank while hot and supported on a mandrel between opposed simultaneously-acting dies the acting faces of which are coaxial with said mandrel.

1,387,925. CONSTRUCTION OF SADDLETREES. DANIEL J. FLUDE, Essendon, Victoria, Australia, assignor of one-half to Henry Michael Fetherston and Ferdinand William Schellnack, Melbourne, Victoria, Australia. Filed Feb. 23, 1921. Serial No. 447,132. 7 Claims. (Cl. 54—44.)

2. As a new article of manufacture, a one-piece leather head member for a saddletree, which is structurally

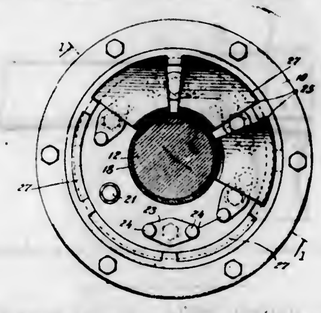


separate from the seat member of the tree and which has an intermediate arched portion from which extend downwardly divergent integral side legs, and integral arms projecting rearwardly from the rear edge of said legs on opposite sides of the intermediate arched portion and adapted to overlap and to be attached to the forward portions of the seat member so as to form an elongated lap joint between the two members.

1,387,926. MOLD FOR STORAGE-BATTERY GRIDS. LEON B. HILLS, Lakewood, Ohio, assignor, by mesne assignments, to National Carbon Company, Inc., a Corporation of New York. Filed Nov. 20, 1916. Serial No. 132,316. 1 Claim. (Cl. 22—153.)

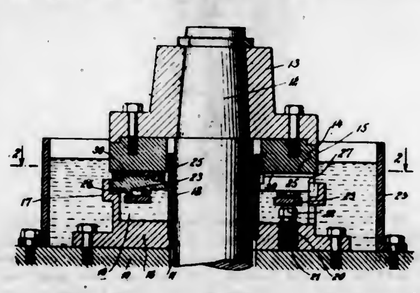
A mold for battery grids comprising separable halves adapted, when fitted together, to define a series of communicating passages located in parallel planes, each of said passages containing a reëntrant angle in the boundary of its cross-section.

1,387,927. KITCHEN-CABINET. RUDOLPH HOFFMAN, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Dec. 20, 1920. Serial No. 431,897. 3 Claims. (Cl. 45—16.)



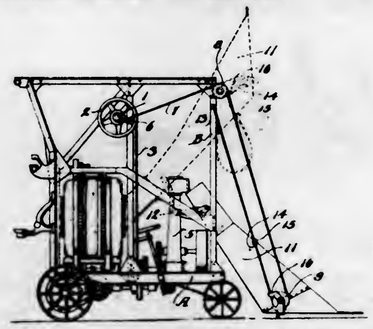
1. A kitchen cabinet having an upper section comprising side and rear walls formed of sheet metal and a bottom wall made from a separate sheet of metal and having flanges to which the lower ends of the side and rear walls are secured, and an inner wall structure formed from a single sheet of metal constructed to provide side, bottom and rear wall portions, the bottom wall portion being integrally connected at its side and rear edges with the rear and side wall portions, and said side and rear wall portions being arranged to overlap at their adjacent edges with the overlapping portions rigidly secured together in a tight joint.

1,387,928. DRY-CELL CAN. HOMER W. JONES, Cleveland, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Dec. 22, 1919. Serial No. 346,776. 4 Claims. (Cl. 204—53.)



1. In a dry cell, a zinc electrode consisting of a hollow sheet metal member having edges connected by an autogenous weld.

1,387,929. BEARING. ALBERT KINGSBURY and HARRY A. S. HOWARTH, Pittsburgh, Pa.; said Howarth assignor to said Kingsbury. Filed May 5, 1916. Serial No. 95,557. 42 Claims. (Cl. 64—25.)

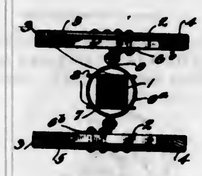


1. A thrust bearing comprising a base, a plurality of equalizing supports tiltably mounted thereon, and bearing shoes mounted on the equalizing supports and flexibly connecting the same.

1,387,930. BEARING. ALBERT KINGSBURY and HARRY A. S. HOWARTH, Pittsburgh, Pa.; said Howarth assignor to said Kingsbury. Filed Aug. 29, 1917. Serial No. 188,725. Renewed Nov. 27, 1920. Serial No. 426,848. 28 Claims. (Cl. 64—25.)

1. A bearing comprising a plurality of circumferentially arranged spaced supports, a resilient ring mounted on said supports, and a plurality of bearing shoes pivotally supported on the resilient ring.

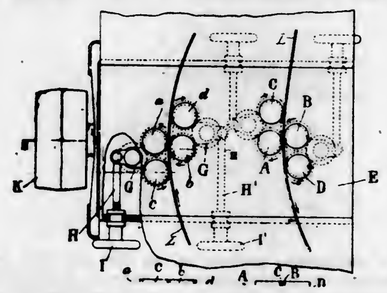
1,387,931. LOADER FOR CONCRETE-MIXERS. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor, by mesne assignments, to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 28, 1918. Serial No. 225,255. 2 Claims. (Cl. 214—130.)



1. In combination, a support, a loading skip movably connected at one end therewith, raising means for said skip comprising a cable anchored at one end and passing around the pulley, means on the support for actuating the said cable, said pulley being formed with clutch grooves adapted to act automatically on breakage of the cable to prevent dropping of the skip.

1,387,932. TOWEL-CABINET. ADOLPH MILLER, Kirkwood, Mo. Filed June 26, 1919. Serial No. 306,867. 5 Claims. (Cl. 45—32.)

1. A towel cabinet comprising a base, a rotatable member secured thereto, a removable seat mounted on said rotatable member and a retaining ring adapted to have towels strung thereon, said towels resting on said seat.

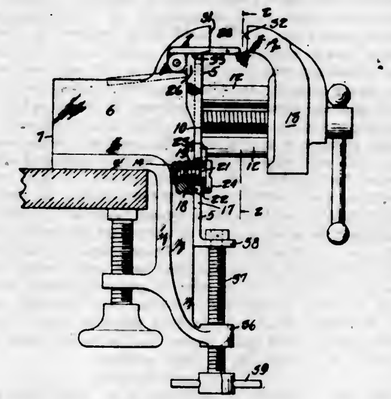


1,387,933. SIGN. NICHOLAS MOLLET, Massillon, Ohio. Filed Apr. 11, 1921. Serial No. 460,326. 4 Claims. (Cl. 40—39.)

1. In a display sign of the character described, the the combination with an upright supporting post, of plates applied to the post and projecting laterally therefrom, a pair of similar sign card receiving frames arranged upon opposite sides of the post in a substantially spaced and parallel relation, upper and lower cross pieces rigidly connecting the sign card receiving frames and provided at intermediate points in their lengths with bearing rings which loosely receive the post to permit of the frames rotating about the post, one of the bearing rings resting upon the projecting portion of the plates.

1,387,934. MEANS FOR MAKING SPRINGS. JOHN C. MONTEITH, Cleveland, and LEE A. FRAYER, Columbus, Ohio. Filed Aug. 13, 1919. Serial No. 317,132. 2 Claims. (Cl. 153—54.)

1. Means for bending spring leaves comprising, in combination, a pair of rolls each having a fixed axis of rotation and between which the leaf is passed, said rolls being geared to rotate in opposite directions, a companion roll for each of said rolls, one of which is geared to its

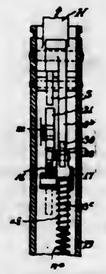


mate and is independently adjustable with reference to the passage between the first mentioned pair.

1,387,935. SAFETY-RAZOR. EDWIN L. PAGE, Bridgeport, Calif. Filed Aug. 18, 1919. Serial No. 318,075. 8 Claims. (Cl. 30—12.)

3. In a razor, the combination with a blade having a cutting edge, of a guard coöperating with said edge, a supporting member adapted to engage said blade, and means operative by the movement of said member in a plane substantially perpendicular to that of the blade for moving said guard in a plane substantially parallel to that of said blade.

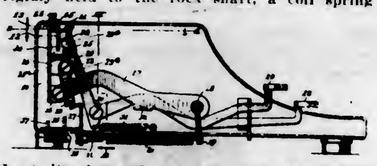
1,387,936. VISE APPLIANCE. EDWIN L. PAGE, Oakland, Calif. Filed Apr. 17, 1920. Serial No. 374,528. 2 Claims. (Cl. 81—38.)



1. The combination with the jaw members of a vise, of a vertically adjustable slide connected to one of said members, and supports connected to said slide and positioned to lie at the opposite ends of said jaws, said supports being movable independently of each other into or out of the area between the planes coincident with the opposing faces of the jaw members.

1,387,937. COMBINATION-GARMENT. SAMUEL PAULL, New York, N. Y. Filed Sept. 1, 1920. Serial No. 407,435. 6 Claims. (Cl. 2—60.)

1. A combination garment of the class described comprising a body portion, sleeve members at the opposite sides of the body portion, the arm-pit portions of said sleeve members being cut out, flaps at the opposite sides of the body portion, said flaps being adapted to be extended into the sleeve members and to be detachably connected therewith.

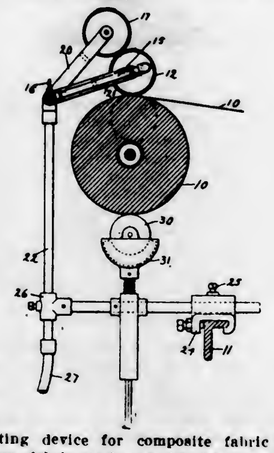


1,387,938. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Filed Dec. 26, 1919. Serial No. 347,437. 23 Claims. (Cl. 42—3.)

1. In a firearm, in combination, a frame of said firearm, a firing member movable to firing position and to fired position, sear means engageable with said firing-member, slidable means, a grip-compressible member engageable with said frame when in position of safety, and releasable from said engagement by grip-compression, spring means for moving said firing member to fired position, means actuated by said spring means for moving said slidable means in a direction to lock said sear means and firing member in firing position, means for moving said slidable means in a reverse direction when said grip-compressible member is grip-compressed and said firing member is moved to firing position, means engageable with said grip-compressible member and said slidable means for blocking the slidable means in said locking position, and movable by grip-compression of the grip-compressible member, lever means movable by said grip-compressible member and engaging said means for blocking and engageable with trigger means, and trigger means arranged to engage first said lever means, when said grip-compressible member is grip-compressed, to move said blocking means for releasing said slidable means for movement from said locking position, and to engage subsequently said sear means for releasing said firing member for movement to fired position.

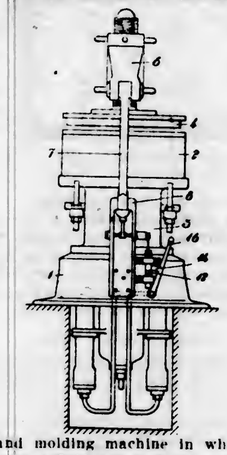
1,387,939. SEGMENT-SHIFT FOR TYPEWRITING-MACHINES. OTTO PETERMANN, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Sept. 11, 1918. Serial No. 253,544. 23 Claims. (Cl. 197—74.)

1. In a typewriting machine, the combination of a machine frame, a type-bar-hanger support, means for guiding the support to move up and down in the frame, a rock shaft extending transversely of the frame and rotatably supported thereon forward of the type-bar-hanger support, a pair of rock arms rigidly held at their forward ends to said shaft and connected at their rear ends with the hanger support, one of said rock arms being provided intermediate its ends with a lateral projection, a depending arm rigidly held to the rock shaft, a coil spring con-



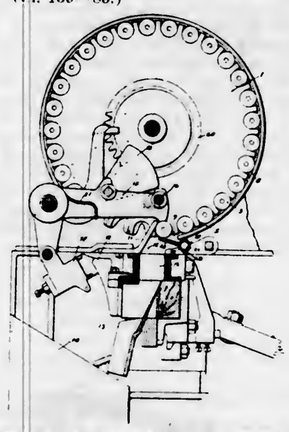
nected at its forward end with said depending arm, tension adjusting means connecting the rear end of the spring with the frame, and a shift key lever overlying said projection on the rock arm and pivotally supported in the frame at a point at the rear of said projection.

1,387,940. SEGMENT-SHIFT FOR TYPEWRITING-MACHINES. OTTO PETERMANN, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed June 5, 1917, Serial No. 172,855. Renewed Feb. 21, 1921. Serial No. 446,865. 22 Claims. (Cl. 197—72.)



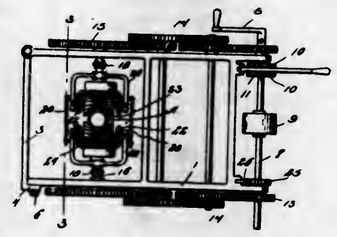
1. Case shift mechanism for typewriting machines comprising a type bar segment, an adjustable stop for determining the normal position of the segment, a spring for normally moving said segment upwardly into engagement with said stop, a locking dog having a cam surface adapted to engage the under side of the segment to wedge and hold said segment in its normal upper position, a case shift lever, and means operated by said lever to release the locking dog and move the segment downwardly to a different case position.

1,387,941. APPARATUS FOR PRINTING ON WAXED PAPER AND THE LIKE. GUNTHER H. PETRI, Brookline, Mass. Filed Jan. 16, 1918. Serial No. 212,004. 7 Claims. (Cl. 101—213.)



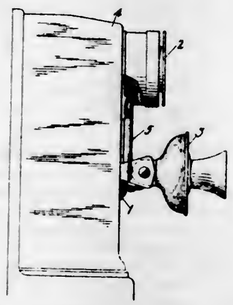
1. A printing device for composite fabric having a printable core fabric and non-absorbent coating, comprising a holder for the fabric, adapted for the fabric to move forward; and means acting on the fabric to modify temporarily the coating along a restricted area; combined with means registering therewith for printing through the modified coating upon the core.

1,387,942. MOLD-PRESSING MACHINE. HUGO EMIL PETTERSSON, Stockholm, Sweden. Filed Sept. 18, 1919. Serial No. 324,494. 2 Claims. (Cl. 22—43.)



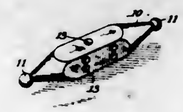
1. In a sand molding machine in which the sand is rammed between a fluid actuated piston in a fixed frame and a presser head adapted to swing on a pillar to permit of the introduction of the sand, in combination: a depending link pivoted to the presser head, a catch device on the fixed frame for engaging the said link, valve operating means on the fixed frame for the control of the pressure fluid to the said piston, and a stop device for preventing the operation of said valve operating means unless the presser head is in correct position over the piston and the said link is in engagement with the said catch.

1,387,943. BOBBIN-SUPPORT. GEORGE R. PLOTT, Hillsboro, N. C. Filed Dec. 1, 1920. Serial No. 427,576. 1 Claim. (Cl. 139—85.)



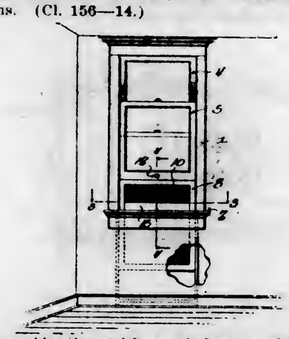
A device for the purpose stated comprising a pintle, a bobbin supporting member comprising a plate formed between its ends with a sleeve pivotally fitting the pintle and having its portions beyond the sleeve in mutual flat contact to provide a supporting leaf, and a spring coiled about the pintle and having operative connection with the leaf to yieldably support the same.

1,387,944. WELL-CASING EXTRACTOR. FILMORE M. PRICE, Floydada, Tex. Filed July 29, 1920. Serial No. 399,761. 4 Claims. (Cl. 254—30.)



1. An apparatus of the class described comprising a supporting frame, a pair of opposing stub shafts journaled therein, a short shaft connected with each stub shaft by a universal joint, a yoke rotatably mounted on each short shaft, a cross shaft carried by each yoke, gears connecting the cross shaft with the short shaft, a gripping roller on each cross shaft, a drive shaft and gears connecting the same with the stub shafts.

1,387,945. ADAPTER FOR TELEPHONE CALLING DEVICES. HARRY W. PUGH, New York, N. Y., and JAMES A. WOTTON, Montclair, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 11, 1919. Serial No. 337,358. 3 Claims. (Cl. 179—90.)

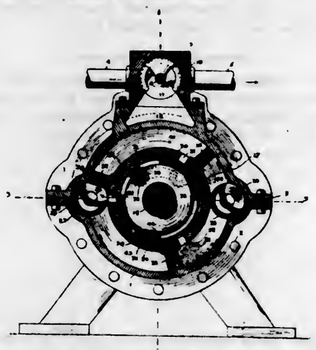


1. In combination, a subscriber's telephone set including a transmitter, an adapter, a calling device attached to one end portion of said adapter, said transmitter mounted on the other end portion thereof, and means for detachably mounting said adapter on said set.

1,387,946. GAME. JOHN RUTHERFORD, Jr., and THOMAS F. BAKER, Albany, N. Y., assignors to The Embossing Company, Albany, N. Y., a Corporation of New York. Filed Nov. 6, 1920. Serial No. 422,325. 7 Claims. (Cl. 46—65.)

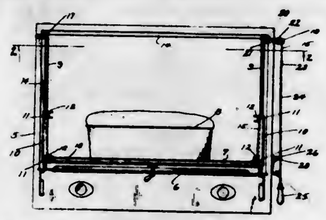
1. A game outfit comprising a trigger of polygonal cross section, and a bat, the faces on the trigger and spaced areas of the bat being marked to correspond, whereby the faces of the trigger are identified with or correspond to particular areas on the bat, and vice versa.

1,387,947. WINDOW-SCREEN. ROBERT SCHULZ, Milwaukee, Wis. Filed June 15, 1920. Serial No. 389,071. 6 Claims. (Cl. 156—14.)



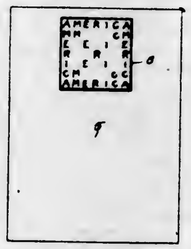
6. The combination with a window or similar frame having an opening in one side providing an entrance way into a sash compartment, and a main sash movable in the frame, of an auxiliary sash movable into and out of the compartment by movement of the main sash, means for detachably connecting the two sashes together, a finishing strip slidable in the frame of the auxiliary sash and normally disposed in said compartment, and means located in the auxiliary sash for moving the strip outwardly a limited extent when the auxiliary sash is moved out of the compartment.

1,387,948. BUTTON. CHARLES SILVERMAN, Providence, R. I. Filed Apr. 14, 1921. Serial No. 461,203. 4 Claims. (Cl. 24—103.)



4. In a garment button, a body provided with a diametrical slot and with arcuate slots branching therefrom, a plate rotatably mounted in the body provided with a diametrical channel and with an oblong opening in the channel, and a hook comprising a base slidably mounted in the channel, an arm upon the base extending through the opening and registrable with the slots, a beak upon the arm, and an inclined point upon the beak in the body.

1,387,949. ROTARY ENGINE. ANDREW D. SMITH, Concepcion, Calif. Filed July 29, 1916. Serial No. 112,140. 6 Claims. (Cl. 121—71.)

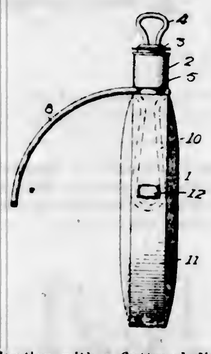


1. A rotary engine comprising a casing, a hollow motor cylinder within said casing, divided interiorly into two longitudinal parts by a cross diaphragm integrally formed with said cylinder, said parts adapted to act as steam passages.

1,387,950. ADJUSTABLE SHELF-SUPPORT. GUSTAV R. SPEAL and ARTHUR W. MIEROW, Milwaukee, Wis. Filed Apr. 29, 1920. Serial No. 377,611. 4 Claims. (Cl. 126—337.)

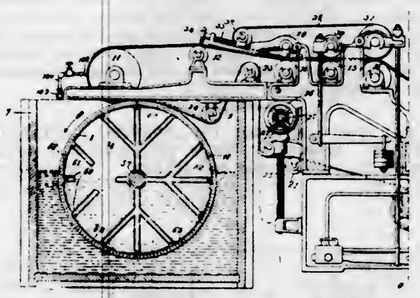
1. In a device of the class described, the combination of a plurality of guide rods, a shelf, a plurality of members associated with said shelf and slidably engaging said respective rods, said members coöperating with said rods to maintain said shelf substantially horizontally when it is raised or lowered, and a cable associated with said shelf for raising or lowering the shelf relative to said rods.

1,387,951. ADVERTISING-PUZZLE. JAMES T. STANDING, St. Louis, Mo. Filed July 28, 1919. Serial No. 313,907. 1 Claim. (Cl. 46—41.)



An advertising puzzle comprising a blank, a rectangular figure formed thereon by joining perpendicular and horizontal border lines, a series of rectangular spaces of an odd number formed on four sides of said rectangular figure and along the margin thereof and a series of intermediate rectangular figures formed on said rectangular figure which are also of odd numbers, certain predetermined letters of a word beginning and ending with the same letter and having an odd number of letters adapted to be inserted in said spaces at predetermined times, so that when all of said letters of said word have been placed in said rectangular spaces the said word will be spelled out and be arranged along the four sides of said rectangular figure and diagonally twice through said figure, one of said diagonal words intersecting the other.

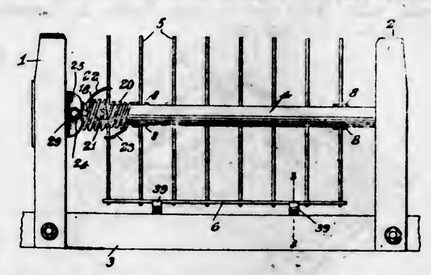
1,387,952. SHANK-PIECE AND METATARSAL-ARCH SUPPORT. JOHN STEINBRECHER, Chicago, Ill. Filed Oct. 13, 1920. Serial No. 416,689. 2 Claims. (Cl. 36—71.)



1. In combination with a shoe having a heel, an outer sole and an inner sole and a suitable upper, of means for securing the longitudinal and transverse rigidity between the heel and the forward portion of the sole consisting of a plate inserted between the outer and inner soles and secured thereto and to the heel, said plate being provided with longitudinal reinforcement and having the anterior end thereof formed with an integral upwardly dished portion whereby the central metatarsal area of the wearer's foot is maintained in an arched relation with respect to itself and with respect to the heel.

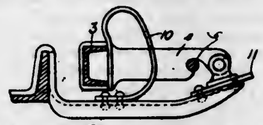
1,387,953. HOT-WATER BOTTLE. WILLARD E. SWIFT, Worcester, Mass. Filed Dec. 17, 1919. Serial No. 345,561. 5 Claims. (Cl. 220—94.)

1. The combination with a flattened disk shaped receptacle provided on its edge with a hollow projection corresponding substantially with the diametrical axis of the receptacle, said projection having an annular recess, of a handle held in said annular recess and rotatable about the axis of said projection, and means for retaining said handle on the edge of said receptacle.



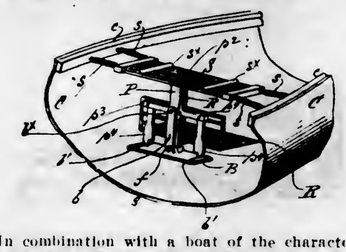
1,387,954. PULP OR PAPER MACHINE. HARRY E. TIDMARSH, Bangor, Me., assignor of one-half to Union Iron Works, Bangor, Me., a Corporation of Maine. Filed Dec. 9, 1919. Serial No. 343,505. 15 Claims. (Cl. 92—42.)

1. A pulp machine comprising means for forming a pulp web, a felt for carrying the web, a set of press rolls between which both the web and felt pass, and a second set of press rolls arranged beyond the first between which only the web passes, said sets of press rolls being constructed and arranged to subject the web to a heavy pressure to remove water therefrom.



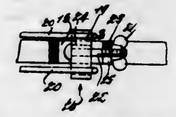
1,387,955. FLOOD-GATE ON STREAMS. BYARD CLEMENCE WILBURN, Apache, Okla. Filed Apr. 30, 1920. Serial No. 377,997. 4 Claims. (Cl. 39—4.)

1. In a combined flood gate and farm gate, the combination of a gate post, a horizontally disposed bearing mounted to swing horizontally upon the post, a vertically tiltable gate frame having a pivot portion mounted to rock in the bearing and to swing horizontally therewith,



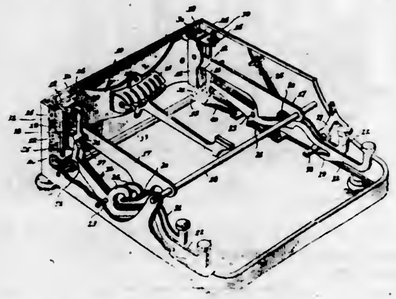
and a spring carried by the bearing and associated with the gate frame to yieldably maintain the latter in a vertical position.

1,387,956. BRAKE-BEAM RELEASE AND SUPPORT. CHARLES HAINES WILLIAMS, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1920. Serial No. 396,438. 7 Claims. (Cl. 188—213.)



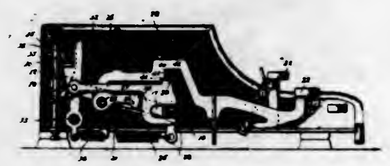
1. A third or fourth point support for brake beams the same comprising a body portion secured to a portion of the car truck, the extremities of said body portion being flared in opposite directions.

1,387,957. CANOE. FREDERICK W. ZEIDLER, Jersey City, and CARL HALPERN, Newark, N. J. Filed Nov. 13, 1920. Serial No. 423,792. 7 Claims. (Cl. 9—7.)



1. In combination with a boat of the character designated, a seat movably mounted, and elastic resilient means tending to maintain the seat in normal position, for the purpose described.

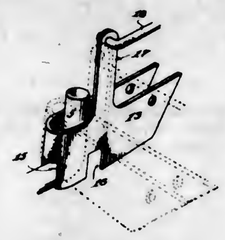
1,387,958. WINDOW-GUARD. HENRY M. AARONS, New York, N. Y. Filed Feb. 2, 1921. Serial No. 441,874. 3 Claims. (Cl. 20—71.)



2. In a window guard, a frame, means carried thereby, to engage a window casing, a rod releasably supported by the frame, a link engaging said rod, and means carried by the frame to actuate the link to draw the rod firmly against said frame.

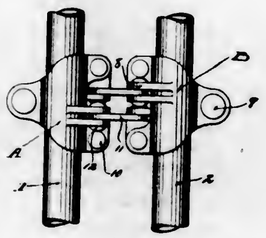
1,387,959. TYPEWRITING-MACHINE. FRANK HUBERT ARMSTRONG, Auburn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Oct. 3, 1918. Serial No. 256,675. 20 Claims. (Cl. 197—72.)

1. In a typewriting machine, the combination of a support shiftable to vary the relation between printing instrumentalities and a platen, means for slidably holding the support to move vertically, a pair of rock arms extending fore and aft of the machine having a pivotal connection at their rear ends with the support, a rock shaft forward of the support to which said rock arms are rigidly held, a pair of shift key levers pivotally supported to swing about a common axis at the rear of the rock shaft and provided with rock-arm depressing parts loosely engaging one rock arm at points intermediate the rock shaft and the support, the rock-arm depressing part on one lever being longer than that on the other lever and engaging the rock arm at a point closer to the rock shaft than the other arm depressing part, and a spring for normally swinging the rear ends of the rock arms upward.



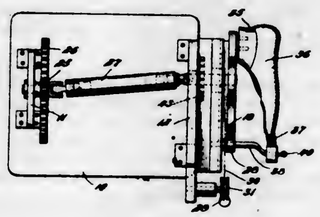
1,387,960. TYPEWRITING-MACHINE. FRANK H. ARMSTRONG, Auburn, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Nov. 11, 1918. Serial No. 261,971. 15 Claims. (Cl. 197—72.)

1. In a typewriting machine, the combination of a frame, a support shiftable in the frame to vary the relation between printing instrumentalities and a platen, means for guiding the support to move up and down in the frame, an arm extending fore and aft of the frame pivotally connected at one end with the support and pivotally held to the frame and having a laterally extending lug intermediate its connections with the support and frame, a pair of shift-key levers fulcrumed in the frame at the rear of the lug and overlying said lug, and a spring for normally moving the support upward, said levers being provided with parts of different length engaging the upper side of the lug at points spaced apart longitudinally of the arm.



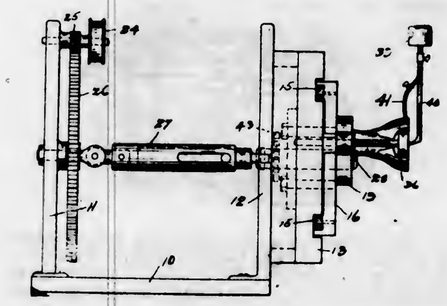
1,387,961. GATE-LATCH. CLARENCE E. AXLINE, Sr., Bryant, Ill. Filed June 25, 1920. Serial No. 391,791. 3 Claims. (Cl. 16—146.)

1. The combination with a gate, a supporting part on which it is hingedly mounted, a keeper for the opposite end of the gate, and a latch to engage it, of a member serrated at its lower edge adapted to swing about said supporting part and adapted to engage the same, of a



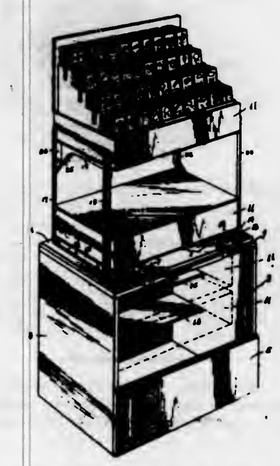
mechanism connecting the latch and said member adapted to operate the latter in the movement of said latch.

1,387,962. HINGE. ERWIN W. BAERWALDT, Stevens Point, Wis., assignor to Farmers Barn Equipment Co., Stevens Point, Wis. Filed June 22, 1920. Serial No. 390,819. 1 Claim. (Cl. 16—11.)



A hinge including a pair of clamps, one forming a support engaging member and the other a gate post engaging member, each clamp comprising a pair of like post embracing plates, a bifurcated ear extending from each of the plates at one side of a transverse plane through the center thereof, means for clamping the pairs of plates together to engage the gate post and support respectively, and a pair of links, each link being pivoted at one end to the ear of one of the support engaging plates and pivoted at its other end to the ear on the diagonally opposite post engaging plate.

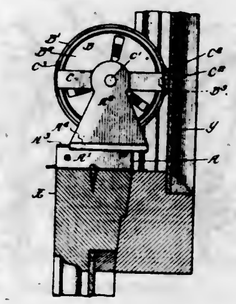
1,387,963. METHOD OF APPLYING A COATING FLUID. STEPHEN W. BOURN, Providence, R. I. Filed Sept. 30, 1920. Serial No. 413,829. 4 Claims. (Cl. 91—39.)



1. An improved method of spreading a fluid coating upon the surface of work, which consists in providing a non-rotatable spreader and automatically feeding the fluid to the point of application and causing a relative movement between said spreader and the work.

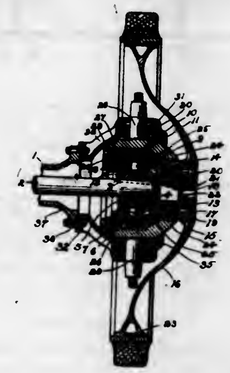
1,387,964. SURFACE-COATING MACHINE. STEPHEN W. BOURN, Providence, R. I. Filed Sept. 30, 1920. Serial No. 413,830. 9 Claims. (Cl. 91—39.)

1. In a machine of the character described, means for supporting the work, a non-rotatable fluid spreader, means for supporting said spreader, and means for moving one relative to the other for automatically applying fluid to the surface of the work.



1,387,965. DISPLAY APPARATUS. EDGAR W. BOWEN, Detroit, and ROBERT TURNER, Highland Park, Mich., assignors to D. M. Ferry & Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 23, 1920. Serial No. 412,310. 3 Claims. (Cl. 217—58.)

1. In a display apparatus, a case having a front door hinged at its upper edge to the front edge of the top and adapted to be swung up and back to lie flat upon the top, supports pivoted to the inner side of the door and adapted to be folded up to extend vertically when the door lies on the top, and display boxes mounted on the supports.

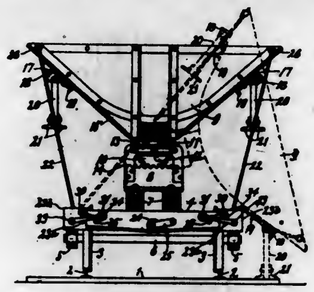


1,387,966. MOUNTING FOR BURGLAR-ALARMS. JAMES M. BUTCHER, Chicago, Ill., assignor to Sentinel Alarm Co., Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 12, 1918, Serial No. 257,751. Divided and this application filed Sept. 18, 1919. Serial No. 324,727. 5 Claims. (Cl. 116—90.)

1. In an alarm device, the combination of an attaching base having upstanding side walls providing a slide track, an alarm carrier having a slide shoe bridging the channel of the attaching base and embracing and sliding upon said track, a friction tongue mounted between said side walls in position to enter into frictional bearing against

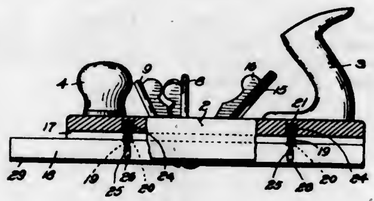
said slide shoe, and means for pressing said tongue into said frictional bearing.

1,387,967. DRIVE-WHEEL ASSEMBLY. SILAS V. DUSSEAU, Erie, and MAURICE G. DUSSEAU, Detroit, Mich. Filed Aug. 25, 1919. Serial No. 319,719. 8 Claims. (Cl. 180—48.)



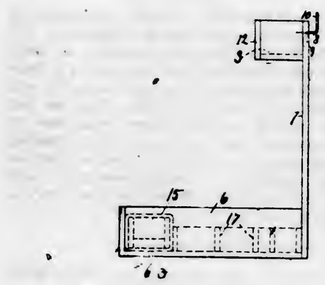
1. In a driven wheel assembly, a hollow semi-spherical fixed outer socket member, a hollow semi-spherical ball member trunnioned in said outer socket member, an inner socket member within the ball member and having a bearing therein, a wheel having a hub portion secured to said inner socket member to rotate therewith within the ball member, the outer end of the ball member being open to receive the hub portion, and driving means extending into the inner open end of the ball member and articulated to the inner socket member for imparting rotation to said wheel, said outer socket member and ball member together forming a spherical casing.

1,387,968. DUMP-CAR. NELS EKBERG, St. Paul, Minn. Filed Mar. 24, 1921. Serial No. 455,079. 8 Claims. (Cl. 105—264.)



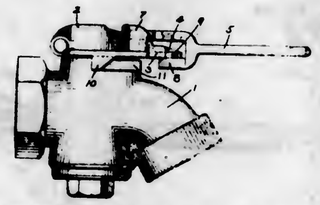
1. A dump car having a laterally tiltable body composed of a single member of segmental form in cross section so as to hold the load when in normal position and dump it automatically when tilted to either side, said body having hangers pivoted one set to each side to swing to

and from the same, a foot rail secured to each set of hangers and arranged to stop the tilting of the car body



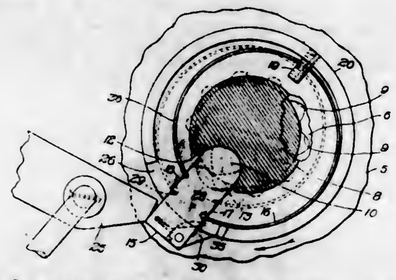
when the rail gets in contact with the track on which the car stands.

1,387,969. PLANE. OTTO ELIAS, Rochester, Pa. Filed Dec. 27, 1920. Serial No. 433,242. 3 Claims. (Cl. 145—10.)



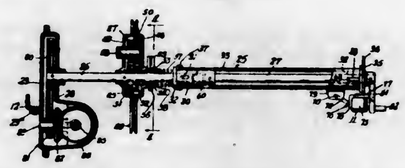
3. A plane comprising a body portion, three bits adjustably secured in said body portion adapted to cut a groove having a flat bottom and outwardly flaring side wall portions, a guide rib formed integral with the bottom wall of said body portion on a line with said bits and adapted to travel in the groove being cut, and a second guide rib resiliently mounted for vertical movement in a slot in said body portion, said last named guide member having its lower side edges beveled, and being adapted to fit in a previously formed groove, thereby guiding said plane to equally space each succeeding groove.

1,387,970. TAILOR'S KIT. LORENCE ERICKSON, Dawson, Minn. Filed Mar. 1, 1921. Serial No. 448,857. 4 Claims. (Cl. 223—53.)



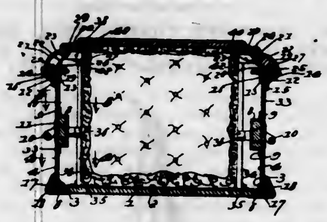
1. A tailor's kit comprising a hollow base open at the top and having its rear wall extended a considerable distance above the base, a series of compartments open at the top along the front of the upper end of said rear wall, and a wire spaced from the rear side of the top of the wall and secured with its ends to the wall.

1,387,971. ANGLE-COCK HANDLE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1919. Serial No. 330,786. 3 Claims. (Cl. 254—6.)



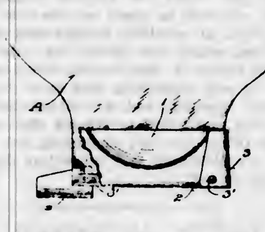
1. The combination with an angle cock device comprising a cock and a locking member pivotally mounted on the cock for operating the cock, of a detachable handle adapted to be applied to said member for operating same.

1,387,972. CLUTCH MECHANISM FOR POWER-DRIVEN PUNCH-PRESSES. ERNEST GAUTHIER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1918. Serial No. 253,546. 4 Claims. (Cl. 192—29.)



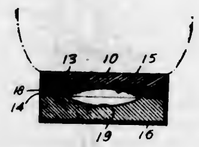
1. In a power driven punch press, a constantly rotating fly wheel, a crank-shaft with which said fly wheel coöperates, a pivotally supported clutch pin for establishing an operative connection between said fly wheel and said crank-shaft, a spring normally tending to swing said clutch pin in one direction into an operative position, means for reversing the action of said spring, and means for holding said clutch pin in a neutral position when the spring is reversed.

1,387,973. GEARING. WILLIAM H. GEORGE, Fairfield, Iowa, assignor to The Dexter Company, Fairfield, Iowa, a Corporation of Iowa. Filed Feb. 7, 1920. Serial No. 357,086. 8 Claims. (Cl. 192—116.)



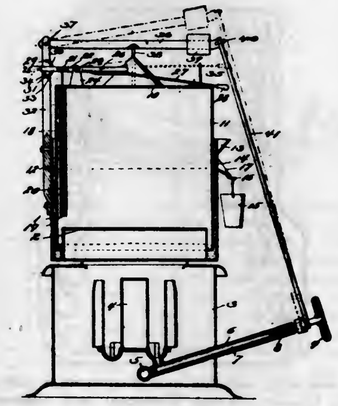
1. The combination of a support, an oscillating operating device in said support, a continuously rotating drive shaft, a second shaft adapted to be driven thereby, clutch means between said shafts, means operatively connecting said second shaft with said operating device, a control member, and means actuated by said control member and operable upon by a part of said means connecting said second shaft with said operating device for throwing out the clutch between said drive and driven shafts.

1,387,974. CASKET. JESSE H. GLEASON, Atlanta, Ga. Filed Sept. 19, 1918. Serial No. 254,826. 2 Claims. (Cl. 27—7.)



2. A casket embodying a base, side and end walls upstanding from the base, posts disposed within the casket and in spaced relation to each other and in spaced relation to the side walls, a hinged top frame swinging down into abutting position with said posts, and upholstery disposed within the casket and in the plane of the inner faces of said posts, as herein shown and specified.

1,387,975. CLAMP FOR FLEXIBLE CONTAINERS. WILLIAM EDWARD GODDARD, Watertown, Wis. Filed Dec. 27, 1920. Serial No. 433,460. 2 Claims. (Cl. 24—30.)

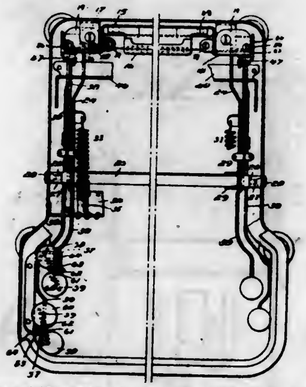


1. A detachable friction clamp for closing the open end of a flexible container comprising a resilient metallic body, folded upon itself to form gripping lips, an end closure for the body, comprising open mouth clips in pivotal union with the base corners of the clamping body, the edges of the clips being contracted from their pivot points so as to progressively compress the clamping lips when said clips are folded against the end edges of the aforesaid clamping body.

1,387,976. RUBBER HEEL. CLARENCE C. GOODMAN, Elyria, Ohio. Filed Aug. 23, 1920. Serial No. 405,435. 3 Claims. (Cl. 36—36.)

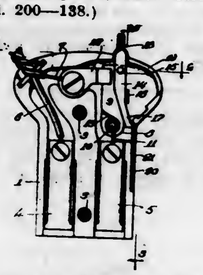
1. In a heel of the type described, an upper elastic lift having its lower face free from downwardly projecting portions and having formed therein a continuous groove having a reduced downwardly opening outlet opening through such lower face and a lower lift provided with an upwardly extending bead corresponding in shape and arrangement to the groove of said upper lift, the upper end of said unwardly extending bead being adapted to enter said groove through said restricted outlet openings to secure said lifts together.

1,387,977. CANNING-MACHINE. JOHN C. GREEN, Hackettstown, N. J. Filed Mar. 13, 1919. Serial No. 282,389. 9 Claims. (Cl. 236—31.)



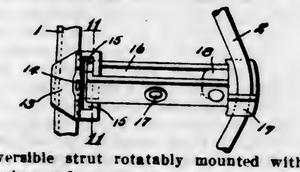
3. In a canning machine of the type comprising a tank and a cover providing a chamber adapted to contain steam and the products to be treated and capable of rising and lowering movements in accordance with variations of the steam pressure therein, means operative by the rising and lowering movements of said cover for controlling the supply of heat to the machine to maintain a steam pressure within the cover, and other means also operative by the rising and lowering movements of said cover to automatically release or interrupt the release of pressure within the cover.

1,387,978. SPRING-CLIP. WILLIAM HALKET, Holyoke, Mass., assignor to L. D. Van Valkenburg, Holyoke, Mass. Filed Jan. 21, 1920. Serial No. 353,117. 1 Claim. (Cl. 24—252.)



A spring clip consisting of a pair of members, one of said members being provided nearer one end than the other with lateral ears provided with circular openings and the other member being provided with lateral trunnions extending into the openings of the ears and providing a pivotal connection between the two members, the first member having a handle extending rearwardly from said ears and a second member having a handle extending rearwardly from said trunnions, the first member having a relatively wide flat jaw extending forwardly from said ears and a second member having a relatively wide flat jaw extending forwardly from said trunnions, said second member having the body of its jaw offset to prevent the terminal portions of said ears from contacting with the flat surface on which the clip is associated, one of said members being provided with a spring tongue formed integral therewith and deflected inwardly to engage the other member to maintain said jaws in contacting relation, each of the handles being connected to its jaw by a diverging portion to permit of the assembly of the two members.

1,387,979. TYPEWRITING-MACHINE. EDWIN L. HARMON, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Aug. 12, 1919. Serial No. 316,990. 15 Claims. (Cl. 197—72.)

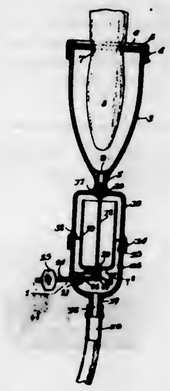


1. A case-shift assembly unit comprising a pair of upstanding brackets having horizontal ears adjacent the upper and lower ends thereof, a pair of vertical guide posts extending between the ears on the brackets and held to said ears, and a vertically slidable support having a pair of vertically spaced horizontal ears at each end thereof slidably held to the posts.

1,387,980. TERMINAL BLOCK. RAYMOND R. HAUGH, Chicago, Ill. Filed Sept. 23, 1920. Serial No. 412,275. 5 Claims. (Cl. 200—138.)

1. A terminal block for electrically heated appliances having a body formed of insulating material, a switch blade pivotally mounted on said block, means for normally urging said switch to its open position, a thermostatic element having one end rigidly secured to said block and having its other end arranged to hold said switch in its closed position against the action of said means, said element being disengaged from said switch blade when the heat of said appliance reaches a predetermined limit.

1,387,981. FLOATING REVERSIBLE STRUT. ARTHUR W. HAWKINS, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1920. Serial No. 383,746. 6 Claims. (Cl. 188—232.)

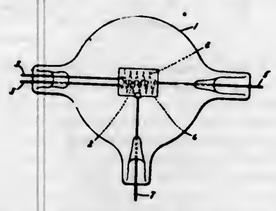


1. A reversible strut rotatably mounted with respect to the tension and compression members of the brake beam and provided with stops for arresting and determining the forty degree angular position of the strut when moved for use in either a right or left-hand position.

1,387,982. DISK-WHEEL CONSTRUCTION. ROSCOE C. HOFFMAN, Indianapolis, Ind. Filed July 6, 1920. Serial No. 394,240. 4 Claims. (Cl. 301—63.)

1. A disk type wheel for vehicles including a supporting disk adapted to carry a tire rim about the periphery thereof, an auxiliary bracing disk mounted adjacent said supporting disk having its outer periphery in engagement therewith, said bracing disk being mounted at an angle to said supporting disk so as to act as an angular brace therefor, and an intermediate disk of less radius than said auxiliary bracing disk mounted between said auxiliary disk and supporting disk for further bracing and strengthening said supporting disk near the center portion thereof.

1,387,983. TEAT-CUP. LEO HOFMEISTER, Milwaukee, Wis. Filed May 5, 1919. Serial No. 294,870. 4 Claims. (Cl. 31—97.)



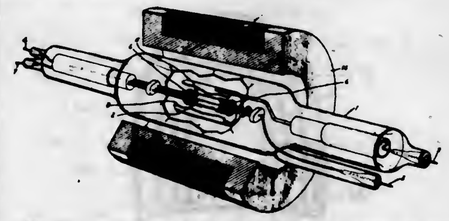
1. A device of the class described, comprising a teat cup, a cup shaped member directly carried by the teat cup, a passageway connecting said teat cup and member, means connecting said member with a suction machine to draw liquid from the teat cup into said member from where it is discharged into a suitable receptacle, and means contained within the cup shaped member for varying the suction in the teat cup according to the flow of fluid.

2. A device of the class described, comprising, in combination, a teat cup, a cup shaped member directly carried thereby, a passageway connecting the interior of the teat cup with the interior of said member, a valve in said passageway, said valve being normally held open by the flow of liquid from the teat cup through the passageway, and means contained within said member for closing the valve when the flow from the teat cup substantially ceases.

3. The combination with a teat cup, of an inverted cup shaped member integral therewith, a passageway connecting the teat cup with said member, a receptacle vertically movably mounted in said member with its opened end in register with the passageway, a valve carried by the receptacle and movable to a position closing the passageway, said receptacle being moved from the passageway by the flow of fluid from the teat cup, and means for moving said receptacle, and with it the valve, toward the passageway to close the same when the flow substantially ceases.

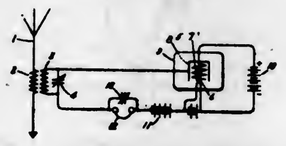
4. A device of the class described, comprising a teat cup having a two part closed end cylindrical member carried thereby, a passage way connecting the teat cup and the cylindrical member, a transverse shaft journaled in said member and having one end positioned exteriorly thereof, a link member having one end fixed to said shaft, a receptacle having its lower end pivotally connected with said link and its upper open end positioned adjacent said passageway, a counter-balanced lever secured to the end of said shaft exteriorly of said member whereby said receptacle is normally yieldingly urged toward the passage way, a valve carried by said receptacle and operable to close said passage way when the receptacle is in its uppermost position, and means permitting the discharge from said receptacle of fluid at a predetermined rate, said receptacle being held away from the passage way by the fluid contained therein and being movable by said counter-balanced lever to close said passage way when the flow substantially ceases.

1,387,984. NEGATIVE RESISTANCE. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1915. Serial No. 47,938. 38 Claims. (Cl. 250—27.)



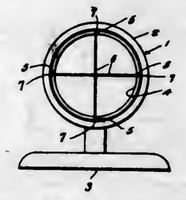
1. A negative resistance device comprising a plurality of electrodes inclosed in a highly evacuated receptacle and having sources of potential applied to said electrodes in such a way that the device has a working range over which the current flow between two of said electrodes increases and decreases inversely as the potential applied between said two electrodes.

35. A thermionic amplifier having a cathode and two coöperating electrodes and means for directly producing by impact an effective emission of secondary electrons from one of said coöperating electrodes by reason of a bombardment thereof by a stream of primary electrons emanating from the cathode.



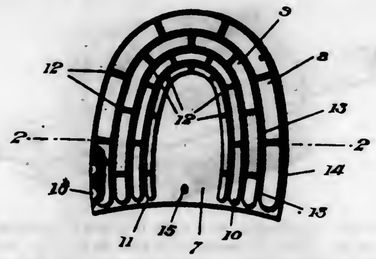
1,387,985. ELECTRON-DISCHARGE DEVICE. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 13, 1916. Serial No. 130,990. 53 Claims. (Cl. 250—27.)

9. The method of amplifying a variable current which consists in producing an emission of electrons from a cathode to a grid anode and a third electrode surrounding said cathode and subjecting the electrons to the action of a magnetic field produced by the current to be amplified in a direction parallel to said cathode.



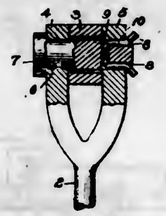
52. The combination in a high frequency signaling system of an electron discharge device having an electron emitting cathode and a coöperating electrode inclosed in an evacuated receptacle, an oscillatory circuit associated with said electrodes in such a way that high frequency oscillations will be produced in said oscillatory circuit, means for producing a magnetic field in the space between said electrodes, and means for varying the strength of said magnetic field in accordance with variations in a signaling current and thereby varying the amplitude of the high frequency oscillations produced in said oscillatory circuit.

1,387,986. WIRELESS RECEIVING SYSTEM. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 10, 1917. Serial No. 154,024. 12 Claims. (Cl. 250—8.)



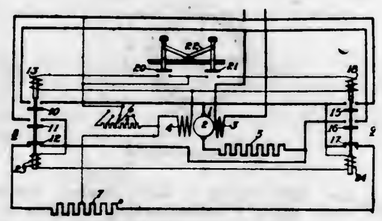
1. Means for receiving wireless signals comprising a circuit which is resonant to the frequency of the signal waves to be received, and a device closely coupled to said resonant circuit so as to reduce the damping thereof and so proportioned and adjusted as to produce oscillations of a frequency slightly different from that of the received oscillations, said device having a working range over which the current flow therethrough increases and decreases inversely as the potential applied thereto.

1,387,987. GUN-SIGHT. CHARLES W. IRION, Red Cliff, Colo. Filed Nov. 8, 1919. Serial No. 336,608. 2 Claims. (Cl. 33—47.)



1. A gun sight having a body member, removable crossed sight wires, a sleeve having retaining means serving as gages to position said wires, said wires being positioned in said means and extending beyond the sleeve, and said sleeve being slidable into the body so that the extended portions of the wires will frictionally engage the interior of the body to fasten the wires in place and the sleeve and body against accidental relative movement.

1,387,988. RUBBER HEEL. LOUIS KAPLAN, New York, N. Y. Filed Oct. 16, 1920. Serial No. 417,286. 4 Claims. (Cl. 36—35.)

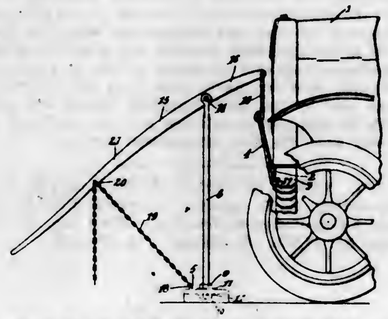


1. A resilient heel having ribs on its tread surface, located one within the other, and of diminishing height to come into contact with the underlying surface one after the other from the outer rib inward as the ribs wear away.

1,387,989. PIVOT-JOINT. CHARLES O. KEAGY, Pitcairn, Pa. Filed May 22, 1920. Serial No. 383,542. 3 Claims. (Cl. 287—100.)

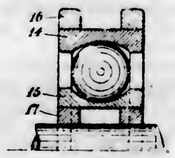
1. In a pivot joint, the combination of a pair of members provided with registering eyes, a pivot pin extending through said eyes and having a pair of oppositely-disposed longitudinally-extending grooves in its side and a transverse opening through tae pin from the inner end of one to the inner end of the other of said grooves, and a strip of bendable metal lying in said grooves and opening and having its ends turned outwardly to lock the pin in the eyes of said members.

1,387,990. CONTROL SYSTEM. HAROLD L. KEITH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 17, 1919. Serial No. 345,600. 20 Claims. (Cl. 172—179.)



8. The combination with a motor, of reversing and dynamic braking means therefor and a plurality of coils for biasing said means and connected in shunt relation to the motor armature during normal operation and during dynamic braking.

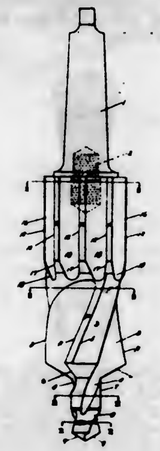
1,387,991. PRESSURE GAGE AND CUT-OFF FOR PNEUMATIC TIRES. EDWARD G. KUNKE and HARRY E. THOMPSON, Oklahoma, Okla. Filed July 14, 1919. Serial No. 310,852. 2 Claims. (Cl. 152—11.5.)



1. The combination with a pressure regulating valve comprising a casing having means for attaching the same to an air supply hose, a piston movable in the casing, a valve carried by the piston and controlling the entrance of air into the casing, air discharge means connected with the casing, and yielding means bearing upon the piston to maintain the valve normally open until the attainment of a specified pressure within the casing which actuating the piston will close the valve, of means connected with the piston and having an exposed terminal whereby the piston may be moved manually for the closing of the valve when desired.

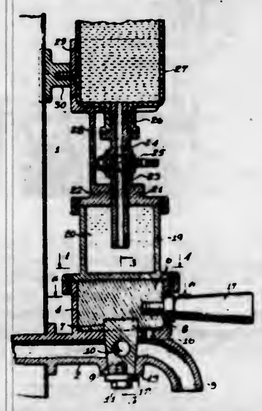
1,387,992. JACK. THOMAS A. LAKE, Hillman, Mich. Filed May 5, 1920. Serial No. 379,079. 1 Claim. (Cl. 254—45.)

A device of the character stated comprising a base, a standard secured to the base, said standard having integral forked legs merging into a shank, the upper end of which is bifurcated, a lever fulcrumed in the bifurcated end of said standard, a link suspended from the short end of the lever and having an eye at its end, an inverted V-shaped coupling member passed through the eye of the link and having its apex seated in said eye, the said member being provided with hooked extremities, and means for locking said lever in place when a weight is being supported by said coupling member.



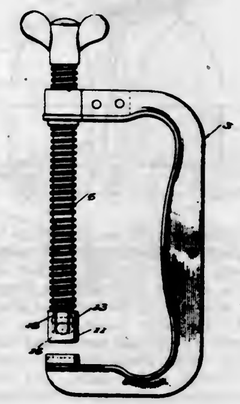
1,387,993. BALL-BEARING. KARL OSKAR LEON, Stockholm, Sweden. Original application filed Nov. 25, 1918, Serial No. 264,068. Divided and this application filed Jan. 5, 1920. Serial No. 349,649. 1 Claim. (Cl. 64—36.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a ball bearing, the combination of balls, and races provided with grooves formed in their tracks and having



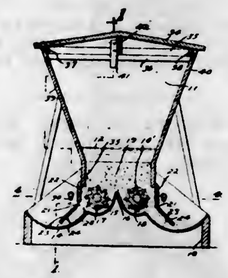
such varying thickness as to become resilient at the said grooves, and flanges consisting of rings fitted to the sides of said races opposite said balls on both sides of said resilient portions of the races.

1,387,994. DRILL. REX W. LEWIS, Portland, Oreg. Filed Feb. 25, 1920. Serial No. 361,095. 2 Claims. (Cl. 77—65.)



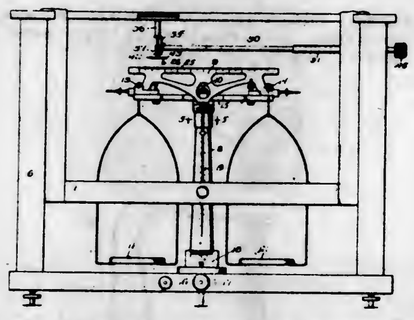
1. A tool for boring boiler tube holes in boiler plate comprising more than two cutting sections each acting as a pilot for the succeeding one, the second section having a small and odd number of cutting blades of sufficient depth to greatly enlarge the hole by which it is piloted and its succeeding section having a number of cutting blades which are a multiple of that of the preceding section, but substantially shallower and exceeding but slightly the external diameter of the next preceding section.

1,387,995. DISPENSING APPARATUS. JOHN H. LIMPERT, New York, N. Y. Filed Nov. 5, 1920. Serial No. 422,007. 7 Claims. (Cl. 221—96.)



1. A dispensing apparatus for a liquid receptacle having an outlet passage, comprising a valve in said passage, a liquid chamber associated with said receptacle and adapted to receive liquid from a second receptacle, a second valve associated with said chamber and having a recess of a definite size therein adapted when the valve is in a normal position to receive liquid from said chamber, and means for moving both of the valves to cause the mixture of the liquid from both of said receptacles.

1,387,996. PRESSURE-SCREW. EDWARD W. MENGER, San Antonio, Tex. Filed June 24, 1921. Serial No. 480,174. 3 Claims. (Cl. 144—304.)

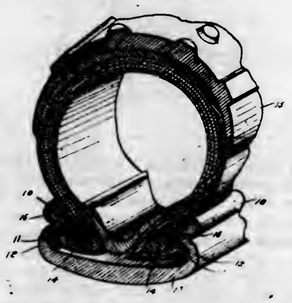


1. A pressure screw comprising a body having its forward end provided with a head and an annular rib, a shoe having a socket receiving said head and having yieldable side walls provided with a groove receiving said rib, and a sphere shaped bearing confined between the bottom wall of said socket and the forward end of said head.

1,387,997. HOG-FEEDER. FRANK HOWARD PAGE, Waverly, Iowa. Filed Nov. 15, 1919. Serial No. 338,301. 3 Claims. (Cl. 119—54.)

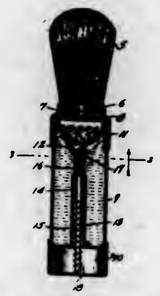
2. A hog feeder comprising a hopper for receiving feed, a feed roller arranged adjacent the bottom of the hopper, said hopper being formed with an opening adjacent said roller whereby as the roller rotates the feed will be forced through said opening, a ratchet wheel secured to said roller, a pawl for actuating said ratchet wheel and said roller, means including a vibrating bar operated by the hog for actuating said pawl, and a flapper bar pivotally mounted on the hopper below said vibrating bar whereby it will act as a guard for preventing a hog reaching said vibrating bar while eating.

1,387,998. ANALYTICAL BALANCE AND THE LIKE. WILLIAM M. PESTEL, Chicago, Ill., assignor to Schaar & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1920. Serial No. 360,665. 5 Claims. (Cl. 265—54.)



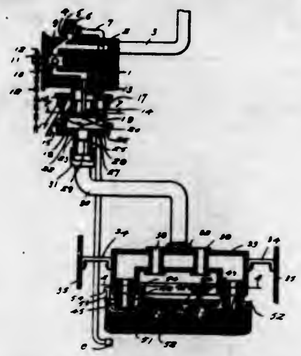
1. The combination with an analytical balance having in its upper portion a horizontally extending rider beam, and an inclosing casing for said balance; of a rider carriage for said beam, said rider carriage comprising a sleeve secured in the side wall of the casing at a point of greater elevation than the rider beam, a tube rotatably and slidably mounted within said sleeve, and having its inner end within said casing above the rider beam and having its outer end outside of the casing, and provided with a suitable head member secured to the inner end of said tube above the rider beam, a vertically arranged plunger slidably mounted in said head member, a horizontal pin on the lower end of said plunger, a spring in the head member normally raising the plunger and pin, a rod extending through the sleeve aforesaid, and having its outer end outside of the casing and provided with an operating finger piece, and a rocking connection between the inner end of said rod and plunger whereby when the rod is rocked by rotation of the finger piece, the plunger is depressed to carry its cross pin into close proximity to the rider beam, substantially as described.

1,387,999. COMPOSITION FOR MATCHES AND PROCESS FOR MAKING SAME. MANUEL PRADO P., Santiago, Chile. Filed Dec. 19, 1919. Serial No. 346,111. 7 Claims. (Cl. 52—27.)



1. A complete composition of matter for match heads, capable of igniting by friction, including a slight excess of alkaline material so that there will be no free acid present.

1,388,000. RIM-GUARD FOR TIRES. RAY W. PRITCHARD, Baltimore, Md. Filed June 2, 1920. Serial No. 386,129. 1 Claim. (Cl. 152—26.)



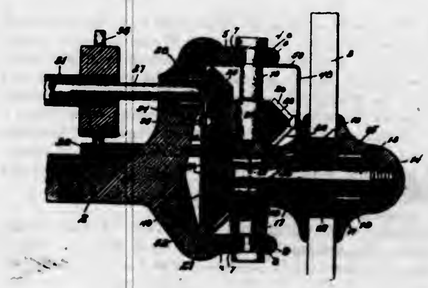
As a means to prevent rim-cutting of a tire, a flange to engage the inner surface of the bead-securing flange of the rim, a flange integral with the first flange extending therefrom over the edge of the bead securing flange and being curled into a tube engaging the exterior of the securing flange whereby the tube and first flange clasp the bead securing flange, said means being resilient and split with overlapping portions at the tube, and a means in the tube extending into the overlapping portions to reinforce them.

1,388,001. SHAVING-BRUSH. PAUL PASQUALE PUPILLA, New York, N. Y. Filed Mar. 27, 1920, Serial No. 369,236. Renewed Feb. 12, 1921. Serial No. 444,537. 6 Claims. (Cl. 15—50.)

1. A brush, including bristles, a base for such bristles, said base being formed with an opening, a bulb positioned to the rear of and in communication with said opening, a handle forming a reservoir, said bulb being formed with an opening permitting of communication between the same and the reservoir forming handle, and means for actuating said bulb to expel fluid within the same through the base opening.

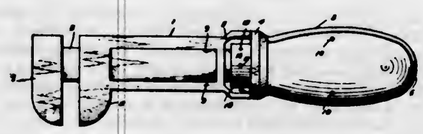
1,388,002. INCANDESCENT GAS-BURNER. WILLIAM G. ROBEY, Grafton, W. Va. Filed July 27, 1920. Serial No. 399,273. 4 Claims. (Cl. 67—94.)

4. A burner device having a fuel mixture regulator comprising a nipple, a valve needle mounted thereby, a valve member screwed to the nipple having an opening to receive the needle, a flange extending from the nipple, a second nipple having a flange extending therefrom, a tube intermediate and positioned by the flange, and closures overlapping the flanges and screwed to the exterior of the tube.



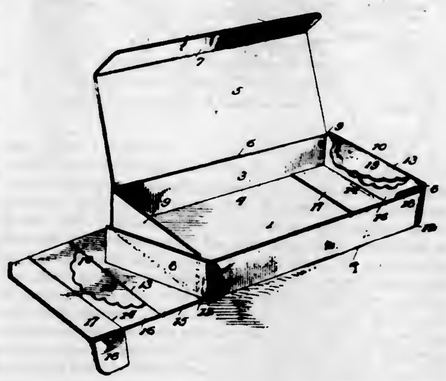
1,388,003. BATHING-BOAT. JOHN SEBETO, Brooklyn, N. Y. Filed Mar. 19, 1921. Serial No. 453,598. 8 Claims. (Cl. 9—18.)

1. A structure of the class described, including a hull having a well extending through the bottom in which the user may assume a standing or sitting posture, and a swingable seat on said structure adjacent to the rear end of the well adapted to be swung upwardly against the



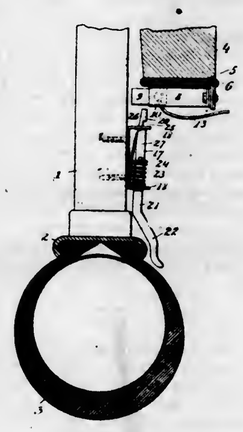
back wall of the well or to the lowered horizontal position for use, there being supporting means on the hull for the seat when lowered.

1,388,004. DRIVING AND STEERING MECHANISM. JOSEPH SCHMIT, Lansing, Mich. Filed June 26, 1918. Serial No. 242,060. 5 Claims. (Cl. 180—43.)



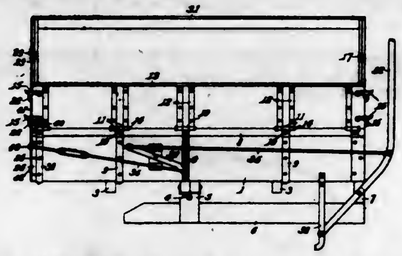
1. In a wheel drive for motor vehicles, the combination of an axle, a knuckle pin included on the axle and having a sleeve extending therefrom and integral therewith, and also provided with a circumferential journal portion between one of its ends and said sleeve, a wheel driving spindle journaled in the sleeve, a wheel having a hub fixed to said spindle and mounted to rotate upon the sleeve, a gear carried by the spindle, a gear meshing therewith and slidably and rotatably mounted upon the circumferential bearing surface of the knuckle, a drive gear meshing with the second named gear, and means for advancing and retarding said drive gear to permit the second named gear to have sliding motion on the knuckle.

1,388,005. WRENCH. HARRY J. SMITH, Bend, Oreg. Filed Sept. 3, 1920. Serial No. 407,866. 5 Claims. (Cl. 81—169.)



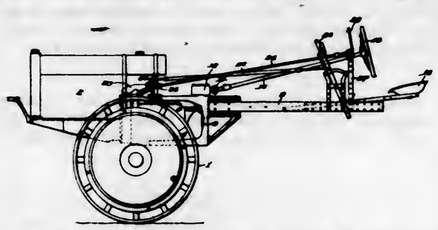
1. A wrench comprising a body portion, a stationary jaw carried at one end of said body portion, a neck formed at the opposite end of said body portion and having open sides, a handle projecting from said neck and having open sides, side handle members for closing the open sides of the handle, a shank slidable through said body and through the neck and the handle, an outer jaw carried by said shank, means within said neck for locking the shank in adjusted position to prevent movement of the outer jaw with respect to the inner jaw, and means within said handle to limit outward movement of said shank.

1,388,006. BOX-BLANK. JESSE SHOFF, Cincinnati, Ohio. Filed Oct. 15, 1920. Serial No. 417,166. 1 Claim. (Cl. 229—34.)



A box blank having a bottom, and side flaps formed with extension pieces, said bottom having ends formed in three sections, the inner and middle sections to be folded over said extension pieces and the outer section to lie on the bottom and formed with a tongue extending upward adjacent the outer side flap, and a cover having an edge lip to be received between said tongue and said side flap.

1,388,007. AUTOMATIC TIRE-SIGNAL. WILLIAM ANTHONY STEPHENS, Oakland, Calif. Filed Nov. 22, 1919. Serial No. 339,834. 4 Claims. (Cl. 200—58.)



1. Means for indicating deflation of automobile pneumatic tires, comprising a trigger attachable to a portion of the automobile wheel, locking means for holding the trigger in retracted position, and a normally open circuit closer having interposed insulating material temporarily lodged in the path of the trigger for complete discharge of said insulating material from the circuit closer and the closing of the latter.

1,388,008. BODY FOR TRUCKS. BLAKE TAYLOR, Roanoke, Va. Filed Mar. 12, 1921. Serial No. 451,732. 6 Claims. (Cl. 296—32.)

1. A body structure for trucks, comprising a main body of box-like form, and a knock-down superstructure removably mounted thereon, said superstructure comprising side-boards adapted to seat in inclined positions upon the sides of the main body, means for attaching said side-boards to said sides, front and rear end walls fitting between said side-boards, the front wall resting upon the end wall of said main body, means detachably connecting said end walls to said side-boards, an end-gate adapted for suspension from the main body when the superstructure is omitted and for mounting on the rear end of the superstructure when the latter is used, and means for automatically actuating said end-gate to and from closing position.

1,388,009. TRACTOR. CARL F. WALZ, Minneapolis, Minn., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed July 26, 1920. Serial No. 398,988. 10 Claims. (Cl. 180—77.)

1. The combination in a tractor having a power unit comprising transmission gearing and a beam relatively movable with respect to said unit, of means for shifting said gearing comprising shifting means movable with said beam, intermeshing gears supported adjacent said power unit, means connecting one of said gears with said transmission gearing and means connecting the other of said gears with said shifting means.

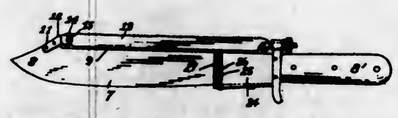
1,388,010. DISPLAY-RACK. EDGAR WATSON, Chicago, Ill. Filed May 21, 1921. Serial No. 471,350. 1 Claim. (Cl. 40—148.)

In a display rack, a frame, a glass mounted in the front part of said frame, a door hinged to the back of said frame, a series of posters removably secured to the inner surface of said door, a flexible mounting sheet likewise supported on said door between said posters and said door, and spring means between said mounting sheet and said door for pressing outwardly upon said mounting sheet, whereby the outermost poster is pressed against the inner surface of said glass.

1,388,011. METALLIC CEMENT. FRANK P. WEST, Chicago, Ill. Filed Jan. 11, 1921. Serial No. 436,601. 2 Claims. (Cl. 106—8.)

1. A metallic cement composed of oxid of iron, oxid of zinc, litharge, comminuted aluminum and water glass.

1,388,012. SILO-HOOP TIGHTENER. WILLIAM ZULCH, Cobleskill, N. Y. Filed Dec. 1, 1920. Serial No. 427,551. 5 Claims. (Cl. 217—95.)



3. The combination with an annular body and a flexible device encircling the body, of pairs of channel guide blocks spaced apart and secured to the outer face of the body, plates slidable in the guide blocks and connected to the ends of the flexible device, and means for positively moving the plates toward each other, said means comprising a pair of flanges on the guide blocks having alined openings therein, a threaded rod located through said openings, and adjusting nuts on the ends of the rod confining the flanges between them.

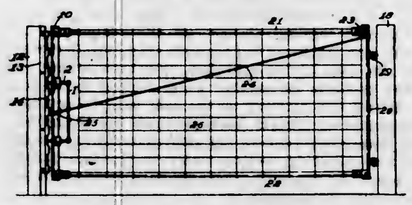
1,388,013. CORNCRIB AND THE LIKE. FOLGER ADAM, Joliet, Ill., assignor to Illinois Wire & Mfg. Co., Joliet, Ill., a Corporation of Illinois. Filed June 30, 1919. Serial No. 307,495. 3 Claims. (Cl. 98—26.)

1. A crib for the purpose specified, comprising in combination a circular inclosure constructed of a plurality of superimposed sections of slat fencing, comprising parallel slats and cross stay wires each of said sections being circular form and having their adjoining slat ends interwoven and having their slots standing in a vertical position, a platform on which said inclosure is mounted, means for supporting said platform above the surface of the ground to provide a ventilation space thereunder, there being a vent opening through said platform and a vent extending upwardly through the central portion of the inclosure, said vent comprising a series of superimposed sections of slat fencing comprising parallel slats and cross stay wires and having their slots extending in a vertical direction, and the lower end of the vent being in communication with the vent opening in the platform, for the purpose specified.

1,388,014. COMBINED KNIFE AND SAW. HAROLD AIGUIER, Kearny, N. J. Filed Mar. 12, 1921. Serial No. 451,919. 1 Claim. (Cl. 7—1.)

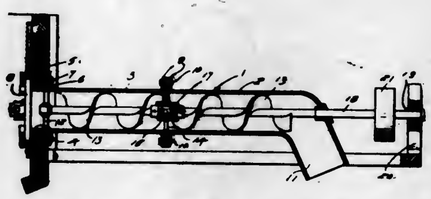
A butchering implement including a blade and a handle, a clamp member secured to the free end of the blade and adapted for engagement with a saw blade, a second clamp member comprising a square socket having spaced depending integral arms secured to said blade adjacent the handle, a square bar slidable in the socket and having a forked portion engageable with an end of the saw blade, a threaded end portion extending from the square bar, said bar being slidable in the socket with the end portion projecting therefrom, and a nut on said end portion engaging the socket portion of the second clamp to draw the bar inward and thereby tension the saw.

1,388,015. MARBLE-GUN. MACK BANKS, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 374,977. 1 Claim. (Cl. 124—12.)



A toy gun comprising a barrel having an opening therein between its ends, a spring pressed plunger in said barrel and including a head, a spring pressed sear pivoted exteriorly to the barrel and having an end projectable through said opening for releaseably engaging said head, a trigger, and a rod connected to said sear and detachably connected to said trigger.

1,388,016. MANUFACTURE OF ALKYLENE CYANHYDRINS. WALTER BAUER, Darmstadt, Hessia, Germany, assignor to the Firm Röhm & Haas, Darmstadt, Hessia, Germany. Filed Nov. 11, 1920. Serial No. 423,465. 2 Claims. (Cl. 23—24.)

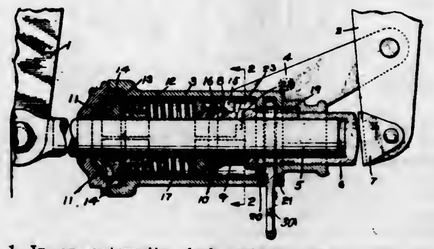


1. The process for the manufacture of alkylcyanhydrins from alkylenehalogenhydrins and a solution of cyanid, characterized thereby that the change takes place in a pure water solution under the influence of cooling.

1,388,017. LATCHING MEANS FOR FLEXIBLE GATES. CHARLES B. BAUMGARTNER, Manchester, Iowa, assignor to National Manufacturing Company, Manchester, Iowa, a Corporation of Iowa. Filed Sept. 29, 1919. Serial No. 327,228. 1 Claim. (Cl. 292—162.)

Latching means for a flexible gate, comprising a fixed standard provided with a plurality of longitudinally-alined spaced elongated sockets, the adjacent gate-stile having spaced longitudinally-alined orifices positioned opposite sockets of said standard, a catch-device consisting of catch-rods passed through the stile orifices, yieldable resilient means connected to said catch-rods to propel them toward said standard, and a connecting-rod pivotally connected to and between said catch-rods.

1,388,018. WATER-MOTOR. ENOCH J. BRADY, Burkburnett, Tex. Filed Nov. 19, 1919. Serial No. 339,072. 1 Claim. (Cl. 253—32.)

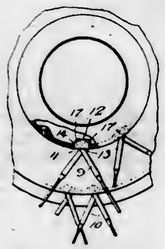


A water motor comprising a tube having an offset discharge portion, a bearing spaced from and opposite to the offset discharge portion, a water driven power element in the tube projecting through and journaled in said offset discharge portion, said element also being journaled in said bearing, and a power take-off means on the element intermediate the offset discharge portion and said bearing, said tube being in sections, a bearing disposed intermediate said sections, securing means common to the second bearing and said sections, a coupling journaled in the second bearing, and said power element being made in sections and coupled by said coupling member.

1,388,019. COMPOSITION OF MATTER. SIGRID BREITHOLTZ, New York, N. Y. Filed June 12, 1920. Serial No. 388,691. 3 Claims. (Cl. 99—10.)

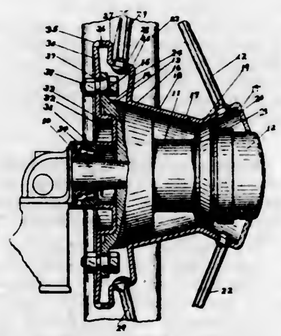
1. As an article of manufacture, a pastry composition consisting of the following ingredients, namely, flour, a shortening material and a weak infusion of tea leaves, said ingredients being mixed in about the proportion of two cups of flour, one cup of shortening material and two tablespoons of infusion of tea leaves.

1,388,020. AUTOMATIC SLACK-ADJUSTER. THOMAS R. BROWN, Pittsburgh, Pa., assignor to American Brake Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 30, 1919. Serial No. 293,878. 8 Claims. (Cl. 188—199.)



1. In an automatic slack adjuster, the combination with brake levers and adjustable members operatively connecting said levers, of friction grippers for engaging one of the adjustable members and a tiltable ring for forcing the grippers into gripping engagement with said member.

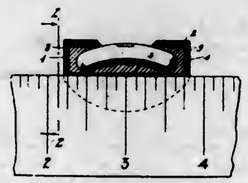
1,388,021. WIRE-SPOKED WHEEL. EDWARD G. BUDD, Philadelphia, Pa., assignor to Budd Wheel Corporation, Philadelphia, Pa., a Corporation of Virginia. Original application filed July 19, 1916, Serial No. 110,112. Divided and this application filed Feb. 13, 1918. Serial No. 217,013. 2 Claims. (Cl. 301—59.)



1. In a structure of the class described, the combination with a hub shell and a rim, said hub shell having a

plurality of spaced openings therein, of a plurality of anchor blocks, each engaging the inner surface of the hub shell and having a central reduced portion disposed in one of said openings and a straight passage way

therethrough with one end thereof opening inside said hub shell, and a plurality of straight spokes each having one end disposed in one of said passageways and the other end connected to said rim.

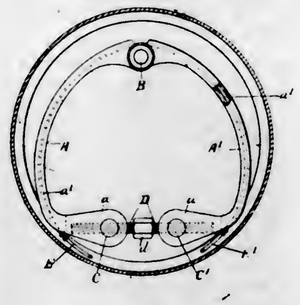


1,388,022. HUB STRUCTURE OF DETACHABLE WIRE-SPOKED WHEELS. EDWARD G. BUDD, Philadelphia, Pa., assignor to Budd Wheel Corporation, Philadelphia, Pa., a Corporation of Virginia. Filed June 7, 1918. Serial No. 238,705. 4 Claims. (Cl. 301—9.)

1. In a hub structure, the combination of an inner hub having an enlarged inner end portion with a seating depression in the end surface of said enlarged end; a flange on the inner end of said enlarged portion of the hub; a coupling plate secured to the inner side of said flange and extending outwardly therefrom; locking projections on said outwardly extending portion; a centrally and outwardly pressed portion on said coupling plate, adapted to be seated in the seating depression in said inner end surface of the hub; a wheel hub, adapted to be seated on the inner hub and having an enlarged flange portion as an inner end; and locking projections on the outer edge of the flange portion adapted to coöperate with the locking projections on the outwardly extending portion of said coupling plate.

1,388,023. LEVEL-HOLDER. FRANK BUTLER, Los Angeles, Calif. Filed Aug. 28, 1920. Serial No. 406,552. 2 Claims. (Cl. 33—207.)

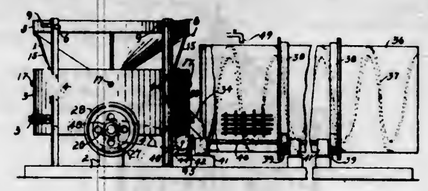
1. A level holder, comprising a cylindrical portion having wings thereon and adapted to clamp a support, and downwardly and inwardly projecting tongues on the ends of the cylindrical portion adapted to engage in



recesses in the ends of a spirit level and hold the latter against turning movement in the cylindrical portion.

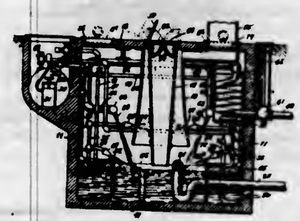
1,388,024. EGG-PRESERVATIVE. VICTOR CLAIREMONT and CHRISTIAN T. LEHMANN, San Francisco, Calif. Filed Oct. 29, 1919. Serial No. 334,255. 1 Claim. (Cl. 99—8.)

A composition for treating eggs which comprises a light mineral oil of the Russian variety, paraffin which has been dissolved in oil and rosin all in the proportions such that the oil acts as a medium for introducing paraffin and rosin into the pores of the shells of eggs, the rosin aids the paraffin in hardening and remaining solid as a thin hard coating without embodying a rosin taste to the eggs, the rosin also acts as a germicide and the paraffin reduces the glaze-like appearance of the rosin.



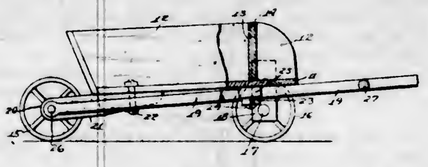
1,388,025. SUPPORT FOR BOILER-FLUES. EDWARD W. CLARKE, Kingston-upon-Hull, England. Filed Nov. 9, 1920. Serial No. 422,972. 1 Claim. (Cl. 122—136.)

The combination, with the horizontal fire flue of a boiler, of a support for the flue comprising two curved bars pivoted together at one end and adapted to fit in the flue with their free end portions extending downwardly below the axis of the said flue, said bars having longitudinal passages for cooling water formed in them and the pivoted end portions of the said bars being adapted to be placed in contact when the bars are expanded, so as to operatively connect the said passages, pipe connections for supplying cooling water to the said passages, and means for expanding the said bars arranged between their lower end portions.



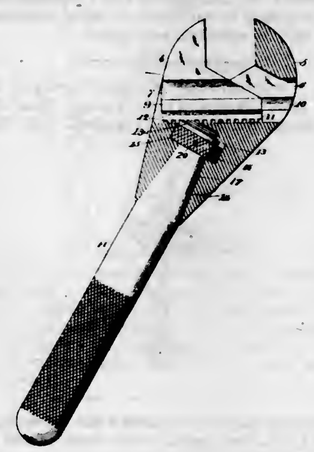
1,388,026. NUT-HULLER. JOSEPH A. CONNER, Santa Clara, Calif. Filed Feb. 1, 1921. Serial No. 441,637. 10 Claims. (Cl. 146—14.)

1. A nut hulling machine including a revoluble huller plate, a brush mounted in spaced and substantially parallel relation thereto, means for feeding nuts to be hulled on to the central portion of said plate, and a buffer



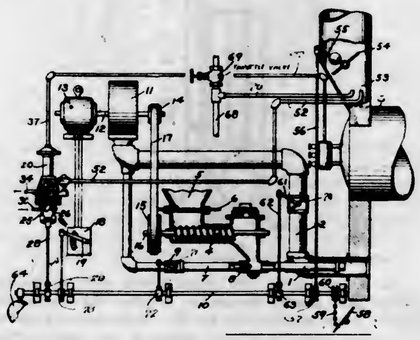
element mounted to receive the impact of the hulled nuts discharged by said plate.

1,388,027. SNOW-MELTING APPARATUS. PATRICK CONNOLLY, New York, N. Y. Filed Aug. 19, 1918. Serial No. 250,432. 14 Claims. (Cl. 126—343.5.)



1. Snow melting apparatus, comprising in combination a melting chamber, a chute extending downward into the chamber for receiving snow to be melted, a heat confining casing located within the melting chamber and extending about the chute and spaced therefrom, a burner nozzle for directing a heating flame against the outside of said chute within the casing, means for supplying air to said chamber, means providing an outlet passage for the products of combustion leading from the upper part of said casing, and a drain outlet leading from the lower part of said chamber.

1,388,028. CONVERTIBLE VEHICLE. SAMUEL E. CREASEY, Sanford, Me. Filed Aug. 16, 1920. Serial No. 403,875. 3 Claims. (Cl. 280—29.)



1. A vehicle as characterized having a single pilot carrying wheel; hand bars pivotally connected therewith in line with the axis thereof, said hand bars being adapted to swing in front of and to the rear of said wheel; means mounted on said vehicle for holding said hand bars rigidly in rearwardly extended disposition; and means for mounting said wheel on said vehicle to permit a lateral swing of said wheel relative to said vehicle, said means embodying a swivel block and king bolts for attaching the same to the body of the vehicle, said swivel block having forwardly extending arms for supporting the axle of said wheel.

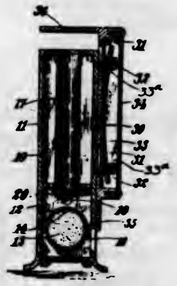
1,388,029. WRENCH. RICHARD H. DIMOCK, JOSEPH SHEAVER, and GEORGE WYSKOCIL, Cedar Rapids, Iowa. Filed Feb. 10, 1921. Serial No. 443,968. 4 Claims. (Cl. 81—164.)

1. In an angle-wrench, a fixed jaw mortised to receive the rack-toothed shank of a movable jaw, a movable jaw having a shank at right angles to its working face, and fitting said mortise, a handle inclined at less than ninety degrees to said shank, and provided with a conical, spiral scroll engaging said shank.

1,388,030. PULVERIZED-FUEL-BURNING APPARATUS. SIDNEY G. DOWN and CARLTON D. STEWART, Berkeley, Calif. Filed Oct. 15, 1918. Serial No. 258,142. 7 Claims. (Cl. 236—14.)

1. The combination with a steam boiler and furnace, of mechanism for conveying pulverized fuel to a distribution point, a conduit for supplying fluid under pressure at the distribution point for conveying the fuel to the furnace, a conduit for supplying air to the furnace for combustion of fuel, means for regulating the speed of said mechanism, and the rate of flow of the distributing medium and air for combustion through said conduits, and a controlling device operated according to variations in pressure in the smoke stack for governing the operation of said regulating means.

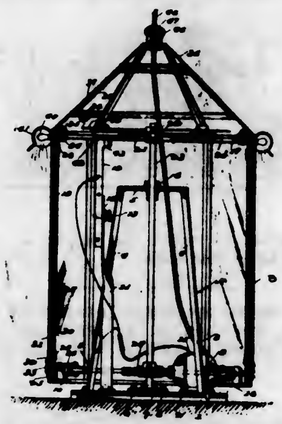
3. The combination with a steam boiler, of an apparatus for controlling the combustion of fuel for heating said boiler, including an operating member and a controller



therefor, said controller comprising pistons operatively connected to said member, each piston being responsive to a differential of pressures on its opposite sides for operating said member, a valve for controlling the differential pressure on each piston, and a movable abutment operated according to variations in steam pressure in the boiler for serially operating said valves.

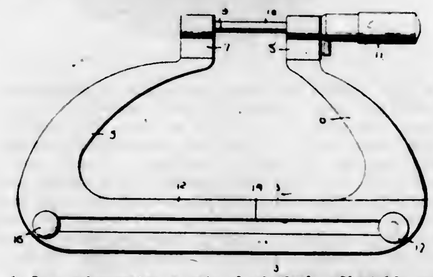
1,388,031. ANCHORING MEANS. HOWARD THOMAS RYTON DRAY, Boulac, Cairo, Egypt. Filed July 29, 1920. Serial No. 399,958. 2 Claims. (Cl. 189—91.)

1. Anchoring means comprising a pile screw adapted to be screwed into the ground, a pile head, means for connecting the pile head to said pile screw, a slab adapted to be arranged about the pile head above the slab, and a cement filler in the cap to bind the pile head and slab together, substantially as described.



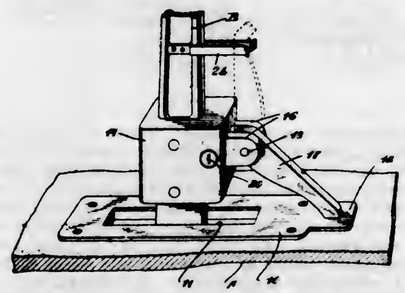
1,388,032. BURNER FOR VULCANIZERS. WILLIAM FROST, London, England, assignor to Harvey Frost & Company, Limited, London, England. Filed Mar. 1, 1920. Serial No. 362,180. 8 Claims. (Cl. 126—351.)

1. In a vulcanizer, the combination with a heating chamber, and heating-means for heating the same, of a slidable controlling member for the heating-means mounted so that it tends to move to diminish the heating effect of same, and retaining-means normally holding said controlling member back against its tendency to move, and arranged to release the same under the automatic control of the heating chamber.



1,388,033. DISPLAY-STAND. NORWOOD GATES, Mineral Wells, Tex. Filed Apr. 29, 1920, Serial No. 377,607. Renewed June 23, 1921. Serial No. 479,923. 3 Claims. (Cl. 40—77.)

1. A display stand comprising a stationary frame, a vertical shaft rotatably mounted in and extending above said frame, an outer frame secured to the upper end of the shaft and inclosing the stationary frame, an annular track secured about the stationary frame near the lower end thereof, horizontally disposed rollers mounted on the interior of the outer frame at the lower end thereof and

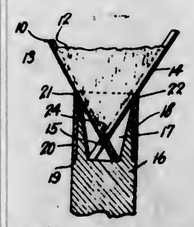


engaging the outer side of said track, means for rotating the shaft, and display panels on the outer frame.

1,388,034. EXTENSION-MICROMETER. GEORGE GILLESPIE, Ann Arbor, Mich. Filed Oct. 7, 1919. Serial No. 328,990. 7 Claims. (Cl. 33—165.)

1. In a micrometer, a pair of relatively adjustable companion jaws, gage pins carried thereby, said jaws being provided with adjustably related shanks, and interlocking means carried by the shanks to lock the latter in adjusted position when assembled.

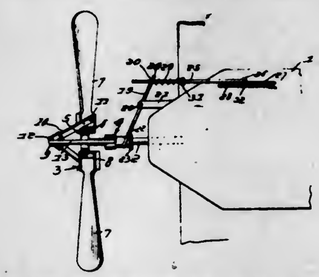
1,388,035. LEVER-LOCK. G MURL GORDEN, Portland, Oreg., assignor to H. Blanche Adams, Portland, Oreg. Filed Mar. 15, 1920. Serial No. 365,986. 2 Claims. (Cl. 70—128.)



1. A locking device comprising a collar adapted to be securely fastened to a shift lever and having spaced parallel ears at one side, a latching member between and pivoted to the ears and having a notch in its pivoted end, a lock tumbler slidable between the ears and engageable in the notch to make fast the latching member when in latching position, and key actuated locking mechanism for controlling the tumbler.

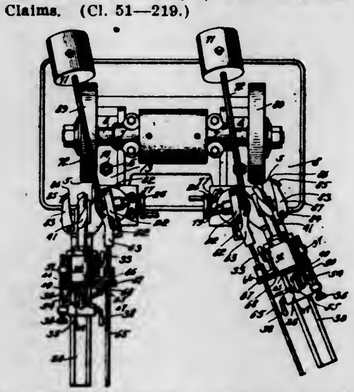
1,388,036. SALT AND PEPPER SHAKER. SMITH HARRIS, South Shaftsbury, Vt. Filed Feb. 26, 1921. Serial No. 447,915. 1 Claim. (Cl. 65—45.)

A salt and pepper shaker comprising a body having a partition whereby it is divided into compartments and also having swells on the sides of the said partition adjacent to the upper end thereof, in combination with a cover adapted to rest on the body and having at its underside a coupler constructed and arranged to straddle the upper end of the body partition and to be sprung into and out of engagement with the swells thereof; the said coupler being of channel form in cross section and provided with resilient clips, and being connected in diametrical position to the underside of the cover by tongues struck from a portion of the cover.



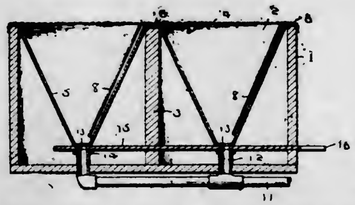
1,388,037. FAN. WILLIAM S. HASSKARL, Philadelphia, Pa. Filed Oct. 16, 1920. Serial No. 417,296. 2 Claims. (Cl. 230—33.)

1. In a device of the class described, a frame having inner end portions projecting in opposite directions, the elements of the frame intersecting, and being interlocked near the aforesaid oppositely projecting portions, a handle provided with a socket into which said projecting portions extend, a ferrule having notches formed in the ends thereof for receiving and retaining the side portions of the frame; and means engaging the frame at the part where the elements thereof intersect, and engaging the aforesaid ferrule, for retaining the frame in position.



1,388,038. AUTOMATIC PITCH-ADJUSTER FOR PROPELLER-BLADES. CLIVE K. HENNINGTON, Davis, Okla. Filed Nov. 13, 1918. Serial No. 262,868. 1 Claim. (Cl. 170—163.)

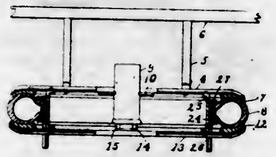
In a device of the character described in combination with a rotatable shaft, a propeller having a rigidly mounted hub on the end of said shaft, oppositely positioned studs formed on said hub, offset U-shaped bearing brackets and propeller blades swivelly mounted on said studs, angularly extending arms connected to the side faces of the said blades, said arms having their outer terminals bifurcated providing spaced ears, links pivotally connected to said ears, a longitudinally adjustable sleeve splined to said rotatable shaft, having opposed ears connected to said links and a sleeve adjusting angularly extending lever pivoted medially to a bracket support, a connecting rod yieldingly secured to the end of said sleeve adjusting lever, an adjustable collar carried by said connecting rod, a rack and lever mechanism offset from the



axis of the hub and rotatable shaft, and a compression spring interposed between the said collar and an attaching eye on the upper end of the sleeve adjusting lever for yieldingly maintaining the blades at a predetermined pitch and also maintaining the connecting rod and sleeve adjusting lever in adjusted position relative to said rack and lever mechanism.

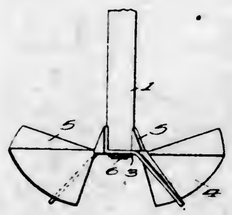
1,388,039. DRILL-GRINDER. JULIUS C. HINZ, Detroit, Mich.; William Hinz administrator of said Julius C. Hinz, deceased. Filed July 4, 1919. Serial No. 308,684. 21 Claims. (Cl. 51—219.)

1. In a twist drill grinder, a pivoted non-rotatable support normally sustained by gravity in a horizontal position, and adapted to be manually oscillated in a vertical plane, means for rotatably mounting a drill upon said support, and holding the same against axial displacement, and means for imparting an oscillatory rotation to the drill during the vertical oscillation of said support.



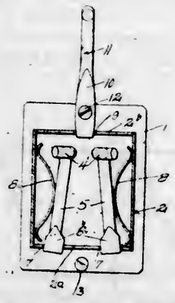
1,388,040. SAND-TRAP. JAMES M. HOOD, Ranger, Tex. Filed Nov. 29, 1919. Serial No. 341,346. 5 Claims. (Cl. 61—2.)

1. A sand trap comprising a casing disposed in the bottom of a ditch, partitions in the casing forming com-



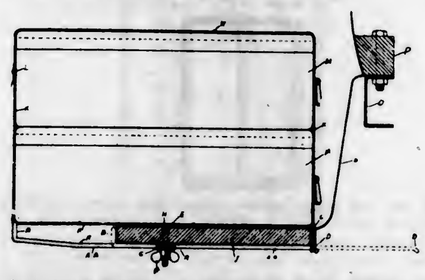
partments, means in the compartments for trapping sand and silt, and means communicating with said first named means for carrying off the sand and silt so trapped.

1,388,041. SPARE-TIRE HOLDER. WILLIAM J. HUNT, St. Joseph, Mo. Filed May 17, 1920. Serial No. 381,909. 6 Claims. (Cl. 224—29.)



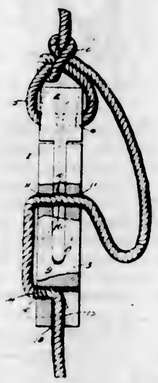
1. A spare tire holder comprising a pair of spaced bars extending diametrically one to either side of a tire, clamp members carried at the opposite ends of the bars and engaging the opposite sides of the tire, a hollow lock casing open at one end carried medially of one of said bars, and a locking mechanism carried medially of the other of said bars and adapted for insertion into said locking casing for locking said bars together.

1,388,042. CHURN-DASHER. JOHN T. HUNTER, Sumrall, Miss. Filed Dec. 18, 1917. Serial No. 207,687. 1 Claim. (Cl. 259—140.)



A dasher formed of a circular blank made from sheet metal clipped or cut radially and bent to form outwardly tapered arms truncated at their free ends, said ends lying in the plane of the blank, and a downwardly inclined extension at one side edge of each arm and disposed at an angle of approximately 45° relative to the plane of the arm, and a vertical fin inclined toward the center on the other side edge of the arm.

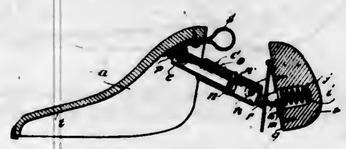
1,388,043. HOLDING DEVICE. AUGUST JOHNSON, Pittsburgh, Pa. Filed Feb. 5, 1921. Serial No. 442,818. 2 Claims. (Cl. 24—249.)



1. In a device of the character described, a casing, rods mounted within the casing and disposed longitudinally of the same, said rods extending from front to back of the casing and being loosely connected at their lower ends to said casing for movement toward and away from each other, gripping members carried by the rods at the upper ends thereof, and leaf springs confined between the rods and the sides of the casing and acting to force said rods toward each other.

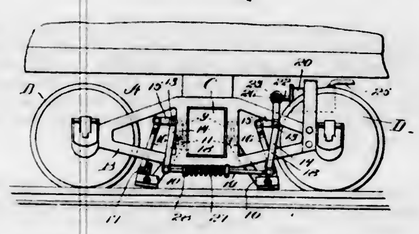
1,388,044. AUTO BAGGAGE-CARRIER. ENOS H. JOHNSON, Los Angeles, Calif., assignor of one-half to C. N. Howard, Los Angeles, Calif. Filed May 26, 1920. Serial No. 384,270. 4 Claims. (Cl. 224—29.)

1. A luggage holder attachment of the character described, comprising a slidable member having spaced arms, and a closed upturned outer end, means adapted to be mounted in the running board of an automobile for slidably and adjustably connecting the arms of said member beneath said running board, a guide bail adapted to be engaged in the running board near its inner edge and slidably receiving the spaced arms and preventing removal of the free ends of said member, and an article holding strap trained through the bail and closed end of the slidable member and adapted to embrace an article for the holding of the same upon the running board.



1,388,045. CLAMP. JOSEPH W. JOHNSON, Newburgh, N. Y. Filed Oct. 20, 1920. Serial No. 418,168. 1 Claim. (Cl. 24—136.)

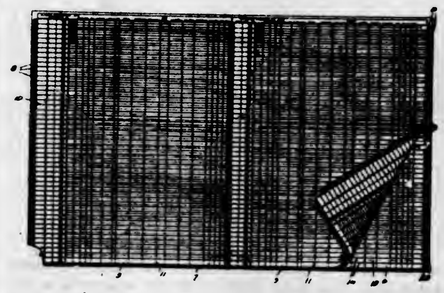
In a clamp of the class described comprising a rectangular, sectional block substantially square in cross section, one of said sections having a transverse aperture formed therein for receiving a flexible supporting element and provided with a central, elongated, flat tongue portion formed integral with the head or body portion of the said section, said tongue being also provided with a transverse aperture at its center, the other of said sections being substantially of the same length as the first named section and provided with a longitudinally extending U-shaped groove of the same length as the flat tongue to receive the same in interlocking relation, and having



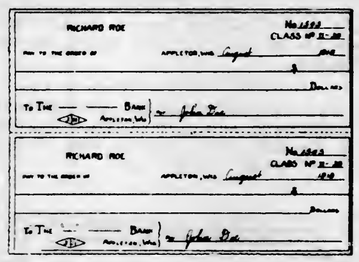
alined apertures centrally of the sides for registration with the aperture in said flat tongue and a right angular groove in the lower body of said second section for receiving the flexible element after it is passed through the alined apertures in the sides and tongue portion of the first named section.

1,388,046. TREEING DEVICE FOR BOOTS AND SHOES. HUGH SNOWIE JONES, Hampstead, London, England. Filed Sept. 8, 1919. Serial No. 322,501. 2 Claims. (Cl. 12—128.1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In combination with the front and heel members of a boot tree, a link pivotally connected to the front member, a plate hingedly connected at its upper end to the rear member and also pivotally connected to said link, and a spring arranged in a recess in said heel member and exerting tension against said plate to normally hold said plate at an angle with respect to said heel member.



1,388,047. RAIL-ENGAGING BRAKE. RUSSEL JONES, Pontiac, Mich. Filed Feb. 8, 1919. Serial No. 275,774. Renewed May 31, 1921. Serial No. 473,780. 2 Claims. (Cl. 188—41.)

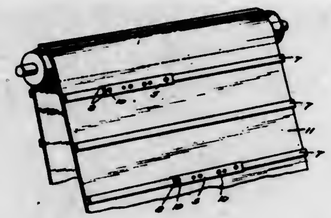


1. A brake mechanism for railway trucks comprising a pair of divergently arranged downwardly extending brake members pivoted upon each side of the truck, rail engaging shoes on the lower ends of said brake members, a pair of angle levers pivoted upon each side of the truck, links pivotally connected with the lower ends of said brake members and with the corresponding arms of said angle levers, a connecting rod connecting the other arms of said angle levers whereby said angle levers will have simultaneous movement, an auxiliary arm formed on one angle lever at each side of the truck, a rod connecting the free ends of said auxiliary arms, means for holding said brake members normally elevated and means for exerting a pull upon said rod.

1,388,048. CAR-RECORD BOOK. FORREST C. KING, Columbia, S. C. Filed June 8, 1920. Serial No. 387,471. 3 Claims. (Cl. 283—36.)

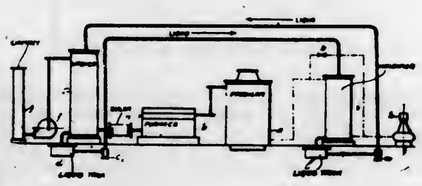
1. A record book comprising main and supplemental entry pages marked to provide divided rows of horizontal spaces, designating characters marked upon the pages of the main entry part of the book, designating characters for the supplemental entry pages having distinguishing characteristics differentiating from the designating characters of the main entry part, and means at the top of each main entry page for designating a page in the supplemental entry part to permit entries to be made in the latter when the pages of the main entry pages are filled.

1,388,049. SAFETY-CHECK. JOSEPH KOFFEND, Sr., Appleton, Wis. Filed Jan. 28, 1919. Serial No. 273,511. 1 Claim. (Cl. 283—11.)



A negotiable paper bearing a number indicative of the class of the maker and having a guard number, part of which is associated with the class number and part of which is differently located on the face of the paper, and a time character in conjunctive relation with the part of the guard number remotely situated from the class number.

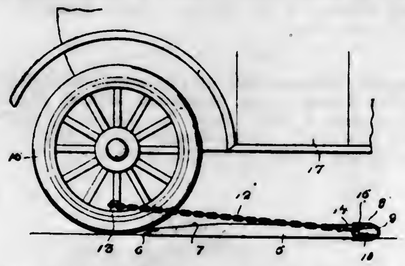
1,388,050. WINDOW-VENTILATOR. MICHAEL J. LEAHY, Philadelphia, Pa. Filed Apr. 10, 1920. Serial No. 372,865. 2 Claims. (Cl. 98—31.)



2. A window ventilator comprising two sections, one section terminating to provide channels to slidably receive the other section, an end wall on each section and arranged inwardly of the outer end thereof, each end wall having an elongated slot, the portion of the section projecting beyond the end wall being formed to provide tongue and grooves for interfitting engagement with the tongue and grooves of the window casing, and means for holding the ventilator in position upon the window.

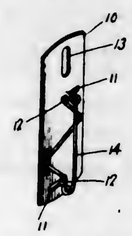
1,388,051. SLAT-REPAIRING DEVICE. JOHN B. LEGGE, Morris, Minn. Filed June 4, 1920. Serial No. 386,495. 1 Claim. (Cl. 287—65.)

As an article of manufacture, a repair device for broken wooden slats of endless conveyer aprons comprising a substantially elongated body of sheet metal formed to provide oppositely depending side flanges adapted to embrace the opposite sides of the broken pieces of the slat, the flanges being of less width than the thickness of the slats, whereby to provide a space between the edges of the flanges and the apron of the conveyer and thereby prevent contact of the edges of the flanges with the apron during the travel of the latter, the connected portion of the body being provided with sets of spaced apertures disposed on the longitudinal center thereof, one set to each side of the transverse center of the same, whereby the fastening devices used may be properly inserted through the body with respect to the line of the break between the parts of the broken slat.



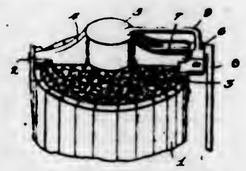
1,388,052. GENERATION AND UTILIZATION OF PRODUCER-GAS. ARTHUR HENRY LYMN, Westminster, London, England. Filed Aug. 18, 1920. Serial No. 404,417. 9 Claims. (Cl. 48—76.)

1. The method of generating and utilizing producer gas which consists in passing the hot products of combustion obtained from furnace plants fired with producer gas into direct intimate contact with a liquid so as to heat said liquid at substantially atmospheric pressure, circulating said heated liquid in contact with a quantity of air so as to heat said air and saturate it with vapor, passing said heated and saturated air into the producer, utilizing the gases generated in said producer for heating said furnace plant, and again passing the liquid used for preheating and saturating the air into contact with the said hot products of combustion of said furnace fired with producer gas in a continuous cycle.



1,388,053. AUTOMOBILE-SKID. ONON G. MOORE, Nashville, Tenn. Filed Aug. 9, 1918. Serial No. 249,204. 1 Claim. (Cl. 180—7.)

An automobile skid for assisting in extracting the traction wheel of the automobile from a hole or rut, comprising a substantially rectangular body which is beveled from the outer face thereof toward its inner end, an angle reinforcing plate on said inner end, a transversely arranged shaft journaled in bearings on the outer end of the skid and said shaft having its ends cranked in the same direction, rings carried by the cranked ends of the shaft, a chain secured to one of said ends, a slidable saddle on the chain to engage with the spoke of the automobile

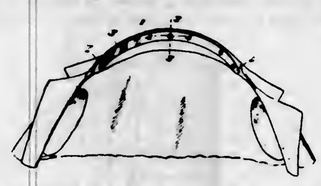


wheel to be extracted, and a hook on the free end of the chain for engaging with the ring on the second crank of the shaft.

1,388,054. DRAPERY-HANGER. ROBERT P. MORTON, Jr., Fairview, N. J. Filed Oct. 23, 1920. Serial No. 418,992. 1 Claim. (Cl. 24—1.)

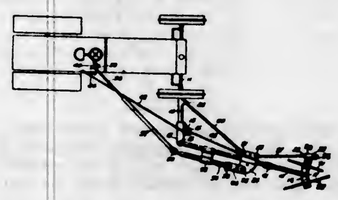
A crape hanger comprising an elongated member having a longitudinally disposed slot arranged adjacent one end of the member, bendable tongues provided on said member and formed to provide loops arranged in aline with said slot, and safety pin having a body portion thereof embraced by said loops for holding the pin mounted on one side of said member.

1,388,055. ICE-CREAM FREEZER. WILLIAM M. NEYLAND, Goliad, Tex. Filed Mar. 2, 1920. Serial No. 362,885. 3 Claims. (Cl. 217—126.)



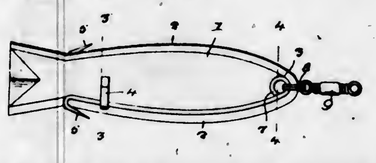
1. A device of the class described including a body member, a cross bar carried thereby, means for fastening the cross bar to the body member, a crank handle arranged adjacent the cross bar, and an auxiliary handle carried by the cross bar in close proximity to the crank handle.

1,388,056. COLLAR-PROTECTOR. WILLIAM HAMILTON NORTH, Cambridge, Md. Filed July 12, 1918. Serial No. 244,595. 1 Claim. (Cl. 2—62.)



In combination with the collar of a coat, of a combined stiffening member for said coat collar and a protector member for a linen collar that is normally contacted by the coat collar, said protector comprising a strip of celluloid having both its upper and lower edges from its center

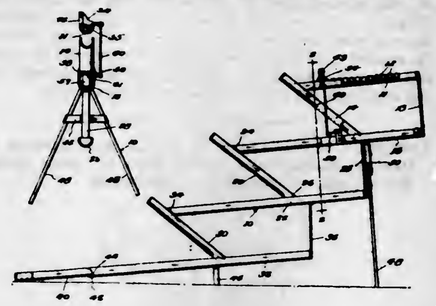
parallel for a determined distance and having its said edges from thence gradually rounded downwardly to the ends of the strip and the said ends being of a less width



than the remainder of the said strip, and bendable prongs carried by the strip for removably securing the strip to a coat collar.

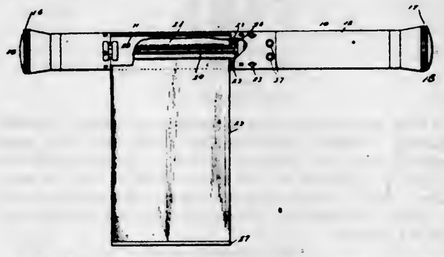
1,388,057. TRACTOR-GUIDE. WILLIAM OLDENDORF, Rushford, Minn. Filed Mar. 17, 1921. Serial No. 453,027. 2 Claims. (Cl. 97—81.)

1. A device of the class described, comprising a support adapted to be coupled to a vehicle, a beam member swinging at one end upon said support, an axle device swinging upon the free end of the beam and having reversely arranged angular journals, furrow wheels of different sizes mounted on said journals, a threaded bracket projecting from said beam, a screw engaging said bracket, a sleeve slidable on said beam, and coupled to said screw, a pull rod pivoted respectively to said sleeve and to one of said axles, a pull rod pivoted respectively to said sleeve and to said support, and means operative from the vehicle for rotating said screw to adjust the beam to cause the furrow wheels to operate nearer to or farther from the line of travel of the vehicle.



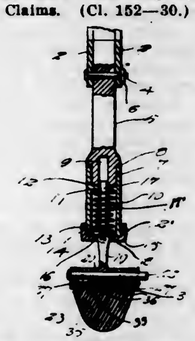
1,388,058. AUTOMATIC FISHHOOK. PAUL PETERSON, JUNEAU, Alaska. Filed Nov. 20, 1920. Serial No. 425,425. 2 Claims. (Cl. 43—35.)

1. An automatic fish hook comprising a body having an aperture adjacent to its forward end and also having an aperture adjacent to its rear portion, a retainer extending through the latter aperture of the body and having reversely arranged hooks at its ends, and resilient hook members adapted for removable arrangement in the hooks of the retainer and connected together and with the body by means adapted to rest in the forward aperture of the body.



1,388,059. TOY. WALTER A. RICHMAN, Egg Harbor, N. J. Filed June 1, 1920. Serial No. 385,691. 8 Claims. (Cl. 46—37.)

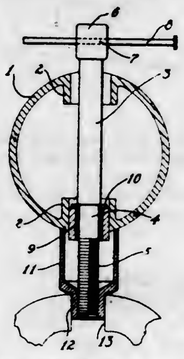
1. A device of the class described comprising a plurality of inclined runways having their upper ends closed and their lower ends open, the lower portions of certain of said runways being bifurcated and secured to opposite sides of certain of the other runways at points spaced



from the upper ends of the same, and means for controlling the passage of spherical objects through said runways.

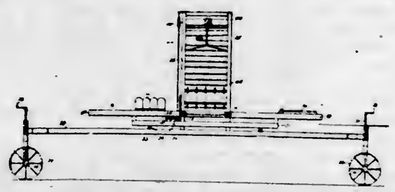
1,388,060. SIGNALING DEVICE. ANTHONY RICIGLIANO, Buffalo, N. Y. Filed May 4, 1920. Serial No. 378,903. 1 Claim. (Cl. 116—132.)

A signaling device having a tubular casing provided with a grip portion and a flag housing portion fitted with longitudinal exit slots, spring actuated spindles mounted in said housing portion and having reeled thereon flags of different signaling significance for extension through the said slots in the casing, the housing portion of the casing being provided with a movable closure for giving access to the interior thereof, and locking means consisting of sliding blocks provided with sockets for the reception of cross sectionally irregular terminals of the spindles for securing the latter when the flags are in their extended position, said blocks being provided exteriorly of the casing with operating buttons.



1,388,061. AUTOMOBILE-WHEEL. CONRAD RITZEL, Dayton, Ohio, assignor of one-half to Julian J. Tangeman, Dayton, Ohio. Filed Aug. 4, 1917. Serial No. 184,499. 2 Claims. (Cl. 152—30.)

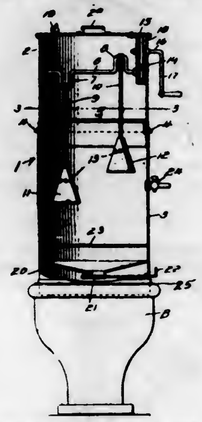
2. In a wheel, a spoke, a cylinder having a partition therein intermediate its ends, said spoke extending into



one end of the cylinder abutting said partition, said partition and spoke having alining openings, a rod disposed on the opposite side of the partition to the spoke and slidable in said openings, a head on the rod, a cap supporting said head mounted on the adjacent end of the cylinder, an expansive spring in the cylinder abutting the partition and the cap, and means extending movably through the cap and from the head adapted to support a tire.

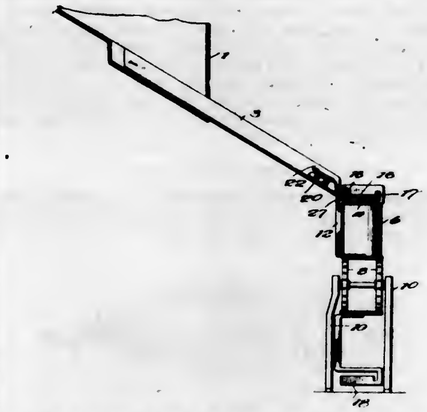
1,388,062. TOOL. LOYD A. RULEY and ORVILLE F. OSBURN, Helena, Okla. Filed June 26, 1920. Serial No. 391,961. 2 Claims. (Cl. 29—88.2.)

1. A tool of the class described comprising a spindle having a reduced part forming a shoulder with screw threads upon the reduced portion, a flanged ferrule removably arranged on the spindle and having its upper end engaging the shoulder and a supporting member having a screw threaded bore for receiving the screw threaded end of the spindle.



1,388,063. UNLOADING AND ELEVATING APPARATUS. JOHN J. RUNCK, Republican City, Nebr. Filed Dec. 6, 1918. Serial No. 265,550. 9 Claims. (Cl. 193—14.)

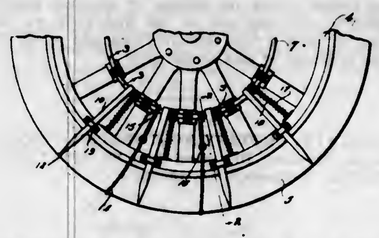
1. An apparatus of the class described comprising a truck provided with longitudinal side bars having tracks arranged thereon, a carrier mounted upon said tracks and movable back and forth relative thereto, an elevator supported by the carrier and provided with endless conveyers, feed mechanism on the carrier leading to the foot of the elevator, delivery mechanism for discharging material upon said feed mechanism, a motor supported by the carrier, and operating connections between said motor, and the elevator conveyer, the carrier feed mechanism and the delivery mechanism.



1,388,064. WASHING-MACHINE. CARL SCHIRMER, Hibbing, Minn. Filed Nov. 23, 1920. Serial No. 425,989. 1 Claim. (Cl. 68—19.)

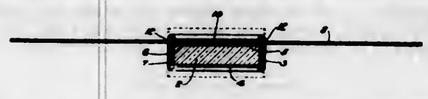
A washing machine composed of two telescoping cylindrical sections one of which is open at both ends and the other open at one end and closed at the other, means for limiting the telescopic engagement of said sections, washing elements mounted to reciprocate in one of said sections, an annular flange on the outer face of the lower end of the open ended section spaced from the end of said section and adapted to rest on the closet seat to form a support for the machine, a bottom in said section spaced inwardly from its lower end and having a central opening,

said bottom inclining downwardly toward said opening, a slide valve for closing the opening and having a handle extending through one side wall of the cylinder, and a perforated false bottom mounted above the first named bottom.



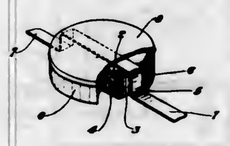
1,388,065. FRUIT-CANNER. HENRY J. SCHMITZ, Berkeley, Calif. Filed May 25, 1920. Serial No. 384,196. 6 Claims. (Cl. 226—2.)

1. In a fruit canner, a holder for the fruit, chutes leading from the holder and inclining downwardly, platforms disposed to receive the fruit from the lower ends of said chutes, flanges on the platforms opposite the chutes, a conveyer passing beneath the platforms and adapted to carry containers therebeneath, and sweeps carried by said conveyer and being slotted to fit about the platforms and said flanges, substantially as described.



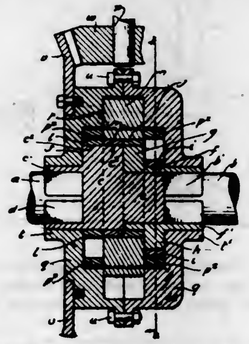
1,388,066. ANTISKID ATTACHMENT FOR VEHICLES. OTTO J. SCHOENBOAN, St. Joseph, Mo. Filed Oct. 22, 1920. Serial No. 418,662. 1 Claim. (Cl. 301—51.)

An anti-skid device for vehicle wheel tires including rings consisting of jointed rotative segments carried by the wheel, and teeth carried by said segments and adapted to engage the road of travel, when said wheels move laterally, thereby rotating said segments, and means operable by movement of said segments to return the teeth to



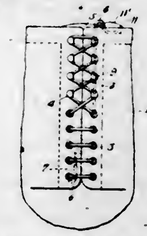
their normal positions when lateral thrust on the tires is discontinued.

1,388,067. METHOD OF MAKING RAILWAY SIGNAL-TORPEDOES. EDWARD A. SCHOOLEY, Pittsburgh, Pa. Original application filed Aug. 31, 1916, Serial No. 117,819. Patent No. 1,359,924, dated Nov. 23, 1920. Divided and this application filed Oct. 25, 1920. Serial No. 419,503. 3 Claims. (Cl. 246—487.)



1. The method of making non-flying railway torpedoes which consists in assembling the parts of the torpedoes, enveloping the explosive charge of the torpedo within casing members and then bending the outer edge of the outer one of said members inwardly and downwardly into tight holding engagement with another part of said torpedo to thereby fasten the parts in assembled relation.

1,388,068. RAILWAY SIGNAL-TORPEDO. EDWARD A. SCHOOLEY, Pittsburgh, and WILLIAM C. WILSON, Jr., Callery, Pa., assignors to Columbia Railway Signal Company, Pittsburgh, Pa., a Corporation of West Virginia. Filed May 24, 1921. Serial No. 472,249. 4 Claims. (Cl. 246—487.)

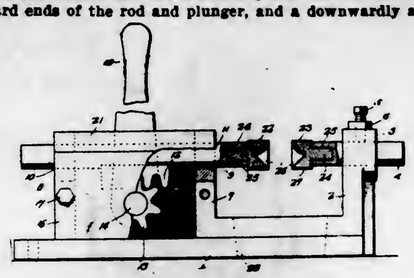


1. A railway signal torpedo comprising a disk-shaped explosive containing casing, an outer cup-shaped shell telescoped over said explosive containing casing, said cup-shaped shell being of greater depth than said casing, and the side wall thereof forming a projecting rim above the flat end face of said explosive containing casing, a rail engaging member laid along the exposed flat end face of said explosive containing casing and passed between the side walls of said explosive containing casing and said outer shell, and having its free ends extending through apertures in the edge of said shell formed at the juncture of the closed end face and side wall thereof, and a binding closure of plastic material filling the space between the exposed face of said explosive containing casing and the projecting rim formed by the side walls of said shell, said plastic material covering said rail engaging member and securing the several parts of said torpedo together.

1,388,069. GEARLESS DIFFERENTIAL POWER-TRANSMISSION. FERDINAND W. SEECK, Lebanon, Oreg. Filed Aug. 11, 1919. Serial No. 316,893. 7 Claims. (Cl. 74—7.)

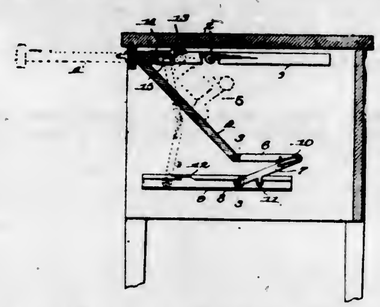
1. A differential transmission mechanism comprising a driven case, a divided axle, whose sections are journaled in the case, a crank-element on each axle-section, transmission members reciprocable in the case on lines radial to the axis of rotation of the case and perpendicular to each other, and devices mounted on the eccentric portions of said crank-elements and reciprocating in said transmission-members.

1,388,070. SHOE. MIKE SEIWALD, Eudora, Kans. Filed Aug. 2, 1919. Serial No. 314,886. 1 Claim. (Cl. 24—117.)



A shoe having eyelets and hooks arranged adjacent the edges of the slit in the vamp and a row of holes located on the inner face of the upper under one row of hooks, an upper pocket formed between the lining and the upper edge of the vamp adjacent the edge which contains the row of holes, a lower pocket formed adjacent the other edge at the lower part of the vamp near the bottom eyelet, said pocket being formed between the lining and vamp, the lining having a hole therein communicating with said lower pocket and a single lace passing through said hole and having its end located in the lower pocket, said lace being passed through the eyelets and the row of holes with its other end located in the upper pocket, the lace having sufficient slack for engaging the hooks.

1,388,071. NUTCRACKER. SIDNEY G. SIMONS, Columbus, Ga. Filed Sept. 20, 1920. Serial No. 411,365. 1 Claim. (Cl. 146—3.)



In a nut cracker of the class described, a base, an integral end support, an adjustable fixed rod carried thereby, spaced vertical supports and side plates also carried by said base, a longitudinally movable plunger carried by said spaced supports in direct alinement with said rod, teeth formed integral with said plunger and intermediate thereof, a transverse shaft supported by the side plates, a toothed gear rotatable with said shaft meshing with the teeth of said plunger, a manually operable lever extending

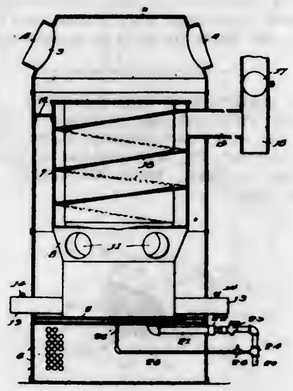
above and medially of the spaced vertical supports for actuating said shaft and plunger, a curved plate inclosing said gearing, removable, interchangeable dies on the forward ends of the rod and plunger, and a downwardly and

outwardly extending, flared chute formed in the base between the end support and the plunger support for directing the kernel and shells to one side when the nut is opened.

1,388,072. TYPEWRITER CABINET-DESK. METHOLD F. SITTA, Chicago, Ill. Filed Apr. 6, 1920. Serial No. 371,607. 5 Claims. Cl. 45—52.)

1. In a device of the class described, the combination of a typewriter supporting tablet, an upper track pivotally connected to said tablet for supporting said tablet, a lower track, and supporting means for said tablet which supporting means is supported by said lower track.

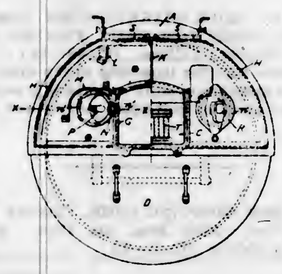
1,388,073. CIGARETTE-CASE. NORMAN G. STEWART, Flint, Mich. Filed Aug. 17, 1920. Serial No. 404,080. 1 Claim. (Cl. 224—5.)



A case of the class described formed of two strips of material, one strip having its ends secured together to form a pocket open at both ends and the other strip having its side edges secured to the front of the first strip to form a second pocket and said second strip being looped across the bottom of the first pocket and secured to the rear side of the first strip at the top thereof to form a belt receiving loop and a flap formed by the extension of said second strip.

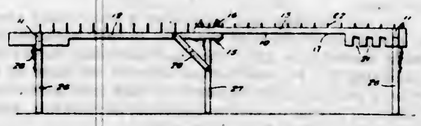
1,388,074. ROTARY TOOTHBRUSH. CHARLES H. STONE, Freeport, Ill. Filed June 29, 1920. Serial No. 392,703. 2 Claims. (Cl. 15—37.)

1. A tooth brush comprising a handle, a shank rotatably mounted longitudinally in said handle, a brush head carried by the shank at one end of the handle, a resilient cup on the shank between the handle and brush head, and a turning grip carried at the other end of the shank to be disposed at the opposite end of the handle.



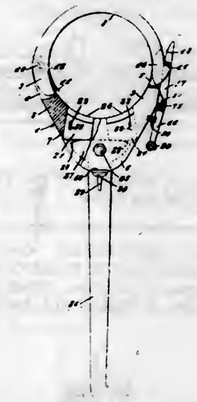
1,388,075. FURNACE. ARTHUR D. SUTTON, Pittsburgh, Pa. Filed July 20, 1917. Serial No. 181,759. 3 Claims. (Cl. 126—116.)

1. In a furnace of the class described, an outer casing having cold air inlet openings at their lower part and hot air flues leading from the upper part, a heating drum within the outer casing and spaced from the sides and bottom thereof and open at the top and bottom and formed with outer and inner walls in spaced relation and with air passages providing communication between the casing and the interior of the drum, the outer wall of the drum being directed inwardly at its lower end to form an annular flange, a tubular member extending from the bottom flange of the drum, a burner supported on the tubular member and comprising an outer perforated wall and an inner imperforate wall, air inlet elements communicating with the drum at its lower part, and an outlet element leading from the upper part of the drum.



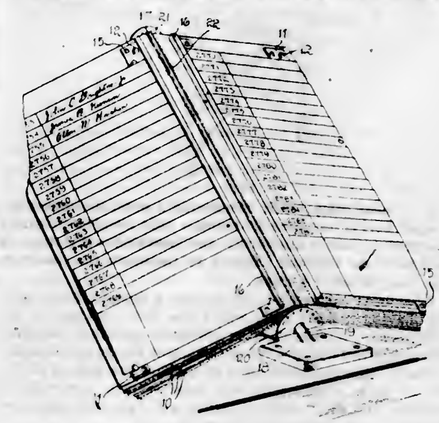
1,388,076. [WITHDRAWN.]

1,388,077. FURNACE-FRONT. HERBERT ALEXANDER THOMPSON, North Shields, England, assignor of two-thirds to Cornelis Zulver, London, England, and Launcelot Eustace Smith, South Shields, England. Filed Aug. 11, 1919. Serial No. 316,623. 1 Claim. (Cl. 110—22.)



In combination with a furnace having a front plate, a baffle extending inwardly of the front plate, an extension outwardly of the front plate, a coal door casing secured to said extension, a substantially semi-circular casing above and extending partially about said extension, guide and radiating vanes in the semi-circular casing extending from the extension in opposite directions and having their outer ends turned downwardly, air tubes projecting through the semi-circular casing and baffle being closed at their outer ends and open at their inner ends and provided with openings in their sides communicating with the interior of the semi-circular casing, the tubes being located within the space partially circumscribed by the vanes and extension, oil burners passing through the tubes and damper controlled air inlets in the upper portion of the casing.

1,388,078. CURTAIN-STRETCHER. CAROLINE E. TRACY, Detroit, Mich. Filed Nov. 5, 1920. Serial No. 422,032. 1 Claim. (Cl. 45—24.)

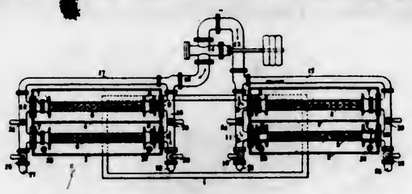


A curtain stretcher comprising a rectangular frame including end bars, each formed in its upper edge at one end with a notch and at its other end with a plurality of notches, said frame including pairs of slidably connected side bars having their inner portions relatively thin and having their outer portions downwardly thickened, the thickened portion at one end of the slidably connected side bars being formed with an upwardly extending notch engageable within a selected one of said second named notches, the thickened portion at the other end of the slidably connected pair of bars being formed with a series of upwardly extending notches, a selected one of which may be engaged within said first named notch, legs hingedly connected with the end of the frame and legs pivotally connected with the intermediate portions of the side bars and a series of upwardly extending pins on the side bars and end bars.

1,388,079. PIPE-WRENCH. GEORGE BARNETTE TREW, Shreveport, La., assignor of one-half to S. A. Guilberson, Jr., Los Angeles, Calif. Filed Aug. 28, 1920. Serial No. 406,546. 4 Claims. (Cl. 81—66.)

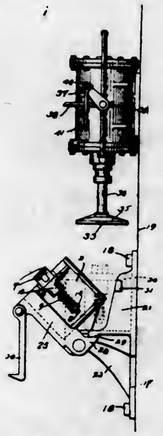
1. A wrench comprising a head having arms; a grip extended between the arms; jaws slidable in the head; and a handle fulcrumed on the head and having cams engaging the jaws.

1,388,080. CARD-INDEX. JOHN WELBON, Utica, N. Y. Filed July 10, 1918, Serial No. 244,291. Renewed May 16, 1921. Serial No. 470,203. 6 Claims. (Cl. 40—124.)



1. A card index unit comprising a strip of material having a plurality of tongues stamped to project upon one side of the strip and penetrating means stamped and projecting from the opposite side of said strip.

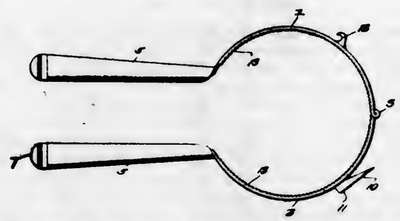
1,388,081. DYEING AND BLEACHING APPARATUS. ALOYSE WIOLAND, Hericourt, France. Filed June 21, 1920. Serial No. 390,616. 2 Claims. (Cl. 8—18.)



1. An apparatus for dyeing and bleaching vegetable and animal fibers on bobbins or beam rollers, comprising: a reservoir for the dyeing or bleaching bath,—two vats arranged above the said reservoir,—perforated tubes mounted in the said vats and receiving the materials to be dyed or bleached,—a system of piping connecting the vats together and with the said reservoir,—a rotary pump with a reversing gear interposed in the system of piping, between the two vats containing the products and permitting to obtain the circulation of the dyeing or bleaching

ith from the reservoir to either of the said vats, or from one vat to the other, means for washing of the textile

materials, means for oxidation of the fixed colors and means for drawing off the baths.

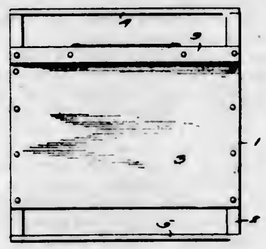


1,388,082. MEAT-COMPRESSER. OSCAR M. WOLFF, Chicago, Ill., assignor to B. B. Hanak Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1919. Serial No. 345,108. 5 Claims. (Cl. 100—57.)

1. A meat compresser, comprising a bracket support for a mold box or receptacle having a side member pivotally mounted to swing outwardly and provided with stops to hold it in an inclined position to facilitate the insertion and removal of the mold.

3. A meat compresser, comprising a support for a mold box, having a shelf upon which the box rests during the compression, a side member pivotally mounted to swing outwardly to facilitate the insertion of the box, said member being provided with lugs to support the bottom of the box as it is swung with the side member into vertical position, the shelf being provided with slots or apertures to receive said lugs.

1,388,083. CULINARY IMPLEMENT. AUTHOR DOUGLAS WORKMAN, Knoxville, Tenn. Filed Feb. 1, 1921. Serial No. 441,611. 1 Claim. (Cl. 81—3.1.)

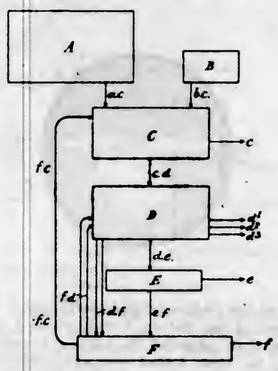


A device of the class described comprising segmental bandlike gripping jaws pivotally connected at one end and merging at their other ends into integral rod-like arms extending at an obtuse angle therefrom, the free ends of said arms being threaded and provided with nuts, wooden handles through which said arms extend and which are secured between said nuts and the free ends of said jaws, the inner faces of said jaws being provided with biting elements.

1,388,084. MILK-SHAKE-POWDER COMPOUND. ALVERDO S. ALBERT, Ione, Wash. Filed Oct. 14, 1919. Serial No. 330,682. 1 Claim. (Cl. 99—11.)

A milk shake filler for imparting to the drink a thick, rich, appetite satisfying quality comprising a powder composed of two parts of pulverized gelatin and one part gum acacia.

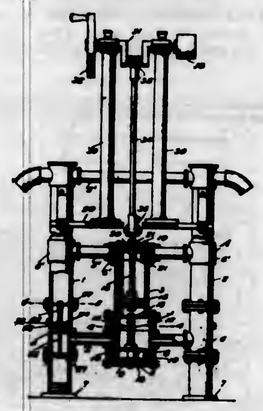
1,388,085. BEE-SHIPPING CAGE. EUGENE B. AULT, Calallen, Tex. Filed Sept. 30, 1920. Serial No. 413,706. 3 Claims. (Cl. 6—9.)



1. A bee shipping cage comprising a crate closed except at the top and bottom of the sides thereof, a screen wire bee retaining cage mounted in said crate, and a feeder in said cage.

2. A bee shipping cage comprising a crate closed except at the top and bottom of the sides thereof, a foraminous lining mounted in said crate and extending across and connecting the top and bottom edges of the sides of the crate, a feed container supported in said crate within said lining and having its mouth depending downwardly, and a foraminous closure for said mouth.

3. A bee shipping cage comprising a crate closed except at the top and bottom of the sides thereof, a foraminous lining mounted in said crate and extending across and connecting the top and bottom edges of the sides of the crate, a feed container supported in said crate within said lining and having its mouth depending downwardly, and a foraminous closure for said mouth, and a screw cap for holding said closure in operative position.



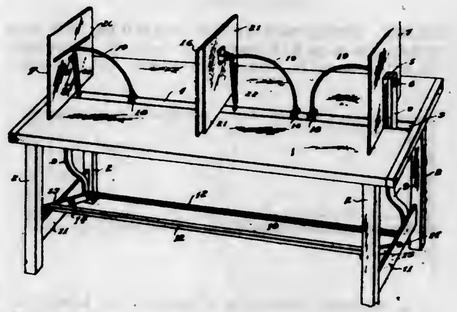
1,388,086. PROCESS FOR RECOVERING VALUES FROM ORES. EDGAR ARTHUR ASHCROFT, London, England. Filed Sept. 15, 1920. Serial No. 410,537. 10 Claims. (Cl. 204—19.)

1. The process of treating metal bearing materials, which comprises the steps of converting a metal constituent of the material into a chlorid, and combining the latter with an alloy of heavy and light metals to effect

the precipitation of the metal from the chlorid, substantially as described.

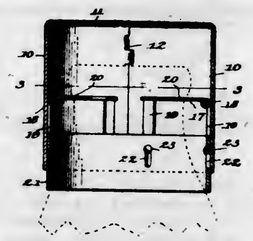
1,388,087. PUMP. CHARLES H. BACH, Laconia, N. H. Filed Jan. 9, 1920. Serial No. 350,256. 2 Claims. (Cl. 103—75.)

1. An apparatus of the class described comprising a frame formed of tubing and including a suction chamber having an inlet opening in its bottom, a spring pressed valve controlling said opening, a cylinder having its lower end in communication with the suction chamber, a piston in said cylinder, a piston rod connected with the piston and passing through the upper end of the cylinder, vertically arranged discharge pipes arranged parallel with the cylinder and suction chamber, transverse tubing connecting the discharge pipes with the cylinder and chamber and the tubing connected with the chamber being in communication with said chamber and said discharge pipes, spring controlled valves in said discharge pipes, a platform supported on the frame, uprights supported on the platform, a crank shaft carried by said uprights and a pitman connecting the crank shaft with the piston rod.



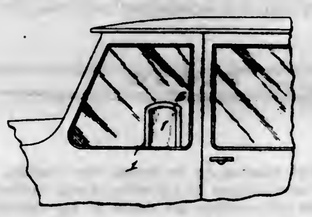
1,388,088. ELECTRIC THIRD RAIL. ARNE KRISTIAN HILBERG BJORGE, St. Paul, Minn. Filed Dec. 17, 1919. Serial No. 345,668. 3 Claims. (Cl. 191—20.)

2. A device of the character described, comprising a guard housing formed of an insulated material, a conductor strip within said guard housing and co-extensive therewith, and having portions of the same exposed in recesses spaced along one face of said guard housing, flexible rail sections disposed in end to end relation one insulated from the other and extending along the recessed face of said guard housing, and contact strips carried by said rail sections and projecting into said re-



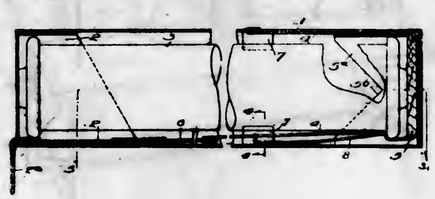
cesses, and adapted to be forced into contact with the complemental exposed face portion of said conductor strip, when said rail sections are flexed by the contact shoe of a passing car, whereby one rail section is energized at a time.

1,388,089. BOX-HOLDER. RUBEN H. BOYCE, Glasco, Kans. Filed Sept. 9, 1920. Serial No. 409,203. 3 Claims. (Cl. 144—295.)



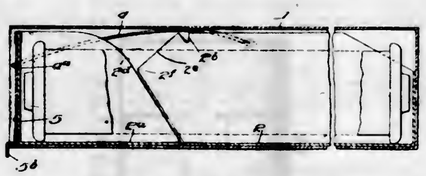
1. The combination of a carrier bar, means for supporting the same for pivotal and vertical reciprocatory movement, fixed clamping members on said bar and extending laterally from the opposite sides of the same, clamping arms pivotally mounted upon the bar and extending longitudinally thereof with their free ends spaced from the bar to coact with said fixed clamping members, and yieldable means carried by the bar for drawing said movable clamping members to the fixed clamping members.

1,388,090. MILK-BOTTLE LOCK AND RETAINER. GEORGE F. BRASSLER, Whitestone, N. Y. Filed Nov. 14, 1919. Serial No. 337,935. 2 Claims. (Cl. 232—41.)



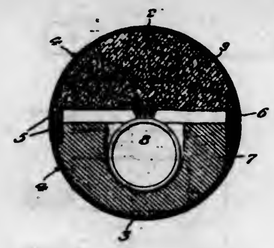
1. A bottle holder of the class described comprising a casing, pivoted devices arranged therein and adapted to co-act with each other to receive the neck of a bottle and support the same, and vertically movable means adapted to co-act respectively with the body of a bottle and the supporting devices to close the space between the bottom of the casing and body of the bottle.

1,388,091. AUTOMOBILE-WINDOW ATTACHMENT. THOMAS M. BRENAHAN, Washington, D. C. Filed Feb. 27, 1920. Serial No. 361,850. 1 Claim. (Cl. 189—76.)



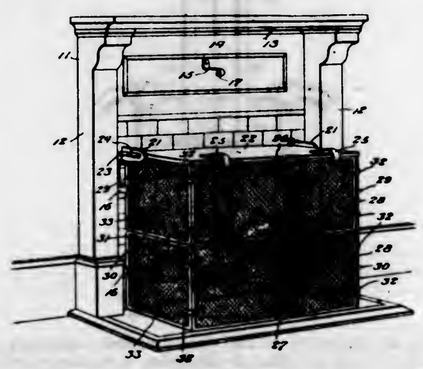
In combination with a transparent panel having an opening therein, a frame clamped to the edges of the panel around said opening, said frame consisting of two parts, each engaging a face of the panel and one part having a portion interlocking with the other part and a door associated with the frame for closing said opening.

1,388,092. CONTAINER FOR MUSIC-ROLLS AND THE LIKE. CHARLES S. BURTON, Oak Park, Ill. Filed Sept. 15, 1919. Serial No. 323,827. 9 Claims. (Cl. 206—59.)



1. A container comprising a tubular box having one open end, and a strap having one end secured to the body of the box at a distance forward from the opposite end, and adapted to extend thence within the box back toward said opposite end for encompassing the dischargeable contents of the box, and thence forward to the open end; and a catch for engaging the box contents, the strap being engaged with the catch for disengaging it by the initial withdrawing and content-expelling movement.

1,388,093. CONTAINER FOR MUSIC-ROLLS AND THE LIKE. CHARLES S. BURTON, Oak Park, Ill. Filed Sept. 15, 1919. Serial No. 323,828. 9 Claims. (Cl. 206—52.)

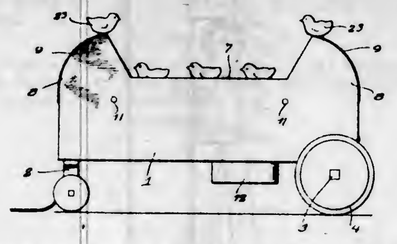


1. A container consisting of an outer tubular box member having an open end; an interior open-top box member adapted to telescope longitudinally in the tubular box member, said open-top member having an outer end portion severed from the remainder and hinged thereto at one side for folding away from the remainder to leave said remainder open ended; a latch pivoted to the tubular box member for swinging to engage the severed and hinged end portion in the same planes in which said severed end portion swings for opening; and means on the severed and hinged portion for partly withdrawing the interior box member from the exterior member.

1,388,094. JEWELRY-CASE. JOHN BUTTIGIEG, Rockford, Ill. Filed Nov. 29, 1919. Serial No. 341,361. 1 Claim. (Cl. 211—28.)

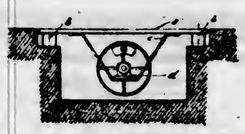
A device of the class described comprising a case of egg-shape formed of two halves, a strip secured to the inner wall of each half adjacent its edge, a covering for each half having its edges folded over said strip and secured to the inner wall, a strip connected with one half and having a part projecting therefrom for engaging the other half, said strip engaging the folded over portion of the covering of each half and a pad in each half, one pad having a recess therein.

1,388,095. FIRE-SCREEN. CHARLES A. CANNON and HARVEY E. SCOTT, McNab, Ark. Filed Aug. 23, 1918. Serial No. 251,170. 1 Claim. (Cl. 126—202.)



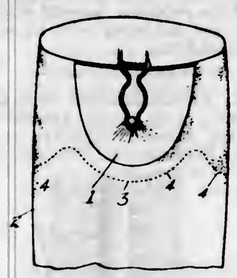
In combination with a fireplace and a mantel, a bracket located on each side of the fireplace, a sectional folding screen including a swinging top having slidable hinge connections with said brackets, spring clips on the sides of the fireplace engaging adjacent portions of said screen, and a hook above the fireplace adapted to engage and hold the folded screen in elevated position.

1,388,096. FIGURE WHEELED TOY. ARTHUR C. CAPONIC, Havre de Grace, Md. Filed Aug. 17, 1920. Serial No. 404,089. 1 Claim. (Cl. 46—45.)



A toy comprising a body having an opening in its upper part, spaced rollers journaled in the body, an endless belt passing over said rollers, figures carried by the belt and arranged to appear through said opening when the belt is being moved by the rotation of the rollers, hangers at the rear or the body having oblong openings therein, a roller axle engaging said openings and adapted to move to the rear ends of said openings when the toy is moved forwardly, a belt connecting said roller axle with one of the before mentioned rollers and adapted to be tensioned by

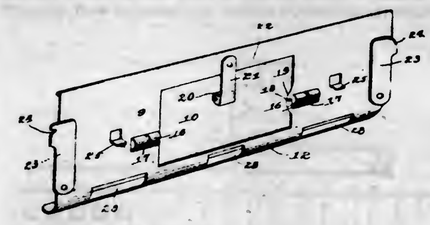
the rearward movement of the roller axle so that it will transmit the movement of said axle to the roller, wheels



connected with the ends of said roller axle and front wheels for the body.

1,388,097. APPARATUS FOR PRODUCING OSCILLATORY MOVEMENTS. CARLO CAPSONI, Alessandria, Italy. Filed June 19, 1920. Serial No. 390,235. 2 Claims. (Cl. 259—75.)

1. In an apparatus for shaking material, the combination of a platform, rigid throughout, adapted to carry the material; resilient members on which said platform immediately rests and solely by which it is supported, said resilient members adapted to yield in every direction; and platform-vibrating means rigidly secured to said platform.



1,388,098. STOCKING. GEORGE JOSEPH CONNOR, Toronto, Ontario, Canada. Filed Aug. 23, 1919. Serial No. 319,508. 1 Claim. (Cl. 2—23.)

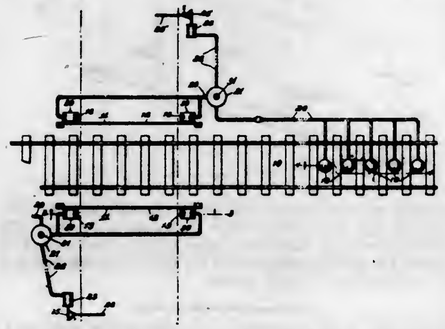
In a stocking, a continuous scalloped line of stitching extending entirely around the stocking leg a general direction transverse to the length of the stocking at a point a small distance from the upper edge of the stocking and adapted to prevent runs, tears and ladders from passing downwardly into the body of the stocking and to permit of the free lateral expansion of the stocking fabric to prevent rigid binding of said fabric at said line of stitching without distorting the original contour of the said stocking.

1,388,099. ADDRESSING ATTACHMENT FOR TYPEWRITERS. WILLIAM G. CROCKER, Lisbon, N. D. Filed Jan. 25, 1921. Serial No. 439,808. 4 Claims. (Cl. 197—135.)

1. A card-holding attachment adapted to be applied to a front-strike typewriting machine in front of the platen thereof, comprising a plate having an opening exposing the card to be written upon, through which the type may operate, the lower end of the plate being curved to conform to the curvature of the platen and lie close to the face

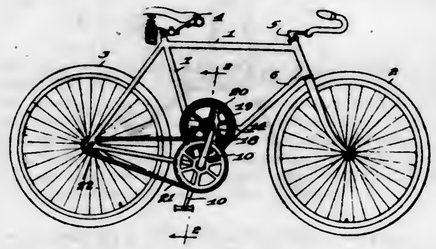
thereof when the attachment is in use, and the upper portion of the plate being fitted with rollers to direct the card toward the said lower edge and carrying means by which the plate is united with the paper carriage and held in place relative to the platen.

1,388,100. KEY-RING. VIRGINIA DAVIS, New York, N. Y. Filed May 8, 1919. Serial No. 295,582. 2 Claims. (Cl. 59—96.)



1. As a new article of manufacture, a key ring formed from a continuous piece of wire and embodying a main elongated loop having certain portions of its opposite sides substantially parallel and other portions concave and being provided with ends or leads extending therefrom and returned upon themselves to form a supplemental loop positioned in a plane perpendicular to the plane of the main loop, said supplemental loop being provided with a slit or opening whereby a key may be inserted through the slit and secured to the key ring.

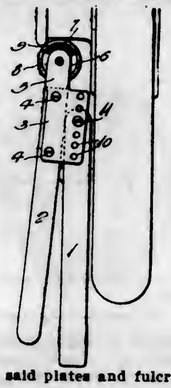
1,388,101. PNEUMATIC RAILWAY-GATE. ROSS DE SIMONE, Hilton, N. Y. Filed Sept. 27, 1919. Serial No. 326,967. 1 Claim. (Cl. 246—272.)



In combination with the rails of a track, a crossing, pivotally supported weight influenced gates at the crossing and a signal carrying shaft to one side of the gates, of pneumatic means for operating the gates to an obstructing position and for revolving the shaft to bring the signal thereon to signaling position, including air compressing pumps disposed one forward of the other between the rails of the track, to the sides of the crossing, each of said pumps including a cylinder having an air bleed port, a plunger in the cylinder spring influenced toward the top of the cylinder, a stem for the plunger passing through the cylinder and a rounded head for the stem, and the said rounded heads being in the path of engagement with a

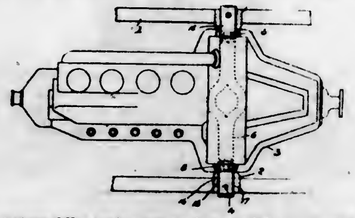
contact element on a train approaching the crossing, a reservoir having a safety valve and having a pipe connection with the respective cylinders, pipes leading from the reservoir, a cylinder with which one of said pipes communicates, a piston therein, a stem for the piston passing through the cylinder, a slotted rod connected with the shaft

of the signal arm freely receiving the end of the stem in the slot thereof, cylinders having bleed ports with which the second pipe communicates, pistons therein, rods therefor projecting through the cylinders, links pivotally connected to the rods, and a crank on the pivot of the respective gates to which said links are pivoted.



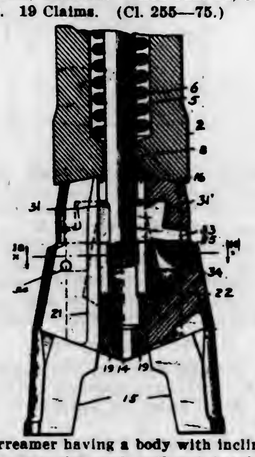
1,388,102. BICYCLE PROPULSION-GEARING. GABRIEL H. W. DOOSE, New Orleans, La. Filed July 2, 1920. Serial No. 393,651. 2 Claims. (Cl. 204—17.)

1. The combination with a bicycle frame comprising the usual forward frame tube and seat standard, of a transverse hanger sleeve arranged at the juncture of said forward frame tube and seat standard, a crank-shaft rotatably mounted within the transverse hanger sleeve, a horizontal supporting bridge joining the forward frame tube and seat standard, a transverse tubular supporting sleeve intermediate the ends of said horizontal supporting bridge, a countershaft rototably mounted within the transverse tubular supporting sleeve, a double sprocket loosely mounted on the crank-shaft, means to transmit the rotation of the crank-shaft to the counter-shaft, means to transmit the rotation of the counter-shaft to one member of the double sprocket, and connecting means between the other member of the double sprocket and the rear drive sprocket of the bicycle.



1,388,103. JACK. JOHN P. DORAU, North Fond du Lac, Wis. Filed Dec. 20, 1920. Serial No. 431,990. 3 Claims. (Cl. 254—120.)

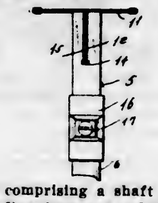
1. A jack of the class described comprising a lever, plates connected to the upper end of the latter and extending beyond said upper end and inner face, said extended portions being formed with bearing openings, a supporting standard arranged between the plates, a fulcrum pin passing through the standard and rotatable in the adjacent bearing openings, and a movable hub engaging member also



arranged between said plates and fulcrumed in the adjacent bearings.

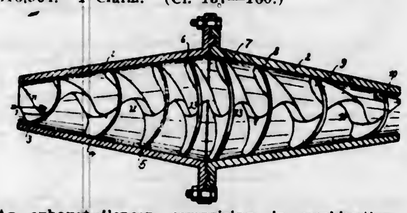
1,388,104. AUTOMOBILE-ENGINE SUPPORT. GEORGE DOTTERWEICH, Richmond Hill, N. Y. Filed June 13, 1919. Serial No. 303,915. 1 Claim. (Cl. 180—64.)

An automobile engine support comprising a cradle formed of a central support 6, side arms 7, inwardly extending lugs 15, hold-down blocks 8 introduced between the upper surface of the outer rim of the engine casing and the nether side of the projecting inwardly extending lugs 15 of the cradle, and tightening bolts 13, as and for the purpose herein set forth.



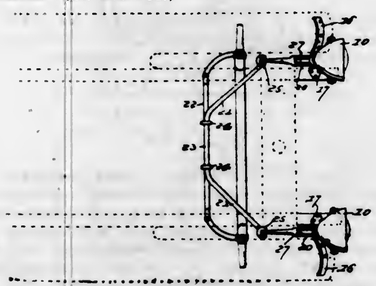
1,388,105. UNDERREAMER. EDWARD DOUBLE, Los Angeles, Calif.; Alice Double administratrix of said Edward Double, deceased. Filed Jan. 24, 1919. Serial No. 272,810. 19 Claims. (Cl. 255—75.)

1. An underreamer having a body with inclined end surfaces forming expansion and upthrust bearings and in-



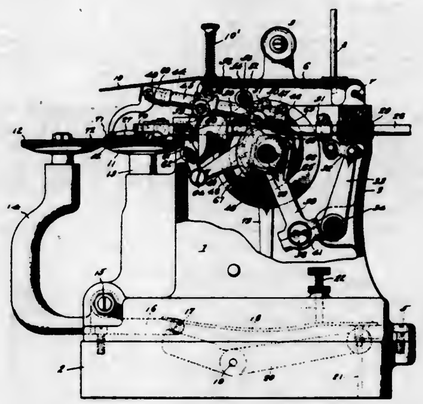
thrust bearings at the central portion of the body above such expansion bearings and with grooves at each side of such bearings, and pocket cutters having strengthening ribs fitting into said grooves when the cutters are collapsed.

1,388,106. FRUIT-PICKER. JOHN HENRY EMERSON, Syracuse, N. Y. Filed Oct. 2, 1918. Serial No. 256,568. 1 Claim. (Cl. 56—339.)



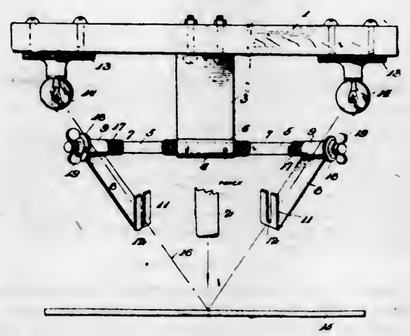
A fruit picker comprising a shaft provided at its side with a groove leading from one end thereof, and provided at its inner end with an enlargement, a loop member having an angularly disposed tang which is received in the groove and in the enlargement thereof, a sleeve member adapted to fit over the end portion of the shaft and inclose the groove and the tang and a set screw carried by the sleeve member and adapted to engage the tang.

1,388,107. EXHAUST-SILENCER. JOHANN ERNST, Paderborn, Germany. Filed Aug. 11, 1919. Serial No. 316,904. 1 Claim. (Cl. 137—160.)



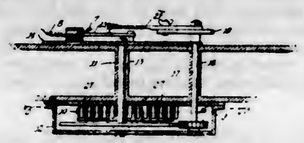
An exhaust-silencer, comprising, in combination, an open-ended casing of double-cone shape and a correspondingly shaped helix therein of a bulb formation on the side facing its outlet-end and of a pitch increasing from its middle toward both ends, said helix having a central bore therein which is cylindrical in its middle and conically increased toward both ends, substantially as and for the purpose set forth.

1,388,108. DIRIGIBLE HEADLIGHT. HERBERT R. FREITAG, CHRISTIAN HINTZ, Jr., and ANDREW HINTZ, Max, N. D. Filed July 14, 1920. Serial No. 396,312. 1 Claim. (Cl. 240—62.)



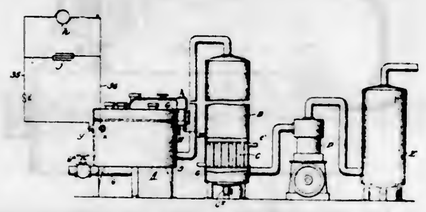
The combination with an autovehicle having a spindle connnecting rod, of a headlight provided with a stem and a bearing in which the stem is angularly movable, the stem being projected below the bearing and made cross-sectionally angular on said lower projecting end, a lever longitudinally slotted adjacent one extremity, the angular portion of the stem projecting through said slot, the remaining extremity of the lever being formed with a ball, a bar having its intermediate portion disposed in substantial parallelism with the spindle connecting rod, and clamps securing said bar to the spindle connecting rod at spaced points, the bar being deflected to provide an upward forwardly extending arm provided at its extremity with a socket in which the ball of said lever engages to provide a universal connection between the two.

1,388,109. GLOVE-SEWING MACHINE. ALFRED GRIEB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 23, 1920. Serial No. 391,083. 9 Claims. (Cl. 112—16.)



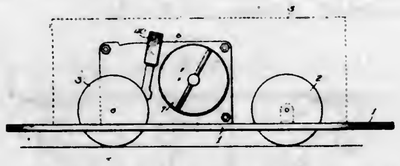
1. In a sewing machine, a frame, stitch-forming mechanism comprising a needle and looper, a looper-support, a shaft having driving means thereon, a lever fulcrumed in the frame and having operative connection with the looper-support, a crank fulcrumed in the frame and having operative connection with said support, and a floating member having operative connection with said lever, crank and driving means.

1,388,110. PUNCH-CENTERING DEVICE. RAYMOND G. HALLOCK, Seattle, Wash. Filed Nov. 25, 1919. Serial No. 340,671. 7 Claims. (Cl. 33—46.)



1. A punch-center locating means, including independent light supports, lights therein and means for directing a narrow beam from each of said lights onto the work-piece, to intersect on the punch center.

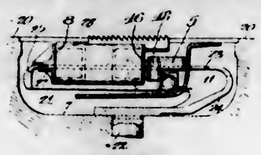
1,388,111. ELECTRIC STOVE. ALLAN C. HARRINGTON, Chicago, Ill. Filed May 28, 1920. Serial No. 384,834. 8 Claims. (Cl. 219—35.)



1. An electric stove comprising a receptacle, a heater element within said receptacle, a thermostatic device within said receptacle, a circuit closing arm, an element coöperating with said thermostatic device and movable in response to the movement thereof, said element cooperating with said circuit closing arm, connections between said element and said circuit closing arm, and means for adjusting the relation of said connnection with respect to the circuit closing arm and said element.

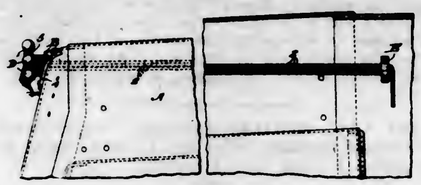
1,388,112. METHOD OF AND APPARATUS FOR TREATING AIR AND GASES ELECTRICALLY. WILLIAM T. HOOFNAGLE, Bloomfield, N. J., assignor to Electro Chemical Products Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 6, 1920. Serial No. 363,807. 11 Claims. (Cl. 204—29.)

1. The method of treating air and gases which comprises passing the air or gas through an electric field and causing the products to flow, while in a nascent state, in contact with a catalyzer.



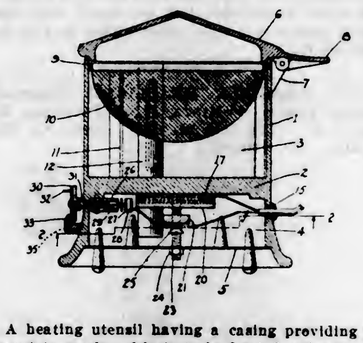
1,388,113. AUTOMATICALLY REVERSIBLE MECHANICAL TOY. WALTER H. HUTH, Chicago, Ill. Filed June 21, 1920. Serial No. 390,355. Renewed July 15, 1921. Serial No. 485,022. 12 Claims. (Cl. 46—48.)

1. In a reversible mechanical toy, the combination of a motor, propelling means, transmission gearing between the motor and said propelling means, a weight mounted on the toy to move forward and backward by momentum, when the toy is stopped, and devices operated by said weight to control said gearing and thereby reverse the direction of travel.



1,388,114. POSITION-BRACKET FOR SEWING-MACHINES. GEORGE JACKSON, Chicago, Ill., assignor, by direct and mesne assignments, to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 7, 1917. Serial No. 190,155. 6 Claims. (Cl. 112—231.)

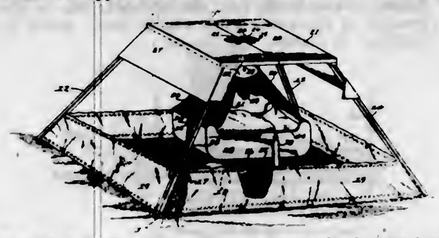
1. In a sewing machine, in combination, a circularly movable loop-taker, a thread-case having at one side a bearing in and supported by said loop-taker, and a holder having a portion adapted for engagement with the other side of said thread-case to confine it to said bearing and



to retain it from movement with the loop-taker, said portion of the holder being retractable from normal effective relation with the thread-case to permit removal of the latter from the loop-taker.

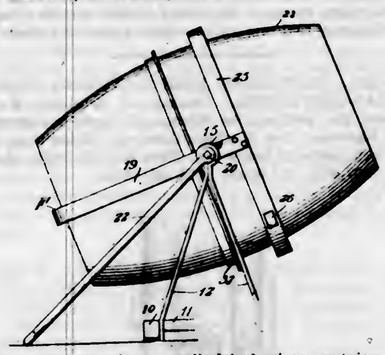
1,388,115. ARRANGEMENT OF WATER-GAGE COCKS. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Oct. 29, 1918. Serial No. 260,160. 6 Claims. (Cl. 122—4.)

1. The combination with a series of pipes extending from the end of a boiler toward the center thereof and terminating at different levels within the boiler, of a single casing having independent chambers with sockets for the rear ends of said pipes, and gage cocks connected with the casing and communicating independently with the different chambers, substantially as described.



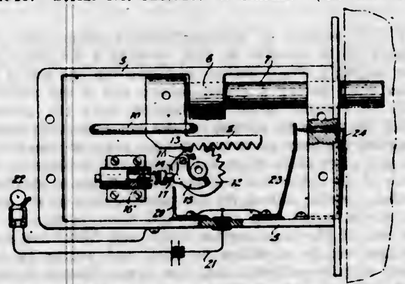
1,388,116. HEATING UTENSIL. GEORGE S. MONSON, St. Paul, Minn., assignor to M. F. Patterson Dental Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1920. Serial No. 400,326. 9 Claims. (Cl. 219—44.)

1. A heating utensil having a casing providing a compartment to receive objects to be heated, a heating chamber below said compartment, an electric heating unit in said chamber, the casing adjacent said chamber being apertured, and electric signal means projecting through said aperture whereby the heat-producing condition of the heating unit may be exteriorly signaled.



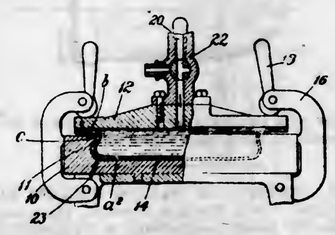
1,388,117. SWINGING CRADLE. JOSEPHINE S. NIMICKS, Freehold, N. J. Filed July 20, 1920. Serial No. 397,729. 1 Claim. (Cl. 5—66.)

In a foldable structure of the character described particularly for the suspension of a child's cradle and comprising a plurality of inclined standards, connections for the lower ends of said standards, a bipartite top to which the upper ends of said standards are removably



secured, a latch and keeper arrangement for locking both parts of the top together, and canvas strips carried around the standards at their foot and at their top parts.

1,388,118. CONCRETE-MIXER. WILLIAM E. PALMETER, Elmwood, Nebr. Filed Jan. 2, 1920. Serial No. 348,755. 1 Claim. (Cl. 83—73.)



In a concrete mixer, a cylindrical mixer container normally disposed in upwardly inclined position and having its upper end open, a support for said container, means for rotating said container, and a lever connected to said container and extending outwardly and downwardly at one side of the same beyond the closed end thereof and at an angle to the axis of the container, the free end of said lever normally acting to sustain said container in position for the mixing operation and also acting to brace the same and said support during such operation, said lever being operable for tilting said container to and from dumping position.

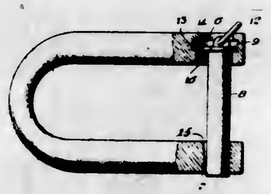
1,388,119. LOCK-OPERATED CIRCUIT-CLOSER. ZYGMUNT H. PEHEL, New York, N. Y. Filed Sept. 10, 1919. Serial No. 324,115. 2 Claims. (Cl. 200—55.)

1. In a lock operated circuit closer of the character described, including a lock bolt, a pinion operating the lock bolt, a pawl pivoted on said pinion, and an electric contact member near said pawl adapted to be engaged by the same upon the operation of said pinion by a key.

1,388,120. METHOD OF MAKING SHOES. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 8, 1919. Serial No. 322,525. 19 Claims. (Cl. 12—142.)

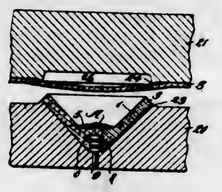
3. That improvement in the method of making shoes which comprises preparing a flat blank, molding the central portion of the blank into the shape of a vessel or pouch without disturbing the disposition of the marginal portions, placing the pouched portion within an external mold, confining the marginal portion, and subjecting the interior of the blank to uniform pressure to cause it to assume the shape of the external mold.

1,388,121. WINDOW-SASH. HERMAN P. PORTER, Jacksonville, Fla. Filed Dec. 1, 1919. Serial No. 341,658. 13 Claims. (Cl. 20—56.1.)



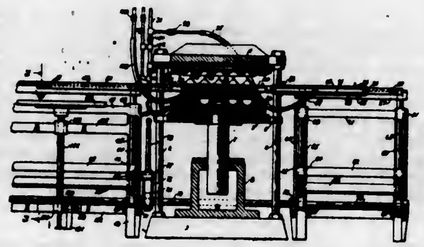
1. An outer sash frame, in combination with an inner sash frame removably and adjustably secured to the outer frame, said inner frame having a longitudinal groove formed within the outer face of its top rail terminating within said rail, and a longitudinal groove formed in the outer face of each side rail communicating with the first named longitudinal groove, and a longitudinal groove formed in the inner face of the bottom rail of the outer sash frame communicating with said longitudinal grooves formed in the side rails, whereby a drainage chamber is formed between the inner and outer sash frames.

1,388,122. CLEVIS. WILLIAM PORTER, Aurora, Oreg. Filed Mar. 16, 1920. Serial No. 366,259. 4 Claims. (Cl. 97—4.)



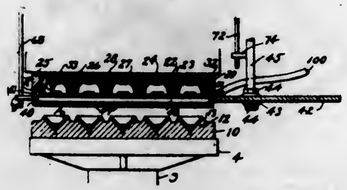
1. In a pin and clevis device, a clevis having a pair of eyes, one of which is provided on its inner surface with a recess elongated in the direction of the length of the clevis, a lug projecting into said eye at the rear thereof and overlying the elongated recess, the other eye being

flared inwardly, and a pin having a head adapted to seat in the recess and provided with a cutaway portion adapted



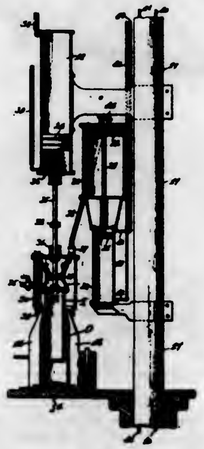
to register with the inwardly projecting lug of the clevis, and a handle mounted upon said head.

1,388,123. METHOD OF MAKING HOLLOW RUBBER ARTICLES. FRED THOMAS ROBERTS, Cleveland, Ohio, assignor, by mesne assignments, to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 26, 1917. Serial No. 198,620. 12 Claims. (Cl. 18—56.)



1. The process of making hollow rubber articles consisting of forming between male and female dies a part adapted to become comparatively stiff when vulcanized, causing another part to abut and adhere to the end of the part first formed the abutting portions being coplanar, thereafter causing said other part to expand to its proper shape, and vulcanizing it in the expanded position.

1,388,124. PROCESS OF AND APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES. FRED THOMAS ROBERTS, Cleveland Heights, Ohio, assignor, by mesne assignments, to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 25, 1918. Serial No. 230,625. 68 Claims. (Cl. 18—19.)



1. In an apparatus for making rubber articles, the combination of a press, coacting mold members carried thereby, a carrier for bringing rubber to be acted upon into the space between the mold members, a slide on which the carrier is mounted, and guides on the opposite sides of the press for slidably supporting the slide.

1,388,125. APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES. FRED THOMAS ROBERTS, Cleveland, Ohio, assignor, by mesne assignments, to Paramount Rubber Consolidated, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 5, 1918. Serial No. 248,280. 18 Claims. (Cl. 18—19.)

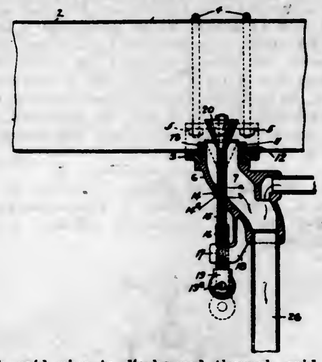
18. In an apparatus of the character described, the combination of a mold member having a cavity, a groove in the member extending entirely about the cavity, means for exhausting the air from the cavity and groove, a carrier plate adapted to present a rubber sheet to the mold, said carrier plate having a projecting border portion adapted to effectively seat the rubber sheet across the groove.

1,388,126. PROCESS OF MANUFACTURING VACUUM WALL-CONTAINERS. CHARLES A. ROHLAND, Uniontown, Pa., assignor, by direct and mesne assignments, to Vacuum Glass Machine Company, Uniontown, Pa., a Corporation of Delaware. Filed Mar. 20, 1920. Serial No. 367,472. 4 Claims. (Cl. 49—82.)

1. The process of manufacturing vacuum wall containers which consists in, first, forming a hot inner section having a closed bottom and open top end and a hot outer shell having a closed bottom and a top provided with an opening larger in diameter than the greatest width of the body portion of the inner section, second, inserting the body portion of the hot inner section within the hot outer shell, third, exhausting the air between the walls of the outer shell and the body portion of the inner section, fourth, uniting the hot inner portion of the opening of the outer shell and the hot outer portion of the top end of the inner section while said inner and outer portions are in condition to stick and adhere to each other and hermetically seal the space formed between said outer shell and inner section, whereby a vacuum wall container is produced without reheating any portion of the sections forming the container.

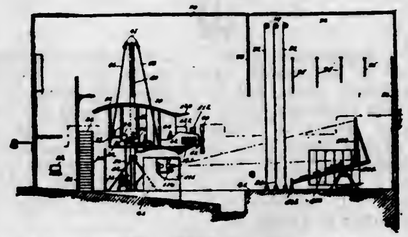
1,388,127. BRUSH. CHARLES SCHATTE, New York, N. Y., assignor to Schatte Manufacturing Co. Inc., Lansdale, Pa., a Corporation of Delaware. Filed Nov. 10, 1920. Serial No. 423,045. 2 Claims. (Cl. 15—38.)

1. A brush, comprising a handle having a socket in one of its ends, a thimble drawn over the socketed end of said handle having an opening in its flat head and a slot in its cylindrical wall in a plane at right angles to the longitudinal axis of said handle, a disk shiftably disposed within said thimble abutting against the inner face of the flat head of the latter, said disk being provided with an opening adapted to register with the opening in said thimble and with a thumb piece projecting through said slot, and a knot projecting through said openings into said socket, said knot being held in position on said handle by shifting said disk to bring its opening into eccentric relation to the opening in said thimble.



1,388,128. APPARATUS FOR HARDENING FLAT CONCRETE WORK. LLOYD R. SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 4, 1920. Serial No. 414,500. 12 Claims. (94—24.)

1. Means to inclose an area of a concrete floor and maintain a quantity of water on the surface thereof to retain moisture in the concrete mass and retard the setting of the cement, the said means comprising a portable dam, with resilient sealing provisions adapted to engage the surface of the concrete floor to prevent escape of impounded water.



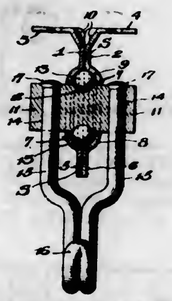
1,388,129. FEED-REGULATOR FOR POWDERED COAL. HANSON THOMAS and JOHN DAHLSTROM, Pittsburgh, Pa. Filed Sept. 12, 1919. Serial No. 323,381. 1 Claim. (Cl. 302—59.)

In a feed regulator for powdered fuel, the combination of a supply pipe for conveying the air and powdered fuel, having a discharge outlet, a connection leading from said outlet having an opening formed therein, with inner and outer inclined faces surrounding said opening, a rotary stem carried by said connection and passing through said opening, and a deflecting member carried by said stem adapted to be projected into the path of the air and powdered fuel, or withdrawn therefrom whereby a portion of the air and powdered fuel in its passage

through said pipe is discharged through said discharge opening.

1,388,130. AMUSEMENT APPARATUS. FREDERICK WILLIAM THOMPSON, deceased, New York, N. Y., by Selene P. Thompson, administratrix, New York, N. Y. Filed Oct. 29, 1919. Serial No. 334,329. 17 Claims. (Cl. 46—70.)

1. An amusement apparatus, comprising a movable craft adapted to accommodate passengers, a driven propeller mounted on the craft, and means for swinging the craft rearwardly into loading position and for releasing the craft after it is loaded to allow it to move forwardly by gravity and aided by the propeller.

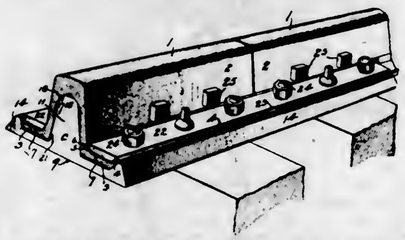


1,388,131. WRENCH. JAMES WILLIAM TRACY, Smithland, Ky. Filed July 21, 1919. Serial No. 312,356. 1 Claim. (Cl. 81—88.)

A tool of the kind described comprising a passive jaw formed with a bar, an active jaw slidably mounted on said

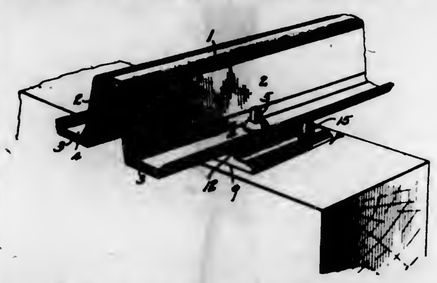
bar and movable toward and away from the passive jaw, a pair of pivotally connected handles one of which is integrally connected with the bar and the other of which is formed with an arm in whose upper edge is formed a slot, a block slidably mounted on the bar and having a stud entering and loosely engaging the active jaw and formed with spaced teeth on one side, a link seated in the slot in the arm and pivotally connected with the arm and also pivotally connected with the block and a worm rotatably mounted on the active jaw and engaged with the teeth in the stud.

1,388,132. SUSPENSION-HOOK. CHARLES F. WALP, ATWOOD J. HICKS, and FRED O. REEDY, Berwick, Pa. Filed Mar. 29, 1920. Serial No. 369,704. 2 Claims. (Cl. 248—64.)



1. A suspension hook of the class described including a pair of complemental hanger plates bent to provide an attaching portion and a hook supporting portion, the said hook supporting portion of each plate being provided with an opening, a reinforcing rib formed in each of the plates to prevent the hinging of the hook supporting portions thereof at the junction with the attaching portions, a bearing spool having a non-frictional journal support in the openings of the plates, and a suspension hook carried by the spool.

1,388,133. METHOD OF MANUFACTURING WATER-SOFTENING MATERIAL. JAMES B. WHERRY, Des Moines, Iowa, assignor to The Refinite Company, a Corporation of Delaware. Filed May 29, 1917. Serial No. 171,782. 2 Claims. (Cl. 23—13.)



1. The herein described process of producing a water softening material which includes the step of subjecting a natural clay substance having base exchange properties to a temperature sufficiently high to completely dehydrate the material without fusion thereof, and subsequently rehydrating the dehydrated material with an aqueous solution containing an alkali metal.

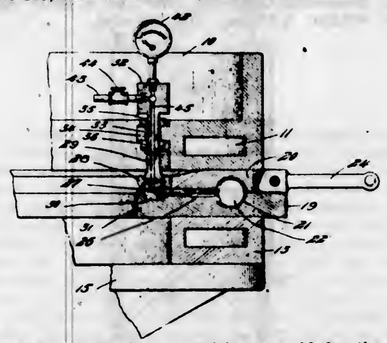
1,388,134. RAIL-JOINT FOR U-RAIL SECTIONS. GEORGE W. WHITEMAN, Philadelphia, Pa., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed May 24, 1919. Serial No. 299,389. 23 Claims. (Cl. 238—137.)

1. A rail joint including a U-rail having a horizontal fishing channel and a fish plate fitting said channel.

1,388,135. TIE-PLATE MOUNTING FOR U-RAIL SECTIONS. GEORGE W. WHITEMAN, Philadelphia, Pa., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed May 24, 1919. Serial No. 299,390. 2 Claims. (Cl. 238—137.)

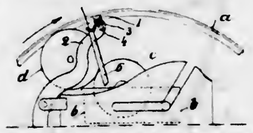
1. A tie plate mounting for U-rail sections comprising, in combination, the tie plate having at the top two pairs of spaced parallel abutment ribs forming seats between them, a U-rail section having base flanges each of which is seated between a pair of the said ribs, and fasteners engaging the base flanges of the rail and said tie plate.

1,388,136. APPARATUS FOR DISTRIBUTING FERTILIZERS, INSECTICIDES, AND FUNGICIDES. LEON F. WHITNEY, Brooklyn, N. Y., assignor to National Farm Equipment Company Inc., New York, N. Y. Filed May 19, 1920. Serial No. 382,473. 3 Claims. (Cl. 299—83.)



1. In a device of the character described, a casing having water inlet and outlet passages, a perforated plate in the casing and a cartridge containing cup having its side walls spaced from the casing and its bottom supported by and spaced from the perforated plate, said cup having its bottom imperforate and its side walls imperforate up to a point adjacent its mouth where the side walls are perforated to permit the passage of the impregnated water from the cup into the space between the cup and casing.

1,388,137. VALVE-STEM ATTACHMENT. MARTIN T. WILLEY, Lead, S. D. Filed May 6, 1920. Serial No. 379,287. 6 Claims. (Cl. 251—144.)

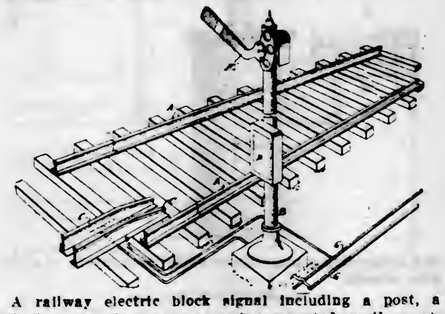


3. The combination with a valve and its stem, said stem being provided near its free end with recess means, of a spring surrounding the stem, a washer having an opening to receive the stem and provided with oppositely arranged radially projecting extensions, and a cap arranged outwardly of the washer, said cap having a radially extending key-hole opening with its larger portion disposed outermost, the inner smaller portion of the key-hole opening engaging with the recess means, said cap being provided near the large end of the key-hole opening with a laterally extending flange to engage with the edge of the washer between said extensions, said flange extending transversely of the key-hole opening, the extensions projecting outwardly beyond the cap.

1,388,138. METHOD OF AND APPARATUS FOR VULCANIZING. ROBERT H. ATCHESON, Providence, R. I., assignor to Ibex Rubber Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Feb. 16, 1921. Serial No. 445,533. 8 Claims. (Cl. 18—17.)

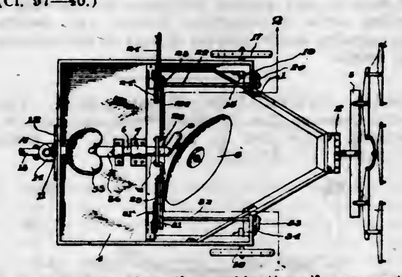
1. A tube vulcanizer comprising a mold for the tube having a single communicating opening thereinto, means for heating the mold, a single hollow stem extending through said opening and communicating with said tube therein, means for communicating with an air supply and connected to said stem for admitting air pressure into said tube to expand the same in said mold, and means communicating with a steam supply also connected to said stem, whereby a vulcanizing pressure of steam may also be subsequently admitted to the confined air in the tube through said stem to vulcanize the interior of said tube.

1,388,139. ROTARY DUPLICATOR. LOUIS PHILIPPE BOSC, Paris, France. Filed Feb. 26, 1920. Serial No. 361,555. 3 Claims. (Cl. 101—120.)



1. A duplicating device of the printing plate or stencil type, comprising the combination of a rotating cylinder, a roller for disposing the ink along a line upon the inner surface of the said cylinder, a brush disposed beyond the inking line for equilizing the ink applied by the said roller upon the inner surface of the said cylinder and for removing the excess of ink therefrom.

1,388,140. BINDER. LOUIS E. BALTZLEY, Glen Ridge, N. J. Filed Apr. 29, 1920. Serial No. 377,425. 12 Claims. (Cl. 129—35.)

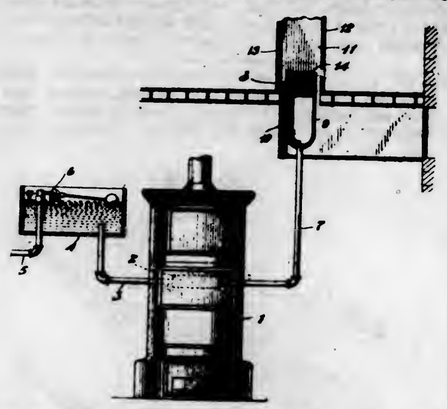


5. A binder comprising a pair of cooperating clamping jaws having backs sliding one over the other in the opening and closing movements of the jaws and provided with relatively inclined slots arranged on intersecting planes, means for confining the backs against longitudinal shifting movement, operating means working in the intersecting slots for shifting the backs to open and close the jaws, said operating means including longitudinally shiftable slide, finger grips at the opposite ends of said slide and cooperating finger grips at the opposite ends of the jaws.

1,388,141. AUTOMATIC BRAKE CONTROL FOR TRAINS. VERNE S. BURTON, Bridgeburg, Ontario, Canada, and STAFFORD A. BURTON, Detroit, Mich. Filed Mar. 27, 1919. Serial No. 285,511. 1 Claim. (Cl. 246—190.)

A railway electric block signal including a post, a swinging semaphore arm, a casing mounted on the post, a vertically movable rod in the casing which can be connected with the semaphore arm, a motor located within the casing at the bottom thereof, a vertical train of gears connected at the lower end with the motor and extending upwardly therefrom, a rocker arm connected with the train of gears at the upper end thereof and also connected with the vertically movable rod for raising and lowering the same and an electric switch operated by the vertically movable rod and composed of a contact member located within the casing at one side of the rod, an insulating member mounted on the interior of the casing and supporting the said contact member, a yieldable brush carried by the rod and having a free terminal portion movable over the insulating member onto and off of the contact member and a spring carried by the rod and bearing against the brush intermediate of the ends thereof for urging the same toward the insulating member and the contact member.

1,388,142. PLOW. ULYSSES E. COOK, Pomona, Calif. Filed May 27, 1919. Serial No. 300,156. 5 Claims. (Cl. 97—40.)

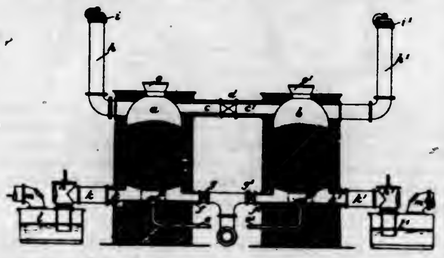


1. In a turning plow, the combination of a supporting frame, a platform carried thereby and being of less length than the frame to provide an opening through the frame, a beam mounted to turn in the opening, a disk carried by the beam, and means for swinging the beam to reverse the angle of the disk.

1,388,143. MEANS FOR CONDITIONING VAPOR. ROBERT W. HARDIE, White Plains, N. Y. Filed Aug. 20, 1920. Serial No. 404,951. 4 Claims. (Cl. 126—113.)

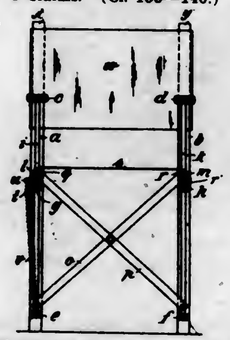
4. In an air humidifying device, the combination of a vapor generator, an open topped vapor expansion recep-

tacle connected with said generator, and a vapor restraining and heat radiating member covering said open top



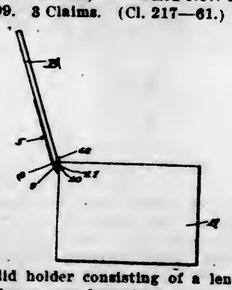
and comprising a plurality of superposed layers of woven wire strands.

1,388,144. MECHANICALLY-OPERATED SCOTCH HEARTH. WILLIAM E. NEWNAM, Collinsville, Ill., assignor, by mesne assignments, to National Lead Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 3, 1916, Serial No. 88,673. Renewed Nov. 4, 1918. Serial No. 261,144. 35 Claims. (Cl. 259—144.)



1. A smelting furnace, comprising, a Scotch hearth adapted to receive molten metal upon which floats the material to be smelted, a carriage mounted for movement along said hearth, a rabbling device mounted on said carriage and adapted to engage the material on said hearth, operating means for imparting a step by step movement to said carriage, and means for operating said rabbling device in coöperative relation with respect to said operating means, adapted to work up the material on said hearth.

1,388,145. GASIFICATION OF SOLID FUEL. FRIEDRICH GODFRIED CARL RINCKER, Watergraafsmeer, Netherlands. Filed Oct. 4, 1919. Serial No. 328,462. 4 Claims. (Cl. 48—202.)

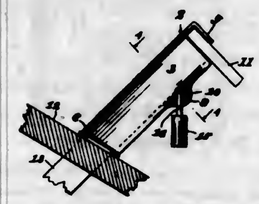


1. A method for producing gas from solid fuel such as coal or the like which consists in passing water gas through said fuel, so as to leave a residue of coke while producing gases which are led off, and then after the said gases have been evolved from the said material, passing steam through the said residue of coke before it has substantially cooled, the coke being at a sufficiently high temperature to cause the production of water gas and then passing the water gas so produced without any substantial lowering of the temperature thereof, through another mass of fuel for the purpose of producing gases from said other mass, the said fuel being always at a lower temperature than the water gas acting thereon, and the mixture of water gas and gases produced from said fuel being led directly to a receiver.

1,388,146. FOLDING CHAIR. LUDWIG SCHEIBE, Krölpa, Kr. Ziegenrück, Germany. Filed Apr. 9, 1921. Serial No. 460,024. 3 Claims. (Cl. 155—140.)

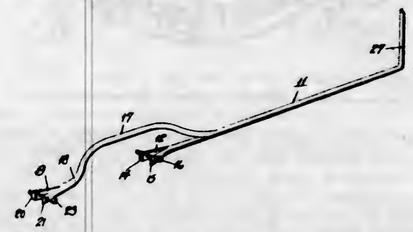
1. A collapsible chair, the lateral members or frames of which are connected to one another by pivoted or trellis struts and in which one side of the seat secured to one of the lateral frames passes over rods secured to the upper ends of the trellis struts, the other side of the said seat being secured to a spring-pulled sliding rod keeping the seat stretched in any position of the chair.

1,388,147. BOX-LID HOLDER. THEODORE D. ANAGNOSTOPOULOS, Opelousas, La., assignor of one-half to James M. Fox, New Orleans, La. Filed Nov. 22, 1920. Serial No. 425,799. 3 Claims. (Cl. 217—61.)



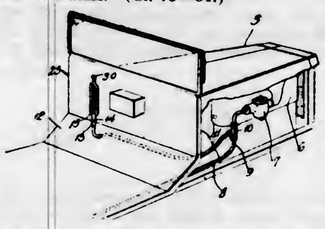
1. A box lid holder consisting of a length of resilient material having a spur formed in one end portion, the opposite end of said body member being extended back upon said body member to provide a stop, the extremity of said end portion being offset and formed into a spur.

1,388,148. TRANSFORMABLE AUTOMOBILE-TRACTOR. DON M. BROCKWAY and FOSS R. BROCKWAY, Los Angeles, Calif. Filed Mar. 25, 1916. Serial No. 86,816. 7 Claims. (Cl. 180—16.)



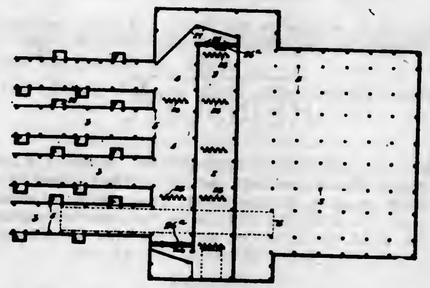
1. The combination with an automobile frame and driving axle, of a tractor axle, tractor wheels thereon, a hanger hinged to the automobile frame and carried by the tractor axle; said hanger supporting the driving axle, and means connecting the driving axle to the tractor wheels to drive the same.

1,388,149. CLUTCH-PEDAL LOCK FOR AUTOMOBILES. EDWARD JOHN FRIEDRICH, Minneapolis, Minn. Filed Sept. 2, 1920. Serial No. 407,715. 1 Claim. (Cl. 70—128.)



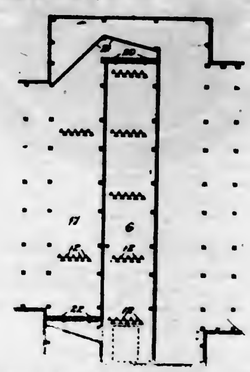
The combination with a clutch pedal and foot-board of an automobile, of a rigid device adapted to be interposed between the pedal and the foot-board, said device being formed from a single piece of sheet metal bent to present a rear portion, and a pair of parallel side members, said rear portion extending beyond the top edges of the side members and being bent at right angles to engage the upper face of the pedal transversely, while the lower extremities of said side members are flexed outwardly to provide flanges for engagement with the footboard and the forward portions of the side members are merged into parallel ears, the device in its entirety having an open front, and being slidable into its final position between the pedal and foot-board, and means for locking the ears together.

1,388,150. HANDLE FOR OPERATING OIL-LEVEL PETCOCKS. WILLIAM D. OHAVER, Judson, Ind., assignor to Montgomery Mfg. Company, Waveland, Ind., a Corporation of Indiana. Filed Jan. 24, 1920. Serial No. 353,765. 4 Claims. (Cl. 137—139.)



1. A device for operating oil level pet cocks including a rotatable operating bar, and means carried by said bar for engaging with a plurality of pet cocks, whereby to simultaneously operate the same when the bar is turned.

1,388,151. DASHBOARD-GAGE FOR GASOLENE-TANKS. WILLIAM D. OHAVER, Judson, Ind., assignor to Montgomery Mfg. Company, Waveland, Ind., a Corporation of Indiana. Filed Jan. 24, 1920. Serial No. 353,766. 4 Claims. (Cl. 73—54.)

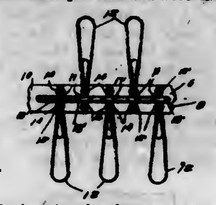


1. An improved gage of the character described adapted to show the level of fuel in a fuel tank comprising a sheet metal shell or frame crimped centrally to provide a substantially cylindrical housing having slots therein, a transparent tube in said housing adapted to receive the liquid fuel and show the height thereof through said slots, and side plates formed by the ends of said sheet metal shell and adapted to be attached to a vehicle.

1,388,152. RACK-EVAPORATOR. FRANCIS WILLIAMS, Adelaide, South Australia, Australia. Filed Feb. 25, 1921. Serial No. 447,871. 8 Claims. (Cl. 34—39.)

1. An evaporator, comprising a preparing room, an evaporating chamber, a wilting room, and sulfuring chambers, the chambers and rooms being provided with alined tray supports to permit trays to be passed from one to the other.

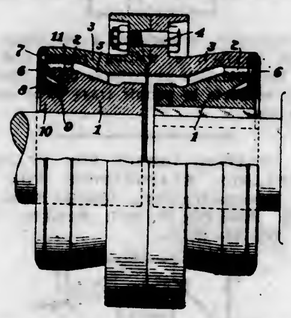
1,388,153. HEATING DEVICE FOR EVAPORATORS, PARTICULARLY EVAPORATORS FOR DRYING FRUIT. FRANCIS WILLIAMS, Adelaide, South Australia, Australia. Filed Feb. 25, 1921. Serial No. 447,872. 4 Claims. (Cl. 34—26.)



1. In devices for heating evaporators:—a furnace below the evaporating chamber at one side thereof, a flue leading from the furnace and extending beneath said chamber to the other side of same, passages from said flue to a series of chambers positioned beneath the evaporating chamber and transversely thereof, sets of vertical tubes or pipes positioned in the evaporating chamber and corresponding in number to the said chambers and connected at their lower ends with said chambers and at their upper ends with horizontal radiator boxes at the top of the chamber and in communication with outlet flues.

1,388,154. SHELVING. CORNELIUS M. COUTTS, Issaquah, Wash. Filed Oct. 8, 1919. Serial No. 329,377. 2 Claims. (Cl. 211—16.)

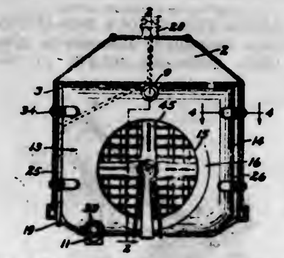
2. A shelving comprising a frame having spaced grooves, resilient members bent upon themselves with their ends arranged in parallel relation and resting in said grooves,



rivets connecting said ends of the resilient members and engaging the frame to prevent endwise movement of said

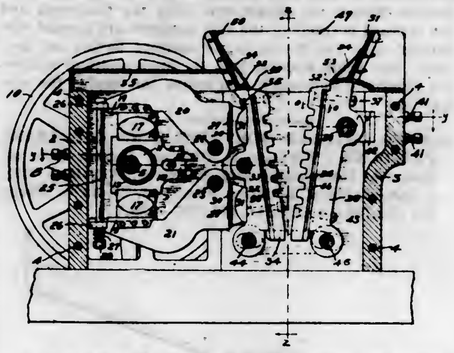
members in relation to the frame, and means retaining the ends of said members in the grooves of the frame.

REISSUES.



15,177. COUPLING FOR SHAFTING. GUSTAVE FAST, Mount Washington, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed May 14, 1921. Serial No. 469,565. Original No. 1,356,860, dated Oct. 26, 1920, Serial No. 284,699, filed Mar. 24, 1919. 29 Claims. (Cl. 64—89.)

20. In combination in a coupling for shafts to hold them in substantially axial alinement, a member encircling a shaft end, a member to be connected with one of the shafts, a drive connection between said encircling member and the shaft member having clearance between them in a radial direction, a ring or flange at the end of the encircling member located out beyond the said driving connection and located between the same and the shaft member, said flange having compensating engagement with the shaft member to accommodate disalinement of the shafts, said encircling member being connected with the other shaft and said compensating engagement being maintained during all changes in the relative positions of the two shafts, substantially as described.



15,178. FAN-HOUSING COOLING EXTENSION. HERBERT H. HART, Orcutt, Calif. Filed Jan. 9, 1920. Serial No. 350,460. Original No. 1,275,682, dated Aug. 13, 1918, Serial No. 186,234, filed Aug. 14, 1917. 12 Claims. (Cl. 123—174.)

1. An extension adapted to be bolted to the rear construction of the radiator of the cooling system of an internal combustion engine for facilitating the induction of air to increase the cooling effect on the radiator and to facilitate the cooling of the engine; said extension consisting of a dished plate having its larger and front portion constructed and arranged to include substantially the en-

tire perforate area at the back of the radiator tubes, and having in its back portion an outlet opening to converge the induced stream of air and direct the same toward the motor.

15,179. ROCK-CRUSHER. CHARLES O. MICHAELSEN, Minneapolis, Minn., assignor to Michaelsen Machinery Company, a Corporation of Nevada. Filed Oct. 28, 1920. Serial No. 420,282. Original No. 1,063,889, dated June 3, 1913, Serial No. 745,726, filed Feb. 1, 1913. 4 Claims. (Cl. 83—53.)

1. In a machine of the character described, a rocking beam, a swinging beam, jaw plates on the adjacent faces of the beams, means for directing the material into the space between the jaw plates, and means comprising a shaft for the rocking beam pivotally supporting the same near its central part, a shaft for the swinging beam pivotally supporting the same near its upper end, a link, a shaft fixed to the lower end of each beam and pivotally connecting each beam with one end of the link and positioning the link axially of said shafts in spaced relation to the beam ends, said last named means to provide, upon the movement of one of the beams, an oscillatory movement of both beams with a simultaneous vertical movement of the opposing faces of the beams relatively to each other, the simultaneous oscillation of the beams causing said opposing faces at the upper ends of the beams to move alternately toward and away from each other while the lower end portions of said opposing faces remain at a substantially constant distance from each other.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 16, 1921.

[PUBLISHED AUGUST 30, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 97,233. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) ESTATE OF P. D. BECKWITH, INC., Dowagiac, Mich. Filed Aug. 9, 1916.

No claim is made to the right to the exclusive use of the words, "Moist-Air Heating System" except in the relation in which they appear in the drawing.

Particular description of goods.—Hot-Air and Combined Hot-Air and Hot-Water Heaters and Furnaces.

Claims use since Jan. 5, 1915.

Ser. No. 110,143. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LEWIS T. FOSS, Southern Pines, N. C. Filed Apr. 12, 1918.

HIGHLAND

Particular description of goods.—Fresh Peaches, Just as Taken From the Tree.

Claims use since July, 1914.

Ser. No. 115,482. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE B. F. GOODRICH COMPANY, New York, N. Y. Filed Jan. 28, 1919.

SILVERTOWN

Particular description of goods.—Pneumatic-Tire Casings of Cord or Thread and Rubber Construction.

Claims use since about July, 1910.

Ser. No. 116,784. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE LOCOMOBILE COMPANY OF AMERICA, Bridgeport, Conn., and New York, N. Y. Filed Mar. 21, 1919.

Particular description of goods.—Self-Propelled Vehicles—Namely, Trucks.

Claims use since March, 1916.

Ser. No. 116,788. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) NEW PROCESS CHEMICAL CO., INC., New York, N. Y. Filed Mar. 21, 1919.

TRI-BITUME

Particular description of goods.—Ready-Mixed and Waterproofing Paints, Waterproofing-Fillers in the Nature of Paint.

Claims use since September, 1917.

Ser. No. 118,221. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE FOWLER NAIL CO., Seymour, Conn., assignor to The Fowler & Union Horse Nail Company, New Haven, Conn., a Corporation of Connecticut. Filed May 7, 1919.

Particular description of goods.—Cold-Rolled Horseshoe-Nails.
Claims use since on or about Mar. 19, 1908.

Ser. No. 118,222. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE FOWLER NAIL CO., Seymour, Conn., assignor to The Fowler & Union Horse Nail Company, New Haven, Conn., a Corporation of Connecticut. Filed May 7, 1919.

CROWN

Particular description of goods.—Cold-Rolled Horseshoe-Nails.
Claims use since on or about Mar. 19, 1908.

Ser. No. 120,311. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ELI LILLY & COMPANY, Indianapolis, Ind. Filed July 7, 1919.

BOROZIN

Particular description of goods.—Toilet Powder.
Claims use since about Sept. 30, 1918.

Ser. No. 121,944. (CLASS 12. CONSTRUCTION MATERIALS.) REYNOLDS COMPANY, LIMITED, Vancouver, British Columbia, Canada. Filed Aug. 23, 1919.

Particular description of goods.—Shingles.
Claims use since 1st day of September, 1918.

Ser. No. 123,400½. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) UNIVERSAL HIGH POWER TELEPHONE COMPANY, Seattle, Wash. Filed Oct. 2, 1919.

WONDERPHONE

Particular description of goods.—Telephones and Parts Thereof, Loud-Speaking or Announcing Telephones, and Music-Transmitting Telephones.
Claims use since July, 1914.

Ser. No. 123,650. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) BERTRICH E. LINQUIST, Minneapolis, Minn. Filed Oct. 10, 1919.

LIBERTY BELL

Particular description of goods.—Phonographs.
Claims use since on or about June 10, 1919.

Ser. No. 124,485. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAS. H. LONGSHORE, assignor to Continental Chemical Corporation, Watseka, Ill. Filed Nov. 3, 1919.

TRI

Particular description of goods.—Chemical Compounds—Namely, Germicide, Fireless Formaldehyde Fumigators, Roach-Powder, Insecticide, Coal-Tar Disinfectants, Soluble Pine Disinfectants, and Rat-Exterminator.
Claims use since July 2, 1919.

Ser. No. 125,272. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) FRANK T. ADAMS, Connellsville, Pa. Filed Nov. 25, 1919.

U POLISH

No claim being made to the word "Polish" apart from the mark shown in the drawing.
Particular description of goods.—A Rust-Preventing and Polishing Preparation for Automobile-Bodies Adapted to be Applied by a Cloth.
Claims use since Nov. 17, 1919.

Ser. No. 125,518. (CLASS 15. OILS AND GREASES.) THE TEXAS COMPANY, Houston, Tex., and New York, N. Y. Filed Dec. 2, 1919.

ESTRELLA

Particular description of goods.—Kerosene-Oil.
Claims use since 1909.

Ser. No. 126,956. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) JACOB DAVIS, Arlington, N. J. Filed Jan. 9, 1920.

DAISY STOVE GLOSS

No registration rights being claimed for the words "Stove Gloss" apart from the mark shown in the drawing.
Particular description of goods.—A Paint Coating or Enamel for Iron Surfaces.
Claims use since October, 1919.

Ser. No. 127,484. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) NATIONAL TOY AND TINSEL MFG. CO., Manitowoc, Wis. Filed Jan. 22, 1920.

No claim being made to the exclusive use of the words "Nat'l Toys" apart from the mark as shown.
Particular description of goods.—Toys—Namely, Mechanical Autos, Toy Stoves, Locomotives, Passenger-Cars, Freight-Cars, Coal-Cars, and Candle-Holders Made of Sheet Metal; Doll Furniture—Namely, Doll-Houses, Chiffonniers, China-Closets, Dressers, Tables, Chairs, Beds, Cradles, Buffets, Washstands, Wardrobes, Bathtubs, Bath-Stools, Medicine-Chests, and Pianos Made of Wood; Tinsel Garlands and Tinsel Ornaments for Christmas Trees.
Claims use since Jan. 2, 1920.

Ser. No. 128,732. (CLASS 12. CONSTRUCTION MATERIALS.) EDWIN A. JACKSON & BRO. INC., New York, N. Y. Filed Feb. 21, 1920.

JAXON

Particular description of goods.—Built-in Garbage-Receivers Consisting of a Compartment or Closet Made of Tin or other Metal Built into the Wall of a Building.
Claims use since Jan. 15, 1919.

Ser. No. 130,284. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) NATIONAL DRUG STORES CORPORATION, New York, N. Y. Filed Mar. 27, 1920.

NATIONAL

Particular description of goods.—Invalid-Rings, Sprays, Surgeons' Operating Rubber Gloves, Ice-Caps.
Claims use since Nov. 22, 1919.

Ser. No. 131,202. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) THE AMERICAN CONTINUOUS RETORT COMPANY, Denver, Colo. Filed Apr. 16, 1920.

CONTINUOUS RETORT PROCESS

No claim is made to the words "Continuous," "Retort," and "Process" apart from the mark as a whole.

Particular description of goods.—Ore and Oil-Shale Roasting Furnaces.

Claims use since the 22d of December, 1917.

Ser. No. 131,428. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) MAX JACOBSON, New York, N. Y. Filed Apr. 21, 1920.

Astral Board

No claim being made to the word "Board" apart from the mark shown in the drawing.

Particular description of goods.—Talking-Boards.

Claims use since Mar. 5, 1920.

Ser. No. 131,628. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) DELTA ELECTRIC COMPANY, Worcester, Mass. Filed Apr. 26, 1920.

DELTA ELECTRIC D COMPANY

Particular description of goods.—Electric Water-Pumping Outfits, Electric-Fixture Parts and Fittings, Shade Attachments for Electric Lights, Electric Signs, and Electric House-Lighting Systems and Parts and Fittings Thereof.

Claims use since 1907.

Ser. No. 132,241. (CLASS 27. HOROLOGICAL INSTRUMENTS.) EMIL GISIGER, Selzach, Switzerland, and New York, N. Y. Filed May 10, 1920.

Timely

Particular description of goods.—Watches, Watchcases, Watch-Dials, Watch-Movements, and Alarm-Clocks.

Claims use since January, 1920.

Ser. No. 132,242. (CLASS 27. HOROLOGICAL INSTRUMENTS.) EMIL GISIGER, Selzach, Switzerland, and New York, N. Y. Filed May 10, 1920.

T

Particular description of goods.—Watches, Watchcases, Watch-Dials, Watch-Movements, and Alarm-Clocks.

Claims use since January, 1920.

Ser. No. 132,243. (CLASS 27. HOROLOGICAL INSTRUMENTS.) EMIL GISIGER, Selzach, Switzerland, and New York, N. Y. Filed May 10, 1920.

Okeh

Particular description of goods.—Watches, Watchcases, Watch-Dials, Watch-Movements, and Alarm-Clocks.

Claims use since January, 1920.

Ser. No. 132,244. (CLASS 27. HOROLOGICAL INSTRUMENTS.) EMIL GISIGER, Selzach, Switzerland, and New York, N. Y. Filed May 10, 1920.

Atlantis

Particular description of goods.—Watches, Watchcases, Watch-Dials, Watch-Movements, and Alarm-Clocks.

Claims use since January, 1920.

Ser. No. 132,245. (CLASS 27. HOROLOGICAL INSTRUMENTS.) EMIL GISIGER, Selzach, Switzerland, and New York, N. Y. Filed May 10, 1920.

Swisstimes

Particular description of goods.—Watches, Watchcases, Watch-Dials, Watch-Movements, and Alarm-Clocks.

Claims use since January, 1920.

Ser. No. 132,246. (CLASS 27. HOROLOGICAL INSTRUMENTS.) EMIL GISIGER, Selzach, Switzerland, and New York, N. Y. Filed May 10, 1920.

Resulta

Particular description of goods.—Watches, Watchcases, Watch-Dials, Watch-Movements, and Alarm-Clocks.

Claims use since January, 1920.

Ser. No. 132,247. (CLASS 27. HOROLOGICAL INSTRUMENTS.) EMIL GISIGER, Selzach, Switzerland, and New York, N. Y. Filed May 10, 1920.

Okay

Particular description of goods.—Watches, Watchcases, Watch-Dials, Watch-Movements, and Alarm-Clocks.

Claims use since January, 1920.

Ser. No. 132,511. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. B. CARR BISCUIT CO., Wilkes-Barre, Pa. Filed May 17, 1920.

Etoy

Particular description of goods.—Biscuits and Crackers.

Claims use since July 1, 1911.

Ser. No. 132,817. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) HENRY P. SCHROEDER, St. Louis, Mo. Filed May 22, 1920.

Particular description of goods.—Non-Intoxicating Beverages—Namely, Fruit Beverages, Carbonated Beverages, Cereal Beverages, Cordials, and Ciders Containing Less Than One-half of One Per Cent. of Alcohol, by Volume, and Sold as Soft Drinks.

Claims use since June 26, 1919.

Ser. No. 132,834. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ATLAS CEREAL COMPANY, Kansas City, Mo. Filed May 24, 1920.

Particular description of goods.—Rolled Oats, Steel-Cut Oats, Cream-Meal, Cornmeal, Hominy-Grits, Pearl-Hominy.

Claims use since Feb. 1, 1900.

Ser. No. 133,555. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) James W. Olts, Oakland, Calif. Filed June 10, 1920.

STAR LIGHT

Particular description of goods.—Automobile and Furniture Polish.
Claims use since Feb. 27, 1920.

Ser. No. 133,985. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Société Ricard Allenet & Cie., Melle, France. Filed June 21, 1920.

Vulcazol

Particular description of goods.—A Furfuramid Chemical Product as Well as All Its Compounds.
Claims use since Feb. 5, 1920.

Ser. No. 134,172. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) American Trading Co., New York, N. Y. Filed June 25, 1920.

RED CAP

Particular description of goods.—Wheat-Flour.
Claims use since 1904.

Ser. No. 134,299. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Bencoe Exporting and Importing Co. Inc., New York, N. Y. Filed June 28, 1920.

FAMOSA

Particular description of goods.—Sheetings.
Claims use since June 1, 1919.

Ser. No. 134,465. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Usher L. Davies, San Francisco, Calif. Filed July 1, 1920.

PEACHERINE

Particular description of goods.—A Non-Alcoholic, Non-Cereal, Maltless Beverage Sold as a Soft Drink.
Claims use since May 1, 1920.

Ser. No. 134,485. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) Guy Motors Ltd., Wolverhampton and Fallings Park, England. Filed July 1, 1920.

Guy Motors Limited

Particular description of goods.—Automobiles, Motor-Boats, Aeroplanes, Motorcycles.
Claims use since Oct. 2, 1914.

Ser. No. 135,175. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) Société Lyonnaise d'Industrie Mecanique, Lyon-St. Clair-Caluire, France. Filed July 19, 1920.

Particular description of goods.—Automobiles and Lorries.
Claims use since Feb. 27, 1920.

Ser. No. 135,675. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) Ultra Refined Crude Products Company, Chicago, Ill. Filed July 31, 1920.

Ker-ene

Particular description of goods.—A Preparation Used as a Polish for Painted, Varnished, Waxed, and Oiled Surfaces and as a Cleanser and Polish for Wooden and Painted and Varnished Metal Surfaces.
Claims use since June 1, 1920.

Ser. No. 136,430. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Anna E. Reynolds, New York, N. Y. Filed Aug. 24, 1920.

Harriet Hubbard Ayer

This trade-mark consists of the word-symbol "Recamier" and a crest composed of fasces surmounted by a coronet, out of which rises the head of a lion. These are arranged as shown in the accompanying drawing, in which the word "Recamier" with the word "Cream" following it, are in block capital letters and arranged in the form of an arch over the said crest, and the facsimile of the signature of Harriet Hubbard Ayer (the original registrant of this trade-mark and my predecessor) is arranged below the said crest. Apart from the mark as shown in the accompanying drawing, I waive claim to the words "Cream" and "Trade-Mark."

Claims use since 1886.

Ser. No. 136,813. (CLASS 32. FURNITURE AND UPHOLSTERY.) Shu-Betty Company, New York, N. Y. Filed Sept. 3, 1920.

SHU-BETTY

Particular description of goods.—Domestic Shoe-Cabinets.
Claims use since July 7, 1920.

Ser. No. 137,131. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Kumyss, Incorporated, New York, N. Y. Filed Sept. 13, 1920. Under ten-year proviso.

DR. BRUSH'S
KUMYSS

Particular description of goods.—Kumyss.
Claims use since 1875.

Ser. No. 137,381. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Lantz Bros. Baking Co., St. Louis, Mo. Filed Sept. 20, 1920.

GRANDMA'S

Particular description of goods.—Cakes and Cookies.
Claims use since Sept. 3, 1912.

Ser. No. 137,793. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Harry W. Van Doren, Pulaski, Va. Filed Sept. 30, 1920.

CHERI PEP
ACCENT ON THE EYE

Particular description of goods.—A Non-Alcoholic Maltless Beverage.
Claims use since July 7, 1920.

Ser. No. 137,952. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Maatschappij Ago, Amsterdam and Ter Apel, Netherlands. Filed Oct. 5, 1920.

LIGNOSTONE

Particular description of goods.—Shuttles, Shuttle-Pegs, Picking Band-Pegs, Creel-Pegs, and Shuttle-Peg Pins Made of Wood Hardened by Chemical and Physical Treatment.
Claims use since May 1, 1920.

Ser. No. 138,264. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) CHAS. A. SCHIEREN COMPANY, New York, N. Y. Filed Oct. 13, 1920.

Particular description of goods.—Leather Packings.
Claims use since June 1, 1920.

Ser. No. 138,770. (CLASS 17. TOBACCO PRODUCTS.) LIGGETT & MYERS TOBACCO COMPANY, New York, N. Y. Filed Oct. 25, 1920.

Particular description of goods.—Smoking and Chewing Tobacco and Cigarettes.
Claims use since about September, 1919.

Ser. No. 138,772. (CLASS 17. TOBACCO PRODUCTS.) LIGGETT & MYERS TOBACCO COMPANY, New York, N. Y. Filed Oct. 25, 1920.

Particular description of goods.—Smoking and Chewing Tobacco and Cigarettes.
Claims use since about October, 1914.

Ser. No. 138,801. (CLASS 7. CORDAGE.) ALUMINIUM-WALZWERKE A.-G., Schaffhausen, Switzerland. Filed Oct. 26, 1920.

Particular description of goods.—Rope Made of Aluminium.
Claims use since Dec. 1, 1912.

Ser. No. 138,815. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) THE LOOK-SEE SHOP, Washington, D. C. Filed Oct. 26, 1920.

No claim being made to the words "1623 H Street, Washington, D. C."
Particular description of goods.—Novelties in the Form of Curios, Old Prints, Embroideries, Brocades, Lacquered and Carved Wood Novelties.
Claims use since July 1, 1919.

Ser. No. 138,922. (CLASS 17. TOBACCO PRODUCTS.) S. A. REYNOLDS, Kansas City, Mo. Filed Oct. 28, 1920.

Particular description of goods.—Tobacco Products—viz., Cigars and Cigarettes.
Claims use since Oct. 20, 1920.

Ser. No. 138,924. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) W. W. RYCROFT & CO., New York, N. Y. Filed Oct. 28, 1920. Under ten-year proviso.

Carina Lustrine

Particular description of goods.—Cotton and Wool Dress Goods in the Piece.
Claims use since Jan. 31, 1895.

Ser. No. 139,046. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PISCEK & BRISCOE, Gallup, N. Mex. Filed Nov. 1, 1920.

Particular description of goods.—A Blood-Purifying Solution Used for Medicinal Purposes.
Claims use since Mar. 1, 1920.

Ser. No. 139,062. (CLASS 31. FILTERS AND REFRIGERATORS.) DE LA VERGNE MACHINE COMPANY, New York, N. Y. Filed Nov. 2, 1920. Under ten-year proviso.

DE LA VERGNE

Particular description of goods.—Ice-Making and Refrigerating Machinery and Parts Thereof—Namely, Ammonia-Compressors, Ammonia-Condensers, Assembling-Piping, Elbows, T's, Flanges, Gages, and Tanks, as Well as Complete Machines.
Claims use since 1881.

Ser. No. 139,120. (CLASS 17. TOBACCO PRODUCTS.) ESTATE OF HENRY B. GRATLET, Philadelphia, Pa. Filed Nov. 3, 1920.

STATE HOUSE

Particular description of goods.—Cigars.
Claims use since Jan. 17, 1876.

Ser. No. 139,183. (CLASS 17. TOBACCO PRODUCTS.) SOLOMON B. BRAFMAN, New York, N. Y. Filed Nov. 5, 1920.

LA HUMORESQUE

Particular description of goods.—Cigars.
Claims use since Oct. 21, 1920.

Ser. No. 139,215. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) MINERVA MOTORS, Antwerp, Belgium. Filed Nov. 5, 1920.

MINERVA

Particular description of goods.—Automobiles and Chassis for Automobiles, Bicycles, and Aeroplanes.
Claims use since 1897.

Ser. No. 139,280. (CLASS 17. TOBACCO PRODUCTS.) JOHN C. HERMAN & COMPANY, Harrisburg, Pa. Filed Nov. 6, 1920.

KING OSCAR

Particular description of goods.—Cigars.
Claims use since Mar. 16, 1892.

Ser. No. 139,358. (CLASS 17. TOBACCO PRODUCTS.) LIGGETT & MYERS TOBACCO COMPANY, New York, N. Y. Filed Nov. 8, 1920.

OLD MILL

Particular description of goods.—Smoking and Chewing Tobacco and Cigarettes.
Claims use since about 1909.

Ser. No. 139,843. (CLASS 11. INKS AND INKING MATERIALS.) BUXTON & SKINNER PRINTING AND STATIONERY COMPANY, St. Louis, Mo. Filed Nov. 19, 1920.

Cote Brilliante

Particular description of goods.—Writing-Inks, Typewriter-Ribbons, and Inking-Pads.
Claims use since January, 1893.

Ser. No. 140,032. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GUST. & H. PROBST A. G., Langnau, Switzerland. Filed Nov. 23, 1920.

The words "Marke" and "Registr" are disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Cheese.
Claims use since November, 1905.

Ser. No. 140,247. (CLASS 7. CORDAGE.) J. E. BARBOUR COMPANY, Paterson, N. J. Filed Nov. 27, 1920.

No claim being made to the words "Irish Flax" apart from the mark shown.
Particular description of goods.—Twines.
Claims use since July, 1915.

Ser. No. 140,408. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HENRY PAULSON, Chicago, Ill. Filed Nov. 29, 1920.

"MERITAS"

Particular description of goods.—Polishing-Buffs.
Claims use since Feb. 15, 1904.

Ser. No. 140,605. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) MEDINA FRUIT PRODUCTS CO., INC., Medina, N. Y. Filed Dec. 4, 1920.

RED BAND

Particular description of goods.—Cider.
Claims use since Nov. 12, 1920.

Ser. No. 140,606. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) MEDINA FRUIT PRODUCTS CO., INC., Medina, N. Y. Filed Dec. 4, 1920.

BLACK JACK

Particular description of goods.—Cider.
Claims use since Nov. 12, 1920.

Ser. No. 141,020. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PURE FOOD SPECIALTIES COMPANY, Toledo, Ohio. Filed Dec. 13, 1920.

SWEETROSE

Particular description of goods.—Oleomargarin.
Claims use since October, 1915.

Ser. No. 141,064. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CONTINENTAL CANDY CORPORATION, Chicago, Ill. Filed Dec. 14, 1920.

The conventional lining is for shade only.
Particular description of goods.—Candy.
Claims use since April, 1920.

Ser. No. 141,445. (CLASS 48. MALT BEVERAGES, EXTRACTS AND LIQUORS.) ALBERT WIBLICH, New York, N. Y. Filed Dec. 22, 1920.

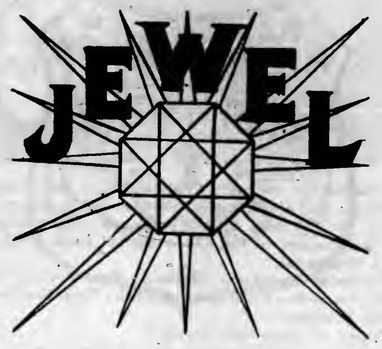
No claim is made to the exclusive use of the words "Malt Extract" and "It Works Like Magic" apart from the showing made in the drawing.
Particular description of goods.—Malt Extracts.
Claims use since Nov. 15, 1920.

Ser. No. 141,455. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DETROIT BEEF COMPANY, Detroit, Mich. Filed Dec. 23, 1920.

No claim is made to the exclusive use of the word "Brand" in the connection shown.
Particular description of goods.—Butter and Eggs.
Claims use since the 1st day of June, 1920.

Ser. No. 141,508. (CLASS 17. TOBACCO PRODUCTS.) THE ROBERT SINCLAIR TOBACCO COMPANY, LIMITED, Newcastle-on-Tyne, England. Filed Dec. 24, 1920.

TONIDES



Particular description of goods.—Cigarettes and Smoking-Tobacco.
Claims use since Mar. 5, 1907.

Ser. No. 141,509. (CLASS 17. TOBACCO PRODUCTS.) THE ROBERT SINCLAIR TOBACCO COMPANY, LIMITED, Newcastle-on-Tyne, England. Filed Dec. 24, 1920.

FOURSOME

Particular description of goods.—Smoking-Tobacco.
Claims use since Feb. 13, 1907.

Ser. No. 141,616. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) WADSWORTH-HOWLAND COMPANY, Chicago, Ill. Filed Dec. 28, 1920.

VICTOR

Particular description of goods.—Bearings.
Claims use since August, 1920.

Ser. No. 147,726. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NATHAN U. KATZ, Camden, N. J. Filed May 14, 1921.

Katz's

Particular description of goods.—Candies.
Claims use since July, 1920.

Ser. No. 147,747. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TAFFAE & BELLION, New York, N. Y. Filed May 14, 1921.

GLORIA

Particular description of goods.—Raw Coffee.
Claims use since May 1, 1921.

Ser. No. 147,748. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TAFFAE & BELLION, New York, N. Y. Filed May 14, 1921.

ESTRELLA

Particular description of goods.—Raw Coffee.
Claims use since May 1, 1921.

Ser. No. 147,785. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Jacobsen Manufacturing Company, Racine, Wis. Filed May 16, 1921.

Particular description of goods.—Lawn-Mowers.
Claims use since Jan. 1, 1921.

Ser. No. 147,790. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) Milwaukee Auto Engine & Supply Company, Milwaukee, Wis. Filed May 16, 1921.

GUARDIAN

Particular description of goods.—Automobile-Bumpers.
Claims use since Nov. 21, 1917.

Ser. No. 147,854. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Vinson Coffee Company, Jackson, Tenn. Filed May 17, 1921.

TENNESSEE MAID

The picture in the drawing being fanciful.
Particular description of goods.—Coffee.
Claims use since Mar. 1, 1921.

Ser. No. 147,861. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) Coast Tire and Rubber Company, Oakland, Calif. Filed May 18, 1921.

COAST

Particular description of goods.—Rubber Tires.
Claims use since Nov. 28, 1919.

Ser. No. 147,865. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Glendon B. Doane, Boston, Mass. Filed May 18, 1921.

"THE DOCTOR"

Particular description of goods.—Tool and Machine Handles and Ferrules.
Claims use since January, 1912.

Ser. No. 147,868. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) Eastlite Electric Company, Louisville, Ky. Filed May 18, 1921.

EASTLITE

Particular description of goods.—Unitary Electric-Light Plants.
Claims use since Apr. 10, 1921.

Ser. No. 147,898. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Samoset Chocolates Company, Boston, Mass. Filed May 18, 1921.

CLOTH OF GOLD

Particular description of goods.—Candy.
Claims use since Dec. 10, 1919.

Ser. No. 147,899. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) The C. F. Sauer Company, Richmond, Va. Filed May 18, 1921.

O=RUM=O

Particular description of goods.—Food-Flavoring Extracts.
Claims use since on or about Nov. 1, 1920.

Ser. No. 148,063. (CLASS 23. CUTLERY, MACHINERY, TOOLS, AND PARTS THEREOF.) Frick Company, Waynesboro, Pa. Filed May 23, 1921.

ECLIPSE

Particular description of goods.—Threshing Machinery, Sawmills, Portable and Stationary Steam-Engines, Traction-Engines, and Tractors.
Claims use since about the year 1876.

Ser. No. 148,092. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) Sargent Company, Chicago, Ill. Filed May 23, 1921.

RENU

Particular description of goods.—Rear-View Mirrors for Automobiles.
Claims use since on or about the 1st day of May, A. D. 1920.

Ser. No. 148,119. (CLASS 39. CLOTHING.) Butler Brothers, Chicago, Ill. Filed May 24, 1921.

VALOR

Particular description of goods.—Gloves of Fabric and of Leather.
Claims use since September, 1920.

Ser. No. 148,140. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) The Gandy Belting Company, Baltimore, Md. Filed May 24, 1921.

"THERMO"

Particular description of goods.—Cotton-Stitched Belting for Power Transmission, Elevating, and Conveying.
Claims use since May 16, 1921.

Ser. No. 148,355. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) Schwarze Electric Company, Adrian, Mich. Filed May 27, 1921.

SELCO

Particular description of goods.—Electric Horns.
Claims use since Mar. 12, 1921.

Ser. No. 148,363. (CLASS 37. PAPER AND STATIONERY.) The Blunden-Lyon Company, Chicago, Ill. Filed May 28, 1921.

Lithofset

Particular description of goods.—Printing-Paper.
Claims use since the 13th day of October, 1920.

Ser. No. 148,387. (CLASS 37. PAPER AND STATIONERY.) Hampden Glazed Paper & Card Co., Holyoke, Mass. Filed May 28, 1921.

LODESTONE

Particular description of goods.—Cover-Paper.
Claims use since May 11, 1921.

Ser. No. 148,414. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) C. H. Wills & Company, Marysville, Mich. Filed May 28, 1921.

Particular description of goods.—Automobiles.
Claims use since Feb. 26, 1921.

Ser. No. 148,457. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Joseph A. Rosenfeld, Philadelphia, Pa. Filed May 31, 1921.

COMET

Particular description of goods.—Pattern-Marking Machines.
Claims use since May 18, 1921.

Ser. No. 148,489. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) H. Engel & Sons, New York, N. Y. Filed June 1, 1921.

TRYENGEL

TRADE MARK

The words "Trade Mark" are disclaimed apart from the mark shown in the drawing and are not claimed by the petitioners to be exclusively appropriated by them.
Particular description of goods.—Handkerchiefs.
Claims use since Apr. 1, 1921.

Ser. No. 148,490. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) The Fitzgerald Manufacturing Company, Torrington, Conn. Filed June 1, 1921.

STAR

Particular description of goods.—Electric Fans.
Claims use since on or about Feb. 1, 1921.

Ser. No. 148,571. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Filed June 3, 1921.

COMPEB

Particular description of goods.—Comminuting Machinery, and Specifically for Tube and Ball Mills and Tumbling-Bodies Therefor.
Claims use since Feb. 19, 1921.

Ser. No. 148,695. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) Sam Bretch Wholesale Specialties, Oklahoma, Okla. Filed June 6, 1921.

FEEL SURE

Particular description of goods.—Automobile-Tires of Rubber and Cloth Fabric Composition and Rubber Inner Tubes for Same.
Claims use since Mar. 7, 1921.

Ser. No. 148,751. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Nash Engineering Co., South Norwalk, Conn. Filed June 6, 1921.

The shading in the drawing does not represent color.
Particular description of goods.—Air-Compressors, Vacuum-Pumps, Vacuum-Heating Pumps, Boiler-Feed Pumps, Turbines, and Turbine-Engines.
Claims use since Mar. 31, 1919.

Ser. No. 148,762. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Henry W. Roos, Cincinnati, Ohio. Filed June 6, 1921.

ROOSHOR

Particular description of goods.—Adjustable Shores.
Claims use since Oct. 7, 1920.

Ser. No. 148,795. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) Crocker-Wheeler Company, Ampere, N. J. Filed June 7, 1921.

PROGRESS

Particular description of goods.—Starters, Motors, Dynamos, and Ball-Bases Therefor.

145,893. (CLASS 31. FILTERS AND REFRIGERATORS.) KINNEY MANUFACTURING COMPANY, Boston, Mass. Filed Nov. 30, 1920. Serial No. 140,469.

KINNEY

Particular description of goods.—Refrigeration Machinery and Parts Thereof.
Claims use since July 1, 1907.

145,894. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE MILLER RUBBER COMPANY, Akron, Ohio. Filed Dec. 18, 1920. Serial No. 141,275.

Miller

Particular description of goods.—Toy Balloons and Sponge-Rubber Balls.
Claims use since Apr. 29, 1916.

145,895. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) NEWARK TORTOISE SHELL NOVELTY CO., Newark, N. J. Filed May 10, 1921. Serial No. 147,525.

BEST-HOLD

Particular description of goods.—Back and Side Combs, Pompadour-Combs, Barrettes, and Hairpins and Not Composed of Precious Metals.
Claims use since Jan. 1, 1910.

145,896. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) OSBS ZINC WHITE LIMITED, Widnes and London, E. C., England. Filed Feb. 18, 1921. Serial No. 143,777.

ORR'S ZINC WHITE

Particular description of goods.—Zinc-White.
Claims use since about Nov. 18, 1918.

145,897. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) PATEK BROTHERS, Milwaukee, Wis. Filed Feb. 23, 1921. Serial No. 143,953.

HIGHEST QUALITY
WEARPROOF

Particular description of goods.—Ready-Mixed Paints.
Claims use since about Sept. 1, 1918.

145,898. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) PATEK BROTHERS, Milwaukee, Wis. Filed Mar. 19, 1921. Serial No. 144,981.

HIGHEST QUALITY

Particular description of goods.—Ready-Mixed Paints, Paint Enamels, Paste Paints, Japans, Wood-Fillers, Paint-Driers, Wood-Stains, Lacquers, Calcimines, Cold-Water Paints, Concrete and Cement Paints, Flat Washable Oil-Paints, Paint and Varnish Removers, Floor-Paints, Colors in Oil, Varnishes, Furniture-Polish, Automobile-Body Polish, Floor-Oil, and Polishes Generally for Painted and Varnished Surfaces.
Claims use on ready-mixed paints, paint enamels, paste paints, japans, wood-fillers, paint-driers, wood-stains, lacquers, calcimines, cold-water paints, floor-paints, colors in oil, varnishes, furniture-polish, floor-oil, and polishes generally for painted and varnished surfaces since 1898. Flat washable oil-paints; paint and varnish removers since 1908. Concrete and cement paints, since 1910. Automobile-body polish, since 1914.

145,899. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE PETERS BAIT CO., Knox, Ind. Filed Nov. 9, 1920. Serial No. 139,427.

LINE DRYING CASTING REEL

Particular description of goods.—Fishing-Reels.
Claims use since Aug. 20, 1917.

145,900. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) JACOB PETRY, Pittsburgh, Pa. Filed Oct. 11, 1920. Serial No. 138,187.

THE JACOB PETRY RETAINER CO.

Particular description of goods.—Dental Suction-Retainers.
Claims use since 1914.

145,901. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) POLLY TRENT CANDY COMPANY, Washington, D. C. Filed Apr. 15, 1920. Serial No. 131,185.

Polly Trent

Particular description of goods.—Candy.
Claims use since Mar. 25, 1920.

145,902. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORGE H. W. REITHER, Brooklyn, N. Y. Filed Dec. 6, 1920. Serial No. 140,679.

Dr. DEE'S
Celebrated Prescription

Particular description of goods.—A Liquid Medicine for Internal Use for Coughs, Colds, and Bronchitis.
Claims use since July, 1908.

145,903. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LILLIAN E. SCOFIELD, New York, N. Y. Filed Aug. 30, 1920. Serial No. 136,653.

Tintex
TINTS AS YOU RINSE

Particular description of goods.—Dye.
Claims use since Mar. 15, 1920.

145,904. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. K. SMITH & CO., North Baltimore, Ohio. Filed Apr. 21, 1921. Serial No. 146,501.

Shurgud

Particular description of goods.—Coffee.
Claims use since about Mar. 15, 1920.

145,905. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,686.

NORMANDY

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,906. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,687.

HARTFORD

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,907. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,689.

RALEIGH

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,908. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,691.

LORRAINE

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,909. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,693.

WESTMINSTER

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,910. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,696.

MILANO

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,911. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,697.

EDGEMOOR

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,912. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,698.

ISLINGTON

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,913. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,701.

KENILWORTH

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,914. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,702.

MT. VERNON

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,915. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,703.

VERNON

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,916. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,704.

LUZERNE

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,917. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed June 14, 1920. Serial No. 133,707.

WINDERMERE

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since Feb. 1, 1920.

145,918. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed Sept. 3, 1920. Serial No. 136,815.

CANTERBURY

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since June 1, 1920.

145,919. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SONORA, INC., New York, N. Y. Filed Nov. 5, 1920. Serial No. 139,230.

LANCASTER

Particular description of goods.—Talking-Machines, Phonographs, and Music-Boxes.
Claims use since June 1, 1920.

145,920. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORGE C. SPENCER, South Bend, Ind. Filed Apr. 4, 1921. Serial No. 145,720.

SPENCER

Particular description of goods.—Perfumes.
Claims use since 1912.

145,921. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) UNKEFER VARNISH COMPANY, Chicago, Ill. Filed Feb. 12, 1921. Serial No. 143,523.

LECLAIRE

Particular description of goods.—Varnishes, Varnish Coatings, Paint Enamels, Paste and Ready-Mixed Paints, and Paint Coatings.
Claims use since Apr. 5, 1919.

145,922. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) WADSWORTH, HOWLAND & CO., INCORPORATED, Boston, Mass. Filed Sept. 30, 1920. Serial No. 137,796.

DULTINT

Particular description of goods.—Liquid Paint for Interior Finish.
Claims use since 1909.

145,923. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BENJAMIN WALKER, Redwood City, Calif. Filed Oct. 27, 1920. Serial No. 138,883.

TRY IT FOR Chapped Hands, Scalds, Burns, Sunburns.

Particular description of goods.—A Preparation for Chapped Hands, Scalds, Burns, Sunburn.
Claims use since Jan. 1, 1903.

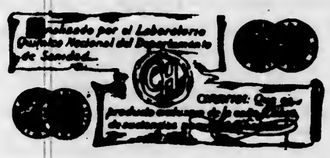
145,924. (CLASS 37. PAPER AND STATIONERY.) S. D. WARREN COMPANY, Boston, Mass. Filed Mar. 29, 1921. Serial No. 145,423.

CUMBERLAND

Particular description of goods.—Printing-Paper.
Claims use since about Jan. 1, 1912.

145,925. (CLASS 37. PAPER AND STATIONERY.) WHITE & WYCKOFF MANUFACTURING COMPANY, Holyoke, Mass. Filed Mar. 16, 1920. Serial No. 129,816.

Master Makers of Distinctive Social Stationery



Particular description of goods.—Writing-Paper Tablets, Composition-Books, Note-Books and Memorandum-Books, Stenographers' Note-Books, Block-Pads, Typewriter-Paper, Papeteries, Writing-Paper, Mailing-Envelops, and Correspondence-Cards.
Claims use since Mar. 4, 1920.

INTERNATIONAL TRADE-MARK REGISTRATIONS

AUGUST 16, 1921.

The following International Registrations have been received from the Bureau at Habana and have been placed upon the Register in accordance with the provisions of section 1 (a) of the act of March 19, 1920.

International Registration No. 425 of February 28, 1921. Registered in Cuba on November 6, 1920, No. 35,870. Proprietor: B. CAMP Y CA., S. EN C. Address: J. A. Saco baja No. 40, Santiago de Cuba.

Merchandise to which the mark is affixed.—Rum.

International Registration No. 480 of June 10, 1921. Registered in Cuba on May 5, 1915, No. 30,816. Proprietor: ALLONES LIMITED. Address: Finlay No. 62, Habana, Cuba.

Merchandise to which the mark is affixed.—Cigars.

International Registration No. 481 of June 10, 1921. Registered in Cuba on July 11, 1917, No. 32,806. Proprietor: ALLONES LIMITED. Address: Finlay No. 62, Habana, Cuba.

Merchandise to which the mark is affixed.—Cigars.

International Registration No. 492 of June 20, 1921. Registered in Cuba on May 21, 1917, No. 32,728. Proprietor: SOCIEDAD ANÓNIMA COMPAÑIA NACIONAL DE PERFUMERÍA. Address: Monte No. 314, Habana, Cuba.

Merchandise to which the mark is affixed.—Rice Toilet Powders.

International Registration No. 503 of June 30, 1921. Registered in Cuba on April 21, 1914, No. 30,044. Proprietor: RON BACARDI, S. A. Address: Marina baja Nos. 30 y 32, Santiago de Cuba.

Merchandise to which the mark is affixed.—Rum.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Circuit Court of Appeals—Seventh Circuit.

HUMMEL & DOWNING CO. *v.* HINDE & DAUCH PAPER CO. *et al.* SAME *v.* KIECKHEFER BOX CO. Nos. 2762, 2763.

Decided March 3, 1921.

1. PATENTS—REISSUE NO. 14,267, FOR PACKAGE-SEALING MACHINE, HELD INVALID AS UNAUTHORIZED.

The Morton reissue patent, No. 14,267, (original No. 1,138,238,) for improvements in package-sealing machines, *Held* invalid as not authorized by any inadvertence, accident, or mistake in the original patent and also as containing new matter.

2. SAME—No. 1,216,175, FOR IMPROVEMENTS IN PRESSES, HELD VOID FOR ANTICIPATION.

The Simpson patent, No. 1,216,175, for press for package-sealing machine, *Held* void for anticipation and lack of invention.

3. SAME—No. 1,228,978, FOR PLATEN CONNECTIONS, HELD VOID FOR LACK OF INVENTION.

The Simpson patent, No. 1,228,978, for improvements in platen connections in package-sealing machines, *Held* void for anticipation and lack of invention.

APPEALS from the District Court of the United States for the Eastern District of Wisconsin.

Suits in equity by the Hinde & Dauch Paper Company and another and by the Kieckhefer Box Company against the Hummel & Downing Company. Decrees for complainants, and defendant appeals. Reversed.

Mr. Arthur L. Morsell for the appellant.

Mr. Max W. Zabel for the appellees.

Before BAKER, ALSCHULER, and PAGE, circuit judges.

PAGE, *Cir. J.*:

No. 2762: On November 10, 1913, one Lawrence D. Morton filed his application for patent upon improvements in package-sealing machines. There was issued to said appellee, The Hinde & Dauch Paper Company, assignee, on May 4, 1915, Letters Patent No. 1,138,238, hereinafter known as the Morton original. On August 5, 1916, Morton petitioned for a reissue of Letters Patent, and Reissue Letters Patent No. 14,267 were, on March 6, 1917, issued to the Hinde & Dauch Paper Company. The Hinde & Dauch Paper Company constituted its co-appellee, Kieckhefer Box Company, licensee under said Reissue Letters Patent.

No. 2763: The complaint alleged that on June 29, 1914, one Simpson filed application for improvements in presses; that Letters Patent No. 1,216,175, bearing date February 13, 1917, were issued thereon to appellee, as assignee; that on the 28th of October, 1914, said Simpson applied for patent for improvements in platen connections; that there was, on June 5, 1917, issued to the appellee, as assignee, Letters Patent No. 1,228,978; that the appellant had infringed.

The cases were tried together and resulted in a decree for appellees (plaintiffs) in No. 2762, finding infringement of claims 9, 10, 11, 12, and 13 of the Morton reissue patent, and, in No. 2763, a decree in favor of appellee (plaintiff) found infringement of claims 2 and 3 of the Simpson patent, No. 1,216,175, and claims 1, 2, and 3 of Simpson patent, No. 1,228,978. These are appeals brought to reverse those decrees.

No. 2762.

1. No history of the Morton invention appears in the record, other than that shown in the file wrappers. The Morton original patent was allowed November 23, 1914, and letters issued May 4, 1915. Each of the ten claims allowed was for a combination embracing a revoluble carrier. The file wrapper shows that the claims filed with the original application covered some of the constituent elements of the individual sealing device, shown in the drawings. It also shows that from time to time other such elements were introduced into the claim. Morton's specifications, with twenty-eight claims,, for the reissue, were supported by an oath. Concerning that oath, the Department said:

> The oath accompanying this application is insufficient, because it fails to set out the alleged defects and insufficiencies with the particularity required by rule 87. • • • The oath alleges that specification does not set forth the general mode of operation with sufficient clarity and that the claims are not sufficiently broad. *Even these general statements do not appear to be borne out by a comparison of the original and reissue applications.*

A new oath was made by Morton. The differences in the wording of the two oaths are shown in the following parallel:

Original.	*Amended.*
1. The claims are unnecessarily limited to a revoluble framework.	1. Each claim, respectively, the claims numbered from 1 to 10, inclusive, has in line 1 thereof either the word "revoluble" or the word "revolving," thus limiting the device to a framework which is rotatable, whereas the rotatable feature of the device is merely incidental.
2. The specification does not set forth with sufficient clarity the general mode of operation of the device.	2. That such errors so particularly specified occurred as follows: The attorney in charge of the prosecution failed to realize during the prosecution that the revolving character of the framework was merely incidental and thus included that unimportant feature as one of the controlling elements in the claims.
3. That such errors so particularly specified occurred as follows: Through the failure of the attorney to have the claims of sufficient breadth on account of a mistake in his understanding of the real mode of operation of the device.	

We are unable to see any difference, in substance, between the two oaths. Morton was asked on the trial:

Q. The oath forming part of your reissue patent sets forth that through inadvertence, accident, or mistake the claims of the original patent were not made broad enough to cover your invention. Can you tell us what that inadvertence, accident or mistake was?

He answered:

That is the language of an attorney, and I would rather not get into it.

An examination of the claims presented, and of those rejected and those allowed, and of the changes made in the specifications filed for the reissue, convinces us that no inadvertence, accident, or mistake intervened in the prosecution of the original Morton application.

The elements composing the combination in claim 9 are as follows: (1) A pair of platens; (2) means for bringing said platens into and out of parallel alined relation; (3) lever and cam mechanism for moving one of said platens relatively to the other when in their alined condition; (4) a stem upon which one of said platens is mounted, said last aforesaid platen consisting of a rigid platelike structure and having edges parallel substantially to the sides of a box structure, so that the loose box end extremities may be folded upon said platen into their overlapping positions; (5) a support upon said stem adapted to hold the lower extending unfolded extremities of said box.

Claim 10 is identical with claim 9, except there is added: (6) a yielding mounting for one of said platens.

Claim 13 is the same as claim 9, except it is not so specific in some respects.

Claim 11 is for (1) a pair of platens; (2) means for bringing said platens into and out of parallel alined relation; (3) an adjustable stop to control said means; (4) means for moving one of said platens relatively to the other when in their alined condition; (5) a stem upon which one of said platens is mounted; and (6) a yielding mounting for one of said platens.

The elements of claim 12 are: (1) A pair of relatively moving platens; (2) a supporting structure therefor whereby relative motion may be imparted to the platens so that a box structure may be placed upon one of said platens without interference from the other platen; (3) means for moving and locking one of said platens whereby said platens are adapted to seal the overlapping ends of a box structure placed therebetween by pressing the overlapping ends between them, and means whereby opposing box flaps may be pressed toward each other prior to sealing.

In claim 9 there is no element that is not very old and that has not been used in combination many times, unless it is the fifth element: "a support upon said stem adapted to hold the lower extending unfolded extremities of said box." The record shows that this element was put upon the modified Muscatine machine some time in 1913. While it is not clearly shown that that was prior to November 10, 1913, when Morton filed his original application, yet it does clearly appear that this element was embraced and used in the modified Muscatine machine six months before it was embodied in any claim by Morton. It further appers that the Morton invention was a package-sealing machine, whereas the support in question really had nothing to do with the sealing operation performed by the machine. It was merely a stop placed at such a distance below the upper surface of the lower platen as would bring the hinge-line between the upper flaps and the sides of the box into the plane of the upper face of the lower platen. The sole purpose of it was to facilitate not an operation of the machine, but a hand operation of turning down the flaps on the head of the lower platen. There is nothing in the record, except the argument, to show that this really added anything even to the hand operation. From the reading of the record it is more than doubtful whether it did or could facilitate such an operation.

We have seen that this machine was particularly designed for use in connection with heavy grades of boxes, made of heavy cardboard, corrugated paper, and the like. The specifications repeatedly use the word "flaps" to distinguish the ends that are turned down. It also appears that the support is so spaced below the face of the lower platen that the "hinge line" is brought to a certain point. It also appears that unskilled labor is used to do the work of sealing. From the nature of heavy cardboard, particularly of corrugated paper and the like, and from the use of the word "flaps" and the words "hinge line," it is altogether probable that the hinge-line referred to was a real hinge made by scoring; if so, then that fixed definitely the point, and the only point, at which the flap could be turned down. It seems obvious that heavy cardboard and corrugated paper could not be otherwise handled without much breakage, and that unskilled labor could not handle such material at all, unless it was scored to make hinges for the flaps; particularly would that be true if the width of the box was so great that the operator could not, in pressing the flap down, cover its whole width with one or both of his hands. If the support added anything to any operation, it added to the hand operation and represented a mere aggregation and not invention. It was never more than a mere rest or stop. The same supports are found in the Wyman patent, No. 731,729, in what seems to us to be substantially the same combination, and likewise in the Jewell patent, No. 600,348, and Weis patents, Nos. 1,095,536 and 1,095,537.

The above discussion fully disposes of claim 10, except as to the provision, "a yielding mounting for one of the platens." This element was clearly present and represented in the spring 17, interposed between the platen and the arms 12ª in Figure 5, Weis patent, No. 1,095,536. It was also clearly present and represented in the coil-springs in the Muscatine machine, as shown in the opinion in case No. 2763.

The discussion of claim 9 fully disposes of claim 13.

Claim 11 contains an element, "an adjustable stop to control said means" of bringing the platens into and out of parallel alined relation. Reading together two widely-separated statements found in appellees' brief, we find that, in reading claim 11 upon the appellant's device shown in drawing A22, it is said that the adjustable stops in claim 11 are the stops 3 and 4 in drawing A22; but elsewhere in discussing claim 11 appellee claims counsel says that the adjustable stops therein are the elements O. The so-called adjustable stops 3 and 4 in A22 are set screws found at the bottom of the stem or shaft carrying the lower platen, and the elements O are the springs shown on the head H (Morton drawing) of which it is said in the old specifications:

During this operation the guides O insure proper registration of the heads G and H, so that, when clamped, all portions of the overlapping flaps are firmly pressed together.

To which was added in the reissue specifications:

Thus the guides O as stated press the overlapping flaps toward each other prior to and up to the time that the platens begin their operation of pressing the overlapping faces together.

We are unable to see in the guides O anything that could possibly control the means for bringing said platens into and out of parallel alined relation.

There are stops F and F' shown at the bottom of the stem in the Morton drawing, which more nearly approach the adjustable screws 3 and 4 in appellant's A22, but they are non-adjustable and there could be no infringement of this element.

Claims 12 contains the element.

means whereby opposing box flaps may be pressed toward each other prior to sealing.

Here, again, appellee's separated arguments must be brought together. In one place appellee says that the elements O represent means whereby opposing box-flaps may be pressed toward each other prior to sealing. These are the same elements O referred to in discussing claim 11. In reading claim 12 upon appellant's structure, it is said that means whereby opposing box-flaps may be pressed toward each other prior to sealing find their equivalent stop 13 (appellant's A22) or the downwardly extending lugs forming a part of the platen in appellant's B23.

Analyzation of the specifications on the method of operation, etc., shows that the arguments and conclusions are unsound. First, the elements O could not at one and the same time find their counterpart in stop 13 (A22) or the downwardly-extending lugs in B23, and also in the set-screws at the bottom of the stem or standard in A22. It is possible that stop 13 (A22), which is adjustably fastened onto the framework and which is designed to come in contact with the box over the outer edge of the lower platen at one point, may be a stop against which, in a hand operation, the box could be pressed by the operator, so as to bring the flaps together. In such case it is a mere stop, and it does not constitute a machine operation by means of which opposing box-flaps are pressed together. The same is true of the downwardly-extending lugs in B23. But a difficulty quite as serious arises in connection with the guides O, which in the original specification were merely to insure proper registration of the upper and lower platen. As above shown, the words,

Thus the guides O as stated press the overlapping flaps toward each other prior to and up to the time that the platens begin their operation of pressing the overlapping faces together,

present a false conclusion. It is wholly new matter in the reissue specifications, and not permissible.

There is a further reason why the argument and conclusions are unsound. There is a clear intimation that the lower platen is the exact size of the interior of the box to be sealed. This is asserted in the argument in case No. 2763. In fact, it would seem to be necessary in order that the package-head may be sealed throughout. From the nature of the operation in the use of heavy cardboard and corrugated-paper boxes, it would be absolutely necessary that there should be scored a hinge-line between the flap and the body of the box, or that the lower platen should be of the exact size of the box. If the hinge-line was scored the flaps would fall or be easily pressed down, bending naturally at the score-line, and the flaps would fall in such a relation to each other as the size permitted or required. The platen would square the box perfectly, with the edge of the platen touching the inside of the box all around, so that there would be neither opportunity nor necessity for any means of squaring the box or pressing the edges of the flaps together. They would be together or apart, just as they were cut. On the other hand, if the platen was not the exact size of the inside of the box, it could only be smaller, and unscored heavy cardboard or corrugated paper could not be bent down over a platen smaller than the box by an unskilled laborer or any one else. If means are used to press opposing box-flaps toward each other prior to sealing, that means is the unpatented and unpatentable hands of men and no part of the appellee's device.

No. 2763.

This suit, heard together with No. 2762, was brought by appellee, Kieckhefer Box Company, upon Patent No. 1,216,175, for which application was filed June 29, 1914, and upon Patent No. 1,228,978, application filed October 28, 1914, and is here to reverse the decree of the district court, finding infringement and sustaining validity of claims 2 and 3 of the first patent and all three claims of the other.

Simpson Patent No. 1,216,175.

(2) Appellee claims in argument that—

the novel feature of this patent rests in the means provided for securing the complete closure of the box ends.

The thing claimed in the specification is:

Downwardly extending lugs are provided at the rear and at one end of the plunger to assist in squaring the box flaps, * * * these lugs having a sufficient length to reach below the plane of the said flaps, when the plunger is in its upper position. Before lowering the plunger the operator presses the box flaps toward the center of the press, and while holding them in this position the lever is thrown.

The language in claims 2 and 3 is:

Downwardly extending lugs along one edge of the plunger against which the box flaps may be forced before lowering the plunger.

Another clause of the specifications is important, viz:

The platen is of a size to just fit within the box.

Appellee gives the operation of the press as follows:

When the stem is swung outwardly * * * the blank box form may be inserted over the platen until the lower box extremities rest upon the arms. The operator then folds two of the flaps inwardly, applies adhesive thereon, and folds the two outer flaps on top. The structure is then swung inwardly to the position * * * directly underneath the platen, so that the inner end of the box form rests against the downwardly extending lugs. * * * During the time that the operator is pulling down the lever so as to force the platen into sealing position the operator exerts by hand a pressure against the upper forward edge of the box form so as to push the box form tightly against the lugs. In this manner the upper opposing box flaps are pressed toward each other prior to sealing in order to thereby get the requisite closure of the box end.

In the Morton specifications, as amended for reissue, it is stated:

My improved machine is particularly designed for use in connection with the heavier grades of knock-down boxes made of heavy cardboard, corrugated paper, and the like. * * * The package or carton which is closed and sealed upon my improved machine comprises rectangular sides hinged to each other at the corners and projecting flaps from opposite ends thereof. In knock-down position the sides and end flaps lie in the same plane.

Taking these matters as claimed, they show:

1. That the means "to assist in squaring the box flaps" as set out in the specifications, viz., "lugs at the rear and at one end of the plunger," were abandoned in the claims in question, and the operation of—

pressing the box flaps toward the center of the press and * * * holding them in this position

was also abandoned in the claims in question.

2. In the specifications the lugs only assisted in squaring the flaps. So far as appears from the specifications, the pressing of the box flaps toward the center and holding them there was done by the operator, wholly unaided by the lugs. In the claims in question a different means, viz., lugs along one edge was claimed and a different purpose claimed, viz, "against which the box flaps may be pressed."

3. If the lower platen is made as specified, viz., "of a size just to fit within the box," then neither the function of the lugs specified, viz., "to assist in squaring the box flaps," nor the function claimed, viz., "against which the box flaps may be forced," could by any possibility be performed because a "platen just to fit" would square the box and the flaps would fall together just as they were cut.

4. Including the lugs as an element in a combination, and not claiming them singly, is an admission that they are not new. In the combination as claimed they could not be useful. The claims are for something not specified.

5. In appellee's operation of the press, as described, the flaps are not pressed against the lugs, nor is there contact anywhere.

Every element in the claims is found in the Morton device, even down to the lugs. The only attempt to point out any difference in this respect between the lugs and the fingers O in the Morton patent is in the following:

> These means are different in manner of detail from those disclosed in the Morton patent.

The contention is made that the lug or stop in appellant's device is the equivalent not only of the Morton fingers, but also of the Kieckhefer lugs. That being true, the Morton fingers and the Kieckhefer lugs must be the equivalent of each other, with the Morton as prior art.

The cartons described in the Morton patent and also in the Kieckhefer patent have identical ends (only one can be sealed on the press). From the uncertainty and lack of harmony between the specifications and the claims in question, when considered in connection with the following language from the Morton specifications, viz:

> Thereafter, the boxes are filled with merchandise and the sealing of the second end presents no particular difficulties

it is doubtful what, if any, purpose either the fingers or the lugs perform.

Simpson Patent No. 1,228,978.

(3) The claim under this patent is that the universal mounting of one of the platens, it does not matter which, is novel and important. The universal mounting has been so long and so variously in use that its use may almost be said to be universal. The press described by Simpson is no more truly a press than is the Lockwood copying-press, Patent No. 438,850, of October 21, 1890, where the universal mounting was used. The plate on the end of the ordinary builder's screw-jack is a very old example of the universal mounting and designed to not only permit the turning of the screw, but the adjustment of the plate to any angularities or irregularities in the contact.

The universal mounting, or perhaps, to be more accurate, the substantial equivalent thereof, was long used in the Muscatine machine. Its use by Simpson added nothing to the art. The Muscatine machine is disposed of by appellee in a very brief argument, which in substance says:

> The machine, according to appellant's testimony, was built in 1901 and used continuously until 1910. The machines then remained idle for three years, until some of them were purchased by Mr. Ziegler, * * * being what might be called an abandoned device.

This argument is not supported by the record. That the Muscatine machine never became commercially known might well be due to the fact that it was made by a user of cartons, not by a maker and vender of them. The Muscatine machine was made by a man doing general carpenter-work in an oatmeal-mill in Muscatine, Iowa, in 1901. It was never patented, but was used continuously for ten years. Then, because of changes in the business, its use was temporarily discontinued. Some time in 1913 it was put into use again, and because it then had added to it rests or arms, upon which the box rested while the upper end was being sealed, was called in the record the "modified Muscatine machine." It is in fact insisted that the last modification was made so recently that it was later than the Morton original application, and therefore does not represent prior art. There is nothing here that indicates abandonment. The record shows continued use and improvement.

The fact that the machine is crude so far as workmanship is concerned can make no difference. It had every element found in the Morton and Kieckhefer machines, excepting only the rotatable feature of the Morton, and possibly the lugs, and did the same work. The record shows that the stem of the Muscatine machine was merely a continuation of the lower platen of that machine, and that it was just the size of the containers that were placed over it, so that those downwardly extending sides of the stem were downwardly extending lugs, and, being the size of the carton, necessarily squared it.

The Muscatine machine antedated the Simpson patents, and the fact that it was made up from old and well-known elements by a man doing general carpenter-work in the Muscatine mill is convincing evidence that the Simpson patents are merely aggregations of old elements, in which no element performs any new function. Neither does the combination.

Both decrees are reversed, and the causes remanded, with instructions to dismiss the bills.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 19, 1921.

The Cachoid Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Bryant, French & Company, 305 South Fifth street, Minneapolis, Minn., for registration of a trade-mark and trade-mark registered December 11, 1906, No. 58,392, to The Cachoid Company, 170 West Seventy-eighth street, New York, N. Y., and a notice of such declaration sent by registered mail to The Cachoid Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The Cachoid Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,332,860.

On July 18, 1921, a decision was rendered that Alfred A. Wells was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, 5, 6, 7, 8, and 9 of his Patent No. 1,332,860, subject, "Coumarone-resin insulating material," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,287,331.

On July 19, 1921, a decision was rendered that John W. Jepson was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, 5, 6, 7, and 9 of his Patent No. 1,287,331, subject, "Electrical system of distribution," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,359,168.

On July 18, 1921, a decision was rendered that William S. Guthrie was not the first inventor of the subject-matter covered by claim 12 of his Patent No. 1,359,168, subject, "Controlling mechanism for exhaust-gases of internal-combustion engines," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,329,459.

On July 19, 1921, a decision was rendered that Emeis R. Dunsford was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,329,459, subject, "Machine for feeding sand to molding-flasks," and no appeal having been taken within the time allowed such decision has become final.

Patents Nos. 1,388,155 to 1,388,838.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 289—No. 4. TUESDAY, AUGUST 23, 1921. Price—$5 per year.
[PUBLISHED SEPTEMBER 8, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

International Bureau at Habana—Protection of Trade-Marks.

(ORDER No. 2,685.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 6, 1921.

Under the convention adopted for the establishment of the International Bureau at Habana and regulations of such Bureau (280 O. G., 195) it is provided, to carry into effect the convention for the protection of trade-marks, that the legal representative of the administration of the country of origin shall communicate to the International Bureau (articles 2–1) the claim of the owner of the mark.

Hereafter no official abstract of title need be furnished by the applicant, but a fee of $5 must be paid the U. S. Patent Office, which will make the title search and perform the other work in connection with the certificate to the Habana Bureau.

Hereafter the applicant need not fill in the official form for such certificate, but in addition to paying the fee of $5 must provide the Office with (*a*) an international money order for $50 to the order of "Director of the International Bureau, Habana;" (*b*) an electrotype of the trade-mark, not larger than 10 centimeters in either dimension; (*c*) should the United States registration claim color as a distinctive element of the trade-mark he shall furnish thirty copies of the mark printed on paper, reproduced in color; (*d*) a statement including (1) the name of the owner of the mark; (2) the address of the owner of the mark; (3) the number and date of registration of the mark in the United States Patent Office, and (4) a translation into Spanish of the particular description of goods as stated in the certificate of registration.

THOMAS E. ROBERTSON,
Commissioner.

Fee for Recording Articles of Incorporation.

(ORDER No. 2,688.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 9, 1921.

For the present the Patent Office is recording the articles of incorporation of companies, so that their names may be available for trade-mark searchers. This is done at the request of the attorneys and is not advocated by the Office. As long as this practice continues a charge will be made for such record of $1.00 for 300 words or less; $2.00 if over 300 words and under 1,000 words; $1.00 for each additional 1,000 words or portion thereof.

THOMAS E. ROBERTSON,
Commissioner.

Classification Bulletin.

No. 46, containing the revision made during the period from January 1 to June 30, 1921, is now out. Price 10 cents.

TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Mark section will include: Trade-Marks published under the act of 1905; Trade-Marks registered under the act of 1905 and under the act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

Condition of Applications Under Examination at Close of Business August 13, 1921.

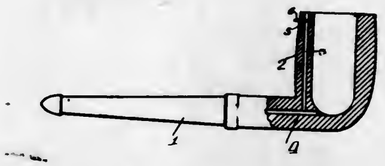
PATENTS

GRANTED AUGUST 23, 1921.

1,388,155. BEDPAN. EDWIN D. ABRAHAM, Chicago, Ill. Filed Sept. 2, 1919. Serial No. 321,015. 2 Claims. (Cl. 4—10.)

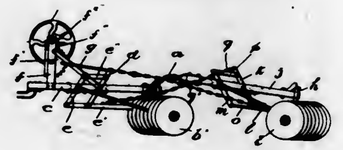
1. A bed pan comprising a substantially oblong outer receptacle tapering at one end and having a substantially flat bottom and side walls extending entirely around the bottom, said receptacle being formed with a flange turned inwardly along the upper edge thereof and extending around the wider end of the receptacle and along the converging sides, thereby providing an opening, and a removable inner receptacle having a body portion inserted through said opening to rest upon the bottom of said outer receptacle, said inner receptacle conforming substantially in outline with said outer receptacle and having its side walls formed with an outwardly turned flange extending along the upper edge thereof, said outwardly turned flange extending entirely around the wider end of the inner receptacle along the converging sides thereof and being arranged to overlie and rest on the inwardly turned flange of said outer receptacle.

1,388,156. FISHING-FLY AND METHOD OF MAKING THE SAME. CHAUNCY W. ALLEN, Sacramento, Calif. Filed July 27, 1920. Serial No. 399,359. 8 Claims. (Cl. 43—48.)



1. The method of making an artificial bait which consists in stripping back the barbs of a feather from tip to quill, securing one end of the feather to a hook, wrapping the feather spirally about the shank of the hook while applying torsion to the shaft of the feather to force the barbs of the feather in an outstanding position, and securing the other end of the feather to the hook.

1,388,157. VANADIUM-CONTAINING IMPACT-TOOL FOR HOT WORK. PERCY A. E. ARMSTRONG, Loudonville, N. Y., assignor to Ludlum Steel Company, a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 289,150. 2 Claims. (Cl. 75—1.)

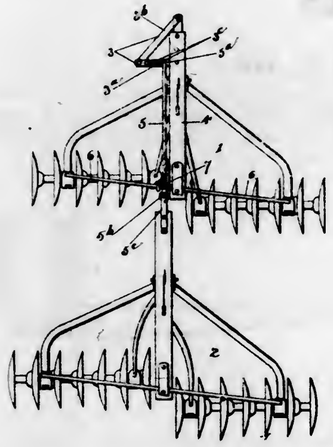


1. Impact tools for hot work of air hardening alloy steel, containing: carbon about .30–.60%, manganese about .30–1%, chromium about 1–1.75%, nickel about 5–6%, and also containing vanadium and the greater part of the remainder iron.

1,388,158. PIPE. JOHN AUSTIN, Geneva, Ohio. Filed Sept. 16, 1919. Serial No. 324,097. 1 Claim. (Cl. 131—12.)

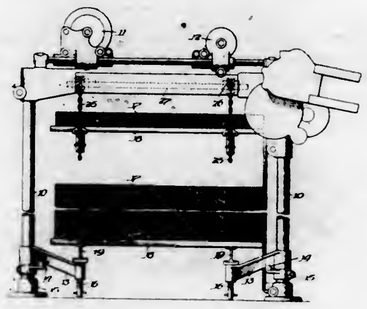
A tobacco pipe including a stem having a passage therein, a bowl opening into the passage and having an air passage in the wall thereof opening at one end into the passage in the stem and at its other end through the top of the bowl, there being a slot extending partly through the wall of the bowl and intersecting the passage in said bowl, a damper pivotally mounted in the slot and normally filling the same, said damper being movable to open or close the passage in the bowl, and a projection on the narrow portion of the damper and extending beyond the wall of the bowl, said projection having opposed finger nail receiving recesses.

1,388,159. DISK HARROW. TORRANCE EDWARD BISSELL, Elora, Ontario, Canada. Filed Aug. 14, 1920. Serial No. 403,551. 7 Claims. (Cl. 55—83.)



1. A disk harrow comprising a train of harrow units, a set of levers for each unit to angle its respective disk gang, the levers of each set being connected for united movement, operable means having a rigid connection with one of the levers of the front unit, and flexible connections between said lever and the corresponding lever of the unit in rear for simultaneously angling all the disk gangs of the train.

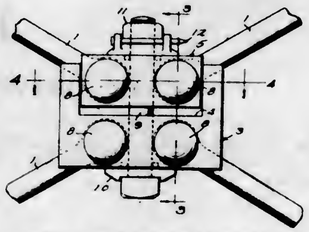
1,388,160. HORIZONTAL ADJUSTABLE DRAFT CONNECTION FOR DISK HARROWS. TORRANCE EDWARD BISSELL, Elora, Ontario, Canada. Filed Nov. 5, 1920. Serial No. 421,927. 6 Claims. (Cl. 55—83.)



1. A draft connection between units of a tandem disk harrow, comprising a draft member, the front end of which has a laterally adjustable connection with the front unit and the rear end of which has a pivotal con-

nection with the rear unit, and means laterally adjustably holding the rear end of the draft member to the frame

of the front unit for the pivotal attachment of the rear unit.

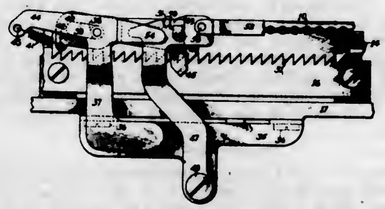


1,388,161. RELOADING FEEDER. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 27, 1917. Serial No. 164,942. Renewed Jan. 17, 1921. Serial No. 437,374. 5 Claims. (Cl. 271—62.)

2. Pile feeding means, comprising in combination, a plurality of standards, swinging arms supported on the standards near the lower ends thereof, and means for lifting a pile between the standards, a second pile being adapted to be supported on said arms while said first pile is being lifted and means carried by said arms for serving as additional supports therefor, substantially as described.

1,388,162. FITTING FOR DIAGONAL BRACES. RICHARD RALPH BLOSS and WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignors to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Jan. 20, 1921. Serial No. 438,721. 4 Claims. (Cl. 189—20.)

2. A fitting for diagonal bracing members comprising a pair of plates adapted to be arranged on opposite sides of the ends of the bracing members, said plates being provided with recesses, a second pair of plates adjustably mounted in said recesses, means for securing the ends of the braces to one of each pair of plates, and fastening



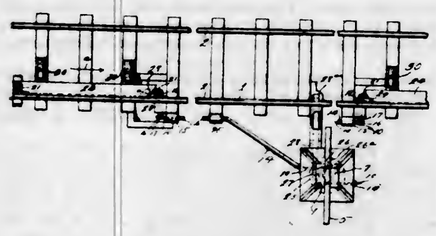
means for retaining said second mentioned plates in said recesses.

1,388,163. NECKTIE-RETAINER. MARTIN J. BOLSTAD, Salt Lake City, Utah. Filed Nov. 17, 1919. Serial No. 338,425. 3 Claims. (Cl. 2—84.)

3. A tie holder comprising in combination with a tie, a single body of substantially triangular shaped sheet material, with its apex portion lowermost and having a substantially triangular shaped central opening symmetrically disposed providing an upper bar about which the tie is tied, said body also having an outwardly extending lug adjacent its lower portion to engage the knotted portion of the tie and cause it to stand outwardly with respect to the holder body, giving the appearance of fullness to the tie.

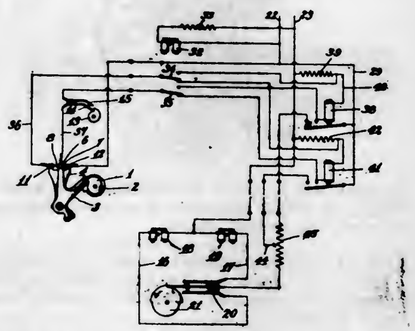
1,388,164. TYPEWRITING-MACHINE. HERBERT E. BRIDGWATER, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 8, 1921. Serial No. 435,974. 7 Claims. (Cl. 197—91.)

1. In a typewriting machine, the combination of a carriage, a releasable feed rack, a back spacing rack separate and distinct from said feed rack and fixedly connected to said carriage, a rigid back spacing pawl carrier mounted for pivotal movement and also for sliding movement in the direction of the travel of the carriage and provided with a fixedly connected back spacing pawl,



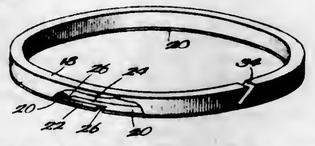
a spring connected directly to said carrier for returning it to normal position, a key actuated lever extending transversely of the sliding movement of said pawl carrier and provided with a cam which coacts therewith to turn said carrier and engage the pawl thereon with the back spacing rack while said spring tends to resist a sliding movement of the carrier, and coacting means between said lever and carrier for affording a movement of one relatively to the other and also for actuating one by the other.

1,388,165. FLASHLIGHT. WILLIAM BRONIE, Brooklyn, N. Y., assignor to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 22, 1919. Serial No. 332,382. 8 Claims. (Cl. 200—60.)



3. A contact device for flashlights comprising in combination a slotted casing, an automatically returning contact member, a circuit controlling member mounted on said casing for both sliding and tilting movement, said member in its tilted position being adapted to shift the contact member to circuit closing position, and a tongue on the casing adapted to form a fulcrum for the circuit controlling member when the same is tilted.

1,388,166. RAILROAD-CROSSING SIGNAL. GEORGE C. BRONSON and MERLE C. ST. CLAIR, Newcastle, Ind. Filed Mar. 8, 1921. Serial No. 450,796. 1 Claim. (Cl. 246—299.)



A train operated signal comprising wheel engaging treads spaced from each other and a signal disposed intermediate said treads, arms carried by said signal and extending in opposite directions, cables connected to the ends of said arms, said cables extending through conduits, spring means normally maintaining the signal in normal position, the ends of said cables being connected to upstanding arms of levers, said levers being rockably mounted in bearings and provided with horizontally disposed oppositely extending arms, rods pivoted to the ends of said arms and extending upwardly, the tread members located adjacent a rail and loosely pivoted at one of their ends, the adjacent ends of the tread members having loose connections with the upper ends of the upwardly extending rods carried by the horizontally disposed arms of the levers, spring means for normally holding the treads in engagement with the rail, a lever pivoted adjacent the rail, a lug carried by the signal and forming a stop, one end of said lever being disposed adjacent the rail and adapted to be engaged by a flange of a wheel, said lug being so positioned that when either of the signal actuated mechanisms is actuated the signal will be held against retrograde movement, said lever forming means whereby when the train passes the signal, said signal will be released and allowed to return to normal position.

1,388,167. SYNCHRONIZING-CLOCK SYSTEM. JAMES W. BRYCE, Binghamton, N. Y., assignor to The International Time Recording Company of New York, a Corporation of New York. Filed Dec. 30, 1920. Serial No. 433,976. 3 Claims. (Cl. 58—24.)

1. In a synchronizing clock system, the combination with a source of operating current, of a master clock, a circuit from the source to the same, a relay, a resistance and a circuit controller operated by the master clock in such circuit, said circuit controller being adapted to close such circuit for definite intervals of time, means operated by the relay for closing the circuit from the source through said resistance and its own magnet and for connecting said source to the line, and means operated by the master clock for throwing said relay out of action at the end of the periods of closure by the circuit controller therein.

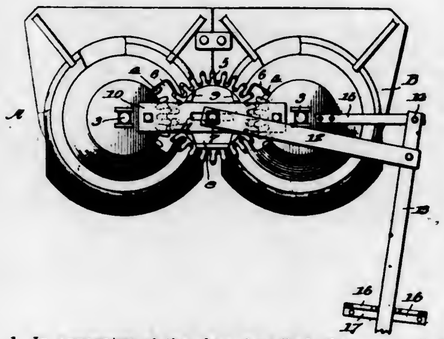
1,388,168. COMPRESSION-SEAL FOR PISTONS. EARL J. BULLARD, Madison, Wis. Filed Oct. 13, 1920. Serial No. 416,685. 2 Claims. (Cl. 74—109.)

2. In mechanism of the class described, in combination with a piston having a circumferential ring seat of substantial width, a ring of any suitable construction occupying most of the width of the ring seat and a relatively thin ring made of relatively soft metal having a circumferential expansion joint, interposed between the wide ring and the ring seat wall and held in place by the wider ring to make an effective compression seal, and a spring ring occupying the space between the other side of the wider ring and the ring seat.

1,388,169. PROCESS OF TREATING MATERIALS WITH CELLULOSE DERIVATIVES. JOSEPH J. BYERS, Brookline, Mass., assignor to Products Syndicate, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1916. Serial No. 92,320. 12 Claims. (Cl. 91—70.)

10. The method of improving material which consists in impregnating it in the presence of heat with a solution of a cellulose derivative and a non-oxidizing oil.

1,388,170. RETRACTOR. WILLIAM J. CAMERON, Chicago, Ill. Filed Oct. 26, 1918. Serial No. 259,767. 6 Claims. (Cl. 128—16.)

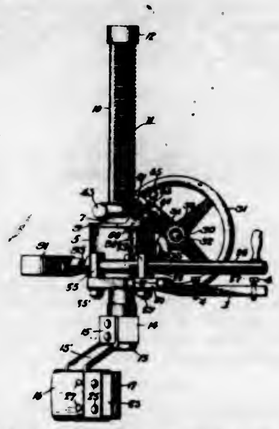


1. The combination with a retractor having a pair of separable arms, a hinge one element whereof is secured to one of said retractor arms, means for holding the elements of said hinge in desired positions, a tongue

depressor, a carrier securing said tongue depressor to the movable element of said hinge whereby said tongue

depressor may be moved longitudinally, and means permitting the pivotal movement of the tongue depressor in horizontal and vertical planes.

1,388,171. TWIN PLANTER. EUGENE M. COLE, Charlotte, N. C. Filed Jan. 14, 1920, Serial No. 351,279. Renewed June 20, 1921. Serial No. 479,085. 7 Claims. (Cl. 74—58.)

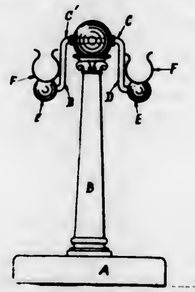


1. In apparatus of the class described, the combination with a pair of operating gears, of a driving gear mounted between the operating gears, and means for shifting said driving gear laterally, in its own plane, into mesh with either one of the operating gears, or simultaneously with both of said gears, as desired.

1,388,172. VETERINARY SURGICAL APPLIANCE. SIMON M. CRADDOCK, Roosevelt, Okla. Filed Mar. 18, 1920. Serial No. 366,895. 1 Claim. (Cl. 128—348.)

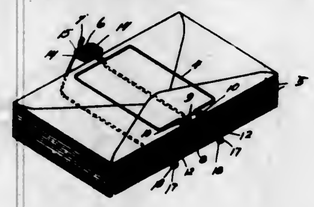
A device for the relief of bloat in cattle comprising an elongated and tapered body having a longitudinal central bore therethrough, said body being adapted to be inserted with its smaller end first through an opening in the abdominal and stomach walls of an animal formed by means of a trocar, the larger end of the body being formed with a diskal flange, and longitudinal fingers on the flange extending in a direction toward the said smaller end of the body, the free ends of the fingers being provided with barbs for penetration in the tissues of the opening in the animal's body.

1,388,173. DISCHARGER FOR SUGAR-CENTRIFUGALS. EDMUND DANIELS, Lahaina, Maui, Hawaii. Filed Aug. 23, 1920. Serial No. 405,542. 16 Claims. (Cl. 210—70.)



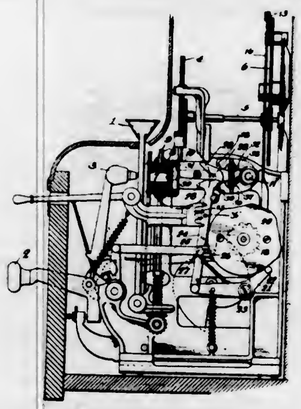
1. A discharger for sugar centrifugals, comprising a fixed bracket, a collar rotatably secured therein, a spindle mounted for vertical movement in and rotary movement with said collar, a semi-circular rack on said spindle, driving gear journaled on said bracket and meshing with said rack, and a plow fixed to the lower end of the spindle.

1,388,174. COMPOSITION OF MATTER AND PROCESS OF MAKING SAME. HENRY W. DENNY, Evanston, Ill. Filed Sept. 29, 1919. Serial No. 327,273. 6 Claims. (Cl. 99—11.)



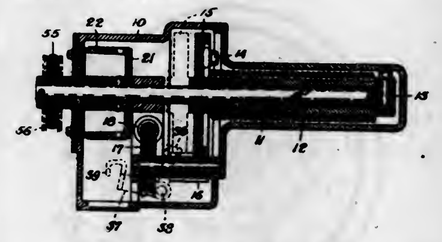
1. A sense-stimulating composition of matter for impregnating purposes, which is solid at ordinary temperatures, comprising, a jellifying material having substantially uniformly ad-mixed therewith, a sense-stimulating substance proper previously placed in solution, the composition of matter being liquefiable in the substance to be treated to thereby permit the impregnation of the substance by said dissolved sense-stimulating substance proper.

1,388,175. PENHOLDER-SUPPORT. JOSEPH J. DESMOND, Corry, Pa. Filed Dec. 26, 1919. Serial No. 347,485. 2 Claims. (Cl. 120—108.)



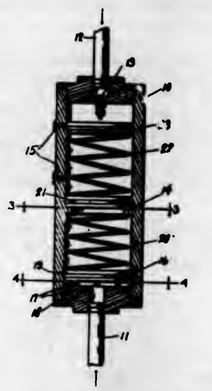
1. In a device of the class described, a weighted base, a vertical post secured to the base, a pair of rods pivoted transversely at opposite sides of the upper end of the post, a weight secured on the lower end of each of the rods and a spring clip mounted on each of the weights.

1,388,176. PACKAGE-TIE. GEORGE F. DILLON, McLouth, Kans. Filed Oct. 25, 1920. Serial No. 419,262. 8 Claims. (Cl. 24—17.)



5. A package tie comprising a frame member adapted to be applied to one side of the package, one end of said frame being provided with a pair of spring arms lying normally in substantially coplanar relation to said frame, a second frame member pivotally connected at one end to said arms for swinging movement in either direction with reference to said arms, said second frame having a spring-hinge structure coöperating with said arms to maintain said second frame normally in a flat outline, and means for detachably connecting the free ends of said frames with said second frame at either side of said first frame.

1,388,177. THREE-RIBBON RECORDER. FRANK B. EELLS, Chicago, Ill., assignor to International Time Recording Company of New York, a Corporation of New York. Filed July 26, 1919. Serial No. 313,579. 11 Claims. (Cl. 234—41.)

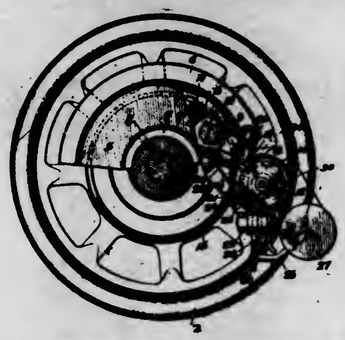


1. In a workman's time recorder, the combination with a multicolored inking ribbon and a movable carrier therefor, of a lever having a movable pivotal support and which is adapted by its engagement with the ribbon carrier to raise or lower the same according to the elevation of its pivotal support, a time controlled cam mechanism including a high cam surface, a low cam surface, and an intermediate cam surface, for varying the elevation of said pivotal support and a printing means which, when operated, brings the said lever into engagement with the carrier.

1,388,178. ENGINE-STARTER. JOHN W. ESTERLINE and DONALD J. ANGUS, Indianapolis, Ind., assignors to Tidewater Equipment Corporation, Portland, Me., a Corporation of Maine. Filed May 4, 1917. Serial No. 166,342. 11 Claims. (Cl. 185—41.)

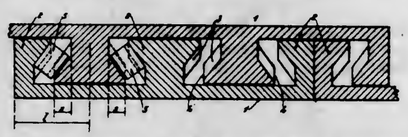
11. In an engine-starter, a starting spring, mechanism including an electric motor arranged to wind said spring at one end, a rotatable member connected to the other end of said spring to transmit the starting motion from the latter, brake mechanism arranged to restrain said rotatable member, means including trip mechanism arranged normally to hold said brake mechanism in brake-applying position, controlling means arranged to trip said trip mechanism to release the brake, said controlling means being arranged to be actuated for the purpose stated by the prolongation of said starting spring in consequence of winding said starting spring to a predetermined degree, and a switch adapted to open and close the circuit of said motor, said controlling means being arranged to operate said switch.

1,388,179. VALVE. ROBERT LEE EVANS and HUGH LEONARD ROBERTS, Roanoke, Va. Filed Nov. 10, 1920. Serial No. 423,202. 5 Claims. (Cl. 116—55.)



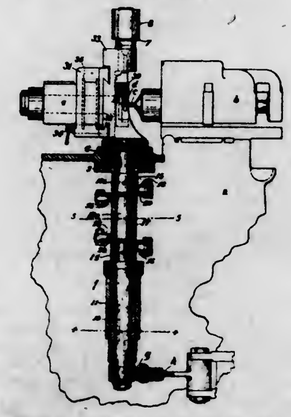
1. A device of the class described comprising a cylinder connected with the brake cylinder, signal means associated with the first mentioned cylinder and means in said first mentioned cylinder for operating the signal means, said means being actuated by the pressure in the brake cylinder caused by the leakage of air therein and said means being rendered inactive when the full pressure is admitted to the brake cylinder to apply the brakes.

1,388,180. BOBBIN-WINDER FOR SEWING-MACHINES. JAMES ALEXANDER FLANAGAN, Toronto, Canada. Filed Apr. 30, 1919, Serial No. 293,663. Renewed June 15, 1921. Serial No. 477,720½. 4 Claims. (Cl. 242—22.)



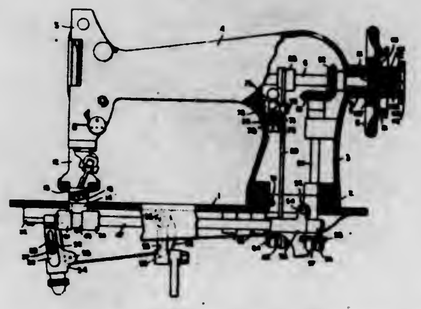
1. A bobbin winder for sewing machines, comprising a pivoted arm adapted to oscillate between an operative and an inoperative position, a bobbin spindle mounted

in said arm, a friction wheel on said spindle adapted to receive motion from the fly-wheel of the sewing machine to turn the spindle, a pivoted latch to yieldingly engage said arm and hold the friction wheel in operative



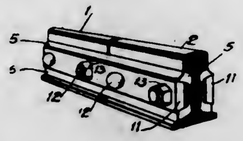
relation with the fly-wheel, and a stationary abutment opposed to the bobbin spindle and engaged by the thread wound on the bobbin as the winding proceeds to actuate the arm to displace the latch and then move said arm from its operative to its inoperative position.

1,388,181. BUILDING-WALL. LOUIS HENRI GUIMONNEAU, Le Raincy, France. Filed Jan. 22, 1920. Serial No. 353,159. 2 Claims. (Cl. 72—38.)



1. A dismountable wall which comprises in combination blocks with vertically and horisontally staggered joints, provided on one face with a plurality of tenons which are placed between the tenons of similar blocks oppositely arranged and which have inclined faces adapted to form with the opposite inclined faces of the opposite blocks downwardly tapering chambers and wedges with correspondingly inclined faces inserted in said chambers.

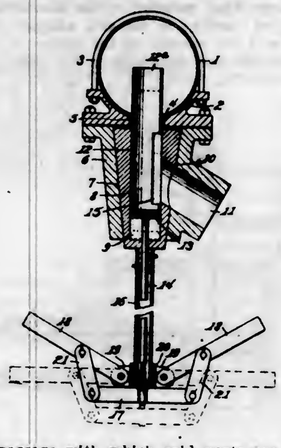
1,388,182. GRINDING-MACHINE. BENGT M. W. HANSON, Hartford, Conn. Filed Dec. 6, 1919. Serial No. 342,912. 9 Claims. (Cl. 51—97.)



1. In a grinding machine, an oscillating work holder, a bearing supporting said holder, oscillating mechanism, and a flexible shaft forming a connection between said work holder and oscillating mechanism.

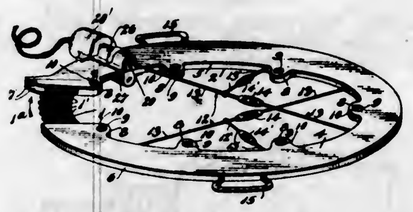
1,388,183. FEEDING MECHANISM FOR SEWING-MACHINES. THOMAS J. HAYES, Roslindale, Mass., assignor to Arbetter Felling Machine Company, Boston, Mass, a Corporation of Maine. Filed Jan. 4, 1917. Serial No. 140,522. 17 Claims. (Cl. 112—178.)

1. In a sewing machine comprising a stationary bed plate, an overhanging arm and stitch forming mechanism carried thereby, feeding mechanism including a pair of rock shafts, means for yieldably supporting the same at one end relatively to the stitch forming mechanism and said bed plate, means for pivotally supporting said shafts at the opposite end, a feed dog operating through an aperture in said bed plate, means for supporting said feed dog from said rock shafts and means for oscillating said rock shafts to actuate said feed dog.



1,388,184. RAILWAY-RAIL JOINT. JACOB A. HYLE, Philadelphia, Pa. Filed May 26, 1921. Serial No. 472,755. 7 Claims. (Cl. 238—244.)

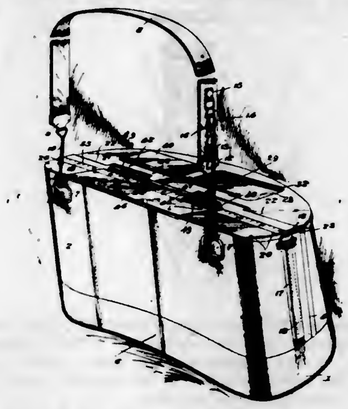
2. A rail joint of the character described, comprising track rails, a splice bar provided with thickened heavy upper and lower members and thinner web portions connecting said members only at and near each end thereof with a recess formed within its outer face, and means for causing said upper portion to be flexed tightly against the tread portion of the rails between said web portions.



1,388,185. FEED-REGULATOR FOR POWDERED FUEL. WILLIAM P. KEYSER and JOHN A. MOORE, Richland district, W. Va. Filed June 10, 1919. Serial No. 303,074. 3 Claims. (Cl. 302—28.)

1. A feed regulator for powdered fuel, comprising a supply conduit for conveying the air and powdered fuel, said conduit having an opening in the under side thereof, a valve casing attached to said conduit and having a cone seat therein, a cone valve rotatable on said seat, a central socket in said valve disposed in register with the opening in the conduit, a tubular member fitted in said socket with its upper end extending into the interior of said conduit for intercepting and conducting downward some of the fuel, and means for adjusting the elevation of said member for disposing the receiving end of the latter at various levels within said conduit, said member and said valve having registering ports, and said valve casing having a

discharge passage with which said ports are adapted to register.

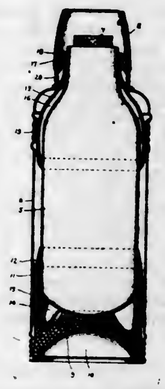


1,388,186. PORTABLE-SAW DEVICE. THOMAS MCCORMICK, Klamath Falls, Oreg. Filed July 7, 1920. Serial No. 394,422. 2 Claims. (Cl. 143—44.)

1. In a portable saw, the combination with an annular saw blade having its outer edge provided with cutting teeth, of a casing therefor comprising arcuate bottom and top plates provided with inner and outer edge walls spacing said plates to receive the saw blade therebtween, the operative portion of said saw blade being exposed between the ends of said casing, pairs of opposite projections extending radially inward from the inner edges of said plates and having alined circular openings therein, disks journaled in said openings, a bolt eccentrically mounted in the disks of each pair of projections, a guide roller journaled on each bolt between said plates and engaging the inner edge of said saw blade, said bolts constituting the means for securing said plates together and said guide rollers being adjustable radially with respect to said saw blade by rotating said disks, and means mounted on said casing for rotating said saw blade.

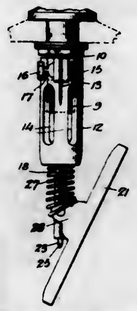
2. In a portable saw, the combination with an annular saw blade having its outer edge provided with cutting teeth, a casing forming an arcuate runway for said blade, the operative portion of said blade being exposed between the ends of said casing, means mounted on said casing for rotating said saw blade, a pair of adjustable main brace members connected at one end of the inner edge portion of said casing adjacent to and on opposite sides of the opening between its ends, said members crossing each other and connected at their opposite ends to the casing opposite the opening between its ends, and an adjustable auxiliary brace member extending at substantially right angles to each main brace member and having one end connected thereto and the other end connected to said casing.

1,388,187. CREEL OR TROUT-BASKET. WEBSTER L. MARBLE, Gladstone, Mich. Filed Apr. 17, 1920. Serial No. 374,577. 4 Claims. (Cl. 43—31.)



1. A creel or trout basket having a cover provided with an opening for the introduction of the fish, a snap-catch for the cover and an inwardly swinging automatically closing door or cover for said opening, said door being of smaller size than the opening, whereby a part of the opening is uncovered.

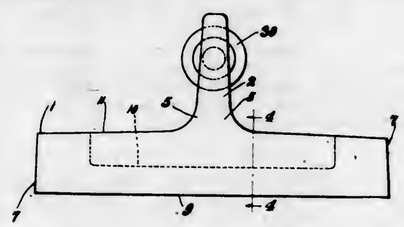
1,388,188. ART OF ANNEALING. PAUL A. MEEHAN, New Castle, Pa., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 20, 1920. Serial No. 375,271. 2 Claims. (Cl. 148—6.)



1. The improvement in the art of annealing acid pickled articles held by metallic supports which consists in neutralizing acid retained on such articles by acid neutralizing material supplied in the form of a coating to said supports from time to time.

1,388,189. THERMOS BOTTLE. GEORGE S. MEIKLE, New York, N. Y. Filed Nov. 4, 1919. Serial No. 335,641. 10 Claims. (Cl. 215—13.

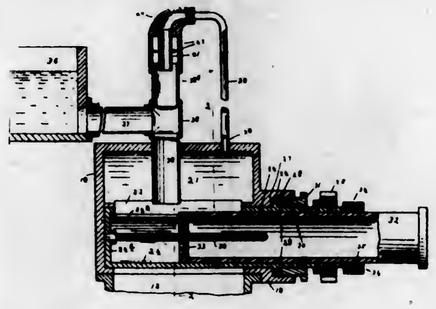
1. In a thermos bottle, a container, a frangible filler, and yielding means for supporting the filler in the container said means providing air pockets under the bottom and at the side of the filler against which the filler rests and which serve to form air cushion supports for the filler.



1,388,190. MOTOMETER-GUARD. GEORGE B. MEAS, Charleston, W. Va. Filed Sept. 23, 1920. Serial No. 412,349. 5 Claims. (Cl. 220—39.)

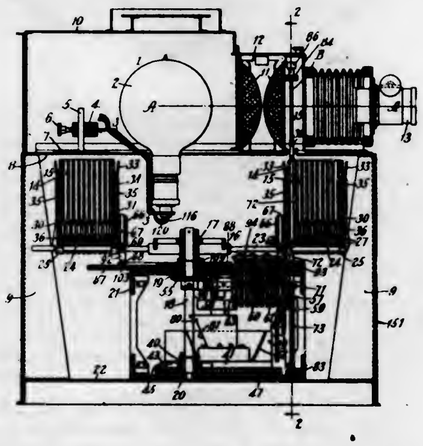
1. A device of the character described comprising a holding member for the motometer, a bolt resiliently connected to said holding member, and a cross-bar for securing the holding member to the radiator mounted on said bolt, substantially as set forth.

5. A device of the character described comprising a holding member for the motometer having a downwardly projecting rigid portion, an inverted T-shaped locking element loosely connected to said rigid portion and adapted for convenient application to a motor radiator, and means for automatically rendering the locking element rigid when in applied position, substantially as set forth.



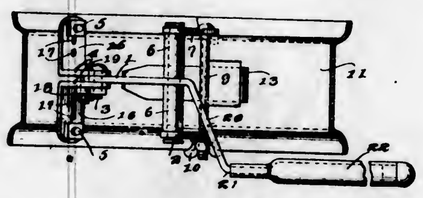
1,388,191. HOE. JOHN F. NEWMAN, Kansas City, Mo. Filed June 21, 1920. Serial No. 390,495. 1 Claim. (Cl. 55—99.)

A hoe comprising a blade and a shank projecting from the blade in direct alinement therewith, the blade being in the form of a narrow strip of relatively small width measured longitudinally of the shank and being of relatively great length measured transversely of the shank, the shank being increased in width at the place where it joins the blade, the blade tapering in thickness from its central portion to its ends to define terminal cutting edges, and being wedge-shaped in cross section, to define a lower cutting edge, the blade being tapered along its ends and in its lower portion, whereby said edges will hold their sharpness, the blade embodying an untempered portion located at the place of juncture between the shank and the blade and extended well toward the ends of the blade to prevent a rupture at the place of juncture between the shank and the blade due to the strain produced by the relative length of the blade, said untempered portion offsetting any weakness resulting from the fact that the blade is narrow.



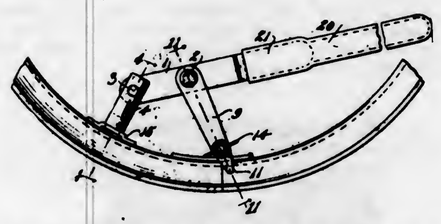
1,388,192. MEASURING DEVICE. GEORGE J. OLNEY, Westernville, N. Y. Filed Dec. 6, 1920. Serial No. 428,751. 4 Claims. (Cl. 99—2.)

1. In a measuring device the combination of a casing having a cylindrical measuring chamber, a supply chamber thereabove, a large opening leading from the supply chamber to the measuring chamber, a passage leading from the bottom of the measuring chamber, a main air escape leading from the said passage, a hollow cylindrical measuring valve revolubly mounted in the measuring chamber and having an opening in its side adapted to register alternately with the opening in the bottom of the supply chamber and with the passage from the measuring cham-



ber, a supply tank above the supply chamber, a supply pipe leading therefrom nearly to the bottom of the supply chamber and an air escape pipe leading from the upper part of the supply chamber to the atmosphere about the level of the liquid in the supply tank and adapted to return liquid carried along with said air to the supply of liquid.

1,388,193. PROJECTING APPARATUS. GEORGE L. W. PALMER, Plainfield, N. J. Filed Jan. 10, 1920. Serial No. 350,539. 33 Claims. (Cl. 88—27.)

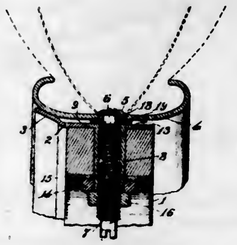


1. A projecting apparatus having in combination, instrumentalities for projecting luminous rays, a carrier constructed and arranged to rotate in a plane substantially parallel with the axis of said rays, a plurality of transparency containers mounted upon said carrier each adapted to hold a plurality of transparencies, means to feed said transparencies consecutively from each of said containers into the path of said rays, and means to move said carrier after a plurality of transparencies have been fed consecutively from a container into the path of said rays.

1,388,194. RIM-OPERATING TOOL. LOUIS H. PERLMAN, New York, N. Y., assignor to General Motors Corporation, a Corporation of Delaware. Filed Feb. 23, 1917. Serial No. 150,490. 5 Claims. (Cl. 157—1.)

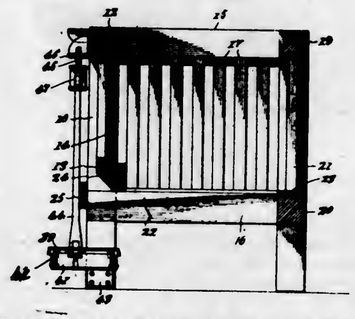
1. A fulcrum post for a cross-cut rim manipulating tool comprising radially disposed plates each having an angularly extending arm, and rim engaging pins adjustable along the arms.

1,388,195. DEMOUNTABLE-RIM-OPERATING TOOL. LOUIS H. PERLMAN, New York, N. Y., assignor to General Motors Corporation, a Corporation of Delaware. Filed Aug. 16, 1917. Serial No. 186,524. 3 Claims. (Cl. 157—1.)



3. An operating tool for manipulating a cross-cut demountable rim comprising a fulcrum post having a button at one end of greater length than width and having a shouldered portion spaced from the button for enabling the button to be inserted in a slot through a portion of the rim and to be rotated beneath the material of the slot so that the terminals of the button will underhang such material while the shoulder overhangs the material, and means engaging the fulcrum post for shifting one end of the rim relative to the other, the said button being formed with a parti-globular face.

1,388,196. RIM. LOUIS H. PERLMAN, New York, N. Y., assignor to General Motors Corporation, a Corporation of Delaware. Filed Nov. 1, 1919. Serial No. 334,919. 3 Claims. (Cl. 301—33.)

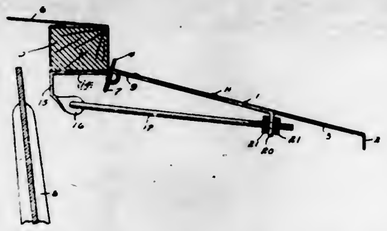


1. In a rim structure, the combination of a cross-cut demountable rim and a pair of levers, one arranged outside of each side flange of the rim and each lever pivoted at an intermediate point in its length to the rim adjacent one terminus of the rim and pivoted to an intermediate portion of the rim at one terminus of the lever, each lever having a free portion extending beyond its first-mentioned pivot and the free portion being offset laterally for receiving the socket of an operating tool.

1,388,197. WHEEL. LOUIS H. PERLMAN, New York, N. Y., assignor to General Motors Corporation, a Corporation of Delaware. Original application filed June 24, 1916, Serial No. 105,693. Divided and this application filed Nov. 8, 1919. Serial No. 336,596. 4 Claims. (Cl. 301—21.)

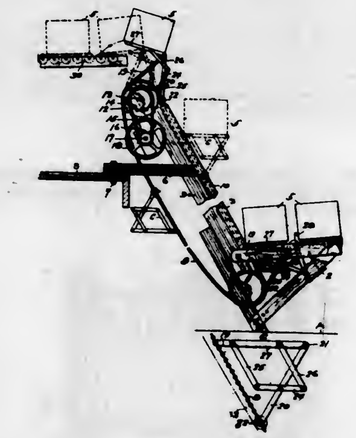
1. The combination, with a wheel body and a demountable rim therefor, of an internally threaded sleeve extending through a portion of the wheel body, and having means of engagement therewith, resisting inward travel of the sleeve, and a nut threaded on to the inner portion of the sleeve, and contacting with a portion of the wheel body for preventing outward travel of the sleeve, a bolt threaded into the sleeve and extending in position to engage and sustain the demountable rim on the wheel body, and a nut threaded on the inner portion of the bolt, and disposed to be threaded into contact with the first-mentioned nut.

1,388,198. VEGETABLE AND FRUIT DISPENSER. FRANK PHILIPPS, Hammond, Ind. Filed Mar. 26, 1921. Serial No. 455,809. 6 Claims. (Cl. 211—9.)



1. In a dispensing device, a hollow body adapted to receive articles to be dispensed and provided with a forwardly inclined bottom forming a chute, a gate closing the outer end of the chute, a pedal mounted upon the side of the body and connected to the gate for swinging the same into open position upon depression of the pedal, and a scale platform mounted within the forward end of the body portion beneath said gate for supporting a container in position to receive articles from the spout.

1,388,199. AUTO ADJUSTABLE SUNSHADE. EARL V. POWERS and WILLIAM J. BOYD, St. Louis, Mo. Filed Mar. 7, 1921. Serial No. 450,161. 1 Claim. (Cl. 296—95.)

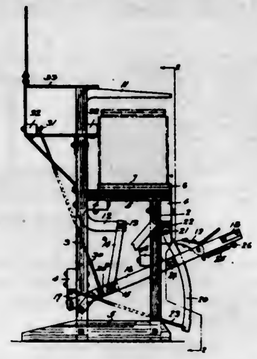


A sheet-metal sun-shade having hinges at its rear edge, by means of which it is to be supported entirely by the attachment of said hinges to the front bow or cross-bar of an automobile top; perforated brace-arms projecting downwardly from the rear of said hinges; perforated ears at the front ends of said hinges; brace rods pivoted at their rear ends to the said perforated brace-arms and

having their forward ends screw-threaded and mounted in the perforations of said perforated ears; and nuts on

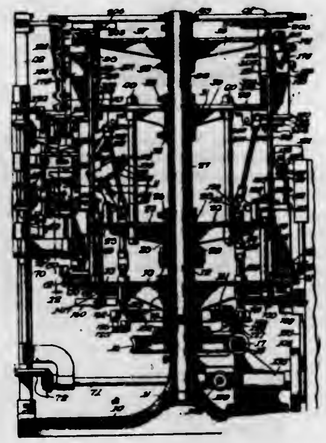
said threaded portions of said braces, on each side of said perforated ears.

1,388,200. BOX OR PACKAGE HANDLING APPARATUS. WILLIAM G. PRICE, Yakima, Wash. Filed Sept. 10, 1919. Serial No. 322,810. 3 Claims. (Cl. 193—8.)



1. In package handling apparatus, the combination of an endless traveling chain conveyer, a bracket carried thereby comprising arms and braces pivotally mounted at their inner ends on said conveyer and connected at their outer ends, load supporting members carried by said arms and braces normally in a horizontal position, and means for elevating the outer ends of said supporting members when the inner ends of said arms and braces approach each other as said conveyer moves around the upper sprocket wheels.

1,388,201. FRUIT-BOX PRESS. WILLIAM G. PRICE, Yakima, Wash. Filed Nov. 10, 1919. Serial No. 336,825. 7 Claims. (Cl. 100—57.)

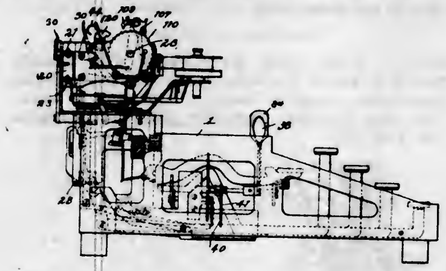


2. In a fruit box press, the combination of a box-receiving support, a pair of U-shaped press members, each of which has one arm extending above the said support and its other arm extending beneath the said support, means for vertically reciprocating the said members, and compression-resisting means attached to said U-shaped members for spacing apart the upper portions of the said members.

7. In a fruit box press, the combination of a frame, a box-receiving support, and a yoke vertically movable in the said frame and rigidly carrying pressure arms extending over the said box-receiving support, the said yoke and the said arms being adapted to tilt laterally as a unit to bring both of the said arms into engagement

with boxes that are of different heights at their two ends.

1,388,202. AUTOMATIC FIBER-CONTAINER MACHINE. WILLIAM HARRY RAY and PAUL BANCROFT PIERCE, Monroe, Mich., assignors to the Weis Fibre Container Corporation, Monroe, Mich., a Corporation of South Dakota. Filed Nov. 7, 1917. Serial No. 200,849. 50 Claims. (Cl. 93—36.)

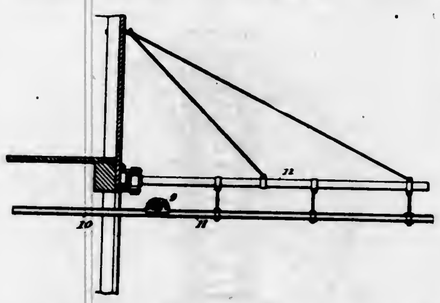


1. A machine for folding and securing the top and bottom flaps of containers, comprising means to carry the containers along successive paths of travel, a first group of devices associated with one path of travel to operate upon the top flaps, mechanism to automatically transfer the containers from the one path of travel to the other, and a second group of devices associated with said other path of travel to operate upon the bottom flaps.

1,388,203. TYPEWRITER. LYMAN R. ROBERTS, Rutherford, N. J. Filed Aug. 22, 1917. Serial No. 187,596. 15 Claims. (Cl. 197—72.)

1. In a typewriter, a platen carriage, a plurality of case shift levers, lifting mechanism for the carriage operable by either of said case shift levers, an abutment engaged by part of said lifting mechanism upon operation of one of said case shift levers, a slotted plate having a spacing lug associated therewith, and a pin associated

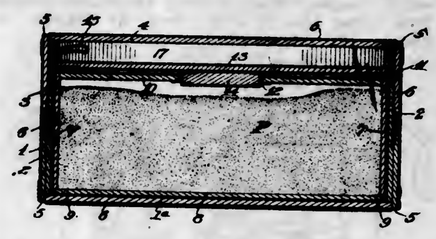
with the other case shift lever to ride in said slot and move the plate to interpose the spacing lug between the



lifting mechanism and said abutment upon operation of said last named case shift lever.

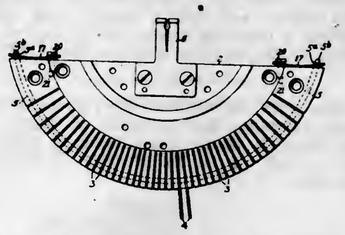
1,388,204. TOILET ARTICLE. WILLIAM HERBERT ROYSTONE, New York, N. Y. Filed Aug. 7, 1920. Serial No. 402,003. 7 Claims. (Cl. 132—82.)

1. A toilet powder packet comprising a compressed mass of toilet powder having a covering of pervious fabric sufficiently loose to admit of its being moved over the surface of the inclosed mass by rubbing.



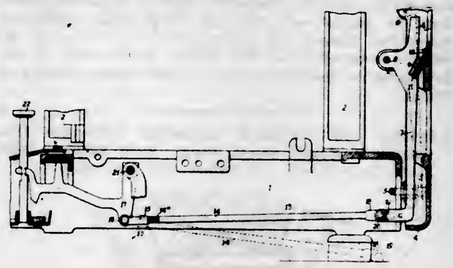
1,388,205. VARIABLE TRACK-HINGE. HENRY J. RUTZ, Lake City, Minn. Filed May 18, 1921. Serial No. 470,732. 3 Claims. (Cl. 104—92.)

1. A track hinge of the class described comprising two sections, one being provided with knuckles and the other having pintles for engagement with said knuckles, said sections being also provided with longitudinal channels adapted to receive portions of the track to which the sections are engaged.



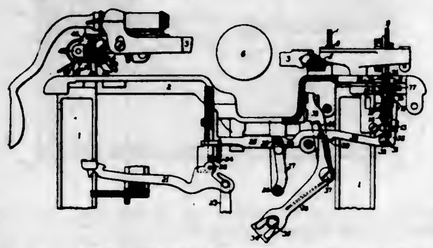
1,388,206. RECEPTACLE OR CONTAINER. FREDERICK SCHANG, New York, N. Y., assignor to The Lorscheider-Schang Co., Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 4, 1918. Serial No. 220,298. 3 Claims. (Cl. 229—7.)

1. A receptacle comprising outer and inner containers, the inner container including a fixed top having an aperture, a removable outside cover applicable to the outer container walls, a removable lid applicable over the inner container and closely fitting within the outer container side walls, and a stopper fixed to said lid and



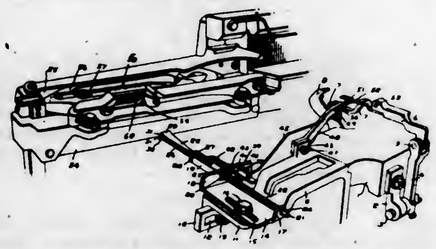
closing the aperture in the top of the inner container when the lid is applied thereover.

1,388,207. TYPEWRITING-MACHINE. WILHELM A. SCHMIDT, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,388. 8 Claims. (Cl. 197—38.)



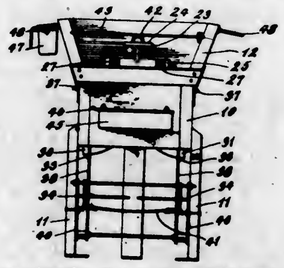
1. In a typewriting machine, the combination of a type bar support, type bars, a pivot wire for said type bars, a lever member of the first order having one arm coöperative with said pivot wire, and means coöperative with the other arm of said lever member to apply pressure from said lever to said pivot wire to fix said pivot wire securely in position.

1,388,208. TYPEWRITING-MACHINE. ARTHUR W. SMITH, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 3, 1919. Serial No. 294,559. 7 Claims. (Cl. 197—176.)



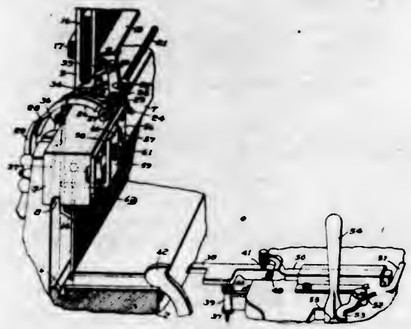
1. In tabulator mechanism for typewriting and like machines, the combination of a tabulator stop actuating member, a key controlled member, and a link connected to and supported at one end by one of said members and having a detachable connection with the other of said members and by which the link is supported at the other end, said detachable connection being formed by an open-ended slot in one part adapted to receive a co-acting portion on another of the two parts to be connected by said detachable connection.

1,388,209. TYPEWRITING-MACHINE. ARTHUR W. SMITH, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 25, 1919. Serial No. 306,684. 36 Claims. (Cl. 197—63.)



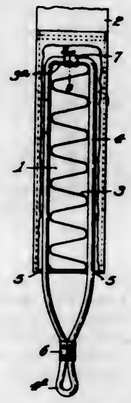
1. In a typewriting machine, the combination of a carriage, escapement mechanism therefor, a locking member coöperative with a part of said escapement mechanism to lock it against operation, means operative to move the locking member into locking position only during the stoppage of the return movement of the carriage, and independent means for moving the locking member to releasing position, said locking member being adapted to be restored to unlocking position during the first printing operation at the beginning of a new line of writing.

1,388,210. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 7, 1920. Serial No. 372,007. 13 Claims. (Cl. 139—85.)



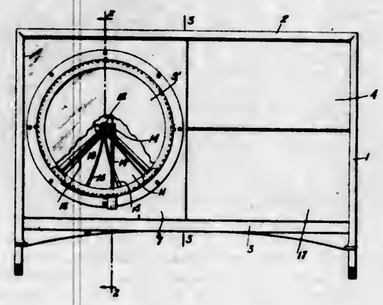
1. In a feeler mechanism for looms, the combination of two feelers mounted for relative separation in a direction transversely of the bobbin by the frontward beat, and which are held from such relative separating movement by engagement with the filling until substantial exhaustion thereof, and means which is actuated by the relative separation of the feelers transversely of the bobbin on a detecting beat to effect replenishment of filling.

1,388,211. PRUNE-TRAY CLEANER AND SACKER. GEORGE F. STARR, Salem, Oreg. Filed Sept. 8, 1920. Serial No. 408,900. 10 Claims. (Cl. 130—32.)



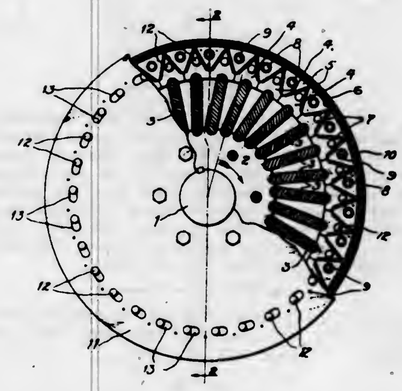
1. An apparatus for the purpose described comprising a tray supporting frame, a drying tray carried by the frame and having a screen portion and relatively elevated supporting bars on the frame for upholding the screen portion of the drying tray.

1,388,212. WARP STOP MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 10, 1921. Serial No. 451,224. 13 Claims. (Cl. 139—92.)



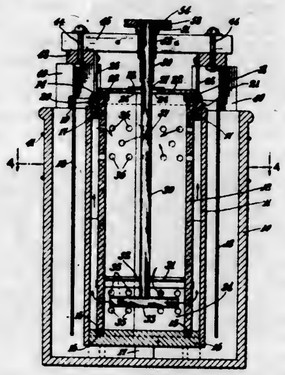
1. In a warp stop mechanism for looms, the combination of the lay, a reed mounted on the lay, a series of drop wires mounted on the lay above the cap of the reed, and each having a downwardly extended portion which projects between adjacent reed dents, a feeler mounted upon the reed cap and having a detecting movement above the reed to engage a drop wire above the reed cap when the drop wire fails to be supported by a warp thread, and means for stopping the loom when the feeler is arrested by a drop wire.

1,388,213. SUSPENDERS. VIRGIL REA STRADER, Philippi, W. Va. Filed Mar. 17, 1921. Serial No. 452,926. 2 Claims. (Cl. 267—74.)



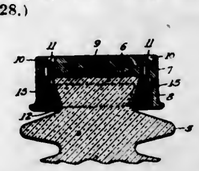
2. A suspender comprising an inelastic webbing doubled upon itself to form a pocket, a zigzag spring disposed within said pocket and having its lower end seated upon the bottom of the latter, the topmost lap of said spring being disposed horizontally, a cord having an intermediate portion thereof seated upon said topmost lap and extending thence downwardly between the sides of said spring and the lateral edge portions of said pocket and protruding through the bottom of the latter, a clamp securing said cord in its said seated position, and means uniting the ends of said cord outside said pocket and forming means for attaching said cord to a garment.

1,388,214. WINDSHIELD FOR VEHICLES. ALFRED O. TATE, New York, N. Y. Filed Mar. 13, 1920. Serial No. 365,482. 3 Claims. (Cl. 296—84.)



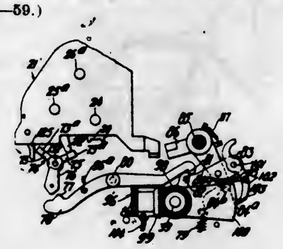
1. The combination with the frame of a windshield of a lookout device mounted in said frame to move transversely of the vehicle from one end of the frame to the other, and a glass pane mounted to move in said frame parallel to the movement of said device and an equal distance, whereby the positions of said pane and device may be interchanged with relation to the driver.

1,388,215. CALENDER-ROLL. ALFRED O. TATE, New York, N. Y. Filed Jan. 29, 1921. Serial No. 440,862. 7 Claims. (Cl. 26—11.)



6. A roll of the kind described, comprising a cylinder, segmental longitudinal stiffening members for said cylinder, heating means inclosed within said stiffening members, wedge members so disposed as to hold the stiffening members apart and in contact with the supporting cylinder, means for forcing the wedges against the stiffening members and heat insulating means between said wedges and said stiffening members.

1,388,216. ELECTROLYTIC CELL. CHARLES J. THATCHER, New York, N. Y. Filed Oct. 21, 1919. Serial No. 332,228. 19 Claims. (Cl. 204—5.)



1. An electrolytic cell, comprising: a suitable container; a separator vessel therein; an electrode in the space between said vessel and container; and a hollow electrode within said vessel, said hollow electrode being provided with a false bottom.

1,388,217. INSULATOR. CYRIL H. THOMAS, Chicago, Ill. Filed May 9, 1919. Serial No. 295,849. 1 Claim. (Cl. 173—28.)

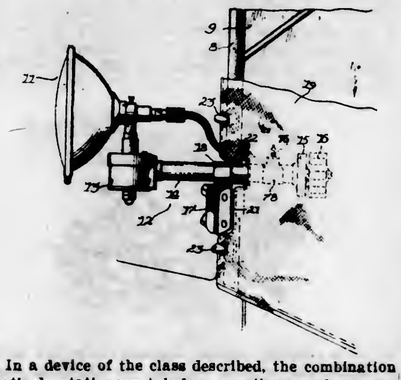
An insulator, and hanger therefor, said insulator having an integral annular conoidal projection similar in shape to a truncated cone with its base extending from the body and its apex merging in the body thereof, in combination with a cup-shape hanger having a flat base part overlying the cone base and a skirt extending over the circumferential part of the cone; a split ring, angular in cross-section, for insertion between said skirt and cone, and screws passing through said base into said split ring to wedge the latter between said skirt and cone and to clamp the hanger to the insulator.

1,388,218. COMBINED TYPEWRITING AND COMPUTING MACHINE. EDWARD THOMAS, New York, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1918. Serial No. 267,977. 38 Claims. (Cl. 235—59.)

13. In a combined typewriting and computing machine, the combination with a carriage, an algebraic totaliser

and a shutter therefor, of a device connected to be positioned by the shutter, a master wheel, numeral keys for driving the master wheel, driving means for inserting the fugitive unit between the keys and the master wheel, and means normally restraining the driving means but adapted to be caused to release the same by the shutter-connected device, if caused to change its position after the units order of the totalizer has been brought into co-operative relation with the master wheel, or by the same device, if it has been previously caused to change its position, on subsequent movement of the carriage to the position in which such relation of totalizer and master wheel is established.

19. In a computing machine, the combination with a totalizer, of a finger projecting therefrom adapted to occupy two positions, a feeler adapted to be selectively positioned by the finger so that when once shifted by the finger, the finger is ineffective thereon until it is again shifted, and a driving device for the totalizer controlled by said finger.

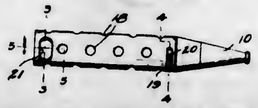


25. In a computing machine, the combination with a totalizer comprising computing wheels, of a master wheel therefor, numeral keys comprising cams for driving said master wheel, and a device interposed between said cams and master wheel for advancing the master wheel independently of the cams, said cams including a cam upon the "0" key.

1,388,219. ADVERTISING DEVICE. Frank Thompson, Camden, N. J., assignor to C. Howard Hunt Pen Company, Camden, N. J., a Corporation of New Jersey. Filed Mar. 21, 1921. Serial No. 453,901. 5 Claims. (Cl. 24—11.)

4. An advertising device comprising a clip consisting of a spring band and a downwardly extending shank, a portion of said band being slit and raised to form a cleat and provided with perforations at points adjacent the ends of, and in line with, said cleat, and a base adapted for the support of advertising matter, said base being slotted for the reception of said cleat and to permit rotation of the base relative thereto, said slot forming ears adapted on the rotation of the base to extend beneath said cleat and afford a connection between said base and clip, there being projections formed on said base adapted on rotation thereof to enter said perforations and tend to maintain the base in fixed position.

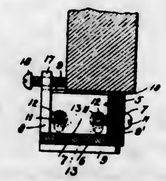
1,388,220. SPOT-LAMP FOR AUTOMOBILES AND THE LIKE. Henry P. Thompson, Chicago, Ill. Filed June 2, 1919. Serial No. 301,167. 6 Claims. (Cl. 240—7.)



1. In a device of the class described, the combination of a relatively stationary tubular mounting member comprising means for mounting the same on or adjacent the windshield of the automobile, an operating sleeve extending through said mounting member and being rotatable therein, a rotatable hollow head on the forward end of said operating sleeve and adapted for rotation concentrically about the axis of said sleeve, said hollow head comprising a yoke member, and a separate cover member closing said yoke member, a rotatable stem extending through said hollow head and having bearing support in both arms of said yoke member, said stem projecting from said hollow head, a spot lamp supported on the projecting end of said stem with the axis of said spot lamp displaced laterally relative to the axis of said operating sleeve, a first bevel gear on said stem between the arms of said yoke member, an operating shaft extending concentrically through said operating sleeve, bearing surfaces in said operating sleeve adjacent the ends of said shaft for spacing the intermediate portion of said shaft from said operating sleeve, a second bevel gear on said operating shaft meshing with said first bevel gear, a first control knob rigidly mounted on the rear end of said operating sleeve, a second control knob positioned in the rear of said first control knob and rigidly mounted on the rear end of said operating shaft, each of said control knobs being capable of rotation independently of the other or simultaneously therewith for the adjustment of the spot lamp in its different planes, said control knobs adjusting said spot lamp through said operating sleeve and shaft solely by rotational adjusting motion of said knobs.

1,388,221. HEADLIGHT-SHIELD. Charles Toepfer, and Edward J. Toepfer, Milwaukee, Wis. Filed June 15, 1920. Serial No. 389,093. 2 Claims. (Cl. 240—48.4.)

1. A shield for a headlight or the like, comprising a substantially semi-circular opaque plate having a plurality of relatively small elongated light openings therein, formed by punching the material of the plate through from one side, the material struck from the openings forming independent deflector plates extending downwardly and forwardly from the upper sides of the openings, the openings of one row being staggered with respect to the openings of the next adjacent rows.

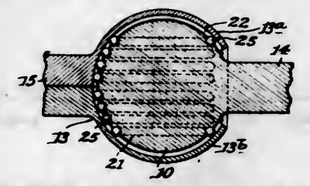


1,388,222. CIGARETTE-HOLDER. Randey Vakilian, Brooklyn, N. Y. Filed Mar. 29, 1920. Serial No. 369,567. 5 Claims. (Cl. 131—22.)

1. A cigarette holder comprising a mouthpiece, an apertured outer tubular casing, said apertured outer tubular casing provided with an abutment shoulder formed on the inner face thereof near one end, the opposite end of said casing being closed, and an inner tubular casing rotatably mounted within said outer tubular casing so as to bear against the abutment shoulder and the opposite end of the outer casing and provided with apertures adapted to register with the apertures formed in the outer casing, and means for limiting the rotary movement of said inner casing within said outer casing.

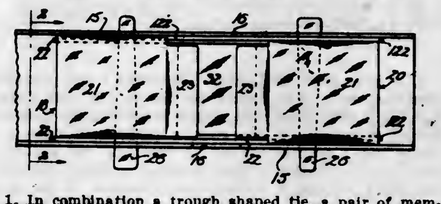
4. A cigarette holder comprising a mouthpiece, an outer tubular casing provided with an open end adapted to receive said mouthpiece, said outer casing provided with a shoulder portion formed upon the inner face thereof, an inner casing rotatably mounted within said outer casing and having one end thereof abutting said shoulder, said outer casing being closed at its opposite end for producing a bearing for one end of said inner casing, said inner and outer casings provided with apertures adapted to be brought into registration, means for rotating the inner casing within said outer casing, said inner and outer casings provided with registering clean-out openings formed near the outer ends of said casings, and one wall of each clean-out opening being flush with the inner face of the closed end of said inner tubular casing whereby ashes may be conveniently cleaned from said casings.

1,388,223. HINGE MARKER, MEASURER, AND CUTTING DEVICE. Aden Wakefield, Alhambra, Calif. Filed Mar. 2, 1920. Serial No. 362,792. 1 Claim. (Cl. 145—25.)



A device of the class described, comprising a rectangular base member having depending flanges formed along the sides thereof, each of three of said flanges having a cutting blade secured thereto, said blades being adjustable in a vertical direction, a pair of gaging screws mounted in the remaining flange of the base member for gaging the width of the cut, and a guard for said cutting blades.

1,388,224. BROOM-CLAMP. Eugene Ward, Brooklyn, N. Y. Filed Sept. 24, 1920. Serial No. 412,462. 2 Claims. (Cl. 15—23.)



1. The herein described broom clamp comprising a body of sheet metal of uniform width and thickness, the same being bent at its middle portion forming a flexible loop, the metal at the loop being flat in cross section, the side portions of the body beyond the loop being channeled for stiffness, and the end portions of the body remote from the loop being provided with flat lips adapted to engage in flat position directly against each other and one of the lips being slidable along the other due to the flexibility of the loop, and means to secure said lips together for holding the clamp in practice.

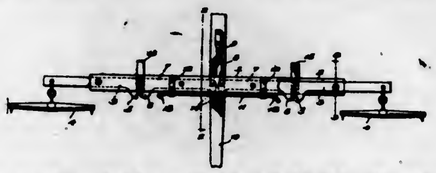
1,388,225. UNIVERSAL JOINT. Ernest H. Webb, New Brunswick, N. J. Filed Dec. 6, 1919. Serial No. 343,043. 4 Claims. (Cl. 64—91.)

4. A universal shaft coupling comprising in combination, a driving member and a driven member one of which at least partially surrounds the other, the inner surface of the outer member being provided with a plurality of race-ways and the outer surface of the inner member being provided with a plurality of race-ways which intersect the first mentioned race-ways, and balls at the intersection of at least some of said race-ways, each of said race-ways containing a plurality of such balls.

1,388,226. METAL TIE AND RAIL-FASTENER. William H. H. Welton, Denver, Colo. Filed July 29, 1920. Serial No. 399,940. 6 Claims. (Cl. 238—63.)

1. In combination a trough shaped tie, a pair of members slidable within the tie, said members being of a width equal to the width of the inside of the tie minus the thickness of the material, each member being provided with two parallel sides one end of which is joined by a web and provided with tongues for engagement with the flanges of a railroad rail and means for securing said members to the tie and clamping them against the flange of the rail.

1,388,227. STITCH-DOUBLING DEVICE AND POINTS THEREFOR. Louis N. D. Williams, Ogontz, Pa. Filed Dec. 13, 1919. Serial No. 344,632. 2 Claims. (Cl. 66—32.)

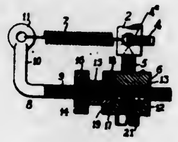


1. A split ring having points for receiving and doubling stitches of knitted web, the points adjacent the divisions of said ring each being provided with a notch adapted to receive and retain against accidental dislodgment the stitch carried by said point.

1,388,228. DOUBLETREE. Martin F. Williams, Brooklyn, N. Y. Filed Aug. 6, 1920. Serial No. 401,611. 3 Claims. (Cl. 278—92.)

1. A double tree comprising a frame, two swingle tree levers pivotally mounted on said frame and each projecting beyond the adjacent end thereof, the inner end of each lever being provided with a plurality of teeth extending concentric with the lever pivot, a pair of intermediate levers pivotally mounted on the frame and each

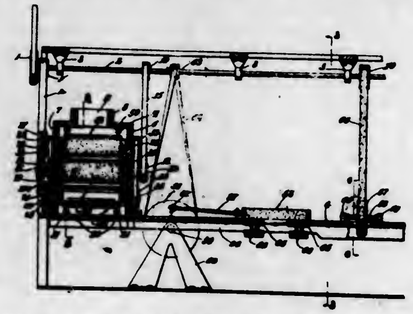
having its outer end provided with teeth engaging the teeth on the inner end of the adjacent swingle tree lever, spring means coöperating with the intermediate levers



to normally maintain them and the swingle tree levers in alinement, and means connected to the intermediate levers near their inner ends and adapted to be engaged with an abutment on a vehicle tongue.

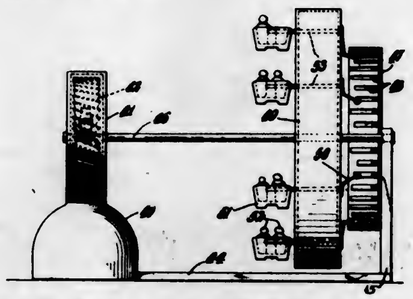
1,388,229. LATCH MECHANISM FOR GARAGE-DOORS. WESLEY G. WINANS, Detroit, Mich., assignor to Frederick Knowlson, Ann Arbor, Mich. Filed June 4, 1920. Serial No. 386,471. 5 Claims. (Cl. 292—262.)

1. A door latch mechanism comprising a bar pivotally connected to a door, means carried by the door frame forming a slide guide and pivotal mounting for said bar during movement of the door, a latch head upon the frame and a member carried by said bar, adjustable to form in one position a latch member yieldably engaging said latch head in a predetermined position of the door to yieldably maintain said position and forming in another position of adjustment a stop limiting the opening movement of the door.



1,388,230. TENSION-REGULATING DEVICE FOR SPRINGS. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 9, 1919. Serial No. 270,317. 2 Claims. (Cl. 197—82.)

1. The combination with a part capable of movement and a coiled spring connected thereto, of an adjustable anchorage for said spring comprising a screw to which one end of said spring is connected, a thumb nut mounted on said screw, a detachable stationary part coöperating with said thumb nut to prevent it from moving along said screw, and means for holding said screw against rotary movement while permitting endwise movement thereof.



1,388,231. POLISHER AND GRINDER FOR WOOD AND METAL MANUFACTURERS. BÉLA ZSARNAY, Belleville, N. J., assignor of one-half to Abraham Lewis, Newark, N. J. Filed Mar. 26, 1920. Serial No. 368,829. 2 Claims. (Cl. 51—23.)

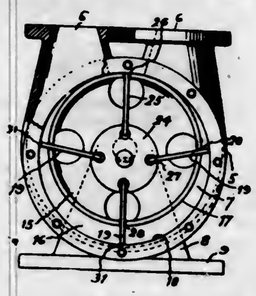
1. In a polishing machine, a set of revoluble rolls adapted to engage one side of the work, a second set of revoluble rolls spaced from said first set and adapted to engage the opposite side of the work, a movable frame carrying said second set of rolls, rods on which said frame is slidably mounted, springs on said rods for pressing said second set away from said first set of rolls, and

screws for moving said frame toward said first set of rolls.

1,388,232. FIGURE TOY. BÉLA ZSARNAY, Belleville, N. J., assignor of one-half to Abraham Lewis, Newark, N. J. Filed Nov. 26, 1920. Serial No. 426,332. 2 Claims. (Cl. 46—40.)

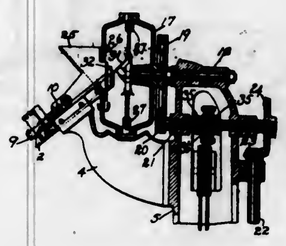
1. In a toy, an air motor, a shaft rotated thereby, a wheel fixed on said shaft, a series of toy elements carried by one face of the wheel, a stationary drum mounted concentric to said shaft adjacent the opposite face of said wheel, and having the face thereof contiguous to the wheel open and the opposite face closed, note strips fixed in said drum, and strikers carried by said wheel and projecting into said drum to engage the said note strips.

1,388,233. PLOW. FRANCISCO AÑORGA Y LARRALDE, Matanzas, Cuba. Filed Oct. 21, 1919. Serial No. 332,220. 4 Claims. (Cl. 97—1.)



1. In plows, in combination with the beam and share thereof, a frame hanging from the beam, treading wheels carried on this frame, a system of knives arranged in a scissor like manner and mounted above the share, and a driving mechanism between the treading wheels and the knives system.

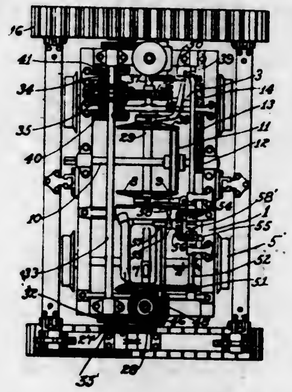
1,388,234. VALVELESS ROTARY PUMP. THOMAS A. BATEMON, Los Angeles, Calif. Filed July 22, 1920. Serial No. 398,190. 4 Claims. (Cl. 103—44.)



1. A rotary pump comprising a casing inclosing a substantially cylindrical chamber, an actuator revolubly

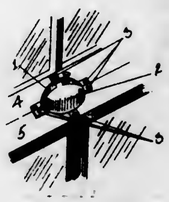
mounted therein, and having its axis eccentrically disposed relative to the chamber, a peripheral flange on the actuator having a series of transverse slots, and forming with the casing, a segmental working chamber, a shaft journaled in the casing, and projecting within the cylindrical chamber, a piston mounted on said shaft and rotating concentrically within the cylindrical cham-

ber, an impelling blade fixed to the piston and sliding inwardly and outwardly in one of said slots in the actuator, other impelling vanes connected to the piston and sliding in the remaining actuator slots, said actuator contacting with the casing at the uppermost point of the chamber, and induction and eduction ports in the casing, on opposite sides of the contacting point of the casing and actuator.



1,388,235. MECHANISM FOR HANDLING ARTICLES. CHARLES C. BLAKE, Brookline, Mass. Original application filed Mar. 27, 1916, Serial No. 86,958. Divided and this application filed Sept. 13, 1917. Serial No. 191,102. 15 Claims. (Cl. 1—6.)

12. A handling mechanism, having, in combination, a raceway, a support therefor, a gate pivoted on the support constructed and arranged to normally prevent the escape of the articles loaded on the raceway, a bridge carried by the raceway, a pair of leaf springs depending from the bridge, and blocks mounted on the lower ends of the springs, respectively, for alining the shanks of the articles adjacent to the gate, substantially as described.

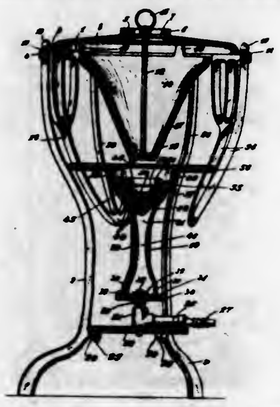


1,388,236. RAILROAD MOTOR-CAR. ROBERT E. BASSLER, Hammond, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed July 18, 1919. Serial No. 311,879. 14 Claims. (Cl. 105—62.)

1. A car embodying therein wheels formed for rail travel; an elongated endless traction device transversely mounted on the car and of a length sufficient to span the distance between the rails, and adapted to travel on the ground; and means for moving the elongated

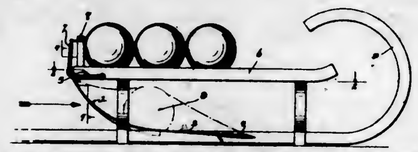
endless traction device downward relative to the wheels of the car and thereby to free the wheels from the rails.

1,388,237. WINDOW-FASTENER. JOHN L. BUSH, Little River, Kans. Filed Jan. 19, 1921. Serial No. 438,283. 2 Claims. (292—135.)



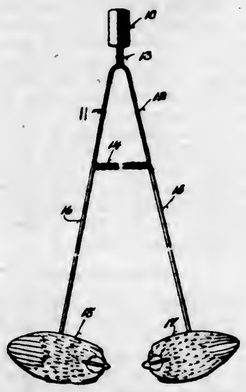
1. A window lock comprising two quarter spherical housings mounted, one upon the lower bar of the upper sash and the other upon the upper bar of the lower sash, and faced together so as to permit the lower sash to be raised past the upper sash; a bolt extended medially from the face of the housing mounted upon the upper bar of the lower sash, and a lip extended from the upper side of the housing out over the bolt and spaced from the bolt; a mortise chambered out of the upper frontal part of the housing mounted on the lower bar of the upper sash, to receive the bolt and lip of the other housing as the window is closed; a gravity latch pivotally mounted within said mortise and adapted automatically to lock over the bolt aforesaid as the two housings meet; and a release pin pivoted from said gravity latch, extended through the housing, and adapted to release the latch from the bolt by depressing the pin.

1,388,238. GAS-HEATER. CHARLES C. CHAPPELLE, New York, N. Y. Filed Oct. 21, 1918. Serial No. 259,154. 9 Claims. (Cl. 126—87.)



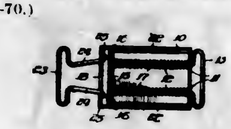
4. A heater comprising in combination a burner having circumferentially arranged jet apertures and adapted for the forcible discharge of fuel therefrom, a radiating member disposed above the burner and having a peripheral radiating wall arranged for the reception of flames from the burner, a horizontally extending baffle arranged above

the level of the burner and below the level of the radiating member, said baffle being apertured to permit



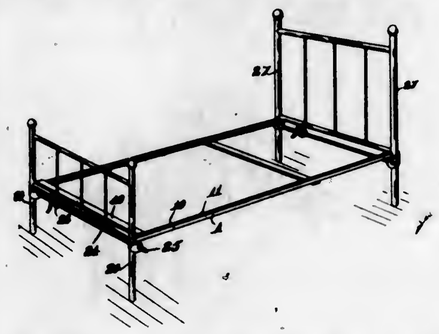
the passage of flame from the burner to the radiating member.

1,388,239. ATTACHMENT FOR BOWLING-ALLEY RETURN-TROUGHS. WALTER CHOINSKI, Milwaukee, Wis. Filed Oct. 28, 1920. Serial No. 420,136. 5 Claims. (Cl. 46—66.)



1. In combination with a bowling alley return trough, means adapted to form a trap for the balls traveling in one direction and to permit their passage in the opposite direction, said means comprising an apron having one end secured above the trough and the opposite end secured to the trough.

1,388,240. TOY. WALTER CHOINSKI, Milwaukee, Wis. Filed Dec. 21, 1920. Serial No. 432,246. 2 Claims. (Cl. 46—40.)

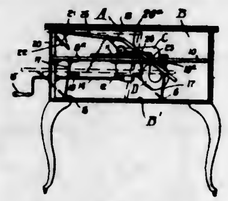


1. A device of the character described, comprising a block, two resilient members extending from one end of the block in divergent relation, the intermediate portions of said members crossing and each extending outwardly from the point of crossing substantially in alinement with the inner portion of the other member, said members being twisted together at the point of crossing, and fighting images attached to the outer ends of said members.

1,388,241. CLASP. LESLIE H. DIERKING, Elgin, Ill. Filed Sept. 20, 1919. Serial No. 325,068. 6 Claims. (Cl. 267—70.)

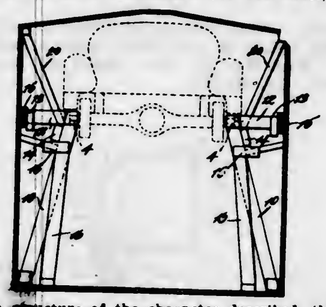
2. A clasp of the class described, comprising an elongated housing having one of its sides open, one end of said housing being perforated, and the other end being provided with a slot, a U-shaped attaching member slidably mounted in the perforated end of said housing, the arms of said attaching member being mounted in the perforations of the housing, springs arranged on the arms of said attaching member and abutting against one end of said housing, a tie-bar spanning the ends of the arms and serving to retain the springs thereon, said springs affording a yielding mounting for the attaching member with respect to said housing, a closure plate fitted within the open side of the housing and provided with engaging flanges, said flanges frictionally engaging the contiguous sides of the housing to retain the closure plate therein, and a hook member releasably engaged with the slotted end of said housing.

1,388,242. INVALID-BED. THOMAS DODDS, Thessalon, Ontario, Canada. Filed Dec. 23, 1919. Serial No. 346,863. 1 Claim. (Cl. 5—45.)



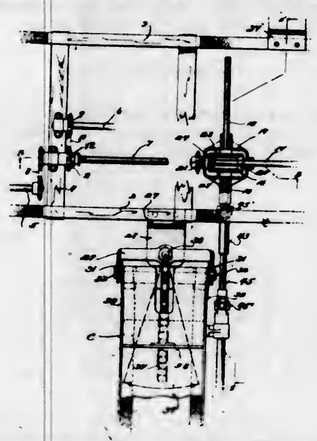
An invalid bed having tubular head and foot posts, racks slidably mounted in the said posts, U-shaped members carried by the tubular posts, a cross bar, a transversely extending rotatable rod journaled in the U-shaped members, gears on the ends of the rod meshing with the racks, and located between the two arms of the U-shaped members, a gear intermediate of the length of the rod, a spring dog on the cross bar, adapted to engage the last said gear, the said dog having a projecting handle formed integral therewith.

1,388,243. PHONOGRAPH-TABLE. HENRY DRAGNER and LOUIS J. HARRIS, New York, N. Y. Filed Oct. 22, 1919. Serial No. 332,544. 4 Claims. (Cl. 45—52.)



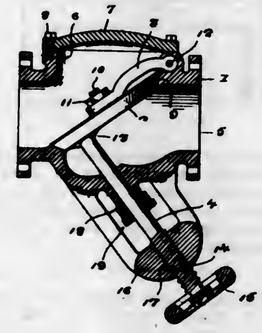
1. A phonograph table having a partially open compartment therein, a motor board movably supported in said compartment, pivotally mounted supports for said motor board and adapted to sustain the latter in a level

plane, an upper cover board, and means connecting the cover board and motor board whereby forward and rear-



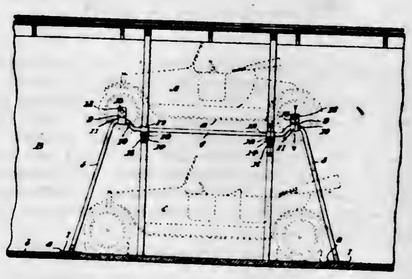
ward movement of the latter will control the arcuate and lateral movement of the former.

1,388,244. SHIPPING-SUPPORT FOR AUTOMOBILES. JAMES N. DUNCAN, Detroit, Mich. Filed May 2, 1919. Serial No. 294,140. 8 Claims. (Cl. 105—368.)



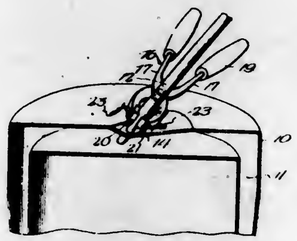
2. In a structure of the character described, the combination with the walls of a retaining inclosure, of supporting means for a vehicle, said supporting means forming trusses with the side walls of the inclosure, the members of the trusses forming two groups situated in planes at right angles to each other.

1,388,245. TRUCK CONVEYER AND UNLOADER. JAMES A. EATON, Milwaukee, Wis. Filed Dec. 8, 1919. Serial No. 343,246. 4 Claims. (Cl. 214—83.)



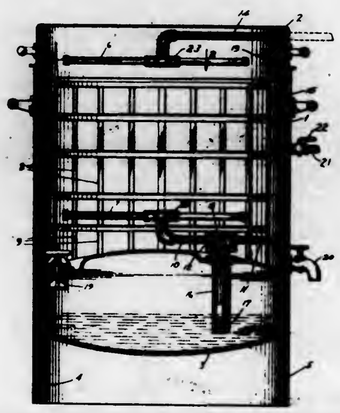
1. The combination with a portable receptacle, of a two-part drive shaft disposed transversely of the direction of normal movement of the receptacle, means for revolving the parts of the shaft in opposite directions, a supporting bracket carried by the receptacle forwardly of one part of the drive shaft, a second supporting bracket carried by the receptacle rearwardly of the other part of the drive shaft, a mechanical conveyer adapted to be selectively connected to either of said brackets, and means for coupling the operating means of the conveyer with either part of said shaft.

1,388,246. CHECK-VALVE. WILLIAM H. ELLIOTT, Washington, D. C., assignor of one-fourth to William F. Walter, Washington, D. C. Filed Aug. 30, 1920. Serial No. 406,840. 1 Claim. (Cl. 251—125.)



A check valve comprising a casing having alined orifices and also having an opening in its top and an open work extension pendent from its bottom and provided with a threaded bore, a plate to close the top opening of the casing and detachably connected to the casing, a diagonally-arranged valve body in the casing and opposed to a valve seat therein, said valve body having a stem, an arm arranged at the pressure side of the valve body and hingedly connected to the casing and receiving the said stem, a nut mounted on the stem above the arm, a stuffing box carried by the casing and disposed within the extension thereof, and a threaded stem bearing in the threaded bore of the casing extension and extending through the stuffing box and into the casing and having its inner end disposed in a depression of the valve body.

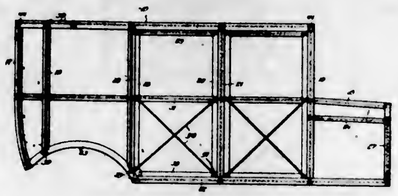
1,388,247. DOUBLE-DECKING BUCK. EDWARD S. EVANS, Detroit, Mich. Filed Mar. 24, 1920. Serial No. 368,367. 9 Claims. (Cl. 105—368.)



3. A double decking buck for automobiles comprising a pair of legs, a substantially horizontal member rigidly connected between the said legs, and a brace receiving socket carried thereby.

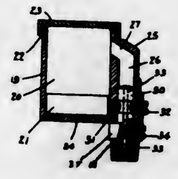
1,388,248. METHOD OF SEALING VACUUM-JACKETS. JOHN L. FATE, Chicago, Ill.; Daisy L. Fate, executrix of said John L. Fate, deceased, assignor, by mesne assignments, to C. Roy Gleason, Chicago, Ill. Filed Sept. 18, 1918. Serial No. 254,548. 5 Claims. (Cl. 113—82.)

1. The method of exhausting and sealing vacuum jackets which consists in exhausting air from the jacket through a conduit, pressing the walls of the conduit together exterior to the jacket, and substantially simultaneously fusing the flattened walls of the conduit to weld them together.



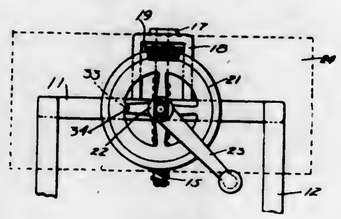
1,388,249. WASHING AND STERILIZING APPARATUS. THEODORE H. FRETER, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,633. 3 Claims. (Cl. 141—9.)

1. A washing apparatus comprising a receptacle having an upper cleaning compartment containing a nozzle, a boiler located in the lower part of said receptacle and having an outlet communicating with said nozzle, said boiler being adapted to contain fluid under pressure for discharge through said outlet and nozzle into said compartment, a valve controlling said outlet, and means for normally holding said valve in its closed position until the pressure of the water in said boiler reaches a predetermined amount.



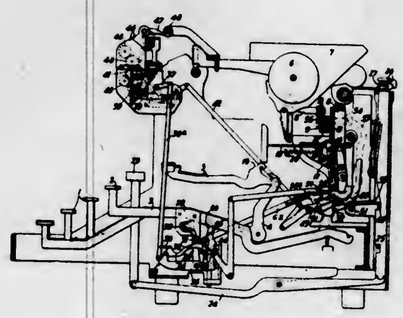
1,388,250. METHOD OF REINFORCING AUTOMOBILE-BODIES. JOHN F. GODFREY, Elkhart, Ind. Filed Dec. 20, 1920. Serial No. 431,820. 3 Claims. (Cl. 296—28.)

1. In a vehicle body construction, interrelated frame members, and tie members extending between joints of said frame members, three tie members meeting at corners of said vehicle body, and an anchor member located at



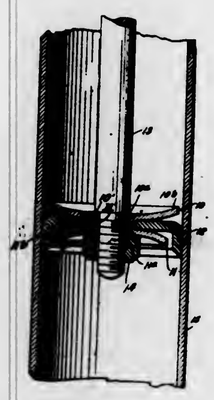
the point of meeting and adapted to be engaged by said members.

1,388,251. CENTRIFUGAL LUBRICATING-CUP FOR LOOSE PULLEYS. LYCURGUS P. GORTON, Indianapolis, Ind. Filed May 13, 1920. Serial No. 381,082. 7 Claims. (Cl. 64—26.)



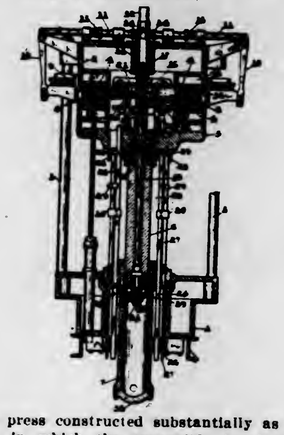
1. A centrifugal lubricating cup comprising a cup body, discharge means having a channel communicating with said body, a piston in said body for forcing the lubricant into said channel, a nipple for supporting the cup and adapted to be secured to a pulley independently of said cup and provided with a channel therein, and means separable from the cup and nipple detachably securing said cup to said nipple, whereby the discharge channel and the nipple channel are in registration with each other and secure said cup to said pulley.

1,388,252. WINDOW-SASH REGULATOR AND OPERATOR. LOUIS J. GOUIN, Freeport, Ill. Filed Sept. 22, 1919. Serial No. 325,394. 3 Claims. (Cl. 268—4.)



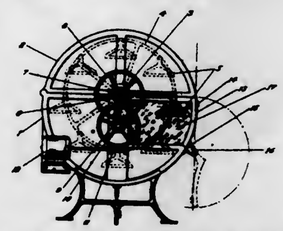
1. A sash operating mechanism having a feed screw arranged substantially parallel with the path of the sash, a bendable traveler connected with the sash, and engaged with said feed screw, and means for imparting rotary movement to the screw, the traveler being disengageable from the screw by lateral movement.

1,388,253. TYPEWRITING-MACHINE. WILLIAM L. GUMPRECHT, Hartford, Conn., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1917. Serial No. 156,595. 11 Claims. (Cl. 197—82.)



1. In a machine of the character described a key controlled step-by-step escapement mechanism tabulating mechanism and an interlocking element for preventing the operation of the tabulating mechanism after a key has released the escapement and until said key has practically finished its return movement, said interlocking element being so connected to the key as to remain stationary during part of the return movement of the key.

1,388,254. PUMP-PISTON. HANS L. C. HANSEN, Chicago, Ill. Filed Dec. 7, 1920. Serial No. 428,915. 4 Claims. (Cl. 103—63.)

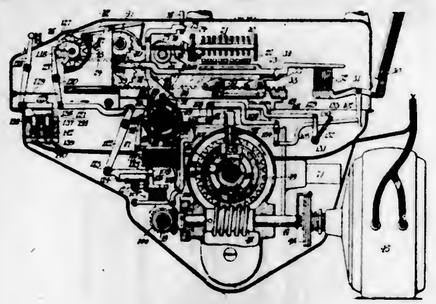


4. A pump piston comprising a piston rod, a cup leather mounted on said rod, and a backing washer mounted on said rod on each side of said cup leather and having convex faces opposing the same, said washers having ribs engaging said cup leather and clenching it upon said rod to provide a liquid tight connection between said cup leather and said piston rod.

1,388,255. TIRE-PRESS. WILLIAM EDWARD HARDEMAN, Birmingham, England, assignor to Dunlop Tire & Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,080. 7 Claims. (Cl. 18—17.)

4. A tire press constructed substantially as set forth in claim 3 in which the expansible tread member is formed of sections adapted to interlock with the side wall members; and a vertically movable ring is provided on which said sections are radially movable.

1,388,256. ROTARY BAKING-OVEN. GEORGE H. HARKRADER, Columbus, Ohio, assignor to The New System Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 24, 1919. Serial No. 332,981. 3 Claims. (Cl. 107—59.)

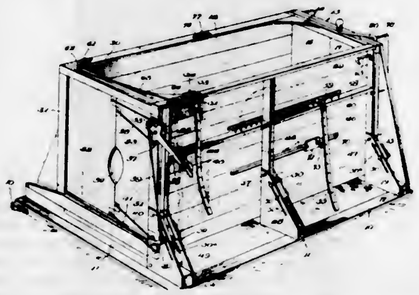


3. A rotary baking oven comprising a cylindrical casing, a reel operating in said casing, a door in the undercut part of the cylindrical casing and mainly below the horizontal center thereof, so that when the door is opened only a small amount of heat will escape through the door opening, hinges at the lower end of said door and on the casing projecting outwardly from the casing to such extent that when the door is closed it will lie of its own accord at one side of a vertical plane passing through the centers of the pivots of the hinges and when the door is open it will lie of its own accord at the other side of said plane.

1,388,257. COMBINED TYPEWRITING AND COMPUTING MACHINE. FREDERICK A. HART, Jersey City, N. J., assignor, by mesne assignments, to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1911. Serial No. 665,315. 118 Claims. (Cl. 235—60.)

3. The combination of a set of numeral types, a carriage, a set of computation wheels, a set of type operators, and mechanism for causing the operation of said type-operators one at a time to print the number which is set up on the computation wheels; said mechanism including means for enabling each dial wheel to select the

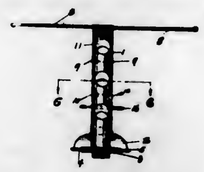
type which is to be printed, and also including means to enable the carriage to determine the order or time of operation of the type-selecting devices.



89. The combination, with a typewriting machine, of a computing device including a series of cams, a series of bars positioned by said cams, and means for actuating said bars to operate the numeral key bars of the type writer.

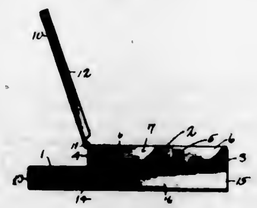
92. In a calculating machine, the combination of, a set of numeral printing bars, a set of displaceable elements, and automatic mechanism for operating said bars successively in a sequence determined by the position of said displaceable elements.

115. The combination with keys, of actuating mechanism for said keys, a carriage, carriage-controlled means for governing the action of said actuating mechanism, and selecting means operative to determine the particular actuation of said keys by said actuating mechanism.



1,388,258. HOG-HOLDER. CECIL K. HASTY, What Cheer, Iowa. Filed Jan. 12, 1920. Serial No. 350,840. 6 Claims. (Cl. 119—99.)

1. A restraining device for animals including a support, a table horizontally pivoted to said support and provided with a longitudinally extending opening, a fastening element adapted to be passed about the body of a hog, a head at the lower end of said fastening member slidably mounted in said opening and comprising spaced plates engaging opposite sides of the table at said opening, and means for maintaining the plates in fixed spaced relation, and a plurality of spaced fastening members carried by said table and adapted to be selectively engaged by the free end portion of said fastening element.



1,388,259. TIE-FASTENER. MICHAEL HENRY, Chicago, Ill. Filed Aug. 2, 1920. Serial No. 400,579. 7 Claims. (Cl. 2—84.)

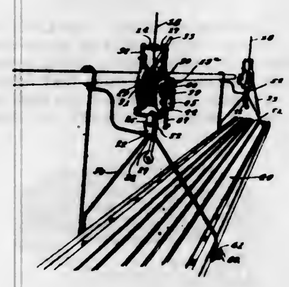
1. An article of the class described comprising a tubular casing having laterally extending tie-engaging arms: openings in said casing; means mounted within said casing adapted to engage a collar button head whereby said

head may be locked in said openings, substantially as described.

1,388,260. COMBINATION WEIGHT AND SPATULA HOLDER. WILLIS F. HOOD, Highland Park, Mich. Filed May 20, 1919. Serial No. 298,508. 3 Claims. (Cl. 220—20.)

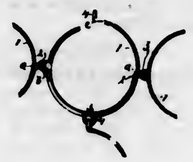
3. A tray for apothecaries' weights and the like and heel therefor, comprising a chamber open at the front and provided with standards upstanding from its top for supporting a tray.

1,388,261. BED-SPRING. JOEL L. ISAACS, Milwaukee, Wis. Filed July 23, 1920. Serial No. 398,519. 1 Claim. (Cl. 5—39.)



In a cushion structure of the character described, the combination of a frame, and a metallic fabric thereon comprising in combination a plurality of lengthwise-disposed, transversely upwardly arched spaced, parallel, sheet-metal bands, springs connecting said bands at their ends to said frame, means connecting said bands together transversely between their ends, the top faces of said bands and the tops of said intermediate connecting means being in substantially the same horizontal plane, the curved shape and the location of the top surfaces of said bands facilitating the transverse sliding of the superposed mattress thereon, substantially as described.

1,388,262. HOISTING ATTACHMENT FOR SCAFFOLDS. FRANK B. JOHNSTON, Roselle Park, N. J., assignor to American Safety Device Co., New York, N. Y. Filed Dec. 3, 1919. Serial No. 342,229. 11 Claims. (Cl. 254—167.)



1. In a hoisting and lowering means for scaffolds, a frame, a drum in the frame adapted to receive a cable thereon, operating means for turning the drum whereby to hoist the frame on the cable, and a holding pawl adapted to maintain the drum from turning in a reverse direction, in combination with a yieldable normally inactive

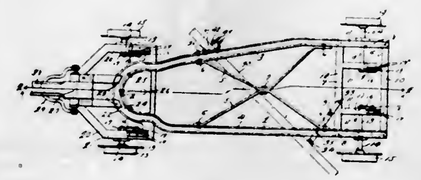
reverse preventing means for the drum adapted to normally permit free operation of the latter and adapted to

hold the drum from reverse movement and absorb shock imposed on the drum when said pawl fails to operate.

1,388,263. BED-SPRING. FRANCIS KARR, Holland, Mich. Filed Aug. 5, 1918. Serial No. 248,459. Renewed Feb. 4, 1921. Serial No. 442,596. 4 Claims. (Cl. 5—29.)

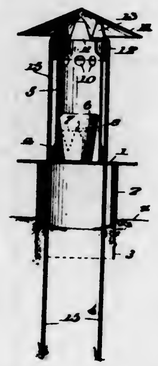
2. In spring bed bottom and cushion construction, surface coils having eyes or rings horizontally disposed on two sides and vertically disposed on two sides of each surface coil all so arranged that the horizontal rings on one surface coil may be interlinked with the vertical rings on adjacent surface coils throughout the surface construction of the springs.

1,388,264. ANTISKID DEVICE. JOHN C. KEAVEY, Cleveland, Ohio. Filed June 12, 1919. Serial No. 303,670. 1 Claim. (Cl. 152—16.)



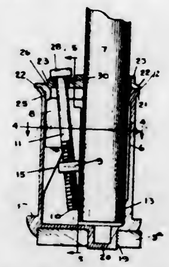
A device of the kind described comprising the semicircular side rings hinged together and terminating in eyes at the free ends, arched transverse bands connected to said eyes, a fabric connected to the transverse bands and to the side rings, and hooks passing through the eyes at the ends of the side rings, each hook having an eye to receive the extreme end of the hook as set forth.

1,388,265. GAME APPARATUS. GEORGE KEHL, Chicago, Ill. Filed June 24, 1920. Serial No. 391,410. 1 Claim. (Cl. 46—41.)



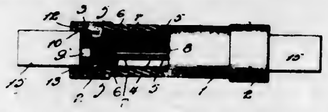
A device of the class described comprising a box like casing, having a flat bottom displaying an image arranged therein, a transparent covering in said casing, the bottom of said casing having a plurality of different sized and shaped depressions arranged therein in different relative positions, a plurality of rolling and tumbling members in said casing, said members being formed of different sizes and shape each adapted to fit in one of the aforesaid depressions to complete the character displayed in the casing.

1,388,266. WHEELED DITCHING-MACHINE. GEORGE KETTENTON, Scotts Bluff, Nebr. Filed Dec. 24, 1919. Serial No. 347,082. 1 Claim. (Cl. 37—7.)



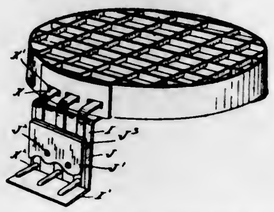
The combination with a vehicle frame formed from channel iron having its flanges extending upwardly, the forward end of the frame being semicircular, of a fifth wheel construction for the forward end of said frame, said fifth wheel comprising upper and lower members, the upper member being formed by removing the forward flange of the semi-circular portion of the frame, upwardly and rearwardly extending lugs carried by the lower member and overlying the horizontal portion of the semi-circular forward end of the frame and located on each side of the longitudinal center line of the frame, a flanged plate disposed within the semicircular forward end of the frame and having its flange secured to the rear flange of said semi-circular forward end of the plate and its body portion disposed on the lower member, and a king pin extending through the flanged plate and the lower member and concentrically disposed in relation to the upwardly and rearwardly extending lugs and in relation to the forward edge of the semicircular forward end of the vehicle frame.

1,388,267. LANTERN. ELIZABETH C. KNEIP, Maspeth, N. Y. Filed Jan. 25, 1921. Serial No. 439,761. 2 Claims. (Cl. 240—13.)



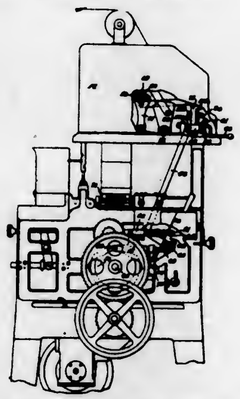
1. A lantern comprising a flat base plate having a pair of openings, a member protruding downwardly therefrom and adapted to be thrust into the ground, a source of light and a chimney supported by said base plate, and a pair of anchor rods, disposed one on each side of said chimney, passing through the openings in the base plate.

1,388,268. COUPLING. ALFRED W. KNUTSON, Galesburg, Ill., assignor to Rowe Manufacturing Co., a Corporation of Illinois. Filed Aug. 25, 1919. Serial No. 319,819. 7 Claims. (Cl. 287—23.)



3. A device of the type set forth comprising a socket adapted to receive a post, a part of one wall of the socket and a part of the surface of the post converging toward each other, a bolt having a head adapted to engage an outer part of the socket and a nut on the bolt adapted to engage and slide between said wall and said surface as the bolt is rotated therein, whereby the nut may be forced into wedging engagement with the post.

1,388,269. INCLOSED OR CARTRIDGE FUSE. WILLIAM JOE KRAMER, St. Louis, Mo. Filed June 16, 1919. Serial No. 304,481. 10 Claims. (Cl. 200—132.)



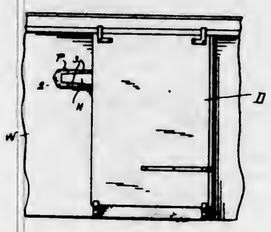
5. A renewable fuse comprising a shell and tubular ferrules fixed on the ends of the shell, in combination with a fuse-strip holder having current-conducting terminals fitting removably longitudinally within the shell, conducting retaining-members for the holder also fitting removably within the shell and engaging loosely with the ferrules and detachably with the holder, and closure-means for the ends of the shell having detachable engagement with the ferrules.

1,388,270. ELECTRIC HEATER. FRANK KUHN and JAY A. HAND, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Original application filed Feb. 21, 1918, Serial No. 218,402. Divided and this application filed May 31, 1918. Serial No. 237,423. 2 Claims. (Cl. 219—19.)

1. In an electric heater, the combination with a frame, of a heating unit detachably engageable with said frame, terminals for said unit projecting therefrom, a housing for said terminals secured to said frame, a marking plate for said unit secured to the terminal portion thereof, and a window in said housing through which the markings on said plate are displayed when said heating unit is in engagement with said frame.

1,388,271. DESIGNATION-PRINTING MEANS. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1916. Serial No. 79,013. 43 Claims. (Cl. 235—58.)

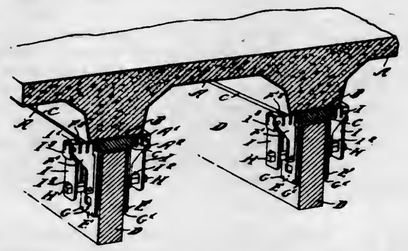
1. In a machine of the character described, the combination of means for setting up and printing items; means for accumulating said items; means for printing the total accumulated by the accumulating means; and settable means for automatically rendering the accumulating means inoperative from the time that a single item is accumulated after the setting of the settable means until the next total is printed.



6. In an accounting machine having a plurality of groups of printers, each group of printers having means for defining the position of said printers for printing individual items, actuating means for actuating said printers into printing position, accumulators to be engaged by said printers to accumulate on said accumulators, means for resetting said accumulators so that said accumulators may define the position of said printers for taking totals, and means for anchoring said accumulators out of accumulating position during one or more normal accumulating periods.

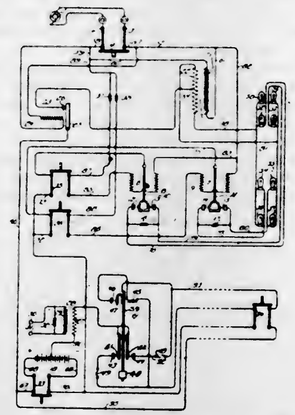
11. In an accounting machine having a plurality of groups of printers, each group of printers having means for defining the position of said printers for printing individual items, actuating means for actuating said printers into printing position, accumulators to be engaged by said printers to accumulate on said accumulators, means for resetting said accumulators so that said accumulators may define the position of said printers for taking totals, progressively actuated anchoring means for anchoring said accumulators out of accumulating position on the second actuation of said anchoring means, the initial actuation of said actuating means not affecting the accumulators whereby the first card of a series may be accumulated but accumulation of all the remaining cards be prevented, and means restoring said accumulators.

23. In an accounting machine having a group of printers, accumulators for coöperating with said printers, a shifting link operatively connected to said accumulators for bringing said accumulators into or out of engagement with said printers, rocking means having an upper and a lower active end, the upper active end being operative to connect said shifting link for shifting the same to bring said accumulators into engagement with said printers for accumulation, the lower active end being operative to connect said shifting link for shifting the same to bring accumulators into engagement with said printers for taking a total, actuating means for actuating said rocking means, and means for anchoring said rocking means out of engagement with said shifting link.



36. In a machine of the character described, the combination of a printing mechanism on which items may be set up; an accumulator adapted to effect the accumulation of a set-up item and to automatically become inoperative during the subsequent setting up of items; and an initiating means for causing the total-taking of said set-up item after said subsequent setting up.

1,388,272. DOOR-HOLDER. WILLIAM H. LAWRENCE, Akron, Ohio. Filed Dec. 24, 1920. Serial No. 433,039. 2 Claims. (Cl. 292—219.)

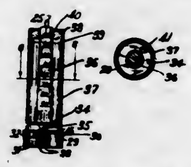


1. In combination with a wall provided with an opening and with a pocket adjacent said opening and a sliding door coacting with the opening, a plate substantially defining the side walls and inner end wall of the pocket and provided with flanges extending within the pocket, a plate fitting between the portions of the first named plate defining the side walls of the pocket, the side margins and the forward end margin of said second named plate being defined by inwardly directed flanges, a pintle supported by the flanges of the first named plate and with which the side flanges of the second named plate are pivotally engaged, and means for constantly urging an end portion of the second named plate outwardly of the pocket and in the path of travel of the door, the pivoted end portion of the second named plate being provided with a tail underlying the portion of the first named plate at the inner end of the pocket.

1,388,273. SUPPORT FOR CONCRETE-FORMS. RALPH R. LEFFLER, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 21, 1919. Serial No. 339,715. 5 Claims. (Cl. 25—131.5.)

1. The combination with a form, of means for supporting said form including a stirrup, a supporting arm adjustable upon said stirrup to either an operative or an inoperative position, together with means for locking said arm in its operative position.

1,388,274. CONVERTER. OSCAR M. LEICH, Genoa, Ill., assignor to Leich Electric Company, Genoa, Ill. Filed Aug. 4, 1919. Serial No. 315,146. 2 Claims. (Cl. 172—281.)

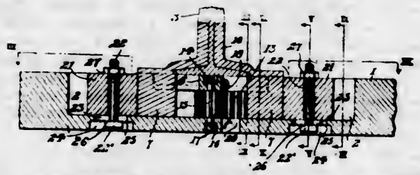


1. Apparatus of the character described comprising a source of alternating current, two or more vibratory rectifiers, means associated with each rectifier for limiting the current flow therethrough to protect the contacts thereof against overload, said rectifiers being adapted to convert said alternating current into uni-directional current, a translating device receiving said uni-directional current, means for connecting said rectifiers to supply said uni-directional current in parallel relationship to said translating device, an equalizer battery associated with said translating device and rectifiers to equalize the current supply to said translating device, a switch for controlling the association of said uni-directional current with said translating device and said battery, a second switch for controlling the association of said uni-directional current with said translating device, and a transformer having a primary and secondary winding, the primary winding being connected to said translating device and an intermediate point of said battery.

2. Apparatus of the character described comprising a source of alternating current, two or more vibratory rectifiers, means connected with each rectifier for lim-

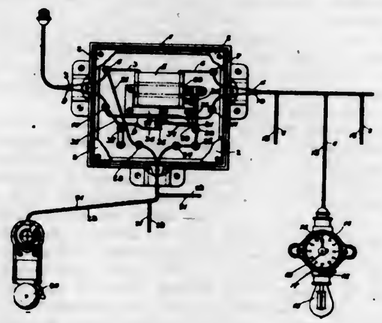
iting the current flow therethrough to protect the contacts thereof against overload, said rectifiers being adapted to convert said alternating current into uni-directional current, a vibratory converter receiving said uni-directional current, means for connecting said rectifiers to supply said uni-directional current in parallel relationship to said vibratory converter, an equalizer battery associated with said vibratory converter and rectifiers to equalize the current supply to said vibratory converter, a switch for controlling the association of said uni-directional current with said vibratory converter, a second switch for controlling the association of said uni-directional current with said vibratory converter, and a transformer having a primary and secondary winding, the primary winding being connected to said translating device and an intermediate point of said battery.

1,388,275. TIRE-GAGE. ARTHUR B. LOW, Denver, Colo. Filed Apr. 12, 1918. Serial No. 228,251. 20 Claims. (Cl. 73—111.)



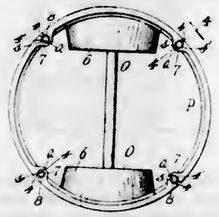
1. A tire gage, comprising a tubular member open at one end to receive fluid under pressure and having a cavity therein, a plunger movable in said cavity and in frictional engagement with the member, the two parts being constructed and arranged to gradually increase the friction as the plunger moves from the open end in predetermined degree having definite and predetermined relation to the extent of movement, and a gage bar on which said plunger is mounted, there being a passage connecting the portions of said cavity on opposite sides of the plunger, whereby the effective pressure area is equal only to that of a cross section of the gage bar.

1,388,276. EXTRACTION OF POTASSIUM FROM THE NATURAL SUBSTANCES IN WHICH IT OCCURS. SAMUEL MCKIRAHAN, Golden, Colo., assignor, by direct and mesne assignments, of two-thirds to F. A. Fuller, Denver, Colo. Filed Feb. 14, 1918. Serial No. 217,280. 3 Claims. (Cl. 23—22.)



1. The process of extracting potassium from natural substances in which it occurs, consisting in mixing with non-calcic silicate rock carrying potassium compounds, a quantity of finely-divided fluorspar (CaF_2) exclusive of any other agent or agents, heating the mixture to volatilize the potassium as potassium fluorid (KF), and recovering the potassium salts from the volatile product.

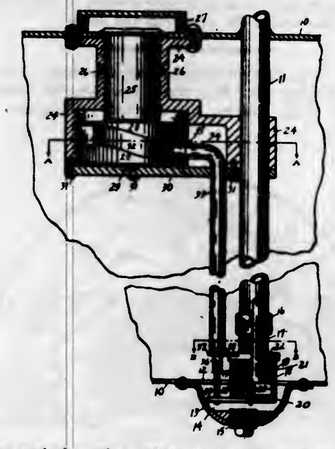
1,388,277. RAILROAD TIE AND FASTENER. STIVE MALICZISKI, Jersey City, N. J. Filed May 23, 1921. Serial No. 471,723. 8 Claims. (Cl. 238—331.)



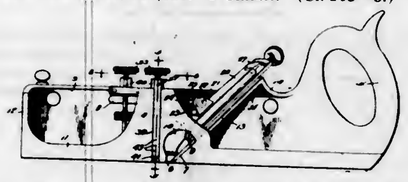
1. A rail tie and fastener of the type described comprising a tie having a recess formed therein and a rail supported on the tie above said recess, rail engaging clamps slidably and interlockingly mounted in said recess, rack bar extensions carried by said rail engaging clamps lying in spaced overlapped relations adjacent the opposite walls of the recess, a pinion journaled in said tie in engagement with said rack bars for shifting the rack bars and the rail engaging clamps carried thereby for engagement with the rail.

1,388,278. SIGNAL MECHANISM. LEWIS A. MAPEL, St. Louis, Mo., assignor to Automatic Appliance Company, St. Louis, Mo., a Corporation of Missouri. Filed July 13, 1918. Serial No. 244,753. 7 Claims. (Cl. 161—1.)

1. Signal mechanism comprising an electric circuit, a switch for opening and closing said circuit, a normally de-energized electro-magnet in said circuit, and a timing device settable to close said switch after any varying selected interval of time, in combination with an electrically operable signal, a circuit wire from said signal in connection with one of the wires of said circuit between said magnet and the source of the electrical energy, another circuit wire from said signal, and a device operated by said magnet when said magnet is energized for placing said other circuit wire from the signal in circuit with the other wire of the first-named circuit between said switch and the source of electrical energy.



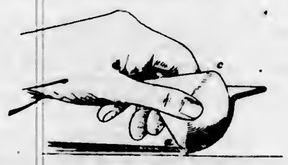
1,388,279. PISTON FOR ENGINE-CYLINDERS. CHARLES A. MARIEN, St. Louis, Mo., assignor to H. & H. Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 29, 1920. Serial No. 420,360. 7 Claims. (Cl. 74—108.)



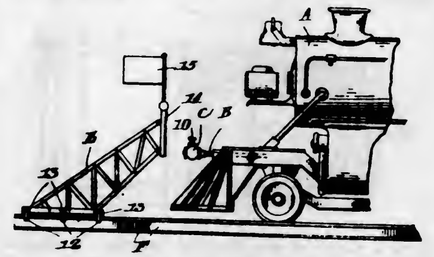
1. A piston for engine cylinders provided with a skirt slit or divided longitudinally, and longitudinally slit filler tubes in the slits of the skirt.

1,388,280. AUTOMOBILE GASOLENE-LOCK. HAL M. MASON, Independence, Kans. Filed June 17, 1920. Serial No. 389,682. 3 Claims. (Cl. 251—7.)

1. In combination, a gasolene tank, a pipe leading therefrom, a flanged extension upon the base of said pipe within the tank, a cap sleeved upon said flanged extension, a collar around said extension engaging said cap, a spring bearing between said collar and flange; openings in the sides of said cap adapted under certain conditions to admit gasolene for transmittal through said pipe, said spring normally tending to raise said cap to seat against the extension and close the orifices leading to said pipe against such gasolene transmittal.

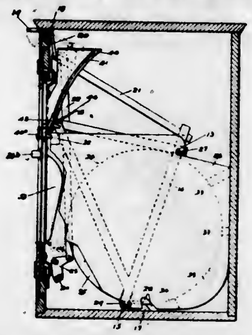


1,388,281. CARPENTER'S ADJUSTABLE FILLISTER OR RABBET PLANE. JAMES E. MEED, Palestine, W. Va. Continuation of application Serial No. 225,151, filed Mar. 28, 1918. This application filed June 21, 1920. Serial No. 390,425. 5 Claims. (Cl. 145—5.)



4. A fillister or rabbet plane comprising a stock having a base plate, a side plate, a bit seat, a web connecting said bit seat with the side plate and formed with an opening therein, a bit resting against the bit seat and provided with gear teeth exposed through an opening in said bit seat, a shaft arranged in rear of the bit seat and carrying a gear projecting through said opening and meshing with said gear teeth, said shaft being rotatably and tiltably mounted at its lower end and projecting at its opposite end through the opening in the web, and a latch device upon the web for holding the shaft in position for rotation with the gear engaging the gear teeth.

1,388,282. ECONOMIC COOKING-VESSEL WIPE. WILLIAM MEREDITH, Indianapolis, Ind. Filed Mar. 23, 1921. Serial No. 454,807. 2 Claims. (Cl. 65—12.)

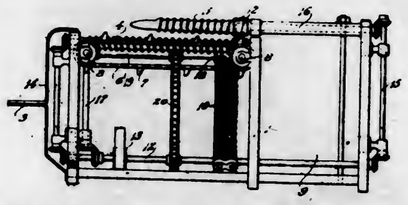


1. As a new article of manufacture, a substantially triangular vessel wipe of flexible material having two straight edges uniting in an acute angle and having a third curved edge, the body of said article increasing in thickness from all three of its edges to its middle in base to base pyramids.

1,388,283. TRAIN-STOP. GEORGE HUMISTEN METZLER, Halifax, Nova Scotia, Canada. Filed Oct. 19, 1920. Serial No. 417,867. 1 Claim. (Cl. 246—207.)

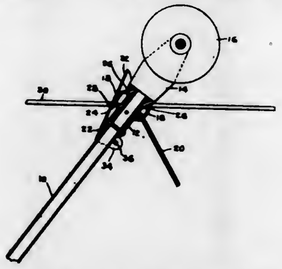
A train stop comprising a valve mounted on the brake pipe line of the locomotive, and a lever on the valve, an angularly disposed skeleton frame, side clamping members and bolts securing the skeleton frame to a rail in advance of the locomotive, a serrated rod in front of the skeleton frame designed to engage the lever, and signaling means on the top of the serrated rod.

1,388,284. CABINET FOR PHONOGRAPHIC RECORDS. ANDREW E. MICHAELSON, Portland, Oreg. Filed Nov. 22, 1919. Serial No. 339,891. 6 Claims. (Cl. 211—16.)



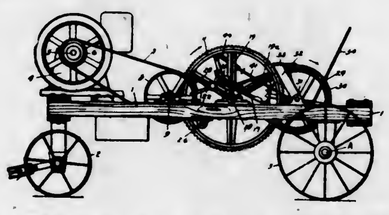
1. In a device of the character described, the combination of, a cabinet of desired form, a rigid transverse bar in a desired position in the cabinet, a triangular frame pivoted in its upper rear part on the bar, a series of cartons pivoted on the cabinet bar, said cartons being provided with notches in their lower parts, bell crank lever mechanism upon the interior, forward and lower part of the cabinet side walls, provided with a transverse bar, and a lever mechanism upon the interior forward upper side walls of the cabinet provided with a handle extending outwardly from the cabinet and intervening means connecting said lever mechanism with the bell crank lever mechanism and the said frame in a manner whereby the bar of the bell crank lever may engage a carton in its lower notch, when the said bar is moved forwardly beyond the bell crank center and the carton is moved upwardly, and to retain the carton in such raised position, also to release the carton when the bell crank bar is depressed and the bell crank moved reversely over its center.

1,388,285. PROCESS OF MANUFACTURE OF BLANC FIXE. GRANVILLE MOORE, San Francisco, Calif. Filed Aug. 13, 1919. Serial No. 317,384. 3 Claims. (Cl. 23—13.)



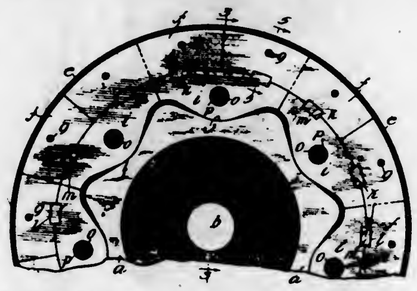
3. The method of producing blanc fixe which consists of mixing finely divided crude barytes with sodium chlorid and alkali metal nitrates, subjecting the mixture to fusion, then chilling the fused mass by discharging it into cold water.

1,388,286. CORN-HUSKING DEVICE. SAMUEL E. MORRAL and WILLIAM W. MORRAL, Morral, Ohio. Filed June 14, 1919. Serial No. 304,209. 15 Claims. (Cl. 130—5.)



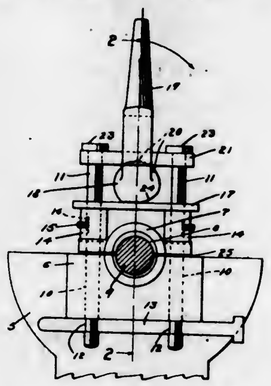
1. In a device of the character described, a rotatable ear removing device, a structure having means to support stalks of corn in horizontal position relatively to the opposite sides of the ear removing device and means operative substantially in the plane of said supporting structure for moving said stalk axially of said ear removing device to aline the same therewith and also transversely of said ear removing device to bring the ear into engagement therewith while said stalk is supported in substantially a horizontal position on said supporting structure.

1,388,287. DEVICE FOR PREVENTING WRECKING OF CROSS-WIRES OF TROLLEY SYSTEMS. WILLIAM F. MURRAY, Minneapolis, Minn. Filed Apr. 1, 1921. Serial No. 457,754. 1 Claim. (Cl. 191—74.)



A device for preventing wrecking of cross wires of trolley systems comprising a transversely curved shield, a pair of enveloping ears at one end of said shield, and means for securing said ears around a trolley pole adjacent its head in such manner that said shield may be moved to cover said head according to which of the opposite sides of the latter is uppermost.

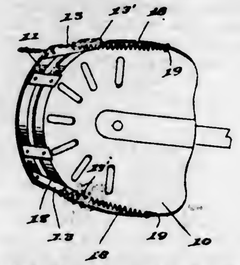
1,388,288. HOISTING DEVICE. HIRAM MYERS, Sterling, Ill. Filed Aug. 2, 1920. Serial No. 400,616. 7 Caims. (Cl. 255—9.)



1. A device of the class described, comprising a suitably mounted frame; a shaft rotatably mounted on said frame; a drum supported on said shaft, so as to rotate independently thereof; a drive-wheel fixed to said shaft, in proximity to said drum; coupling devices carried by said wheel, adapted to connect said wheel and drum so as to rotate in unison; means for disconnecting said coupling devices upon said drum receiving a predetermined amount of movement; means for holding said devices in disconnected position; and means for releasing the same.

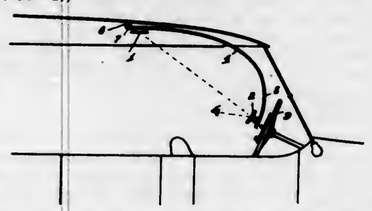
1,388,289. ELASTIC WHEEL. EDWARD NEELY, Chicago, Ill. Filed Dec. 26, 1917, Serial No. 208,899. Renewed Jan. 19, 1921. Serial No. 438,524. 4 Claims. (Cl. 152—36.)

1. In an elastic wheel, the combination with a rigid hub annulus, of a rigid rim annulus surrounding the same, one of said annuli having its periphery adjacent the other waved in its outline, and a rubber cushion annulus secured to the annulus that is opposed to the waved periphery of the other and having a coöperating waved periphery normally separated from the opposed waved periphery at the alternating crests and hollows of the wave-



1,388,290. CLAMPING DEVICE FOR BEARINGS. JOYCE C. NELSON, Tracy, Minn., assignor of one-third to George T. Schesvold, Minneapolis, Minn., and one-third to Robert J. Nelson, Gales, Minn. Filed Apr. 5, 1920. Serial No. 371,423. 6 Claims. (Cl. 29—1.)

1. The combination, with a bearing block, of guide rods mounted therein, a cap mounted for vertical movement on said rods and between which and said block the shaft is seated, a presser bar, vertically movable on said rods, and means for exerting a downward pressure on said bar and bearing cap.



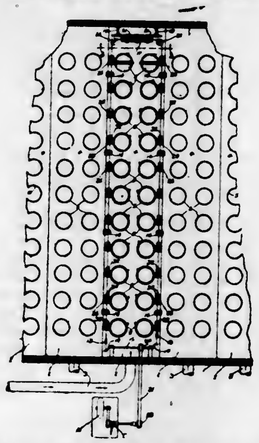
1,388,291. BACKREST FOR FARM MACHINERY. WILLIAM E. NICKLAUS, Madison, Ind. Filed Mar. 26, 1921. Serial No. 455,842. 1 Claim. (Cl. 155—164.)

A back rest for the seat of a farm machine or the like comprising upper and lower horizontal curved strips of different lengths and of different arcs of curvature, vertical connecting strips between the curved strips, downwardly and forwardly inclined side strips connected to the ends of the curved strips, hinged connections between

the side strips and the seat of the machine, and springs connected to the side strips and to the seat forwardly of the said hinged connections.

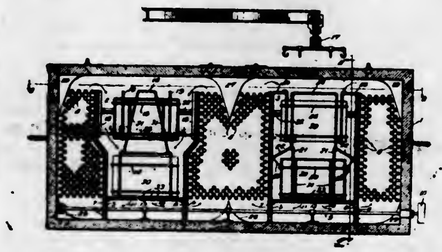
1,388,292. COMPASS. OLE P. NOISOM, South Bend, Ind. Filed Sept. 13, 1920. Serial No. 410,048. 2 Claims. (Cl. 88—1.)

1. The combination with a motor driven vehicle having a top and a steering wheel, of a compass located adjacent said top and to the rear of said steering wheel, a supporting arm, said compass being substantially horizontally disposed and carried by the supporting arm, the rear end of said supporting arm being secured to the top, said supporting arm extending forwardly and curving downwardly and terminating adjacent the steering wheel and a reflecting mirror carried by the downwardly extending portion of said arm and entirely supported by said arm.



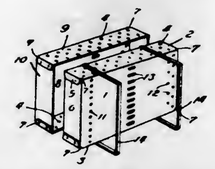
1,388,293. BELLOWS-BOX. FRANK J. NOVOTNEY, Kansas City, Mo. Filed Oct. 10, 1919. Serial No. 329,861. 1 Claim. (Cl. 43—146.)

A bellows box comprising a receptacle composed of a pair of box sections, one of which is of flexible material providing a diaphragm portion, a spring element interposed between said sections and comprising a wire coil having a branch portion engaging said diaphragm and a second branch portion resting against the opposite portion of the box, diametrical strips provided with retaining fingers engaging said branch portions for holding the same in position, and retaining means holding said box sections together against the action of said spring.



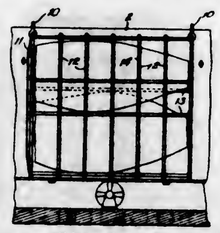
1,388,294. SHAKING MECHANISM FOR FILTERING APPARATUS. JOHN EDWIN PEDERSEN, Hillsboro, Ill., assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo., a Corporation of Maine. Filed Dec. 13, 1920. Serial No. 430,559. 8 Claims. (Cl. 183—58.)

1. In mechanism of the class described, the combination of a gas-tight hopper, an outlet flue from the hopper, a vertically suspended bag having its lower end connected to the wall of said flue, a device connected with the walls of the bag for imparting thereto a torsional shaking motion in opposite directions to dislodge the residue from the walls of the bag and discharge the residue into said



flue, and mechanism for operating said device alternately in opposite directions to shake the bag torsionally, as aforesaid.

1,388,295. REFRIGERATING APPARATUS. PAUL W. PETERSEN, Chicago, Ill. Filed Apr. 13, 1921. Serial No. 460,970. 17 Claims. (Cl. 62—101.)

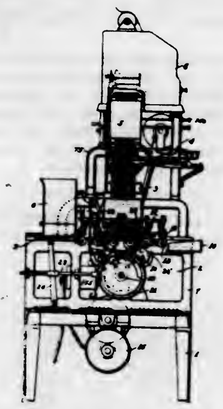


1. In a refrigerating apparatus, a tank containing a refrigerant, compartments therein embodying means for supporting comestibles during their refrigeration, the space without said compartments being approximately equal to the space within said compartments, and means for circulating said refrigerant downwardly through said compartments and around said comestibles.

1,388,296. CONTAINER FOR COMESTIBLES. PAUL W. PETERSEN, Chicago, Ill. Filed May 4, 1921. Serial No. 466,631. 11 Claims. (Cl. 62—1.)

1. A container for comestibles comprising a rectangular box member and a telescopic lid therefor, the ends of said box and of said lid being closed and the sides thereof being perforated to permit of a transverse flow of a refrigerant through the container.

1,388,297. RACK FOR COMESTIBLES. PAUL W. PETERSEN, Chicago, Ill. Filed May 4, 1921. Serial No. 466,632. 4 Claims. (Cl. 62—1.)



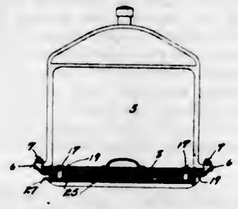
1. A rack for comestibles adapted to be immersed in a refrigerant and comprising an open-work frame to permit the comestibles held in said rack to come in direct contact with the refrigerant, a plurality of side-by-side partitions supported in said frame, said partitions being perforated to form a plurality of transverse and superposed rows of pigeon holes that are severally adapted to support comestibles longitudinally of their length, the pigeon holes in one row being staggered with respect to those in the adjacent row.

1,388,298. METHOD OF PRESERVING COMESTIBLES. PAUL W. PETERSEN, Chicago, Ill. Filed June 4, 1921. Serial No. 475,042. 7 Claims. (Cl. 99—14.)

3. The process of preserving a comestible which comprises refrigerating the comestible with a brine solution to the point where the brine solution may subsequently be washed off by cold water without the comestible being substantially deprived of its inherent cold, then washing the comestible with cold water, then subjecting the comestible to the action of cold air, then glazing the comestible by immersing it in an ice water bath, and then storing the comestible in air maintained below the freezing point.

1,388,299. COMBINED PERFORATING AND PRINTING TABULATOR MECHANISM. JAMES POWERS, New York, N. Y., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 17, 1917. Serial No. 149,203. 25 Claims. (Cl. 235—58.)

1. In an apparatus of the character described, the combination of an accounting machine comprising settable stops; a perforating machine comprising settable members; key members; and means actuated by the actuation of the key members for causing the key members to be brought from operative relation with certain of said stops and settable members to operative relation with others thereof.



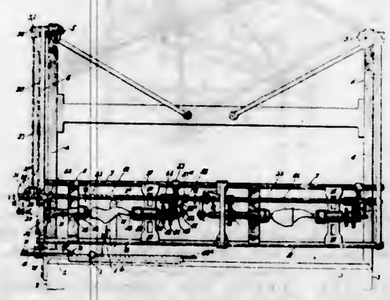
3. In an apparatus of the character described, the combination of an accounting machine comprising groups of movable stops arranged one behind the other; a perforating machine comprising a plurality of groups of settable members; a carriage; key members on said carriage and adapted to operate said stops and members of certain of said groups; and means actuating by the actuation of the key members for moving said carriage for moving said key members from operative relation with certain of said groups to other groups thereof.

7. In an apparatus of the character described, the combination of an accounting machine comprising settable stops; a perforating machine comprising settable members and manipulating means for simultaneously causing the release of the stops and settable members.

17. The combination with a perforating machine and a printing tabulator, of a key board device arranged to operate both of said mechanisms, said device comprising a framework, a plurality of main key bars mounted in said framework, a plurality of auxiliary key bars arranged adjacent to the main key bars, means for normally holding the auxiliary key bars in operative connection with the main key bars whereby a movement of the main key bars will operate the auxiliary key bars.

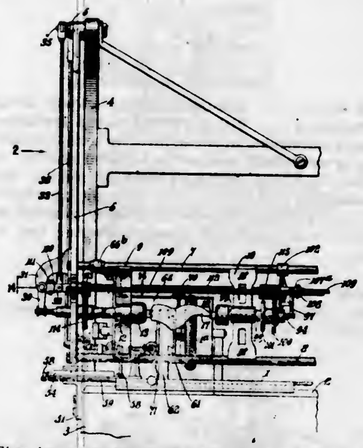
24. In a mechanism of the class described, a perforating machine having a plurality of punches, means for setting said punches, a printing tabulator arranged above the perforating machine, means for setting said printing tabulator and a key board mechanism arranged between the perforating machine and the printing tabulator and having elements arranged to operate the setting means of both of the said mechanisms.

1,388,300. HEATER FOR AUTOMOBILE-RADIATORS. AMANDUS PRIEBE and HUBERT PRIEBE, Antigo, Wis. Filed Nov. 22, 1920. Serial No. 425,931. 3 Claims. (Cl. 126—350.)



2. An automobile radiator heater comprising a casing adapted to contain prepared fuel, means for securing the casing against the front face of a radiator, a series of outlet ports in the upper portion of the rear wall of the casing, a series of inlet ports in the lower portion of the front wall of the casing, a face plate inside the casing and extending across the front, top and bottom sides thereof and having flanges facing the top and bottom portions of the rear side of the casing, inlet ports in the lower portion of the front wall of the plate, means for sliding the plate in the casing to cause the inlet ports thereof to cover or uncover the inlet ports of the casing and slots in the upper rear flange in alinement with the outlet ports of the casing.

1,388,301. MANUFACTURE OF ARTICLES HAVING A SYSTEMATIC RESEMBLANCE TO A PATTERN. EDWIN J. PRINDLE, East Orange, N. J., assignor, by mesne assignments, to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Apr. 27, 1918. Serial No. 231,154. 56 Claims. (Cl. 142—15.)

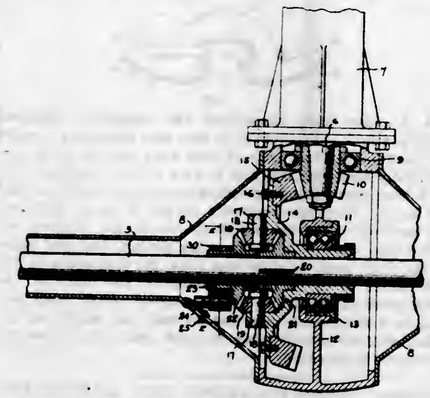


1. That improvement in the art of copy turning lasts which comprises so controlling the model that each point of a certain profile of the model shall be at the same distance from the axis of rotation at the instant when the model wheel is operating on the said point.

10. In a last turning lathe, the combination of a model wheel and cutter, means for rotating a model and block, and means for so shifting the model and block bodily during the turning operation that the portions of the profiles of the soles of the model and block being operated upon by the model wheel and cutter, respectively, shall always be at a fixed distance from the axis of rotation.

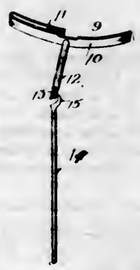
56. That improvement in the art of pattern copying which comprises so controlling the model and work that portions of corresponding contours of them at the instant of reproduction are at affixed distance (which may be zero) from a grading axis.

1,388,302. MANUFACTURE OF ARTICLES HAVING A SYSTEMATIC RESEMBLANCE TO A PATTERN. EDWIN J. PRINDLE, East Orange, N. J., assignor, by mesne assignments, to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed June 25, 1918. Serial No. 241,864. 30 Claims. (Cl. 142—15.)



1. That improvement in the art of manufacturing lasts which comprises revolving a block on a fixed axis, revolving a model, and bodily shifting the model relatively to its axis a distance proportional to the difference in radius between the point of the profile of the last being operated upon and another point or points in the said profile.

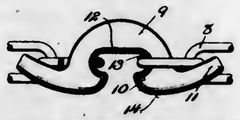
9. In a last turning lathe, the combination of means for bodily shifting the model relatively to its axis of revolution a distance equal to the radius of that portion of the sole profile of the model which is being operated upon by the model-wheel, and means for varying said distance in accordance with the ratio of change in the width of the last.



17. In a last turning lathe, the combination of means for rotating a model and a block, a cam having the shape of a longitudinal profile of the sole of the model, a part progressively engaging points of the said cam corresponding to points of the sole of the model engaged by the model-wheel of the lathe, a lever operated by said part, a second part engaging said lever, means for shifting said model relatively to its axis, connections between said part and said means, and means for adjusting said second part on said lever to transmit motion of said first-mentioned part to the model in accordance with the width ratio.

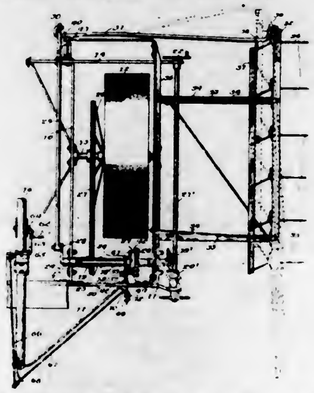
1,388,303. VARIABLE-SPEED POWER-TRANSMISSION. OSWALD S. PULLIAM, New York, N. Y. Filed Aug. 7, 1919. Serial No. 315,918. 1 Claim. (Cl. 74—34.)

A device of the character described comprising a driving shaft and a driven shaft, a bevel gear loosely mounted on the driven shaft, a bevel gear carried by the driving shaft and meshing with the bevel gear on the driven shaft, a second bevel gear loosely mounted on the driven shaft, said last-mentioned bevel gear having a hub extension, a bevel gear keyed to the driven shaft and interposed with respect to the two loosely mounted bevel gears on the driven shaft, a plurality of idle gears carried by the first-mentioned loosely mounted gear on the driven shaft and engaging the second-mentioned loosely mounted gear on the driven shaft and the bevel gear keyed to the driven shaft, and a friction brake engaging the hub extension of the last-mentioned loosely mounted gear for retarding the movement thereof and through the medium of the first-mentioned loosely mounted gear on the driven shaft and the idle gears carried thereby serving to transmit power from the driving shaft to the driven shaft through the bevel gear keyed thereto.



1,388,304. NECKTIE-HOLDER. ALEXANDER RADIN, New York, N. Y. Filed Jan. 5, 1921. Serial No. 435,095. 2 Claims. (Cl. 2—84.)

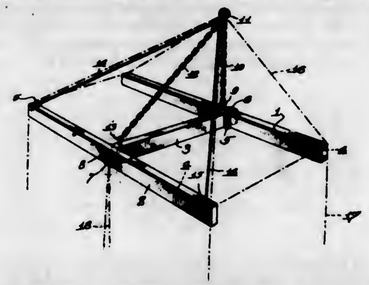
1. A device of the class described comprising a member adapted to be placed against the inner wall of a turned



down collar with the ends thereof extending behind the front wall of the collar, said member having one end turned back upon itself to form a clamp adapted to engage around the edge of the outer flap of the collar to clamp said member upon the collar to make itself supporting thereon, and a rod member projecting forwardly and downwardly from said first member, about which latter member a tie is adapted to be tied, said second member being adapted to lie inside the knot of the necktie and to form a support to hold the knot in extended position.

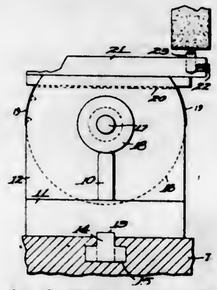
1,388,305. DETACHABLE CHAIN-HOOK. JOHN G. RIEFF, London, Wis. Filed Apr. 9, 1921. Serial No. 459,907. 3 Claims. (Cl. 24—73.)

3. A chain hook comprising two oppositely disposed hook portions connected by a web and extending toward each other, the inner edge of each hook portion being substantially semi-circular, and a wing formed integral with each hook portion and extending outwardly therefrom and having its outer face convexly curved so as to facilitate the passing of the chain link thereover, the distance between the inner side of the wing portion and the point of the hook being slightly less than the free space in the link which is to be passed thereover, the point of the hook being substantially a continuation of the wing portion in the opposite direction so that the weight of the chain will effectually prevent said link from becoming accidentally detached.



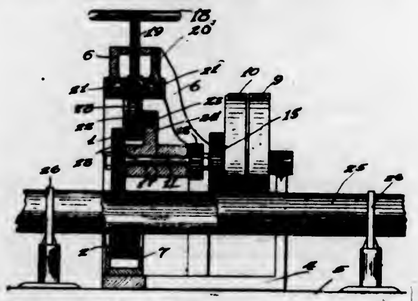
1,388,306. BUNDLE-CARRIER FOR HARVESTERS. CHARLES W. ROBINSON and ERNEST BASEMAN, Hamilton, Ontario, Canada, assignors, by mesne assignments, to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 7, 1917. Serial No. 160,512. 11 Claims. (Cl. 56—478.)

1. In a harvester, a bundle carrier comprising a plurality of extending tines, means including a constantly driven mechanism for actuating said tines and dumping said bundle carrier, and means for controlling said constantly driven mechanism operating upon a single actuation to connect said driven mechanism to said carrier to dump said carrier and retain the carrier in dump position until released.



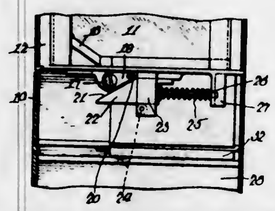
1,388,307. WARDROBE. WILLIAM H. ROBINSON, Detroit, Mich. Filed Dec. 3, 1919. Serial No. 342,081. 2 Claims. (Cl. 45—37.)

1. A wardrobe comprising an inclosure having a peak top and a bag-like bottom, a collapsible three member frame constantly in said inclosure and to which said inclosure is connected, a hanger in the top of said inclosure, and means connecting each member of the collapsible frame



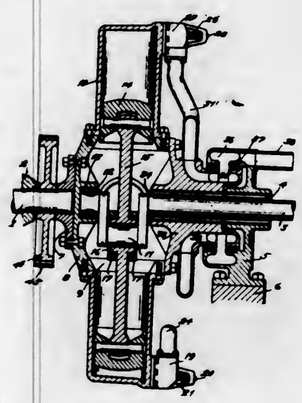
to said hanger so that the frame member may be assembled in said inclosure or said inclosure rolled about the members as a core when said frame is collapsed.

1,388,308. DEVICE FOR DRESSING GRINDING-WHEELS. FRANK P. ROGERS, Worcester, Mass. Filed Jan. 8, 1920. Serial No. 350,115. 2 Claims. (Cl. 125—11.)



1. A device for dressing grinding wheels having, in combination, a base with a vertical face, a graduated disk angularly adjustable about a pivot in said vertical face, means to secure said member in adjusted position against said face, said base having an index coöperating with the graduations of said disk to show the resulting angle of the wheel face, a tool holding device slidably mounted on said disk, and means to secure a wheel dressing tool to said device.

1,388,309. BOILER-TUBE-CLEANING DEVICE. JAMES ROSS, Chicago, Ill. Filed Oct. 2, 1919. Serial No. 327,969. 7 Claims. (Cl. 29—81.)

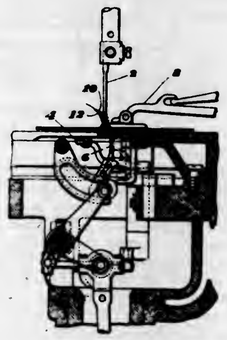


1. A pipe cleaning machine comprising means for supporting a pipe and a rotary cutter having teeth arranged spirally therearound whereby rotation of the cutter simultaneously removes the scale and traverses the pipe over the supporting means.

1,388,310. FARE-BOX. ALBERT RUEBSAMEN and WALTER L. DENNIS, Decatur, Ill. Filed July 19, 1919. Serial No. 311,944. 8 Claims. (Cl. 232—15.)

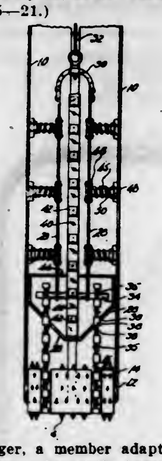
1. A mechanism of the character described including in combination a main casing or body having a hopper and provided with an opening leading into an intermediate part, a lid or tray for opening and closing said opening, a shaft journaled in said main casing or body and located near one side of said opening, said lid or tray being secured to said shaft, a spring pressed wedge element slidably mounted in one side of said body or casing, and coöperatively arranged with reference to said shaft so as to resist the opening movement of said lid or tray and to force the same to a closed position when pressure on the shaft is released, a sliding closure held closed by a part moved by said tray while the latter is closed.

1,388,311. FLUID CLUTCH AND TRANSMISSION. JOHN M. RUSSELL and FREDERICK C. RUSSELL, San Bruno, Calif. Filed June 12, 1919. Serial No. 303,640. 1 Claim. (Cl. 192—60.)



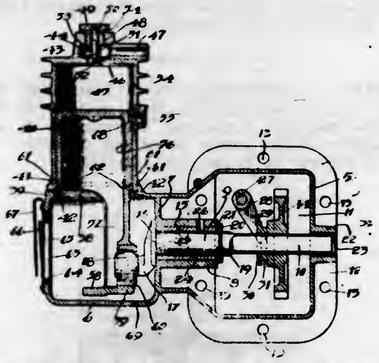
A fluid clutch having a drive and a driven shaft arranged in axial alinement, a cylinder cage secured to said drive shaft and into which the end of said driven shaft extends and is rotatably mounted, a plurality of cylinders mounted on said cage and each provided with a valve controlled fluid inlet port and a valve controlled outlet port, said driven shaft formed within said cage with a crank portion, a piston within each of said cylinders and operatively connected with said crank, a bearing for supporting said driven shaft, a flanged plate secured to said cylinder cage and received within said bearing, said plate provided with a bore within which said driven shaft rotates, said bearing formed at its inner wall with an annular groove communicating with a port, said plate formed with a plurality of bores terminating in an annular peripheral channel communicating with the channel within said bearing, a pressure outlet pipe leading from the outlet port of each cylinder and communicating one with each of said bores, packing between coöperating surfaces of said plate and bearing, and a valve controlling the outlet from said bearing port.

1,388,312. SALIVA-EJECTOR. CARL H. SEEGER, Manitowoc, Wis. Filed Jan. 12, 1920. Serial No. 350,850. 6 Claims. (Cl. 32—33.)



1. An ejector of the class described comprising a suction member having an inner tube of bendable metal, and an outer sheathing of soft yielding material, the outer sheathing being extended at one end beyond the end of the inner tube to form a mouthpiece, an air inlet opening in said inner tube, and means for connecting said inner tube with a suction producing device.

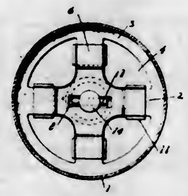
1,388,313. BUTTONHOLE-SEWING MACHINE. HENRY C. SEARLE, West Roxbury, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 15, 1919. Serial No. 317,655. 5 Claims. (Cl. 112—157.)



1. A buttonhole sewing machine having, in combination, a vertically reciprocating upper needle, a looper for taking a loop of upper thread and presenting it in position below the work for the passage up therethrough of an under needle, an oscillating curved under needle for carrying a loop of under thread up through the loop held by the looper and presenting it in position for the passage down therethrough of the upper needle provided with a surface arranged to press the point of the needle inward toward its axis of oscillation by engagement with the work as the needle penetrates the work.

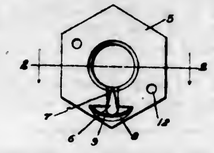
1,388,314. WELL-DIGGER. WILLIAM V. SEIFERT, Denver, Colo. Filed July 20, 1920. Serial No. 397,588. 5 Claims. (Cl. 255—21.)

1. In a well digger, a member adapted to be lowered into a hole, a rotary member at the lower end of said member cutting disks on said rotary member, and a conveyer passing over said rotary member and adapted to elevate material loosened by said disks.



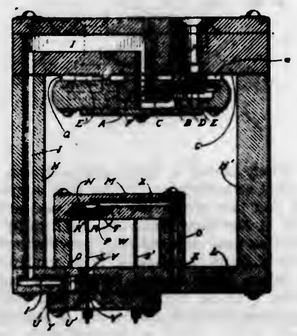
1,388,315. FLUID-PUMP. FRANK D. SHELDON, Chicago, Ill. Filed May 10, 1920. Serial No. 380,096. 2 Claims. (Cl. 230—34.)

1. In a fluid pump, the combination with a combined crank casing and a transmission gear casing, of a crank shaft horizontally journaled therein, a transmission gear slidably mounted on the crank shaft, means to shift said gear, passageways in one of the bearings of the crank shaft affording communication between the crank casing and said gear casing for the passage of lubricant, a cylinder mounted on the crank casing in communication therewith and having an inlet port and an outlet port, a spring-actuated valve controlling the outlet port, a piston located in the cylinder and having a passage-way for fluid coöperating with the inlet port for regulating the inflow of fluid, and means within the crank casing connecting the piston and the crank shaft for effecting combined reciprocating and oscillatory movement of the piston within the cylinder.



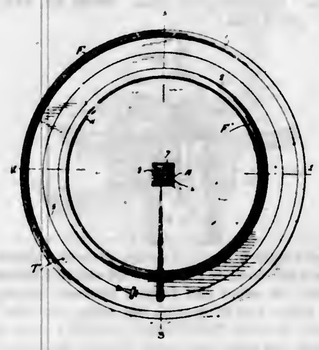
1,388,316. VALVE-HANDLE. FRANK A. STOLL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed May 21, 1921. Serial No. 471,389. 5 Claims. (Cl. 16—117.)

4. The combination with a stem having a transversely extending pin near the end thereof, of a hollow handle having a plurality of inwardly extending ears, a top clamping spider limited in vertical movement and in rotative movement by said pin and having its arm adapted



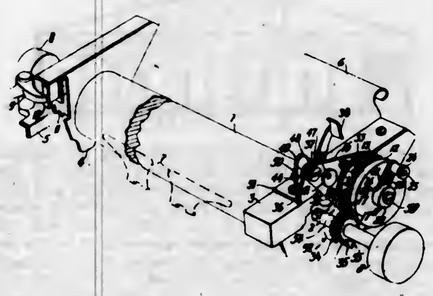
to engage above said ears, a bottom clamping spider having its arms engaging beneath said ears, and means for forcing the bottom clamping spider toward the top clamping spider.

1,388,317. NUT-LOCK. JOHN ARTHUR STUBBLEFIELD, Portland, Oreg. Filed Dec. 11, 1920. Serial No. 429,978. 1 Claim. (Cl. 151—25.)



A nut lock including a body portion having a central threaded opening and having a lateral opening in communication therewith, said nut having an opening providing communication between the threaded opening and lateral opening, a spring member having its ends disposed toward the central threaded opening, a wedge member positioned within the lateral opening and having one end thereof extending beyond the wall of the central threaded opening, said wedge having a curved head contacting with the spring, said spring adapted to urge the wedge toward the central threaded opening, and said wedge member adapted to rock in the lateral opening.

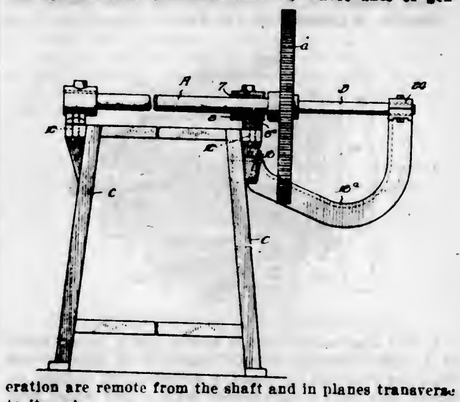
1,388,318. PNEUMATIC ACTION FOR PIPE-ORGANS. WILLIS E. AUSTIN, Minneapolis, Minn.; John S. Austin administrator of said Willis E. Austin, deceased. Filed Oct. 5, 1917. Serial No. 194,865. 2 Claims. (Cl. 84—335.)



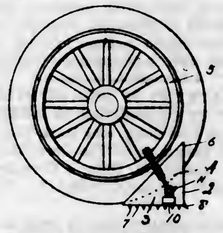
1. A pneumatic action comprising a motor-diaphragm chamber, a flexible motor-diaphragm member loosely fitting within said chamber, and movable bodily throughout its area in said chamber, a valve mounted on said motor-diaphragm member and a wind channel adjacent to said motor-diaphragm member and alternately closed and opened by the movement of said valve.

1,388,319. LANDING-STATION FOR AIRCRAFT. PETER JAMES BACKUS, Delphos, Ohio. Filed Dec. 27, 1920. Serial No. 433,367. 4 Claims. (Cl. 244—2.)

2. A landing station for aircraft comprising a trackway, a guide strip extending along said trackway, and a fencing extending along one side of the trackway and provided with a wall inclined downwardly toward the trackway.



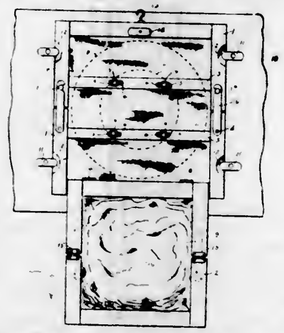
1,388,320. TYPEWRITING-MACHINE. GEZA BACSANYI, Detroit, Mich., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 3, 1919. Serial No. 274,639. 5 Claims. (Cl. 197—189.)



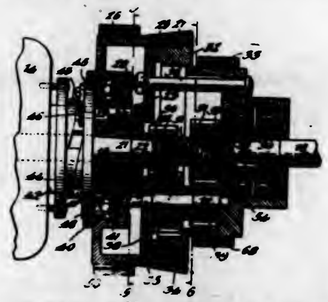
1. In a typewriting machine, the combination with a pinion having a hub, of a scale having a hub into which said first hub projects, and a dog adapted to pass through an opening in said scale hub to variably engage the first hub to position the scale variably thereon.

1,388,321. SELF-ALINING SHAFT-BEARING. WILLIAM BARTHOLOMEW and GEORGE SIMON, Chicago, Ill., assignors to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Sept. 12, 1919. Serial No. 323,246. 11 Claims. (Cl. 64—52.)

1. In a shaft mounting, a shaft, bearings in which said shaft is rotatably mounted, bearing supports, and frames carrying said bearing supports with freedom of adjustment bodily and angularly in a plane parallel to the axis of the shaft; said bearings resting upon the supports through concave cylindrical surfaces whose axes of generation are remote from the shaft and in planes transverse to its axis.



1,388,322. WHEEL-LOCK. MICHAEL BRANCO, Norristown, Pa. Filed Apr. 5, 1920. Serial No. 371,185. 1 Claim. (Cl. 70—90.)

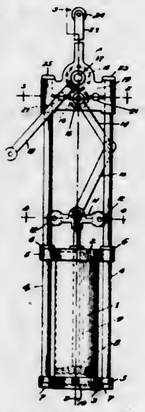


A wheel lock consisting of a triangular shaped body having a chamber adapted to register with a portion of a wheel, means for attaching the wheel lock to a wheel, projections extending from the base wall of said body and other projections extending at an angle from the corner produced at the meeting point of the base with the upright wall.

1,388,323. HAT-CASE. WILLIAM J. BRUCE and FANNIE M. WORTHINGTON, Sterling, Ill. Filed June 16, 1919. Serial No. 304,691. 5 Claims. (Cl. 206—9.)

1. A hat receptacle, comprising a main frame, provided with hat supporting means; a fabric closure for the back thereof; an auxiliary frame adapted to fold into said first-named frame, so as to engage the brim of a hat therein; and a distensible fabric closure for said auxiliary frame, oppositely disposed to said first-named closure.

1,388,324. CHANGE-SPEED MECHANISM. WILLIAM C. CARR, Buffalo, N. Y. Filed July 30, 1920. Serial No. 400,133. 6 Claims. (Cl. 74—34.)

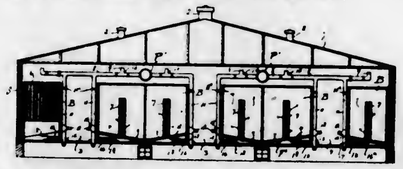


1. The combination with a driving and a driven shaft, of a clutch member slidable relatively to said driving shaft but rotatable therewith, a second clutch member rotatable relatively to said driven shaft, a gear wheel rotatable with said driving shaft, a second gear wheel rotatable with said driven shaft, a planetary gear set carried by said second clutch member and meshing with said driving and driven gear wheels, means for normally holding said clutch members in engagement with each other, automatic means for releasing said clutch members when said holding means are moved to abnormal position, and means for holding said second clutch member against rotation when out of engagement with the companion clutch member.

1,388,325. TREATMENT OF IRON OR STEEL FOR THE PREVENTION OF OXIDATION OR RUSTING. LEE S. CHADWICK, East Cleveland, and MARC RESEK, Cleveland Heights, Ohio, assignors to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 1, 1917. Serial No. 194,117. 7 Claims. (Cl. 148—6.)

1. The process of treating iron or steel, or articles composed of or having a surface of iron or steel, which includes subjecting the said articles to the action of a bath containing a mixture of di-hydrogen and mono-hydrogen phosphates of a metal less basic than iron.

1,388,326. TIRE-PUMP. MORRIS J. CHAIKIN, Detroit, Mich. Filed June 5, 1920. Serial No. 386,861. 6 Claims. (Cl. 230—27.)

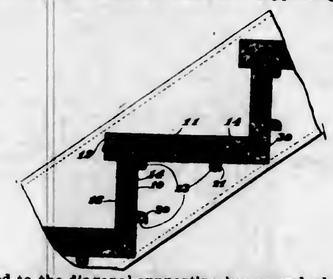


1. A tire pump comprising a cylinder, a standard carried by and projecting upwardly from said cylinder, a piston within the cylinder, a piston rod secured to said piston, a pitman engaging said piston rod, a crank arm engaging said pitman, actuating means for the crank-arm, and a mounting for said actuating means and crank-arm carried by said standard and adjustable from a position of use adjacent the top thereof to a lower stored position.

1,388,327. STOPPER. LOUIS A. CORNELIUS, Grand Rapids, Mich. Filed Apr. 23, 1921. Serial No. 463,780. 3 Claims. (Cl. 4—35.)

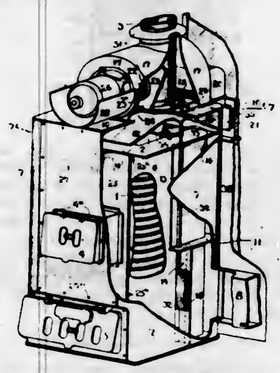
1. In combination a sleeve adapted to be located at the outlet of a wash bowl or the like, said sleeve having a cross bar adjacent its upper end formed between its ends with a vertical sleeve and said cross bar being provided with a longitudinal opening therethrough reaching from the vertical opening through the sleeve in the cross bar to the outer side of the first sleeve, a vertical rod passing loosely through said vertical sleeve formed at its lower end with outwardly bent forks and a short distance above the lower end with an annular groove a spring actuated catch located in the opening in said cross bar adapted to press against the rod, and a disk-like stopper member connected to the rod above the upper end of the first sleeve and adapted to close the upper end of said sleeve when in lower position, the catch entering the groove in the rod when the same is moved to an upper position, thereby holding the stopper member against downward movement.

1,388,328. MEANS FOR CURING SWEET POTATOES. WILEY D. COTTON, Dardanelle, Ark. Filed May 8, 1920. Serial No. 379,836. 5 Claims. (Cl. 98—26.)



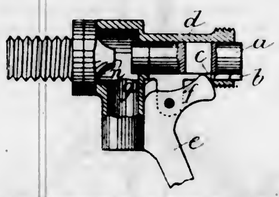
5. A means for curing potatoes embodying the combination with a house structure inclosing a plurality of bins and providing an upper chamber above said bins and hallways, said housing structure being provided with means for exhausting the air from the chamber, and each bin communicating with said chamber, air conduits within the upper portion of the housing and leading from a suitable source of supply; of nozzles interposed in said conduit and each having rocking movement about substantially a horizontal axis, conduits leading from said first named conduits and discharging below the bins, substantially horizontally disposed nozzles interposed in said last named conduits and arranged within the hallways, each of said last named nozzles being adjustable about substantially a vertical axis, said last named conduits also discharging below the floor of the housing, and means for controlling said last named discharge.

1,388,329. STAIRWAY. WILLIAM A. DAVIS, Malden, Mass., assignor to Babcock-Davis Corporation, Boston, Mass., a Corporation of Massachusetts. Filed May 7, 1920. Serial No. 379,493. 3 Claims. (Cl. 72—96.)



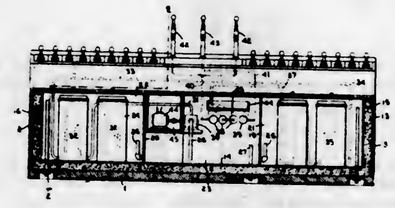
1. A stairway comprising a plurality of substantially parallel diagonal supporting beams, a series of separate concrete stair elements located between the supporting beams and each comprising a tread member and a riser depending integrally from the front portion of the tread

in the rear portion of the tread face to receive the lower member, each of the tread members having a recess formed portion of the next adjacent riser, and supporting means



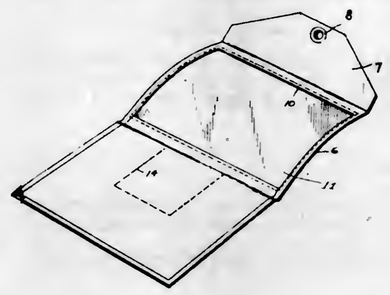
connected to the diagonal supporting beams and adapted to engage directly with the under portion of each tread member to support the separate stair elements from the diagonal supporting beams.

1,388,330. CAR-STOVE. WILLIAM H. GARDINER, Albany, N. Y., assignor, by mesne assignments, to The Peter Smith Heater Company, a Corporation of Michigan. Filed Sept. 20, 1917. Serial No. 192,245. 16 Claims. (Cl. 126—56.)



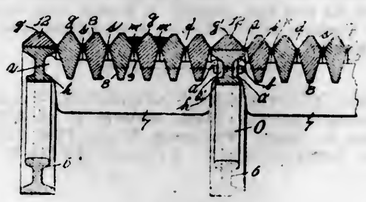
1. In a car stove, the combination of a fire-pot, a plurality of air-heating chambers surrounding it, a fan and means for conducting a blast of air from the fan through the surrounding air-heating chambers in series, or for cutting out part of them at will.

1,388,331. BALL AND FLOAT VALVE. ERNEST ALBERT GEORGE, Chelsea, England. Filed Apr. 30, 1920. Serial No. 377,863. 3 Claims. (Cl. 137—104.)



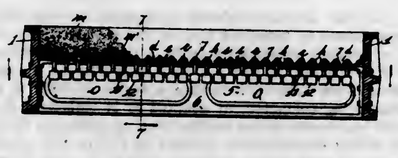
1. A ball or float valve comprising a body formed with an open ended housing and with a slot extending through the wall thereof, a sliding valve member in such housing, a valve lever formed in two parts one of which extends through the slot of the housing into engagement with the sliding valve member and is mounted upon a stationary pivot, while the other part is provided with a float, and means for normally connecting the said two parts of the lever together in a rigid manner in which condition a certain predetermined angular movement of the lever cannot be exceeded, such means being adapted to free the connection between the lever parts whereby the angular movement of the part that engages the sliding valve member can be increased to permit it to be disengaged from the valve member.

1,388,332. REFRIGERATING APPARATUS. JAMES E. GILMAN, Winchester, Mass., assignor of one-half to George A. Ambler, Winchester, Mass. Filed Aug. 7, 1918. Serial No. 248,721. 3 Claims. (Cl. 62—79.)



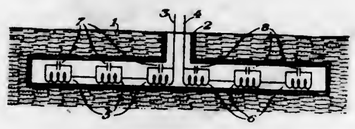
1. A soda fountain cabinet comprising a refrigerating compartment of sufficient size to receive salted ice with ice cream cans embedded therein, a tank for a circulating non-freezing medium and a cooling compartment, a conduit leading from said tank having a series of coils in said refrigerating compartment adapted to be embedded in the salted ice therein and a cooling section extending through said cooing compartment adapted to reduce the temperature of air and objects adjacent thereto in said compartment and a pump for causing circulation of said non-freezing medium through said conduit.

1,388,333. MARCH-FOLIO HOLDER. DWIGHT W. GODARD, Aurora, Ill. Filed Oct. 7, 1920. Serial No. 415,441. 1 Claim. (Cl. 45—58.)



A device of the character described formed of an integral flexible material and comprising a back, a front and a flap, said front having a sight opening formed therein covering substantially its entire area, a sheet of flexible transparent material for covering the sight opening, said transparent material lying directly adjacent the inner face of the back over its entire area so that a music sheet disposed between the transparent material and the back will be visible through said transparent material over the entire surface of the latter and a sheet of material secured to the outer face of the back along both of its sides and across its upper edge and having its lower edge left free to thereby form a pocket for the reception of a supporting element.

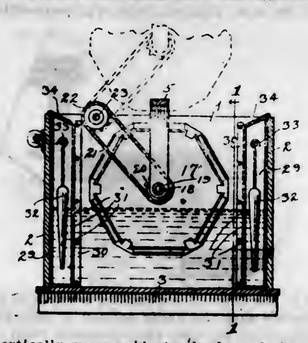
1,388,334. GRATE FOR SINTERING-PANS. JOHN E. GREENAWALT, New York, N. Y. Filed Nov. 9, 1920. Serial No. 422,800. 49 Claims. (C. 266—21.)



1. A grate provided with a plurality of openings, and having a succession of supports for the material disposed in a plane above said openings.

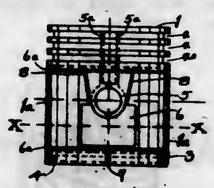
1,388,335. GRATE FOR SINTERING-PANS. JOHN E. GREENAWALT, New York, N. Y. Filed Dec. 31, 1920. Serial No. 434,212. 15 Claims. (Cl. 266—21.)

3. In combination with a treatment vessel tiltable to dumping position about a fixed axis, a grate for supporting the charge to be treated comprising a succession of individual parallel bars spaced apart, said bars being freely rotatable about their longitudinal axes, and means for causing the adjacent edges of contiguous bars to participate in a separating movement with a dumping movement of the vessel for dislodging the material resting on the bars.



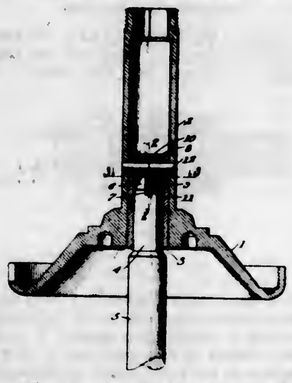
1,388,336. UNDERGROUND AND SUBMARINE ANTENNA. EARL C. HANSON, Washington, D. C. Filed Feb. 25, 1919. Serial No. 279,078. 4 Claims. (Cl. 250—33.)

1. A wireless system for signaling by electro-magnetic waves comprising antennæ formed of free ended spirals extending in opposite directions substantially parallel to and buried under the surface of the earth.



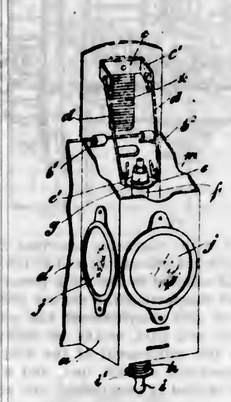
1,388,337. ELECTROPLATING APPARATUS. FOREST H. HARTZELL, Dayton, Ohio. Filed Apr. 22, 1919. Serial No. 291,893. 24 Claims. (Cl. 204—5.)

2. In an electroplating apparatus of the character described, the combination with a vat, a revolube drum, and actuating means therefor, of a pair of inverted U-shaped or goose neck standards straddling the opposite walls of the vat with the inner legs of which the drum is engaged, and actuating means engaging the outer legs of the stand-



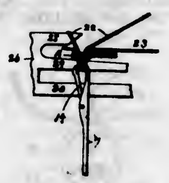
ards to vertically move said standards and the drum carried thereby.

1,388,338. PISTON FOR ENGINES. CHARLIE E. HATCH, Denver, Colo. Filed July 16, 1920. Serial No. 396,652. 5 Claims. (Cl. 74—108.)



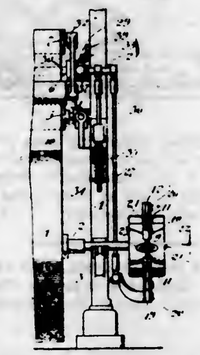
1. A piston composed of a head portion provided with a plurality of piston ring grooves and wrist pin lugs depending th refrom and rigidly supported thereon, a skirt portion depending from said head portion separate from said wrist pin lugs and provided with a full cylindrical portion at the lower end thereof with two cuts therethrough longitudinal in extent, and with an internal ring groove within said cylindrical portion, and an expanding ring within said internal ring groove.

1,388,339. DRIVING-MOUNT FOR THE BOWLS OF CENTRIFUGAL MACHINES. JAMES J. HAY, Bellows Falls, Vt., assignor to Vermont Farm Machine Corporation, Bellows Falls, Vt., a Corporation of Vermont. Filed July 14, 1920. Serial No. 396,155. Renewed June 24, 1921. Serial No. 480,193. 6 Claims. (Cl. 64—48.)



6. The combination with the base and hollow stem of a centrifugal bowl separator, of a hard metal bushing in the lower end of the stem, a hard metal tubular step-member having a flaring bore and tightly fitted in said bushing, a plug tightly fitted in said step-member and having a tongue extending beyond it, a transverse pin engaging the stem, bushing, step-member and plug, and a driving spindle having its upper end surrounded by and engaging the bushing and a frusto-conical tip transversely kerfed or nicked and seated in the step-member and engaged by the tongue.

1,388,340. VEHICLE-LAMP. FREDERICK HAGGER HEADLEY, Birmingham, England. Filed Feb. 26, 1920. Serial No. 361,516. 1 Claim. (Cl. 240—11.)



A lamp comprising a casing open at the top and provided with a hinged cover for the top, a burner arranged in the casing for vertical movement, a spring to normally depress the burner, and a link connecting the burner and the cover.

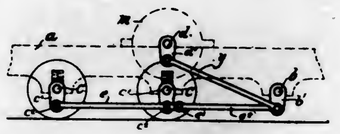
1,388,341. KNITTING-MACHINE. FRANK D. HOLMES and WALTER H. TRICK, Detroit, Mich. Filed Aug. 2, 1919. Serial No. 314,944. 1 Claim. (Cl. 66—26.)

In a knitting machine, a needle cylinder having radial and longitudinal guide grooves, needles mounted in the longitudinal grooves and means for moving said needles up and down, sinkers mounted in the radial grooves and having supporting fingers, tufting points and butts, a sinker cam-ring to move the sinkers in and out, means for guiding a pair of yarns to the sinkers so that one yarn will lie on the other below the tufting points, means to turn the needle cylinder relative to the sinker cam-ring, and means to move the needles down to engage both yarns and pull them through the previous stitch, said sinker cam-ring being formed to hold the tufting points between said yarns until just before the needle in its upward movement passes back of the previously formed stitch and then to move the sinkers back to release the yarn supported thereby so that the pressure of the succeeding sinkers will draw down the loop which has previously been supported by said sinker until it substantially contacts with and covers the other yarn.

1,388,342. TENSION DEVICE. EDWARD POWELL HOPKINS, New York, N. Y., assignor to The Publisher's Utilities Co., New York, N. Y., a Corporation of New York. Filed Jan. 2, 1913, Serial No. 739,715. Renewed June 28, 1918. Serial No. 242,504. 9 Claims. (Cl. 242—75.)

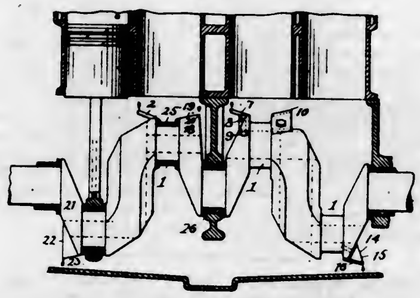
8. A web tension mechanism comprising a web roll shaft, a brake therefor, a web control for the brake having a rock shaft, a plurality of arms extending in different directions from the shaft at each side of the path of the web, and guide rollers carried by the arms and arranged to receive the web under and over them respectively, a tension roll over which the web is received as it passes from the web roll to the guide rollers, means for maintaining the tension roll in yielding contact with the web, adjustable yielding means coöperating with the brake and maintaining a predetermined initial tension in the web, and means connecting the arms and the brake for transmitting movement from the rollers to the brake.

1,388,343. SPARK-PLUG. RAY L. HULL, San Francisco, Calif. Filed Nov. 28, 1919. Serial No. 341,188. 1 Claim. (Cl. 123—169.)



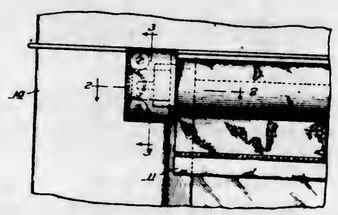
A spark plug such as described comprising a hollow cylindrical base, externally threaded, for engagement with the cylinder walls of an internal combustion engine; a flange within said base adjacent one end thereof; a hollow shell in threaded engagement with the interior of said cylindrical base on the end opposite said flange; an insulated member frictionally centered within said hollow shell having a shoulder thereon adapted to engage said base flange; a plural pointed flat electrode on said insulator end flush with the end of said base; a cap housing adapted to center said insulated member within said hollow shell by engagement with said insulated member and hollow shell and a terminal nut for binding said hollow shell, insulated member and cap housing into an integral unit.

1,388,344. CRANK-GEAR FOR MOTOR-DRIVEN VEHICLES. KALMAN V. KANDO, Budapest, Hungary. Filed Sept. 17, 1920. Serial No. 411,016. 7 Claims. (Cl. 105—120.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



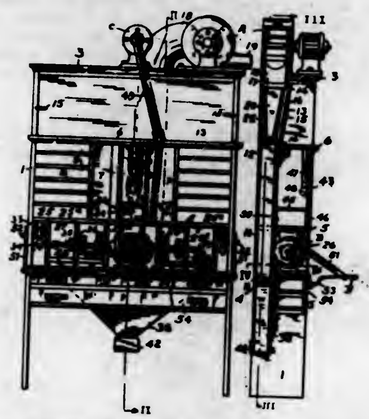
1. In a vehicle, axles, a frame, vertically yielding connections between said axles and said frame, crank-shafts

positively coupled in parallel journaled on said frame motors driving said crank-shafts mounted on said frame, cranks on said axles, a driving-member connected to said cranks, a driving-lever journaled to said driving-member,



downwardly converging connecting rods pivotally linked at their upper ends at two different points to the positive coupling-member of the crank-shafts journaled on the frame and pivotally linked at their lower ends to two different points of said driving-lever.

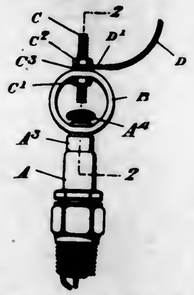
1,388,345. MEANS FOR CONTROLLING LUBRICATION OF ENGINES. THOMAS S. KEMBLE, Cleveland, Ohio. Filed May 1, 1920. Serial No. 378,147. 7 Claims. (Cl. 184—11.)



7. In an engine the combination with a cylinder, piston, connecting rod and crank shaft, bearings associated with the crank shaft, means for supplying lubricant to said bearings, of a device secured to the crank shaft at the end of an arm of the crank shaft, said device having a portion with a slanting surface which extends away from the said arm and positioned so that oil escaping from the bearings is centrifugally discharged in predetermined relationship to the open end of the cylinder.

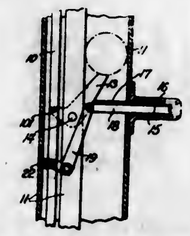
1,388,346. SHADE-ROLLER HOOD. CHARLES W. KIASCH, Sturgis, Mich. Filed Jan. 13, 1921. Serial No. 436,959. 5 Claims. (Cl. 156—24.)

3. In combination with the bracket of a shade-roller, of a second bracket adapted to be clamped and held in position by the first bracket, and a hood adapted to engage said second bracket and when in position to overlie and conceal the end of the shade-roller and said first bracket.



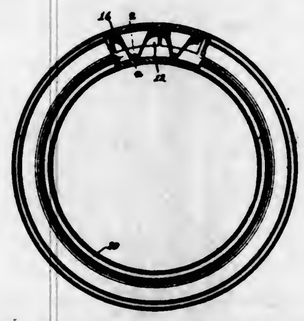
1,388,347. DENTIST'S CABINET. RUDOLF KLICKA, Pittsburgh, Pa. Filed Nov. 16, 1920. Serial No. 424,358. 15 Claims. (Cl. 45—6.)

1. In a cabinet of the character described, the combination of a working compartment inclosed at the bottom, top, sides and rear and adapted to contain a power tool, a port in the floor of said compartment, a drawer slidably mounted on the floor of said compartment and adapted when pushed in to close said port, means for applying suction to said port for the withdrawal of the dust and refuse caused by the operation of said tool, and a rearwardly inclined deflector carried by said drawer and adapted when said port is open to direct said dust and refuse into said port.



13. In a cabinet of the character described, the combination of a working compartment having a transparent top and provided with suction means for the removal of the refuse of working, and a lamp compartment above said working compartment and whose floor is formed by the transparent top of said working compartment, and said lamp compartment being provided with an opaque front wall to prevent the light shining into the eyes of the operator.

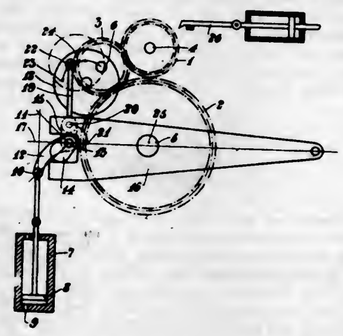
1,388,348. SPARK-INTENSIFIER. KURT R. KOEHLER, Merrill, Wis. Filed Nov. 25, 1919. Serial No. 340,528. 2 Claims. (Cl. 175—183.)



1. In an attachment for spark plugs, an insulated ring provided with two circular orifices, one of which is adapted to receive therethrough the binding post of a spark plug; a second binding post adapted to be inserted through the other orifice; a lock nut upon said spark plug binding post adapted to lock said ring upon said post; a lock nut upon said second binding post within the ring; and a second lock nut upon said second binding post outside of the ring; the said lock nuts upon said second binding post adapted to lock said second binding post upon said ring.

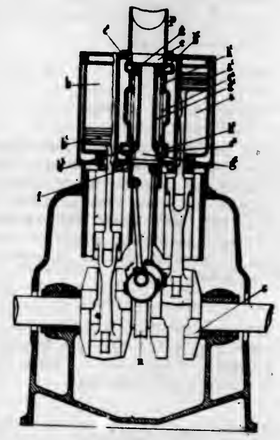
1,388,349. AMMUNITION-HOIST. HUGH WARREN LEE and JOHN WINDLOW SWINDALE, Newcastle-upon-Tyne, England, assignors to Sir W. G. Armstrong, Whitworth and Company, Limited, Newcastle-upon-Tyne, England. Filed Mar. 22, 1921. Serial No. 454,471. 2 Claims. (Cl. 89—46.)

1. In a hoist, a trunk, a number of retaining arms pivoted to the trunk, a slider, a number of lifting arms pivoted to the slider, means for raising and lowering the slider, means for rocking the lifting arms on their pivots, a flash tight door in the trunk, and means for rocking the retaining arms and actuating the flash tight door.



1,388,350. AIRLESS TIRE. CLAUS H. LIGHT, Des Moines, Iowa, assignor of one-eighth to August May and one-eighth to Victorene L. Stamen, Des Moines, Iowa. Filed June 8, 1920. Serial No. 387,450. 1 Claim. (Cl. 152—8.)

An airless tire structure, comprising the combination of a vehicle wheel rim with a flexible resilient casing mounted thereon, a plurality of inwardly opening channel-shaped non-fabric members received in the interior of the tread portion of said casing spaced from said rim arranged in a series circumferentially of the structure and a resilient device arranged in the casing opposite each of said channel-shaped members, and comprising a substantially V-shaped spring fixed at its apex to the rim and having its ends bearing against one of said members and curved to fit against such member, one of said ends being fixed to such member and the other being adapted to slide thereon; each of said resilient members being flat from side to side at its central part, and having its ends channel-shaped to fit the channel shaped members.



1,388,351. REVERSING DEVICE FOR TOOTHED GEARING. FREDRIK LJUNGSTRÖM, Lidingon-Brevik, ISIDOR BROBERG, Tallhyddan, Skarsatra, and ERIK OTTO ERIKSSON, Ormbunken, Brevik, Lidingon, Sweden, assignors to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden, a Corporation. Filed May 28, 1919. Serial No. 300,380. 20 Claims. (Cl. 74—58.)

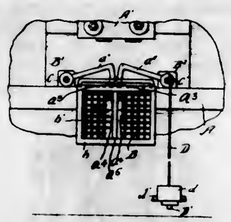
1. In toothed gearings, a reversing device comprising a member in gear with any one of the rotating parts of the gearing, motion transmitting members actuated by said member and locking members adapted to lock the revers-

ing device and to be set in operation by said motion transmitting members.

1,388,352. MEANS FOR CONTROLLING ADMISSION AND EXHAUST IN DOUBLE-ACTING EXPLOSION-ENGINES. JOSEPH CHARLES WILLIAM LLOYD, Alperton, England. Filed Sept. 20, 1918. Serial No. 255,004. 4 Claims. (Cl. 123—52.)

1. An explosion motor of the class referred to and having double-acting reciprocating concentric slide and sleeve valves arranged within auxiliary cylinders independent of the main cylinders but communicating therewith and operating for the two main cylinders simultaneously; in which each auxiliary cylinder communicates with the admission pipe at midway of the length of said auxiliary cylinder, with the exhaust pipe at the top of the auxiliary cylinder, and with the top end of one main cylinder and the bottom end of another main cylinder by lateral openings.

1,388,353. APPARATUS FOR COATING THE SURFACES OF FLEXIBLE FOUNDATIONS. ROBERT A. MCQUITTY, London, England. Filed June 20, 1919. Serial No. 305,653. 5 Claims. (Cl. 91—43.)



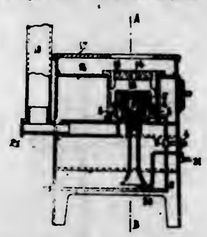
1. Apparatus for coating the surfaces of flexible foundations comprising a tank support, a tank with an opening in one wall thereof, a front piece hinged to said tank support and adapted to cover said opening, a roller mounted in an opening in the lower part of said front

piece, means for moving said front piece upon its hinges, back from the tank to allow of the end of the flexible foundation being passed over said roller mounted in the opening in the lower part of said front piece and placed in position between the front piece and the tank and for moving said front piece forward to a position in which it is in close proximity to the tank after the position of the flexible foundation has been adjusted, a projecting

lip mounted on said tank below said tank opening and adapted to engage the surface of a moving flexible foundation during its passage from said roller between said tank opening and the inner surface of said front piece, a float for raising or lowering the level of the liquid in said tank, and means for adjusting the relation of the tank lip to the surface of said flexible foundation.

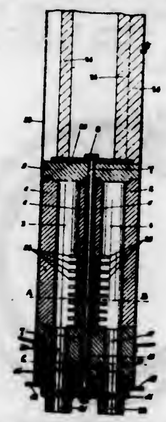
1,388,354. SAFETY DEVICE FOR PUNCH-PRESSES. CHARLES C. MADSEN, Chicago, Ill., assignor to Keystone Tool and Die Works, trustee, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,592. 6 Claims. (Cl. 74—105.)

1. A device of the class described comprising in combination a press, a guard movable vertically at the front of the bed plate of the press, rotatable blocks supported on the bed plate of the press, rods extending therefrom, arms connected with said blocks and having movable connection with said guard, and means for causing said guard to move to elevated position in advance of the operation of the press.



1,388,355. APPARATUS FOR HEATING BY COMBUSTION WITHOUT FLAME. MAURICE MATHY, Flémalle-Grande, Belgium. Filed Apr. 4, 1919. Serial No. 287,657. 5 Claims. (Cl. 158—99.)

3. A furnace having one or more of its heating walls in the form of boxes containing a mass of fragmentary porous, refractory material in the heart of which flameless combustion of a gaseous mixture takes place.

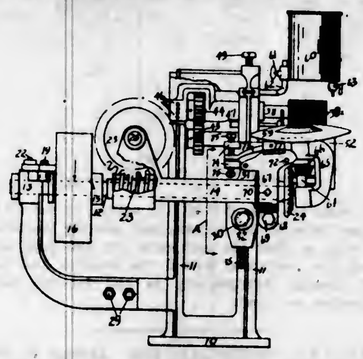


1,388,356. COOKER. MAURICE MATHY, Liège, Belgium. Filed July 17, 1919. Serial No. 311,608. 2 Claims. (Cl. 126—39.)

1. In a gas cooker, the combination of a casing including a top plate; a cooking chamber within the casing; a flameless combustion burner within said casing for heating said top plate and said chamber; a block of refractory material disposed directly above said burner and between the latter and the top plate; a depending draft chimney connected to the bottom of the burner and communicating with the same, said chimney being

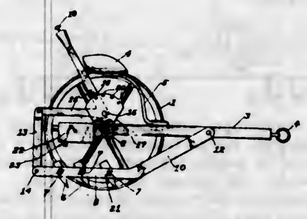
open at its lower end for ingress of air and adapted to be heated by radiating heat from the cooking chamber so as to cause a current of air to enter and flow through the chimney into the burner; and means for supplying gas to said burner for admixture with the air.

1,388,357. SURFACE-COMBUSTION GAS-BURNER. MAURICE MATHY, Liège, Belgium. Filed Sept. 21, 1920. Serial No. 411,790. 4 Claims. (Cl. 158—99.)



1. A burner for boilers having tubular furnaces heated by the incandescent combustion of a gaseous mixture, comprising a pipe for the admission of air and a pipe for the admission of gas arranged parallel with one another in the furnace tube, apertures provided over part of the length of said pipes, and a mass of porous and refractory granules arranged in the tube around said pipes, so that the gas and air meet among the granules and become intimately mixed and then burnt flamelessly in the mass of granules situated around the imperforate part of the air and gas supply pipes.

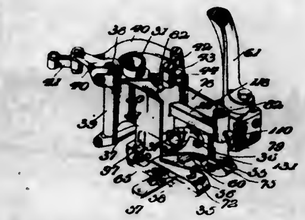
1,388,358. SKIVING-MACHINE. BERT E. MAXWELL, Wichita, Kans. Filed Nov. 18, 1920. Serial No. 424,932. 2 Claims. (Cl. 69—16.)



1. A skiving machine including a framework, a drive shaft carried by said frame; said drive shaft carrying a worm, a bevel gear and a clutch; a pulley wheel rotatably mounted on said drive shaft and a clutch face on said wheel, means for engaging said pulley wheel face to said clutch face and for disengaging same when desired, said means including a shifting lever and parts carried by said lever in engagement with parts on said pulley wheel; a disk cutter on a shaft operable through a bevel gear in mesh with bevel gear on said drive shaft;

a jack shaft carrying a worm gear in mesh with the worm on said drive shaft; a bevel gear on said jack shaft; a roller shaft housed in the framework, a bevel gear on said shaft in meshed engagement with the bevel gear on said jack shaft and a roller carried by said roller shaft; a second roller shaft carrying a second

roller arranged in parallelism with the driven roller and pinions on said roller shafts in meshed engagement; the said disk cutter being adapted to revolve adjacent the diametrical axis of said paired rollers during machine operation for the purposes as specified.

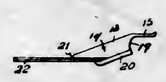


1,388,359. HARROWING-MACHINE. BARTLOMIEJ MAZURYK, Tugaske, Saskatchewan, Canada. Filed Oct. 15, 1919. Serial No. 330,767. 2 Claims. (Cl. 55—19.)

1. In a machine of the class described which includes a draft tongue and a pair of wheels, a pair of separately adjustable harrow units each consisting of an inner and an outer side bar, harrow teeth supported on the rear portions of the said bars, the said rear portions of the outer bars extending adjacent the wheels and the rear portions of the inner bars extending close beside one another at the center of the machine, the forward portion of all of said bars inclining upwardly, while the forward portions of the inner bars also incline outwardly to clear the side of the tongue and the foward portions of the outer bars incline inwardly, means pivotally connecting the forward ends of all of said bars to the said tongue, and a pair of separately operable devices adjustably supporting the rear ends of said bars.

1,388,360. SEWING-MACHINE PRESSER-FOOT. ARTHUR A. MERRITT, Worcester, Mass., assignor to Willcox & Gibbs Sewing Machine Co., New York, N. Y., a Corporation of New York. Filed Oct. 24, 1917. Serial No. 198,249. 26 Claims. (Cl. 112—235.)

1. A presser foot having a foot-body, two companion work-contacting surfaces on said foot-body positioned to engage the work at opposite sides respectively of the medial line of the seam and forming between them a notch extending rearward from the forward end of the foot, and means movably mounting one of said surfaces on the foot-body under tension adapted to yieldingly hold it in engagement with work thereunder and enabling it to assume different elevations relative to the other sur-



face and foot-body, said mounting means also permitting rocking or tilting of said movable surface in the direction of the length of the seam.

1,388,361. AIRPLANE-LAUNCHING APPARATUS. LOUIS JOHN LE MESURIER, Newcastle-upon-Tyne, England, assignor of one-half to Sir W. G. Armstrong, Whitworth & Company, Limited, Newcastle-upon-Tyne, England. Filed May 6, 1920. Serial No. 379,354. 10 Claims. (Cl. 244—2.)

1. In apparatus for launching an air plane from a restricted area the combination of a track, a carriage adapted to travel thereon, a second track parallel to the first track, a movable member adapted to travel on the second track, and means operatively connecting said track, movable member, and carriage whereby acceleration is imparted to the carriage at the beginning of the movement of said member and retardation is imparted thereto as said member reaches the end of its travel.

1,388,362. WEEDER. AUSTIN E. MILLER, Cheney, Wash. Filed Aug. 12, 1919. Serial No. 316,957. 2 Claims. (Cl. 55—149.)

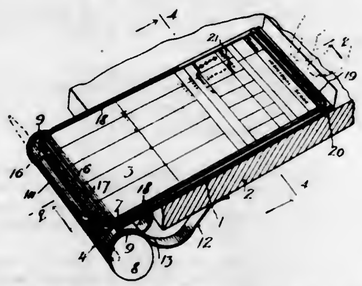
1. A weeder comprising a frame, a plurality of weeding elements mounted thereon, each of said elements consisting of a single piece of material formed to present a pair of cutting blades and a pocketed shank, and a clearing blade secured in said pocket.

2. A weeder comprising a frame, a plurality of weeding elements secured thereto, each of said elements consisting of a single piece of material, the intermediate portion of which is bent upon itself to form a pocketed shank and a clearing blade secured in the pocketed shank, said intermediate portion being inclined downwardly and rearwardly of the frame, the upper end of said material being secured to said frame, and the lower end of said material being split and flared to present a pair of rearwardly diverging weeding blades arranged parallel to the ground.

1,388,363. DEVICE FOR ATTACHING SHACKLES TO SUBMERGED OBJECTS. JOHN A. MILLER, South San Francisco, Calif. Filed May 17, 1920. Serial No. 382,347. 12 Claims. (Cl. 114—51.)

1. A device for attaching shackles to submerged objects comprising a barrel for projecting a projectile; a shackle connected to the barrel to receive a projectile therefrom

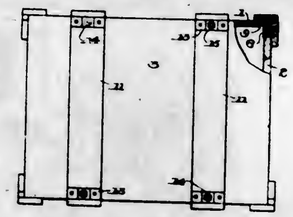
and to temporarily close the mussle of said barrel; means for holding said barrel and shackle adjacent the side of a submerged object whereby projection of a projectile from



the barrel will secure said shackle to said object; and means for preventing an air pressure within the barrel and in front of the projectile when the same is projected.

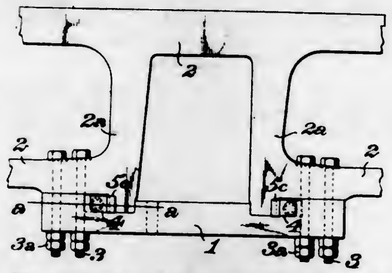
1,388,364. CAKE-BAKING PAN. MARY A. MILLER, Lancaster, Pa. Filed Mar. 16, 1921. Serial No. 452,780. 5 Claims. (Cl. 53—6.)

1. A bake pan for cakes having a portion of its bottom raised to produce a hollow or depression in the cake and provided with a channel surrounding said raised portion and adapted to produce a rim for the aforesaid depression.



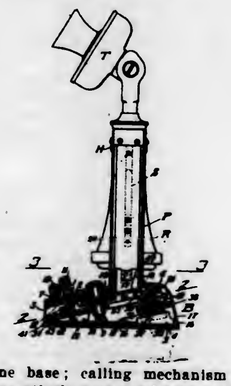
1,388,365. HOLDER FOR MEMORANDA-STRIPS OR GAME-SCORES. GUSTAVE M. MINTON, New York, N. Y., assignor to Leo Schlesinger & Co., New York, N. Y., a Firm composed of Leo Schlesinger, Gustave M. Minton, and Benjamin Levy. Filed Dec. 20, 1917. Serial No. 208,029. Renewed May 28, 1921. Serial No. 473,319. 1 Claim. (Cl. 281—12.)

A device of the class described including a platen, means for holding the platen thereon with one end projecting beyond the support, a tubular casing for holding a supply of paper for use on said platen, arranged beyond the support and below the plane of the platen, said casing having a slot in the top from which the paper is adapted to be drawn over the platen and a frame hinged to the tubular casing beyond said slot and extending over said slot and platen and adapted to hold the extended portion of the paper on the latter.



1,388,366. KNOCKDOWN PACKING-BOX. GENJI NAGAI, Tokyo, Japan. Filed Apr. 1, 1920. Serial No. 370,526. 5 Claims. (Cl. 217—12.)

1. A packing box constructed without using any nails characterized by fastening with metal pieces from inside the four side planks in such a way that the side planks can easily be taken to pieces but not from the outside; placing the body of box thus formed between a lid and a bottom, both of which have several notches at their edges; lining said notches with metal plates through



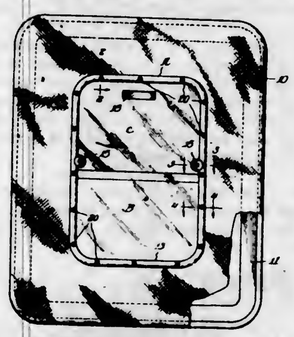
which bolts are passed from the bottom to the lid along the inner sides of side planks; and securing the bolt ends with nuts so that the bolt ends and the nuts screwed thereon are contained within the notches and can be sealed therein, substantially as and for the purposes hereinbefore set forth.

1,388,367. PEDESTAL-TIE. ALFRED C. NEGUS, Schenectady, N. Y. Filed May 18, 1921. Serial No. 470,650. 5 Claims. (Cl. 105—81.)

1. The combination, with a locomotive frame pedestal, of a pedestal tie, having transverse recesses in its upper face adapted to receive the ends of the pedestal jaws; bolts, securing said pedestal tie to the frame; and adjustable clamping devices, fitting between the pedestal jaws and the outer sides of the recesses of the pedestal tie.

1,388,368. CALLING DEVICE. ALFRED T. PALMER, Medford, Mass. Filed Mar. 20, 1919. Serial No. 283,854. 11 Claims. (Cl. 179—90.)

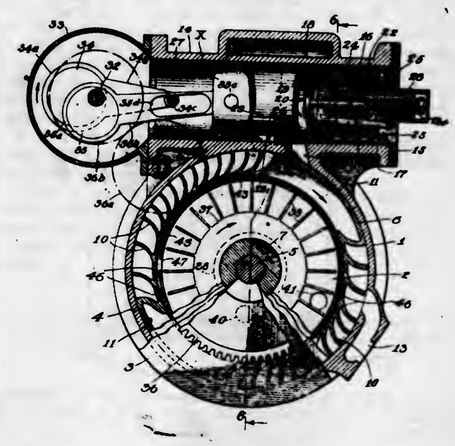
1. A telephone base; calling mechanism within said base; a shaft operatively connected with said mechanism and having one end projecting through said base; a lever



fast on the projecting end of said shaft; a variable stop adapted to limit the movement of said lever in one direction; and a telephone pedestal mounted on said base and so positioned as to limit the movement of said lever in the other direction.

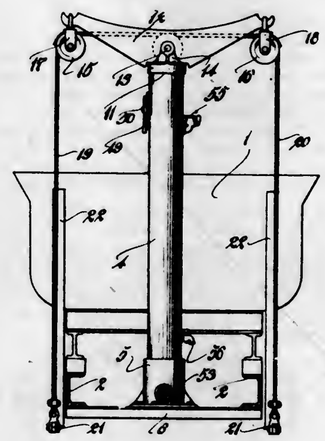
1,388,369. SIGNALING DEVICE. ALFRED T. PALMER, Medford, Mass. Filed Feb. 16, 1920. Serial No. 359,211. 4 Claims. (Cl. 179—90.)

1. In a signaling device, a hollow base for a telephone desk-set; calling mechanism mounted within said base; manually-operative means positioned exteriorly with relation to said base; a vertically disposed shaft connected with said mechanism; a horizontally disposed shaft connected with said means; and means for operatively connecting said shafts.



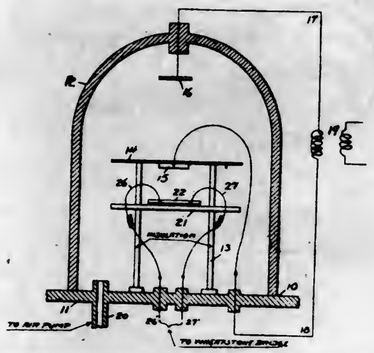
1,388,370. VENTILATING CURTAIN-WINDOW. VICTOR W. PETERSON, Chicago, Ill. Filed Jan. 24, 1921. Serial No. 439,476. 8 Claims. (Cl. 296—145.)

1. A curtain window construction including a frame having a glass slidably mounted therein, which glass is retained within said frame in every position.



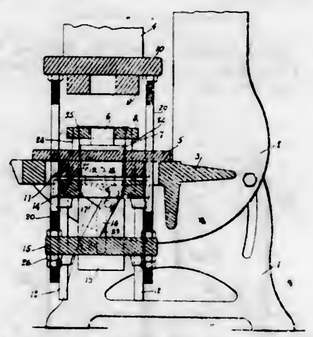
1,388,371. MOTOR. ANDREW J. PIERCE, Chicago, Ill.; Katherine M. Pierce executrix of said Andrew J. Pierce, deceased. Filed May 28, 1918, Serial No. 237,053. Renewed Jan. 27, 1921. Serial No. 440,515. 13 Claims. (Cl. 60—41.)

1. In an internal combustion motor, the combination of a turbine wheel and its inclosing housing, a casing communicating with the said housing through an admission port, said casing being provided with an inlet port for the entrance of the compressed explosive charge, a reciprocating valve cylinder in the casing inclosing a combustion chamber, said valve cylinder being provided with a port adapted to register with the admission port to admit the fired charge to the turbine, means for firing the charge in the combustion chamber, and a plunger-piston



reciprocating in the valve cylinder relatively thereto and adapted to expel the dead products of combustion from the combustion chamber.

1,388,372. BODY-HOIST. HARRY H. RAWSON, Spokane, Wash. Filed Mar. 1, 1920. Serial No. 362,522. 1 Claim. (Cl. 298—21.)

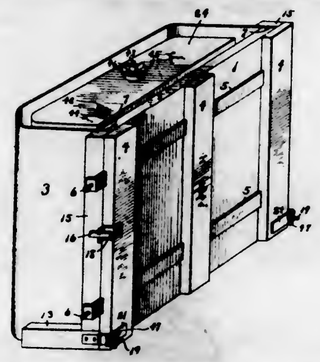


In an appliance as described, the combination of a truck frame and pivoted body, a fixed hollow standard, a reciprocable, non-rotatable head having pulleys in said standard, a head block on the standard, a radially arranged cross arm on said block and central and end sheaves on said arm, cables passed over said sheaves and under said pulleys and connecting the body with said block, mechanism for reciprocating said head, a control lever and connecting rod for said mechanism, spaced abutments on said rod and a tappet on the head between said abutments for automatically moving said rod to control the mechanism.

1,388,373. HIGH-RESISTANCE UNIT. FLOYD K. RICHTMYER, Ithaca, N. Y. Filed Feb. 6, 1919, Serial No. 275,474. Renewed June 3, 1921. Serial No. 474,766. 6 Claims. (Cl. 204—64.)

1. A high resistance unit consisting of a convexly formed non-conductive member carrying on its outer face a thin film of metal annealed *in situ*.

1,388,374. PRESS-DIE. FRANK D. RIFNER, Dayton, Ohio. Filed Jan. 29, 1920. Serial No. 355,012. 21 Claims. (Cl. 113—38.)

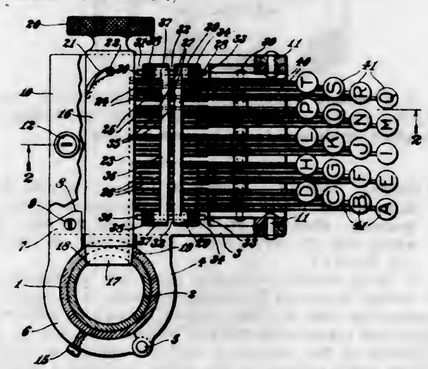


1. In a die mechanism a fixed die member, a movable die carried by the ram of the press, a movable member cooperating with the fixed die to hold the material, a member carried by the ram, and a fixed cam and connections for causing said movable member to remain stationary during the first part of the ram's motion and to follow it, to thus first hold on and then to strip off the material from the fixed die as described.

1,388,375. GATE. ALVIN V. ROWE, Galesburg, Ill. Filed Mar. 8, 1918, Serial No. 221,171. Renewed Feb. 23, 1921. Serial No. 447,222. 15 Claims. (Cl. 39—82.)

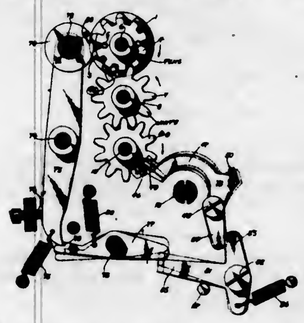
1. In a gate of the character described, a gate-slat loop, an element coacting therewith to clasp the gate slat, a U-bolt engaged with one at least of said elements, a locking and releasing member engaging the U-bolt, and a hinge-bar which it is adapted to engage at selective points.

1,388,376. MOLD FOR HOLLOW BODIES. FREDERICK C. RUPPEL, Grand Rapids, Mich., assignor to Hayes-Ruppel Manufacturing Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Nov. 1, 1920. Serial No. 420,966. 11 Claims. (Cl. 25—130.)



1. In a mold for hollow bodies, a shell comprising a rigid back board, a bottom hinged thereto, a flexible metal sheet constituting three sides of the shell, and packing strips between the contacting portions of the several members of the shell to prevent the escape of water.

1,388,377. MANIFOLD-HEATER. JOSEPH P. RUTH, Jr., Denver, Colo. Filed Nov. 20, 1919. Serial No. 339,361. 11 Claims. (Cl. 263—3.)



1. In combination, a T-shaped intake manifold, and a heater therefor having open tray-members for fuel underlying the transverse portions of the manifold, said members having means on their upper edges engaging the under sides of said transverse portions, and hooked means overhanging and engaging the top of said manifold whereby the heater is secured thereto.

1,388,378. COMBINATION-LOCK. JOSEF F. SCHICKE, St. Louis, Mo., assignor to Josef F. Schicke, trustee, St. Louis, Mo. Filed July 19, 1918. Serial No. 245,734. 6 Claims. (Cl. 70—60.)

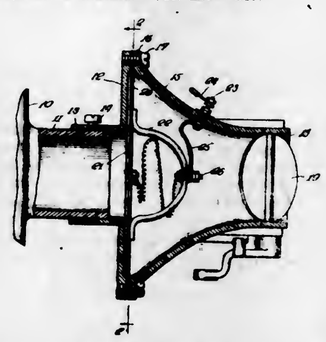
1. In a combination lock, a tumbler having parallel sides and a cam-shaped edge adapted by engagement with a key lever to be moved in a rectilinear path into locking engagement and a key lever adapted to move said tumblers.

1,388,379. CALCULATING-MACHINE. EDWARD C. SCHINKE and NORMAN A. SUTHERLAND, St. Louis, Mo., assignors to Typewriter Calculating Attachment Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 13, 1918, Serial No. 266,634. Renewed Feb. 4, 1921. Serial No. 442,594. 20 Claims. (Cl. 235—139.)

1. In a calculating machine, an accumulator provided with digit wheels of different orders, transferring means whereby motion is transmitted from one order to another, said transferring means comprising two transferring members one of which is driven by the other, one of said transferring members being adapted to occupy an idle position in the path of the other transferring member, and means whereby the idle transferring member is displaced to permit independent movement of the other transferring member.

1,388,380. TEAT-CUP. JOHN A. SCHMITT, Columbus, Ohio, assignor to The Universal Milking Machine Company, a Corporation of Ohio. Filed July 14, 1919. Serial No. 310,727. 14 Claims. (Cl. 31—102.)

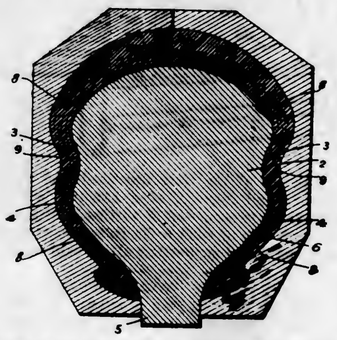
1. In a teat cup, a cup, a flexible lining therefor of greater length than the cup, said lining being attached at one end to said cup, the opposite end of the lining being folded outward over and inclosing the opposite end of said cup, and a rigid band inclosing the overturned end of the lining having therein a series of peripheral corrugations.



3. In a teat cup, a cup member, a flexible lining therefor of greater length than the cup member and attached thereto at one end, the opposite end of the lining being folded outward over and inclosing the end of the cup member, and a rigid retaining band having therein a series of peripheral corrugations whereby the overturned portion of the lining is engaged by said band with different pressure at different points thereof.

5. In a teat cup, a cup member of rigid material having a peripheral bead, a flexible lining therefor of greater length than the cup attached thereto at one end, and folded outward over and inclosing the peripheral bead of the cup member at the opposite end, a rigid retaining band inclosing the out turned portion of the lining having an interior groove registering with said bead when in adjusted position, the constricted portion of the band engaging the lining beyond said bead, and a flaring margin on said band, substantially as specified.

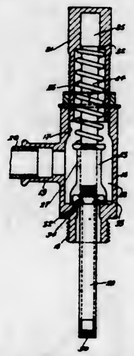
9. In a teat cup, a main cup member and a detachable cap therefor of rigid material having an inturned annular flange of rubber substantially as specified.



14. In a teat cup, a cup member and a detachable cap therefor comprising a rigid retaining band having an inturned marginal edge and an annulus of non-metallic material in which the inturned margin of the band is embedded.

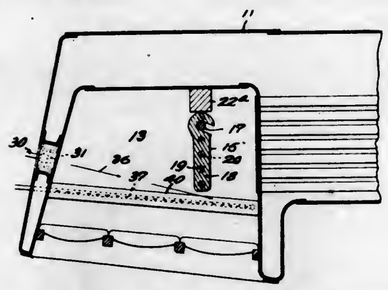
1,388,381. AIR-PREHEATING DEVICE. LEO W. SCHUESSLER, Chicago, Ill. Filed May 5, 1920. Serial No. 378,996. 4 Claims. (Cl. 219—38.)

1. In air-heating means for internal combustion engines, the combination with a carbureter, of a casing secured to the carbureter intake nozzle and providing an expansion chamber having an inlet opening, heating means disposed within said chamber, and means for closing said inlet opening, whereby when said inlet opening is closed entry of air into the casing is prevented and a quantity of air is held in said casing subject to the action of said heating means.



1,388,382. MOLD FOR PNEUMATIC-TIRE TUBES. FRED A. SCHWARTZ, Brooklyn, N. Y. Filed Feb. 10, 1921. Serial No. 443,917. 1 Claim. (Cl. 18—38.)

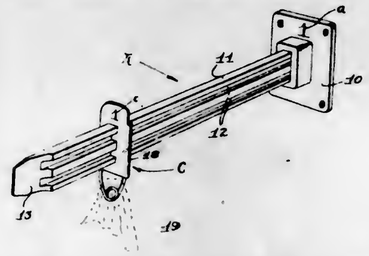
A casing mold comprising a pair of complementary annular sections each having an annular rib offset from its annular concave molding surface, and an annular core ele-



ment having a molding surface normally extending between the said complementary annular sections, the said annular core element having grooves opposite the said annular ribs.

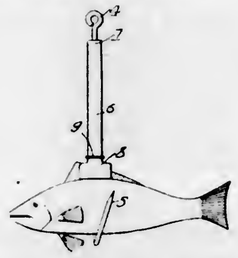
1,388,383. TEMPERATURE-CONTROLLED SAFETY RELIEF-VALVE FOR HOT-WATER BOILERS. CHARLES H. SMITH, Boston, Mass. Filed Mar. 22, 1919. Serial No. 284,378. 11 Claims. (Cl. 137—92.)

1. A temperature-controlled relief valve adapted for use in hot-water systems, comprising a body or casing having a lateral threaded outlet nipple, a threaded inlet nipple at one end, and a threaded removable cap at the other end, in combination with a relief member normally closing said inlet to the entrance of water and having a tube projecting through said nipple and a plug of fusible material sealing the end of said tube, said parts being arranged and related whereby, when the inlet nipple is screwed into a hot-water container, the plugged end of the tube will project into the hot water therein, and whereby, on removing said cap, said member and tube may be removed without detaching said body or casing from said hot-water container.



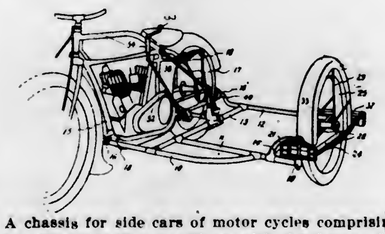
1,388,384. SMOKE-CONSUMER. WILLIAM D. SMITH, Montreal, Quebec, Canada; CECELIA SMITH, Universal Legatee of the estate of said William D. Smith, deceased. Filed May 27, 1918. Serial No. 236,907. 4 Claims. (Cl. 110—63.)

1. In a device of the class described, the combination with a boiler and furnace, of a hanging bridge at the back of the furnace composed of vertically disposed bricks, plates on each side of each brick bolted together through the bricks, and a bar supporting all of said bricks.



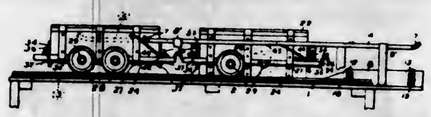
1,388,385. APPARATUS FOR SORTING CLOTHING AND OTHER ARTICLES. ASHLEY M. STOKOE, St. Paul, Minn. Filed Dec. 16, 1919. Serial No. 345,433. 3 Claims. (Cl. 40—26.)

2. In a device of the class described, a rack, a marker adapted to be applied to and supported by the rack, said marker comprising a body and a pin adapted to be caught in an article of clothing or the like and having a yielding member, clasps on the body to secure said yielding member, said body having a notch therein to receive the rack,



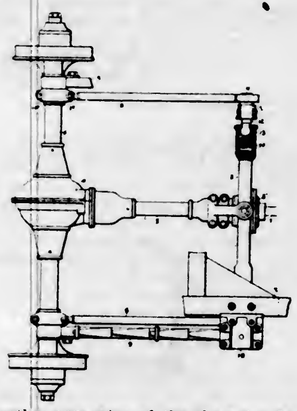
said yielding member being adapted to obstruct the open side of said notch and secure the marker upon said rack, said notch being designed to conform with and fit the rack.

1,388,386. BAIT-HOLDER FOR FISHHOOKS. SVEN SVENSON, La Crosse, Wis. Filed Oct. 27, 1919. Serial No. 333,672. 1 Claim. (Cl. 43—40.)



A bait holder comprising, in combination with a barbed hook, a pair of elongated resilient shanks, fixedly secured at one end to the eyelet end of the hook, the separated ends of the shanks disposed in proximity to the hook and terminating in transversely widened, relatively flat gripping heads shaped to grip without mutilation, the interposed fin or other part of the bait disposed within and extending crosswise of the hooked arch, and a member embracing and slidable lengthwise on said shanks for drawing the heads together so as to clamp and securely hold the bait.

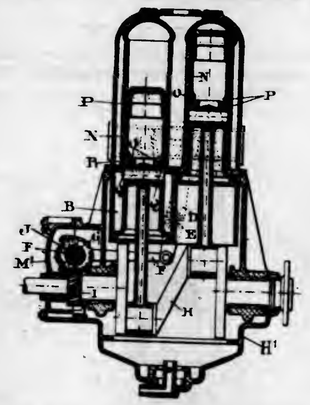
1,388,387. CHASSIS FOR SIDE CARS OF MOTOR-CYCLES. ALBERT SAMUEL SWAN, Coburg, and JOHN ALBERT YEATS, Richmond, Victoria, Australia. Filed Dec. 22, 1919. Serial No. 346,780. 13 Claims. (Cl. 208—45.)



1. A chassis for side cars of motor cycles comprising a frame having pivotal connections with the frame of the cycle, an adjustable connection between the chassis frame and the frame of the cycle, and means for effecting an adjustment of the said connection to tilt the cycle to and from the chassis when the said cycle is in motion.

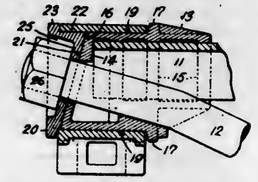
1,388,388. AUTOMATIC CAR-DUMP MECHANISM. DAVID L. SWANK, Davidsville, Pa. Filed Mar. 29, 1920. Serial No. 369,535. 2 Claims. (Cl. 214—63.)

1. A car dump mechanism comprising the combination with a car having a dumping bottom and a releasable latching element carried by the car for normally maintaining the bottom closed, of a stationary element adapted to engage and actuate the latching element during the travel of the car to release the dumping bottom to cause discharge of the load, and means for restoring the bottom to the closed position as the car continues its travel, said means including a stationary grooved member provided with two pairs of resiliently supported rollers.



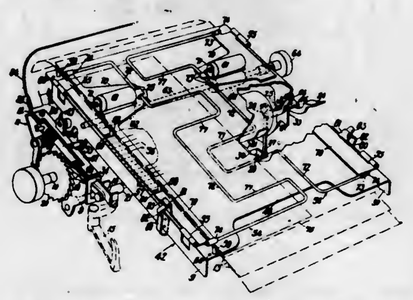
1,388,389. SUPPORTING APPARATUS FOR THE REAR-WHEEL SHAFT OF A MOTOR-CAR. SHINKICHI TAMURA, Kobe, and MASANORI WATANABE, Tokyo, Japan; said Watanabe assignor to said Tamura. Filed Aug. 1, 1918. Serial No. 247,883. 4 Claims. (Cl. 180—85.)

1. Supporting apparatus of the character described including in combination with the chassis, rear axle housing and propelling means for the rear wheels of a motor vehicle, a hanger having its ends universally connected with the sides of the chassis, a universal joint supported by the hanger and interposed in the driving shaft of the propelling means, thrust shafts between the end portions of the hanger and the rear axle housing and springs between the chassis and the rear axle housing.



1,388,390. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. LOUIS VICTOR THOMAS and JOSEPH-ALEXANDRE GUÉRIN, Lyon, France, assignors to Societe Anonyme du Moteur L. Thomas, Lyon, France. Filed May 14, 1920. Serial No. 381,459. 1 Claim. (Cl. 123—59.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

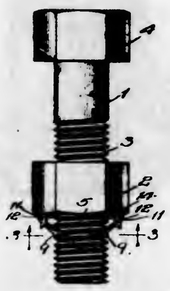
In a two-stroke cycle internal combustion engine the combination of a cylinder having an explosion chamber and a pump chamber, a piston working in said chambers, a valve box having a gas inlet port, a gas delivery port, and a port communicating with said pump chamber, a reciprocating slide valve in said box controlling said ports, a crank shaft actuated by said piston a shaft arranged transversely to said crank shaft, actuating means connecting said crank shaft to said transverse shaft, an eccentric on said transverse shaft lever mechanism connecting said eccentric to said valve whereby said valve is reciprocated, a magneto connected to said transverse shaft,



a lubricating pump connected to said transverse shaft, and a box having a removable cover inclosing said transverse shafts and eccentric.

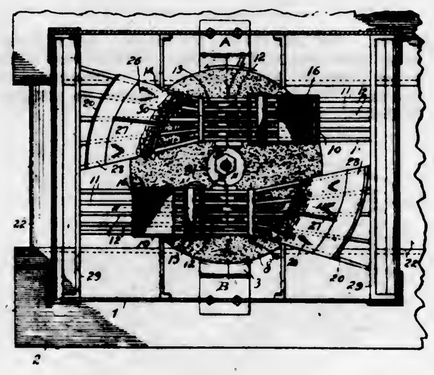
1,388,391. BRAKE-BEAM. ERNEST R. VIBERG, Montreal, Quebec, Canada. Filed Feb. 2, 1920. Serial No. 355,742. 10 Claims. (Cl. 188—229.)

3. In a brake beam, the combination with compression and tension members of an end member formed in two parts, one of said parts being recessed to receive the compression member and form an abutment therefor and the other part being recessed to receive the tension member nut and form an abutment therefor.



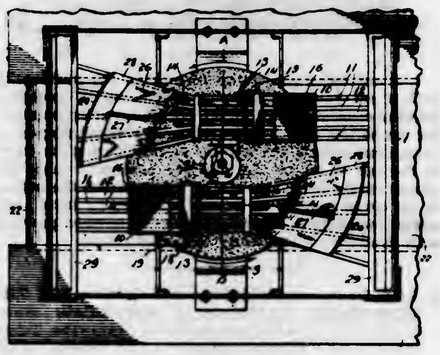
1,388,392. TYPEWRITING-MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 4, 1919. Serial No. 269,562. 26 Claims. (Cl. 197—127.)

1. In a typewriting machine, the combination with a platen frame, of a platen, plates comprising journals adapted to be made fast to said frame, and a collating table pivotally mounted in said journals back of said



platen and adapted to be swung forwardly in said journals to a substantially horizontal position for the purpose of adjusting work-sheets thereon.

1,388,393. NUT-LOCK. DAVID T. WALLACE, Minneapolis, Minn. Filed Apr. 21, 1920. Serial No. 375,520. 7 Claims. (Cl. 151—21.)



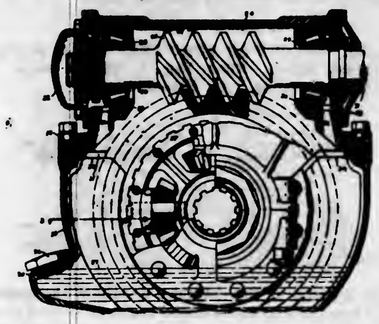
1. In a device of the kind described and in combination, a threaded bolt and a nut coöperating with said bolt, and a washer mounted on said bolt and provided with an extended portion at one side bent back upon itself and of a length to engage with the bolt at the base of the thread therein at a point at one side of the washer, and means on said extending part and integral therewith for engaging said bent over portion on the sides at the rear edges and transmitting thrust directly between the nut and said bent over portions upon movement of the nut, whereby the bent over portion is maintained in engagement with the bolt and rotation of the nut and washer prevented.

1,388,394. PEANUT-BLANCHING MACHINE. ROSCOE P. WITT, Kansas City, Kans., assignor to Ridenour-Baker Grocery Company, Kansas City, Mo., a Corporation of Missouri. Filed July 9, 1920. Serial No. 394,874. 16 Claims. (Cl. 146—14.)

2. In a peanut blanching machine, a member having an abrading surface, means for revolving said member, and means for guiding kernels to be blanched tangentially in contact with said revolving abrading surface, substantially as set forth.

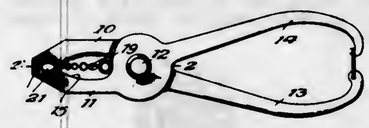
1,388,395. METHOD OF BLANCHING PEANUTS. ROSCOE P. WITT, Kansas City, Kans., assignor to Ridenour-Baker Grocery Company, Kansas City, Mo., a Corporation of Missouri. Filed July 9, 1920. Serial No. 394,875. 9 Claims. (Cl. 146—14.)

1. The method of blanching the kernals of peanuts and the like, consisting in guiding the kernals, while permitting them to rotate, tangentially in contact with a revolving abrading surface, substantially as set forth.



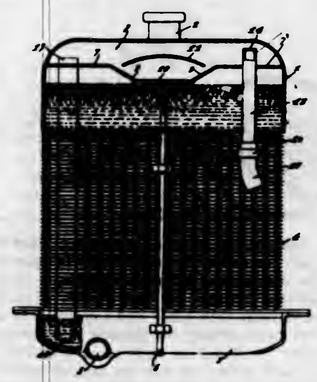
1,388,396. CHEESE-BOX. ERNEST ZEIDLER, Marshfield, Wis. Filed Feb. 7, 1921. Serial No. 443,023. 5 Cims. (Cl. 217—1.)

1. The combination with a cylindrical wall of a receptacle disposed in an annular groove adjacent the periphery of the head of the receptacle, of means for securing said head and wall together and holding the wall in the groove in engagement with the bottom of the groove, said means comprising an annular band having substantially right angularly disposed flanges, one of said flanges being secured to the head, the other flange being secured to the wall, and an annular struckout bead carried by the wall secured flange and having its inner face spaced from the edge of the head.



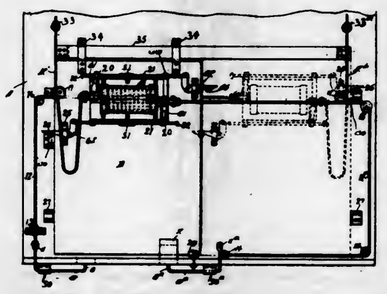
1,388,397. AXLE. THOMAS ZIMMERMAN, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 17, 1918. Serial No. 258,593. Renewed Sept. 11, 1919. Serial No. 323,129. 9 Claims. (Cl. 74—36.)

1. In mechanism of the class described, the combination of a housing, a gear therein, a shaft above said gear, a worm on said shaft, bearings for said shaft on opposite sides of said worm, said housing closely surrounding the sides and top of said worm, and walls on the interior of said housing adjacent the sides of said gear forming a channel through which lubricant will be lifted by said gear from the lower part of the housing to one of said



bearings and carried from the latter by said worm to the other of said bearings.

1,388,398. PLIERS. REGINALD GEORGE ADAMS, Kalgoorlie, Western Australia, Australia. Filed Feb. 19, 1920. Serial No. 359,964. 2 Claims. (Cl. 7—8.)

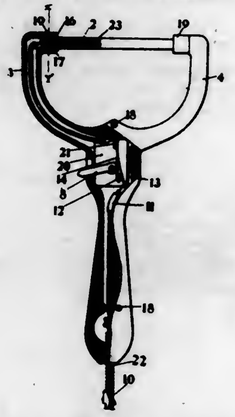


1. In pliers, the combination of a pair of pivoted jaws, each of said jaws having a portion cut away upon one side and face, to reduce the thickness thereof through a certain length of its face edge, the reduced faces of said jaws each having a plurality of coöperating semi-circular recesses therein having insulating stripping beveled knife edges graduated in size as they are positioned from the jaw's pivot, the reduced faces of said jaws having coöperating and abutting wire cutting beveled knife edges thereon.

1,388,399. MOISTENING DEVICE. JOHN A. BELT, Washington, D. C. Filed Apr. 23, 1920. Serial No. 376,061. 1 Claim. (Cl. 257—125.)

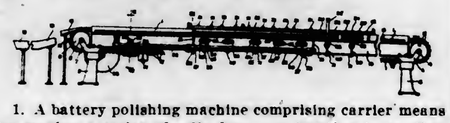
A radiator comprising an upper member; partitions in said member and separating the same into upper and lower chambers, the inner ends of the partitions converging downwardly; a screen connecting the said ends of the partitions; a baffle in the upper chamber above the screen and between the said ends of the partitions; an air inlet for the upper chamber; and an air outlet therefor.

1,388,400. AUTOMATIC DOOR-OPERATING MEANS. JOSEPH C. BERGEN, Davenport, Iowa. Filed Sept. 15, 1919. Serial No. 323,932. 7 Claims. (Cl. 268—8.)



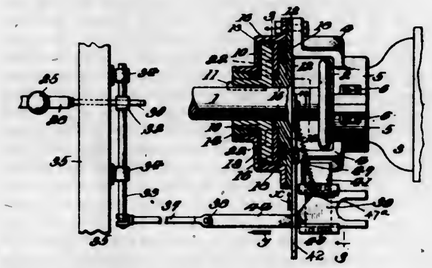
1. In apparatus of the class described the combination with a building structure and a slidable door movable relative thereto, of a spring movable with the door, latches carried by the door for holding the same in either open or closed position, vehicle operated means for placing the spring under compression while the door is held in either open or closed position, and means operated by the compression of the spring to a predetermined extent for unlocking the door, said spring constituting means, when expanded, for projecting the door from one extreme position to the other.

1,388,401. LINE-BUCKLE. THOMAS F. BOLIG, Bellevue, Ohio. Filed Apr. 23, 1919. Serial No. 292,081. 1 Claim. (Cl. 24—176.)



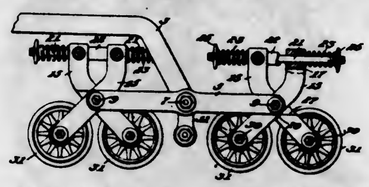
A buckle comprising a base provided at its ends with first and second terminal members disposed at right angles to the base, the terminal members having openings, the axes of which are parallel to the base, the opening in the first member terminating at the base, and the opening in the second member being approximately one-half the height of the opening in the first member and terminating in spaced relation to the base thereby to form a transverse flange, side lugs being formed integrally with the second member and with the base and coöperating with the transverse flange to form a pocket for one end of one of two straps, both of which extend through the opening in the first member, the other of which straps extends through the opening of the second member, the base being provided intermediate its ends with a stud located between the first and second members, the lugs terminating in spaced relation to the first member, to permit the edges of the straps to be engaged by the fingers of an operator, when it is desired to remove the straps from the stud.

1,388,402. APPARATUS FOR SINGEING THE HAIR. ISIDORO CALVETE, London, England. Filed Jan. 19, 1920. Serial No. 352,516. 3 Claims. (Cl. 219—29.)



1. An apparatus for singeing the hair comprising an envelop of refractory material inclosing a resistance wire and carried within a holder, substantially as described.

1,388,403. MACHINE FOR POLISHING BATTERY-CELLS. SECONDO L. CASELLA, New York, N. Y., assignor to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 29, 1918. Serial No. 225,386. 10 Claims. (Cl. 51—74.)

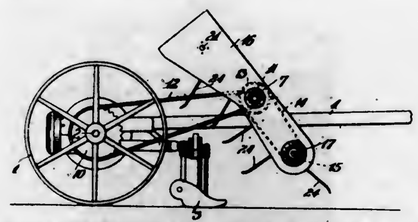


1. A battery polishing machine comprising carrier means for moving a series of cells from one location to another in substantially parallel relation and with their like ends projecting in the same direction substantially at right angles to the path of movement, one kind of polishing means for the bottoms of the battery cells arranged at right angles to the path of movement, polishing means of a different kind for the upper ends of the cells arranged at the other side of the path of movement and means for causing a more prolonged engagement of the polishing means of one kind with the lower end than of the polishing means of the other kind with the upper end of the cell.

1,388,404. REVERSE-STOP FOR VEHICLES. CHARLES P. CIRAC, San Francisco, Calif. Filed Mar. 26, 1918. Serial No. 224,738. 10 Claims. (Cl. 188—30.)

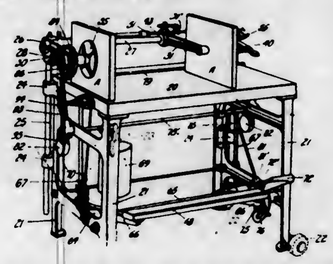
1. A reverse stop for vehicles including a fixed member, a movable member, stop members interposed between said members; and control means controlling said stop members including a slidable bar; a cam plate engaging said bar and means for actuating said cam plate.

1,388,405. TRUCK FOR VEHICLES. STUART H. CLAPP, Pittsfield, Mass. Filed Feb. 1, 1921. Serial No. 441,597. 7 Claims. (Cl. 280—124.)



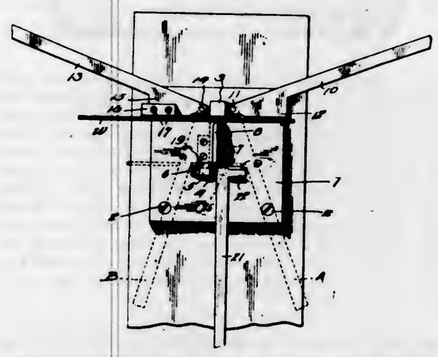
1. In a device of the character described, the combination of a supporting axle, crossed members pivoted to said axle, wheels supported from the lower ends of said members, and resilient means acting upon the upper ends of said members to cushion their movements under varying conditions of load imposed upon said members.

1,388,406. ROCK-DRILL. OMAR E. CLARK, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed July 19, 1918. Serial No. 245,696. 6 Claims. (Cl. 121—7.)



2. In apparatus of the character set forth, the combination with a drill actuating motor, of a drill rotating motor, means for supplying motive fluid to the motors, an actuating device, and means for effecting either the control of the supply of motive fluid to one of said motors independently of the other or to both simultaneously by said actuating device.

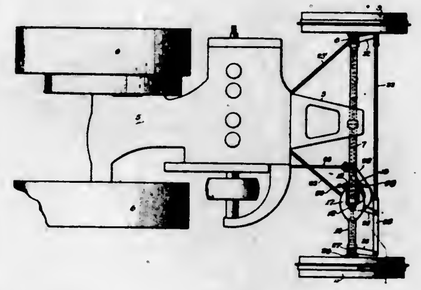
1,388,407. VINE-LIFTING ATTACHMENT FOR HARVESTING-MACHINES. JOHN E. CONKLIN, Tuscarora, N. Y. Filed Jan. 8, 1919. Serial No. 270,103. 7 Claims. (Cl. 56—219.)



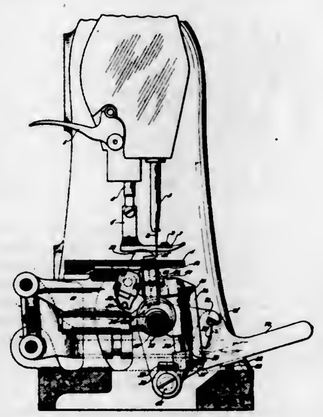
1. The combination with a harvesting machine, of a frame, means for supporting said frame in operative relation to the cutting bar of said machine, a plurality of flexible carriers movable on said frame, a plurality of shafts spaced from each other and connected to said carriers, means on the frame for guiding said shafts, a vine lifting device journaled on each of said shafts, a guide mounted on said frame, an arm on each of said vine lifting devices coöperating with said guide for controlling the operative position of said vine lifting devices, and a spring connecting each of said vine lifting devices with the next adjacent shaft and adapted to maintain said arm in coöperative relation with said guide.

1,388,408. APPARATUS FOR USE IN MAKING BOXES, CRATES, AND THE LIKE. ROBERT GEORGE CROSBIE, Hawthorn, Victoria, Australia, assignor to The Case Making Machine Company Limited, Melbourne, Australia. Filed Feb. 18, 1920. Serial No. 359,616. 28 Claims. (Cl. 144—295.)

1. In an apparatus for use in making boxes, a nailing table having a pair of vertically movable arms on both sides thereof provided with chucks for holding the ends of a box squarely on the table, a stop bar located transversely above the table, means for moving the stop bar forwardly and rearwardly across the table in line with the chucks, and means for raising the chuck carrying arms to adjust the height of the chucks and for simultaneously moving the stop bar into position for correctly determining the position of the ends of a box between the chucks.



1,388,409. WIRE-BENDING MACHINE. JAY DARLING, Williamsport, Ind. Filed Sept. 9, 1920. Serial No. 409,223. 4 Claims. (Cl. 153—39.)

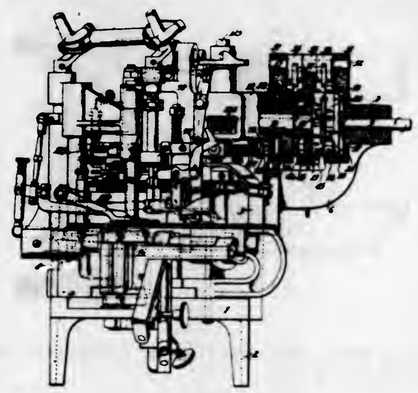


2. In a device of the class described the combination of a base-plate, an upstanding lug, a longitudinal upstanding flange spaced from said lug, a bending anvil spaced from the other end of the longitudinal upstanding flange, said bending anvil having a horizontally projecting extension, and a plurality of spaced bending levers pivotally mounted and suitably shaped and positioned to operate with the above described anvil and flange to bend a wire fastener to the shape shown.

1,388,410. TRACTOR. DAVID P. DAVIES, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Aug. 20, 1920. Serial No. 404,803. 7 Claims. (Cl. 280—96.1.)

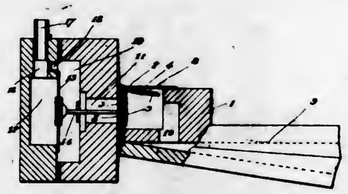
1. The combination, with a tractor, of a front axle, a knuckle pivotally secured thereto and having forked members, an extension axle secured to said front axle, means for adjusting said extension axle into an angle in relation to said front axle, forked members at the outer end of said extension axle, a wheel having a stud axle pivotally mounted between said forked members, steering means, and a link connected to said extension axle and said knuckle whereby said wheel is steered through the action of said steering means.

1,388,411. TRIMMING MECHANISM FOR SEWING-MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 10, 1917. Serial No. 190,451. 33 Claims. (Cl. 112—122.)



1. In a sewing machine, in combination with work-feeding mechanism, trimming mechanism comprising a pair of actuated severing members, an eccentric, and means operated by said eccentric for both relatively and bodily moving said members.

1,388,412. CLUTCH MECHANISM. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Dec. 31, 1915. Serial No. 69,644. Divided and this application filed Mar. 11, 1918. Serial No. 221,595. Renewed Jan. 7, 1921. Serial No. 435,762. 17 Claims. (Cl. 192—116.)

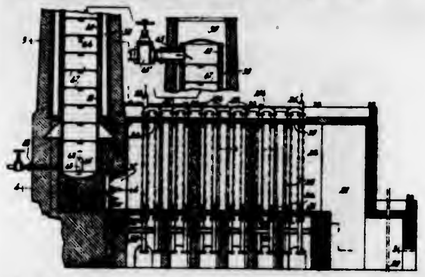


1. In a clutch device, in combination, a driving member and a braking member having adjacent portions formed with annular friction faces, a driven member formed with seats opposed respectively to said friction faces, friction contact elements movable relatively to each other and secured to said seats and adapted to effect

frictional engagement with the friction faces of the driving and braking members, and means acting reciprocally

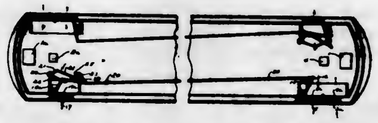
upon said elements for effecting their alternate engagement with the respective friction faces.

1,388,413. PNEUMATIC ACTION. EDGAR HENRY DODDS, Crouch Hill, London, England. Filed Oct. 24, 1919. Serial No. 333,056. 3 Claims. (Cl. 84—53.)



1. A pneumatic valve action comprising in combination a valve casing, including two open sides closed by a detachable L-shaped cover of metal, a single double-acting valve pivotally mounted to the angle of said cover, said valve being formed with two sides forming valve heads extending approximately at right angles to one another, and air ports or apertures in the walls of said cover with which said valve heads coöperate.

1,388,414. TRAWLING AND LIKE FISHING APPARATUS. CORNELIS PIETER DROS, Amsterdam, Netherlands. Filed Mar. 29, 1919. Serial No. 286,154. 14 Claims. (Cl. 43—4.)



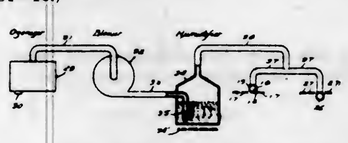
2. In a fishing apparatus, the combination of a fishing net having a catching compartment; a conduit connected at one end to said compartment; a siphon pipe connected to the other end of the conduit; a tank connected to the discharge end of the siphon pipe and having an outlet; a valve for closing said outlet; a separate tank located beneath said outlet and provided with a grating to separate the fish and water delivered immediately thereon by said outlet; and a pump to regulate the siphon action and connected to draw water from either of said tanks.

1,388,415. APPARATUS FOR TREATING OIL. CHARLES EKSTRAND, Brooklyn, N. Y.; Mabel Ekstrand executrix of said Charles Ekstrand, deceased. Filed Nov. 21, 1917. Serial No. 203,085. 8 Claims. (Cl. 196—26.)

1. An oil-treating apparatus comprising a retort, means for forcing oil therethrough under pressure, an expansion and mixing chamber, a baffle plate therein, two contracted nozzles of different sizes having valves for admitting the vapors from the retort through either nozzle into said chamber, said nozzles arranged to project said vapors against said plate.

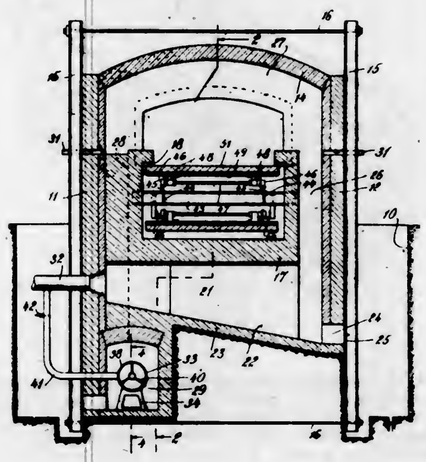
1,388,416. DOUBLE-ENDED RAILWAY-CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1921. Serial No. 454,030. 17 Claims. (Cl. 105—341.)

1. A double-ended one-man car having front and rear doorways at each side thereof, and sign mechanism for each of said doorways, the signs on one side adapted to simultaneously exhibit an entrance legend at one doorway and an exit legend at the other, and the signs on the other side adapted to simultaneously exhibit an entrance legend at one doorway and an exit legend at the other, so that such car may be used on the "pay as you enter" system when the entrance legend is exhibited at the front doorway and the exit legend at the rear doorway, or on the "pay as you leave" system when the entrance legend is at the rear doorway and the exit legend at the front doorway.



1,388,417. SAFETY LOCKING DEVICE FOR MOTOR-VEHICLES. JAMES HENRY FARMER, Hackney, London, England. Filed May 10, 1920. Serial No. 380,184. 1 Claim. (Cl. 70—131.)

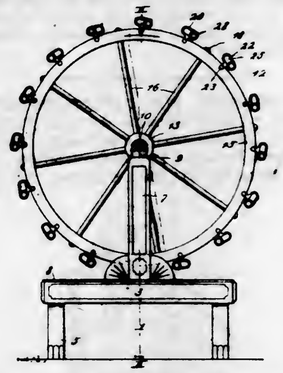
A safety locking device for automobiles comprising a cover plate adapted to fit over the change speed gate, so as to cover all openings except that for the neutral position of the change speed lever, ribs on the under side of said plate engaging in said openings, a supporting plate secured to the under side of said ribs and shaped to pass through said openings, a lock carried by said cover plate, a crank operated by said lock, a transversely sliding bolt mounted in said cover plate, a slot in said bolt, a crank pin on said crank engaging in said slot and adapted to slide said bolt to make it engage with the gate, inclined slots on said transverse bolt, a pair of pins mounted in said supporting plate at right angles to said transverse bolt, a pair of sliding plates mounted on said pins, springs on said pins tending to force said plates apart, projections on said plates engaging in the inclined slots in the transverse bolt whereby when said bolt is moved said plates are forced apart to engage under adjacent portions of the gate



---

1,388,418. PROCESS OF AND APPARATUS FOR PREVENTING OFFSETTING, &c. RICHARD L. FEARN, Jr., Washington, D. C., assignor to National Electrical Supply Company, Washington, D. C., a Corporation of Virginia. Filed Apr. 5, 1920. Serial No. 371,402. 8 Claims. (Cl. 34—18.)

4. The herein described process for preventing off-setting, which consists in heating the paper, subjecting it to the action of ozonized air, and reheating the paper.

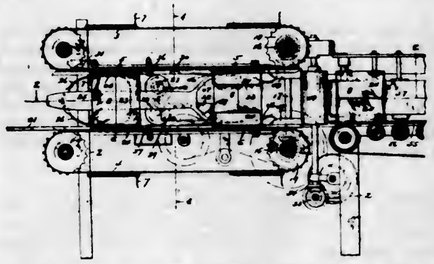


1,388,419. CONTINUOUS-HEATING FURNACE. WILLIAM HENRY FITCH, Allentown, Pa. Filed Jan. 27, 1920. Serial No. 354,415. 16 Claims. (Cl. 263—28.)

1. In a furnace, the combination of a heating chamber, a combustion chamber adjacent thereto, a flue at one side of the furnace for leading gas from the combustion chamber to the heating chamber, and a flue on the opposite side of the furnace for leading gas out of the heating chamber in a direction of flow opposite to the direction of flow in the first mentioned flue, whereby the hot gases pass completely around the heating chamber.

1,388,420. AMUSEMENT DEVICE. JOHN FLINNER, Leavenworth, Kans. Filed Aug. 5, 1918. Serial No. 248,310. 3 Claims. (Cl. 172—36.)

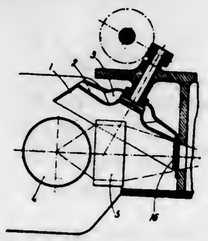
2. In a device of the character described, a vertical wheel, a suitable axis for said wheel, spaced elements on the wheel arranged at an angle to the periphery thereof, weights operably-mounted in said elements to move outwardly on the descending side of the wheel and inwardly



on the ascending side of said wheel, and means to rotate the wheel.

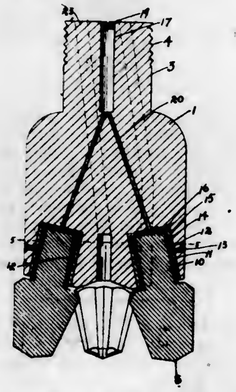
1,388,421. THROAT AND MOUTH GAG. LYMAN ROBERT FORGRAVE, St. Joseph, Mo. Filed Apr. 2, 1921. Serial No. 458,149. 6 Claims. (Cl. 128—12.)

1. A throat and mouth gag comprising a shank having a slideway provided with a ratchet surface, a latch slide plate operable in said slideway, a tongue depressor having a slide plate slidable in said slideway, said slide plates having separable engaging elements held together by the said slideway, when said slide plates are both in the slideway, a latch carried by said latch slide plate to coöperate with said ratchet surface and a loop carried by the shank and having provisions to lie under the upper jaw of the patient.



1,388,422. APPARATUS FOR SEALING CONTAINERS. STANTON W. FORSMAN, Los Angeles, Calif. Filed Oct. 30, 1918. Serial No. 260,247. 17 Claims. (Cl. 93—7.)

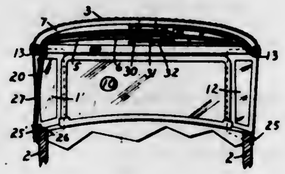
1. In an apparatus for sealing containers having sealing flaps, means for applying adhesive to said flaps com-



prising a trough, a roller rotatable within and extending below said trough, a second roller adapted to receive adhesive from said first roller, means for rotating said rollers, a conveyer for the containers, and means for holding the flaps on opposite sides of the containers extended so as to engage said rollers.

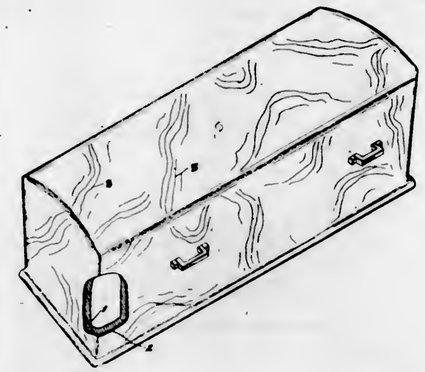
1,388,423. SHUTTER FOR CINEMATOGRAPHIC APPARATUS. PIERRE SYLVAIN GAUDIAT, Paris, France, assignor to Etablissements Continsouza (Societe Anonyme), Paris, France, a French Corporation. Filed Apr. 7, 1920. Serial No. 371,950. 2 Claims. (Cl. 88—19.3.)

1. In a cooling arrangement for the lamps of projecting apparatus, the combination with a rotatable, truncated, conical shutter, of a fan associated with said shutter, said fan being constructed to direct the cooling air through its whole periphery, and means for rotating said shutter and fan simultaneously and also causing the feeding of the film past said shutter during the operation of the apparatus.



1,388,424. ROTARY BIT. EDWARD A. GEORGE, Shreveport, La. Filed June 27, 1919. Serial No. 307,098. 8 Claims. (Cl. 255—71.)

1. In a rotary boring drill, a head, approximately upright cutters rotatable in sockets in the forward face of said head, and having a tapered forward cutting face and laterally tapered cutting edges so arranged that one side thereof is parallel with the sides of the bore being drilled, the other face being adapted to cut the bottom of the hole and each cutter positioned to bear upon the bottom of the hole.

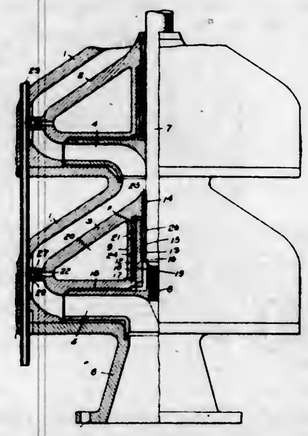


1,388,425. SIDE CURTAIN FOR AUTOMOBILES. LEO GILLIG and CHESTER GILLIG, San Francisco, Calif. Filed May 13, 1919. Serial No. 296,794. 8 Claims. (Cl. 296—140.)

6. Side curtains for automobiles comprising an automobile carrying a top, a bar carried thereby, a pair of flexible single unit curtains hinged thereto one at the edge of the other, means to hold the curtains against the

body at their lower edges when down, and means to hold the curtains flexed under the top when raised.

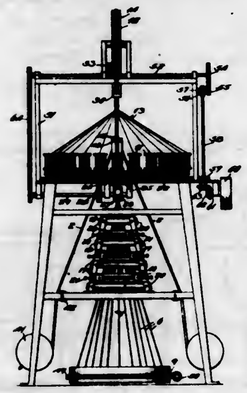
1,388,426. SURFACE-DECORATING. EDMUND J. GREIVE, Los Angeles, Calif. Filed Aug. 17, 1920. Serial No. 404,229. 4 Claims. (Cl. 91—68.)



1. The method of decorating surfaces which consists in applying thereto an elastic coating, allowing said coating to dry, applying a lacquer coating containing a metallic pigment, applying a color coating, and removing the color coating from portions of the surface to allow the metal coating to shine through.

4. A casket having the outer surface composed of an elastic coating with ridges thereon, a metallic pigment coating covering said elastic coating, and a colored japan coating covering the metallic pigment coating except on said ridges.

1,388,427. PUMP MECHANISM. SAMUEL N. HALL, Los Angeles, Calif., assignor to Mahlon E. Layne, Los Angeles, Calif. Filed Sept. 8, 1920. Serial No. 408,948. 9 Claims. (Cl. 253—199.)



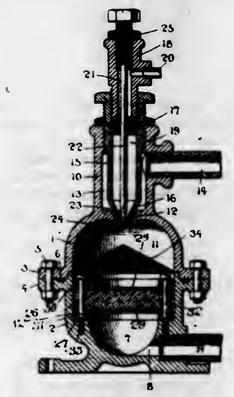
1. In combination in a centrifugal pump, an inner pump casing member provided with a bearing recess, an impeller or runner opposing the end of such member and provided with a bearing hub extending into said recess, a sleeve member secured to the other end of the casing

member and projecting inside the bearing hub, a drive shaft extending through said sleeve and connected to drive the

runner, and a relief passage leading from the space between said sleeve and the bearing hub.

1,388,428. MACHINE FOR MAKING PACKING. LAWRENCE W. HESSING, Maywood, Ill., assignor of one-half to John M. Rhodes, Chicago, Ill. Filed Aug. 30, 1920. Serial No. 407,011. 11 Claims. (Cl. 28—27.)

1. In a machine of the kind described and in combination, means for supplying strands of metallic packing material to the machine, means for initially guiding said strands into a compact body, means for forming and sizing the body, means for applying a backing to said body, and means for braiding a covering about the body and backing.

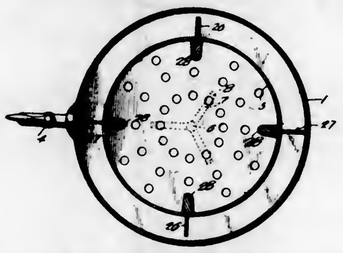


1,388,429. METHOD OF PACKAGING DIGITALIS. FREDERICK W. HEYL, Kalamazoo, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a Corporation of Michigan. Filed June 7, 1920. Serial No. 387,078. 2 Claims. (Cl. 99—8.)

1. The method of preserving digitalis consisting of comminuting desiccated digitalis leaves sufficiently to permit of compressing into porous tablets and compressing into porous tablets, placing the tablets in a desiccated condition in superimposed relation in a container containing at the bottom an alkaline dehydrating material

separated from the tablets by a layer of cotton and sealing.

1,388,430. MEANS FOR CONVERTING LIQUID FUEL INTO A COMPRESSED COMBUSTIBLE MIXTURE. PHILIP D. HIBNER, Seattle, Wash. Filed Jan. 27, 1919. Serial No. 273,365. 3 Claims. (Cl. 261—94.)

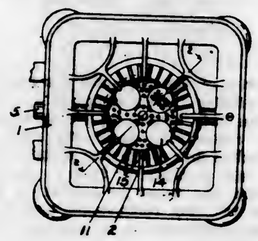


3. In a device of the character described, a mixing chamber, a partition therein composed of a dense compressible porous body of considerable thickness having a non-absorbent framework, means for forcing air and liquid hydrocarbon into the mixing chamber against and through the said partition to form a compressed combustible mixture, and means for placing the porous body under greater or lesser compression and thereby exert greater or lesser resistance to the passage of the air and liquid fuel therethrough.

1,388,431. DISH-WASHER. ALFRED H. HOCK, Bluefield, W. Va. Filed Aug. 15, 1919. Serial No. 317,756. 1 Claim. (Cl. 141—9.)

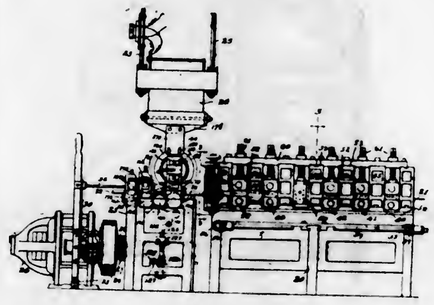
A device of the character described, comprising a stationary cylindrical outer container, a rotatably mounted inner container having its bottom spaced appreciably above the bottom of the outer container, the inner container being perforated throughout, a plurality of vertical strips extending inwardly from the inner periphery of the outer container, a plurality of vertical ribs ex-

tending inwardly from the inner periphery of the inner container, and a plurality of outwardly extending strips



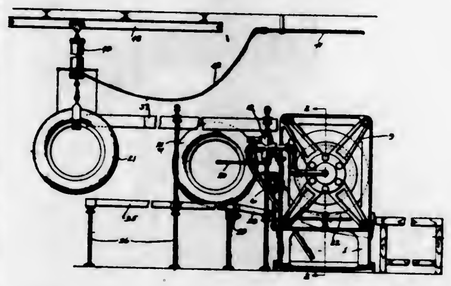
carried by the inner container, some of said strips having their inner edges embedded within certain of said ribs.

1,388,432. AUTOMOBILE-BUMPER. THOMAS A. HOOVER, Fresno, Calif., assignor to American Chain Company, Inc., a Corporation of New York. Filed Feb. 24, 1920, Serial No. 361,066. Renewed May 10, 1921. Serial No. 468,202. 3 Claims. (Cl. 293—55.)



2. In a bumper of the double spring bar type, wherein the ends are brought together near the median line of the bumper at the front thereof, a coupling for the meeting ends of the bar comprising upper and lower plates, clamping bolts for the plates extending vertically between the walls of the bumper, and a flange on one longitudinal edge of one of the plates overlying the meeting ends of the bumper bar.

1,388,433. GAS-BURNER. ALFRED H. HUMPHREY and GEORGE A. HUMPHREY, New York, N. Y. Filed Aug. 3, 1920. Serial No. 400,895. 10 Claims. (Cl. 158—99.)

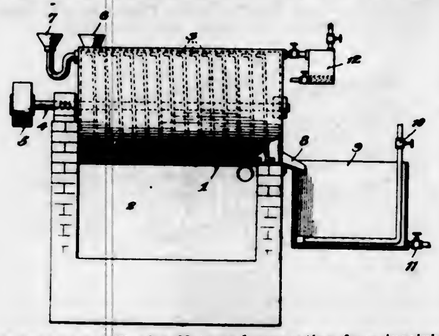


1. The combination with a grid, of a gas burner having a plurality of upwardly projecting burner tips, a pan-shaped deflector member disposed with its upper edge adjacent the under side of said grid and having openings in its bottom through which said burner tips project, there being spaces around said tips for the passage of secondary air thereto, said deflector member being of earthy material and having integral radially disposed internal fins and an integral baffle plate supporting posts disposed about the burner tip openings thereof, baffle plates disposed on said posts above said burner tips, and an outer metal shell for said deflector member.

1,388,434. METHOD AND APPARATUS FOR BUTT-WELDING THIN-GAGE TUBING. GUSTAVE V. JOHNSTON, Chicago, Ill., assignor to American Metal Molding Company. Filed June 9, 1919. Serial No. 302,932. 31 Claims. (Cl. 219—6.)

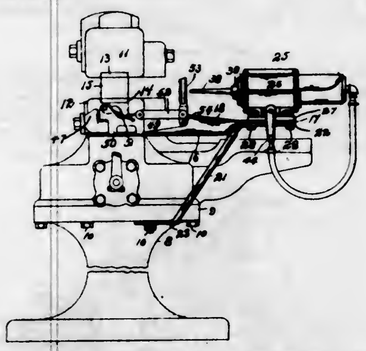
7. A process of making electrically butt-welded thin-walled steel tubing wherein the abutting walls are united by a recurrent weld, which consists in pressing the abutting walls into welding contact, causing an alternating welding current to flow across the seam, and advancing the tube at a rate sufficient to produce a substantially continuous weld exhibiting a recurrent welding effect synchronizing with the alternations of the welding current.

1,388,435. METHOD OF AND APPARATUS FOR REMOVING PNEUMATIC TIRES FROM CORES. KARL B. KILBORN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 24, 1921. Serial No. 455,217. 12 Claims. (Cl. 18—2.)



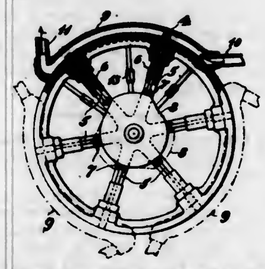
1. A tire stripper comprising means for supporting a tire and its core and means for forcing a fluid between the tire and the core.

1,388,436. MANUFACTURE OF ALUM CAKE. RICHARD MOLDENKE, Watchung, N. J. Filed Oct. 17, 1919. Serial No. 331,434. 3 Claims. (Cl. 23—13.)



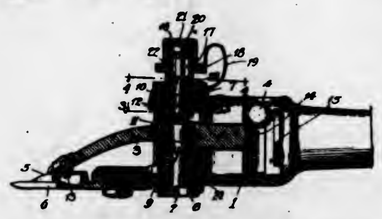
1. The process of making aluminum sulfate which comprises mixing a fine powdered aluminous mineral with about the amount of strong sulfuric acid corresponding to the available alumina present, vigorously agitating the mixture at a high temperature in an atmosphere of acid vapors to form aluminum sulfate while preventing its setting in cake form and to cause it to take a granular form, the agitation being continued to prevent its setting and to retain it in a granular state until reaction is

complete and thereafter mixing the granular reaction product with about the amount of water necessary to



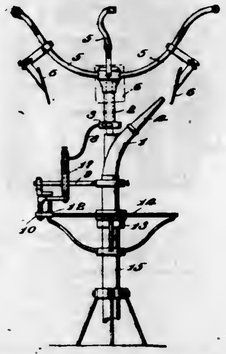
make a crystallized sulfate and separating from insoluble materials while the mixture is hot.

1,388,437. MEANS FOR OPENING THE BORES OF ROCK-DRILLING STEELS. GUSTAVE M. NELL, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed June 14, 1919. Serial No. 304,296. 7 Claims. (Cl. 76—5.)



1. In apparatus of the character set forth, the combination with a drill sharpening machine having relatively movable drill steel clamping jaws, of a bracket arm secured at one point to the machine, a brace for the arm connected to another portion of the machine, and bore opening mechanism mounted on the bracket in position to enter the bore of a drill steel held by the jaws.

1,388,438. ROTARY MOTOR. GEORG NÖLLMANN, Buenos Aires, Argentina. Filed May 18, 1920. Serial No. 382,374. 1 Claim. (Cl. 121—85.)



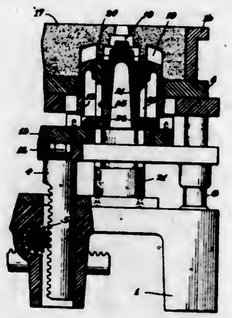
A rotary motor comprising a fly wheel having spokes, flanges on each side of the wheel rim forming an annular chamber, said rim projecting laterally at one side of the spokes and having pockets formed therein, blades in said pockets, stems on the blades projecting from said pockets centrally of the channel and at one side of the spokes, springs on the stems normally retracting the blades, a stationary cam at the center of the wheel over which the ends of the stems travel, a detachable steam channel extending over a portion of the rim and having sides fitting over the flanges of the rim, a stationary hub, and radially adjustable rods connecting the channel to the hub.

1,388,439. ANIMAL-SHEARS. CHESTER M. PALMER, Aurora, Ill. Filed Sept. 3, 1918. Serial No. 252,385. 4 Claims. (Cl. 30—1.)

1. A shearing machine comprising a casing, a fixed comb or cutter, a cutter movable on said fixed cutter, an oscillatory cutter lever, a pivot shaft having rotative bearing in the upper and lower walls of said casing and non-rotatively engaging between its ends said lever, one of said pivot shaft bearings formed relatively larger in diameter than the corresponding part of said shaft, whereby a comparatively increased tension may be provided automatically by the operation of the machine, an adjustable tension screw having threaded engagement with said casing in axial alinement with said pivot shaft, a pivot pin interposed between said tension screw and pivot shaft for applying tensions to the lever through said shaft, means whereby the lever and the cutter carried thereby may have a slight rocking movement with respect to the shaft to permit uniform pressure of the cutter on the fixed comb, means whereby a fixed angle between said pivot shaft and lever is maintained, and means for oscillating said cutter lever.

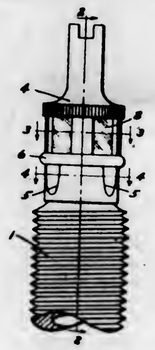
1,388,440. SPRINKLING-MACHINE. THOR PAULSEN PRESTGARD, Hedalen, near Sjoa, Norway. Filed Jan. 2, 1920. Serial No. 349,045. 2 Claims. (Cl. 299—68.)

1. A sprinkling machine including in combination, a rotatable jet piece, a rotatable support including a plurality of radiating arms, vanes connected on the arms and arranged in the path of the water issuing from the jet piece for breaking the water into a spray, and a pawl and ratchet mechanism mounted about the axis of the jet



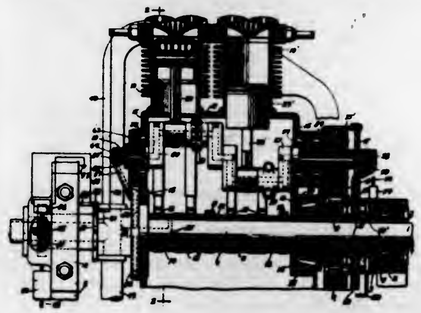
piece and operably connected with the support so as to be actuated thereby to consequently impart a step-wise rotative movement to the jet piece.

1,388,441. MULTIPLE ANTENNA FOR ELECTRICAL WAVE TRANSMISSION. MICHAEL I. PUPIN, Norfolk, Conn., and EDWIN H. ARMSTRONG, Yonkers, N. Y. Filed Oct. 1, 1915, Serial No. 53,494. Renewed Jan. 14, 1921. Serial No. 437,358. 1 Claim. (Cl. 250—33.)



A wireless receiving antenna of such high resistance as effectively to screen the system against disturbing electromagnetic waves impressed upon the conductor, in inductive relation with a low resistance and low inductance antenna which serves as a screen protecting the high resistance antenna against electromagnetic pulses of short duration.

1,388,442. MOLD-FORMING APPARATUS. HERMAN RAU, Brooklyn, N. Y., assignor to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 19, 1919. Serial No. 339,092. 2 Claims. (Cl. 22—54.)

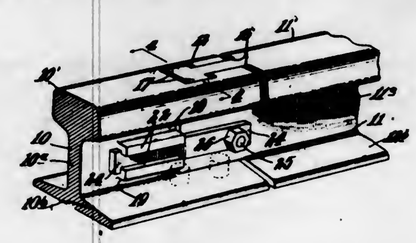


1. In mold making apparatus, the combination of a base, a hollow vertical pattern member, having vertical slots through its side walls, extending upwardly from said base, fixed vertical supports extending upwardly from said base, a plate slidably mounted on said supports, having an opening therethrough, through which said hollow pattern member extends, a mold-supporting plate, mounted on said supports, a pattern member within said hollow pattern member, having lugs extending outwardly through said vertical slots in said hollow pattern member and secured to said first named plate, said mold-supporting plate having an opening therein through which said pattern members are adapted to extend, and means for raising and lowering said first plate.

1,388,443. LEAK-INDICATOR FOR TIRE-VALVES. RALPH E. STEWART, Los Angeles, and HENRY H. HAMMERSTROM, Sierra Madre, Calif. Filed Aug. 17, 1920. Serial No. 404,244. 5 Claims. (Cl. 116—34.)

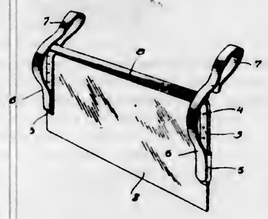
1. The combination with a valve stem, of a cap for the same having a slot therein, a transparent sleeve received within said cap beneath said slot, and an expandible diaphragm received in said cap and extending across the same, said diaphragm retaining said sleeve in position and adapted to be distorted by escaping pressure.

1,388,444. INTERNAL-COMBUSTION ENGINE. FREDERICK R. SUNDERMAN and WALTER H. SHIMPF, Detroit, Mich., assignors to Sunderman Corporation, Newburgh, N. Y., a Corporation of New York. Filed Apr. 12, 1918. Serial No. 228,125. 18 Claims. (Cl. 123—44.)



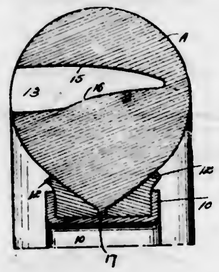
1. In a rotary internal combustion engine, the combination of a stationary gear, a frame mounted to revolve about the axis of said gear, two crank shafts mounted in said frame, a pinion on each crank shaft geared to said gear and one-half the diameter thereof, four cylinders having pistons operating on each of said crank shafts and means whereby said cylinders are fired so that an impulse is delivered at each 45° about the axis of said stationary gear to rotate said frame.

1,388,445. RAIL-JOINT. JOSEPH VASS, Sharpsville, Pa. Filed Feb. 18, 1921. Serial No. 445,940. 5 Claims. (Cl. 238—235.)



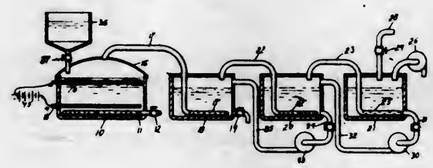
1. In a rail joint, a pair of rail ends one of which has the tread portion presenting a vertically extending T-slot, the other of said rail ends having the tread thereof cut out on opposite sides flush with the web at a distance from the end thereof, the extreme end of said tread being of diminished width to form a pair of projections presenting a T-head engaging in said slot, and means locking

said rail ends against relative vertical displacement, said means comprising a pair of bars detachably secured to the



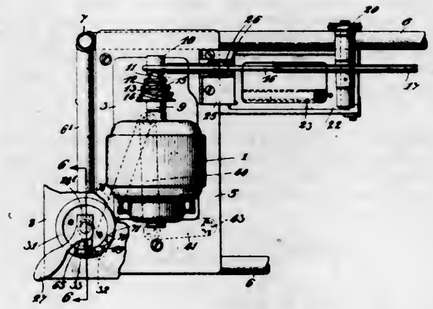
web of one rail end and retainer guides on the other rail end in which said bars engage slidably.

1,388,446. GLARE-SHIELD ATTACHMENT FOR AUTOMOBILE-WINDSHIELDS. ROY H. WOODMANSEE, Denver, Colo. Filed Aug. 16, 1920. Serial No. 403,678. 1 Claim. (Cl. 296—97.)



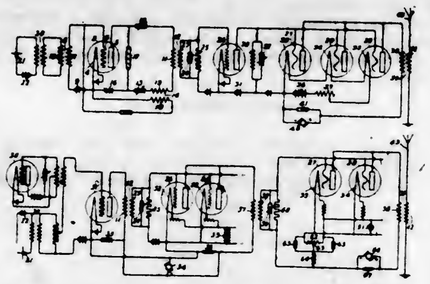
As a new article of manufacture, a glare shield for use on the wind shield of an automobile, comprising a translucent plate, a metallic binder straddling and secured on one longitudinal edge and the upper portions of the end edges of the plate, resilient clips clasping the end portions of the binder and plate, spring portions bowed away from the binder and secured to and extending upwardly from said clips and merged at their upper ends into resilient hooks, and a strip extending between and connected to the upper portions of the said bowed spring portions.

1,388,447. TIRE-CORE. WALTER A. BLACK, Perry, Iowa. Filed Oct. 23, 1920. Serial No. 418,872. 1 Claim. (Cl. 152—5.)



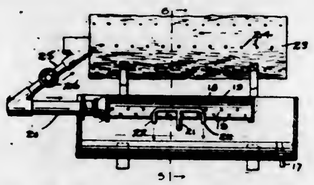
In a device of the class described adapted to be used in connection with a tire casing comprising an annular resilient core member, having apertures in its sides, the apertures on one side being staggered with relation to the apertures on the other side, said apertures being narrower circumferentially of the core at their inner ends than at their outer ends and the sides of said apertures being tapered radially inwardly, the walls of the apertures at the inner and outer sides thereof, radially of the device being arched, whereby in all positions of the core with relation to the ground a continuous cushion of resilient material radially of the core is provided for preventing vibration of load and road shocks and a flange formed on said core member adapted to be received between the edges of the casing for preventing any possible twisting of the core.

1,388,448. ELECTRIC PRODUCTION OF AMMONIA. HENRY BLUMENBERG, Jr., Oro Grande, Calif. Filed May 12, 1919. Serial No. 296,556. 11 Claims. (Cl. 204—9.)



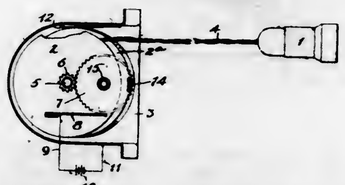
1. A process of making ammonia, comprising subjecting an aqueous solution of a metal nitrate of the alkali metal and alkaline earth metal groups to electrolysis, whereby the nitrate is first reduced to nitrite, and the nitrite is further reduced by the hydrogen generated to form ammonia and the hydroxid of the metal.

1,388,449. STARTING AND SPEED-CONTROLLING DEVICE. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1920. Serial No. 388,484. 10 Claims. (Cl. 172—230.)



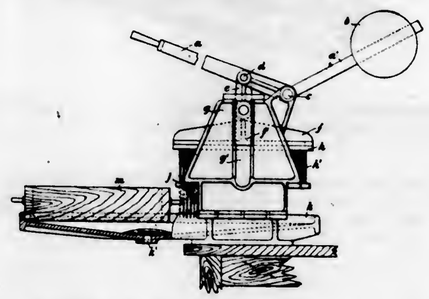
1. In a device of the character described, the combination of a motor, a motor shaft having stepped pulleys thereon with an inclined groove formed across the same, a driven pulley, a belt extending around said shaft and driven pulley, and means for shifting said motor axially in one direction or the other while it is running, to shift said belt from one of said stepped pulleys to another.

1,388,450. TRANSMISSION OF INTELLIGENCE. EDWIN H. COLPITTS, East Orange, and HAROLD DE FOREST ARNOLD, Maplewood, N. J., assignors, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Sept. 3, 1915, Serial No. 48,789. Renewed Jan. 13, 1921. Serial No. 437,125. 28 Claims. (Cl. 250—6.)



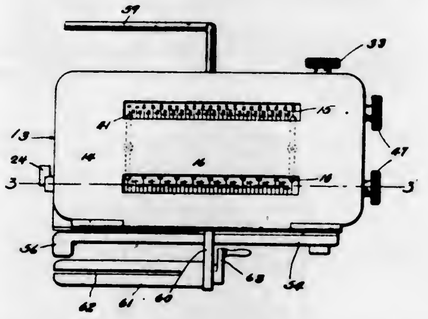
1. The method of signaling which consists in modulating carrier waves of insufficient power for transmission to a distant station and in increasing the power of said modulated waves before they are transmitted.

1,388,451. OIL-BURNER. EMANUEL W. DUNN, Los Angeles, Calif. Filed May 28, 1917, Serial No. 171,345. Renewed Jan. 20, 1920. Serial No. 352,915. 8 Claims. (Cl. 158—92.)



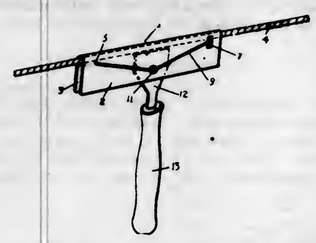
1. An oil burner comprising a base provided with a combined vaporizing and combustion chamber, a perforated blast chamber above said combustion chamber, means for delivering combustible material into the combined vaporizing and combustion chamber close to the wall of the blast chamber, whereby the said combustible material is instantly gasified as it is delivered, and means for delivering air into the blast chamber, the perforations in the blast chamber being oppositioned to discharge air into the zone of gases within the combined vaporizing and combustion chamber.

1,388,452. AUTOMATIC ELECTRIC SWITCH FOR CABLE-CARRYING DRUMS. CHARLES F. CUNO, Meriden, Conn. Filed May 8, 1920. Serial No. 379,750. 5 Claims. (Cl. 200—153.)



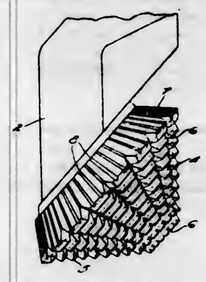
5. An automatic switch for a drum wound current consuming device, including a drum, a current carrying cord wound thereon, a movable member geared to the drum to be rotated thereby and having a conducting portion and a non-conducting portion, and a contact brush supported independently of the drum and arranged to contact with both the conducting and the non-conducting portions of said movable member depending upon the position of the latter.

1,388,453. **TREATMENT OF RAW RUBBER WHEN FRESHLY COAGULATED FROM THE LATEX.** SAMUEL CLELAND DAVIDSON, Belfast, Ireland. Filed Feb. 13, 1920. Serial No. 358,441. 7 Claims. (Cl. 18—50.)



3. Apparatus for eliminating air, gas, and water contained in raw rubber which has been freshly coagulated from the latex, comprising the combination of a base plate, a pin plate, a number of pins fixed in the pin plate, a stripper plate having holes therein corresponding to the pins of the pin plate, a receiver for the rubber to be treated, a support on the tank for the receiver to one side of the pin plate, means for guiding the receiver under the carrier and pin plate and means for pressing the pin plate and receiver together and apart to force the pins through the rubber and for again withdrawing the pin plate.

1,388,454. FABRIC-MEASURING AND COST-COMPUTING MACHINE. LEO EHRLICH, St. Louis, Mo., assignor of one-half to Arthur S. Partridge, St. Louis, Mo., and one-half to Albert Blair, St. Louis, Mo. Filed Feb. 16, 1918. Serial No. 217,502. 20 Claims. (Cl. 33—133.)

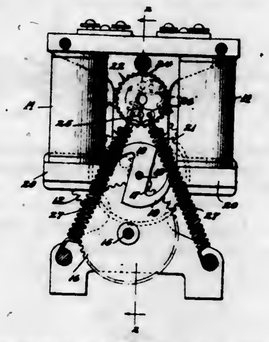


1. In a machine of the class described, an endless flexible member mounted for operation, means adapted to be actuated by the goods passing through the machine for imparting movement to said endless flexible member, a sales slip support arranged adjacent to a portion of said endless flexible member, and means carried by said flexible member and adapted to be manually actuated to mark a sales slip positioned on said support.

1,388,455. CLOTHESLINE-PULLING CLUTCH. SYDNEY JAMES FLEMING, Vancouver, British Columbia, Canada. Filed Oct. 19, 1920. Serial No. 417,906. 5 Claims. (Cl. 24—134.)

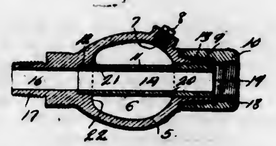
2. A clothes line pulling clutch comprising a substantially U-shaped member adapted to be placed on the line in an inverted position and provided at its opposite ends and intermediate its length with oppositely disposed apertures the apertures at one end being positioned just below the line and those at the opposite end being slotted with the upper edge above the under side of the line, the intermediate apertures being positioned adjacent its lower edge, a plate disposed between the sides of the U-shaped member the upper end of which lies close to the line having an opening registering with the intermediate apertures, said plate being provided with a gripping handle, and a spring wire member doubled over intermediate its length forming a pin adapted to pass through the plate opening and the intermediate apertures to pivotally connect said plate and said member, the ends of the wire being bent and passed through the said end apertures and slots.

1,388,456. ROLLER BORING-DRILL. HAROLD W. FLETCHER, Houston, Tex. Filed Jan. 29, 1921. Serial No. 441,062. 6 Claims. (Cl. 255—71.)



1. In a roller earth boring drill, the combination of a head, frusto-conical cutters rotatable on the forward end thereof, mounted in offset relation to the axis of rotation of the head and teeth on said cutters formed co-axially on the periphery thereof and presenting a cutting edge forwardly in the direction of sliding of said cutters.

1,388,457. FOLDING OR JOINTING AEROPLANE-WING FOR TRANSPORTATION OR STORAGE. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands. Filed Feb. 17, 1921. Serial No. 445,735. 3 Claims. (Cl. 244—12.)



1. An aeroplane wing comprising members hingedly connected together along a line running in the direction of the major dimension of the wing to enable said wing to be folded.

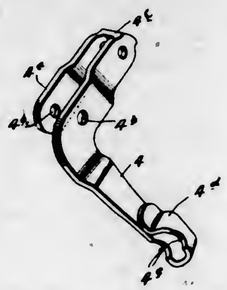
1,388,458. SECONDARY ELECTRIC CLOCK. FREDERICK FRICK, Waynesboro, Pa. Filed Sept. 29, 1920. Serial No. 413,502. 8 Claims. (Cl. 58—26.)

1. In a secondary clock a device for intermittently rotating a shaft comprising in combination means for rotating said shaft through an angle less than 180°, and means for completing the rotation of said shaft through 180°, said last mentioned means including a member rotatable about an axis displaced from the axis of said rotatable shaft and operatively connected to said shaft and a resilient element connected to said member.

1,388,459. PNEUMATIC-HAMMER-OILING DEVICE. THOMAS J. GREENE and PETER W. BURKE, Bremerton, Wash. Filed Feb. 18, 1920. Serial No. 359,594. 1 Claim. (Cl. 184—55.)

An oiling device for pneumatic hammers comprising a body having an oil receptacle therein, said body member having its ends reduced and provided with axially alined air passages, one of said reduced portions of the body member being threaded, a tubular member extending through the oil receptacle of the body member and having one of its ends reduced and disposed within a counterbore adjacent one end of the body member and with the passage of the tube in axial alinement with the passage of the reduced portion of the body member, the other enlarged end of the tubular member being disposed in the passage of the threaded reduced end of the body member, a screen engaging the end of the reduced threaded end of the body member and the enlarged end of the tubular member, a shouldered member threaded on the reduced threaded end of the body member and forming means for maintaining the tubular member and the screen in position, said screen preventing displacement of the tubular member and passages of communication between the air passage of the tube and the oil receptacle whereby air will enter the oil receptacle and force air into the air passage of the tube.

1,388,460. CLOSED HIGH-TEMPERATURE GAS-BURNER. DAVID GUELBAUM, Syracuse, N. Y. Filed Jan. 5, 1921. Serial No. 435,185. 8 Claims. (Cl. 158—7.)

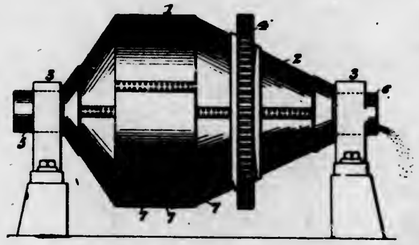


1. A closed high temperature gas burner, comprising a hollow base or frame with a rim and radial ribs supporting a well or recess in the center, having a cone beveled top and a blank bottom with a hub in its center, a nozzle from the rim to the well, means for closing up the open space between rim and well against access of the surrounding air, a central valve with a cone beveled top

concentric with the cone beveled top of the well and having a hub in the center, means for raising and lowering

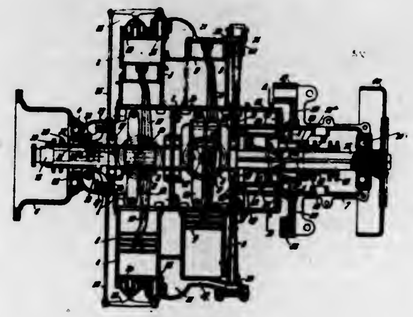
the valve, thus opening or closing the concentric passage between well and valve, substantially as and for the purposes specified.

1,388,461. SPRING-EQUALIZER ATTACHMENT FOR AUTOMOBILES. BEN F. HARDESTY, St. Louis, Mo. Filed Jan. 24, 1920. Serial No. 353,905. 2 Claims. (Cl. 267—17.)



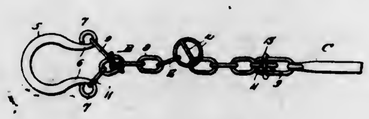
2. A spring equalizer attachment for automobiles comprising a blank bent upon itself and provided with perforations to form a fulcrum, and means of attachment for the spring shackle, the opposite end of said blank being recessed at its edges and bent upon itself to form a slotted opening through which an equalizer rod may pass.

1,388,462. GRINDING-MILL. HARRY W. HARDINGE, New York, N. Y., assignor to Hardinge Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 31, 1919. Serial No. 334,763. 8 Claims. (Cl. 83—9.)



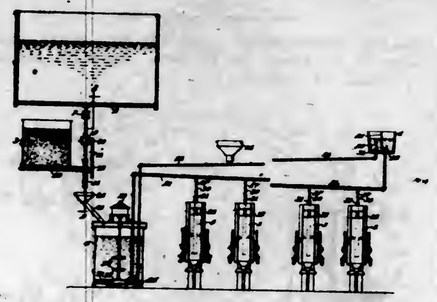
1. A grinding mill unit comprising a substantially integral body having conical ends and a central bore.

1,388,463. GRINDING-MILL AND GRINDING MEDIUM THEREFOR. HARRY W. HARDINGE, New York, N. Y., assignor to Hardinge Company, New York, N. Y., a Corporation of Delaware. Filed July 8, 1920. Serial No. 394,636. 2 Claims. (Cl. 83—9.)



1. A grinding mill comprising in combination, a rotatable drum containing a multiplicity of discus-shaped elements relatively slidable with respect to each other and free to assume a position in which their geometrical axes are at a substantial angle to the axis of rotation of said drum, each of said elements comprising two cone portions secured base to base, the altitude of each cone portion being small as compared to the diameter of its base.

1,388,464. GYROSCOPIC APPARATUS FOR TRANSMISSION OF POWER. CAMILLE JEAN HAUTIER, Boulogne, France. Filed Apr. 12, 1913. Serial No. 760,768. 8 Claims. (Cl. 60—53.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

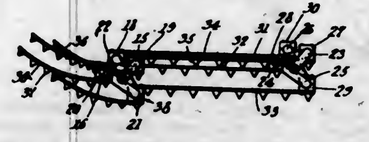


1. In a power transmission, the combination with a driving shaft, of a rotatable air pump driven by said shaft, a rotatable air driven engine, a driven shaft operated by said engine, an air reservoir included between the pump and engine, said engine, pump and reservoir rotating as a unit, and means to partially unload the pump including means to render it inactive.

1,388,465. HOPPLE. ELLIS ERVIN HIGLEY, Salmon, Idaho. Filed June 10, 1920. Serial No. 387,005. 3 Claims. (Cl. 119—128.)

1. A hopple including a cuff adapted to encircle the leg of the animal and having an eye formed on each of the adjacent ends, a chain consisting of a plurality of links and having one end link secured in one of the eyes of said cuff, a ring carried by the outer link of said chain, a long link carried by the other of said eyes on said cuff and through which said chain and said ring are adapted to pass, and a combined stop and centering link carried by one of the links of said chain and receiving the long link to limit the approach of the point of engagement of the long link and chain toward the leg of the animal and to constrain the pull of the chain to be exerted substantially radially of the cuff.

1,388,466. ELECTROLYSIS OF SOLUTIONS AND APPARATUS THEREFOR. ALBERT H. HOOKER, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1920. Serial No. 401,391. 3 Claims. (Cl. 204—1.)



1. In a process of electrolysing salt solutions, the step which consists in supplying to the cell an aqueous electrolyte carrying a salt in solid phase.

1,388,467. FLEXIBLE PAPER TUBING. EMIL KELLER, Vienna, Austria. Original application filed May 22, 1919, Serial No. 299,056. Divided and this application filed May 1, 1920. Serial No. 378,245. 10 Claims. (Cl. 93—94.)

1. As an article of manufacture, a flexible tubing consisting of a paper tube, provided with corrugations having intermediate side parts between their hollows and crests, which are closely abutting along their adjacent faces.

1,388,468. BAND-CUTTER AND FEEDER FOR THRESHING-MACHINES. ISAAC KIRBY, Oklahoma, Okla. Filed Sept. 30, 1918. Serial No. 256,251. 3 Claims. (Cl. 130—1.)

1. The combination with a threshing cylinder and a conveyer extending upwardly toward the cylinder, of spaced crank shafts, located over the conveyer and adjacent the cylinder respectively, bearing boxes mounted on the shafts, a bar secured at one end to the top of a bearing box on the shaft above the conveyer and at its other end to the bottom of the bearing box on the other shaft, knives extending downwardly from the bar and means above the conveyer and connected with said bar for cutting bundles as they are brought successively to the upper end of the conveyer and under the bar.

1,388,469. BUTTON. ALBERT LATHAM, Beverly, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Feb. 19, 1919. Serial No. 277,931. 37 Claims. (Cl. 24—90.)

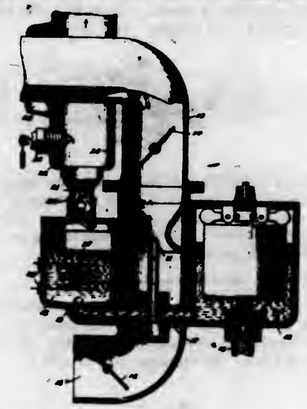
1. A button comprising a body having an opening therethrough, a securing member having an expansible portion extending into the opening, and a member entering the opening at the opposite side and coöperating with the securing member to permanently deform it.

1,388,470. BUTTON. ALBERT LATHAM, Beverly, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Mar. 10, 1919. Serial No. 281,836. 26 Claims. (Cl. 24—90.)

1. A button comprising a body having a plurality of openings, a securing member provided with portions extending into the openings, and a member engaging said portions.

1,388,471. BUTTON. ALBERT LATHAM, Beverly, Mass., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Oct. 2, 1919. Serial No. 327,937. 14 Claims. (Cl. 24—90.)

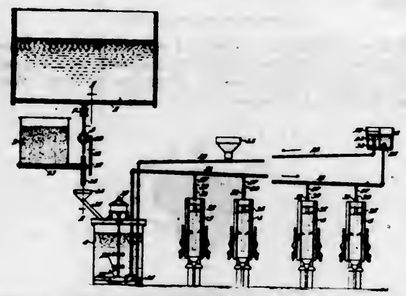
1. A button comprising a body, and securing members formed with a projection and depression arranged for engagement by direct rectilinear movement and retained positively against separation by reverse movement to connect the members to the body.



1,388,472. PLASTIC COMPOUND AND PROCESS. WILLIAM GODSON LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Original application filed Dec. 12, 1914. Serial No. 876,806. Patent No. 1,199,800. Divided and this application filed Sept. 1, 1916. Serial No. 118,002. 7 Claims. (Cl. 106—40.)

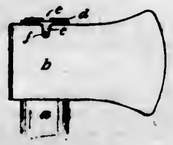
1. A composition of matter containing an acetyl cellulose, borneol, and a miscible medium.

1,388,473. FUEL PREHEATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. THOMAS J. LITLE, Jr., Detroit, Mich., assignor to Lincoln Motor Company, Detroit, Mich., a Corporation of Delaware. Filed June 7, 1920. Serial No. 387,050. 12 Claims. (Cl. 219—38.)



1. In an internal combustion engine, in combination, means for supplying fuel thereto, and means for preheating the fuel comprising a flame inclosing and confining casing in heating relation to said fuel supplying means, a vaporising chamber for a volatile combustible fluid in

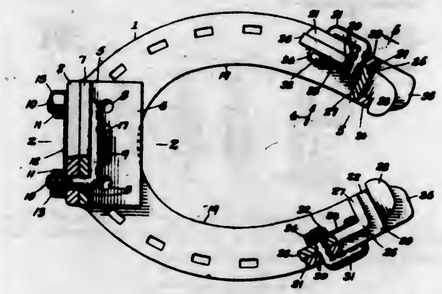
communication with said casing, and heating means for vaporizing the hydrocarbon in said chamber, the resulting



vapors passing into the flame inclosing chamber for ignition.

1,388,474. APPARATUS FOR ELECTROLYZING SOLUTIONS. THOMAS L. B. LYSTER and KENNETH E. STUART, Niagara Falls, N. Y., assignors to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1920. Serial No. 403,326. 8 Claims. (Cl. 204—5.)

1. The combination with an electrolytic cell of means for supplying electrolyte thereto; said means comprising an external circulating system for electrolyte; a feed orifice for the cell; and means included in said circulating system for maintaining a constant head at said feed orifice.

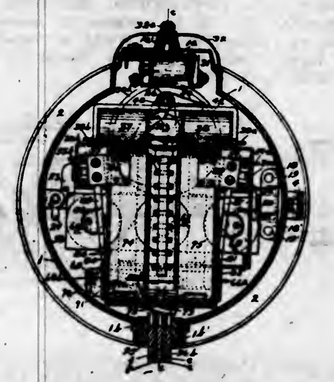


1,388,475. ATTACHMENT FOR AX-HEADS. CHARLES EDGAR MANNERS, Glenville Glen, Crafers, South Australia, Australia. Filed Aug. 26, 1920. Serial No. 406,100. 1 Claim. (Cl. 306—33.)

An attachment for ax heads comprising the combination with an ax head provided with a handle-receiving eye and having slots at said eye portion extending downwardly from the upper edge of the head, of a wedge adapted to be driven into the handle, said wedge having an open slot in its thicker portion designed to register with the slots in the head and to allow said wedge when loose to be driven farther into the handle, and a pin engaging the slots in the head and wedge and passing through the handle.

1,388,476. [WITHDRAWN.]

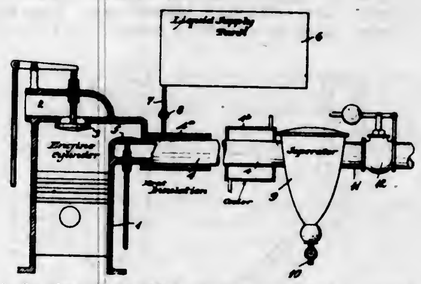
1,388,477. HORSESHOE. LAYTON M. MUSSELMAN, Jersey City, N. J. Filed June 15, 1920. Serial No. 389,140. 7 Claims. (Cl. 168—34.)



1. A horseshoe provided with a main toe calk member and with L-shaped main heel calk members, the longer arms of which extend longitudinally of the sides of the shoe and the shorter arms transversely thereof, and supplemental toe and heel calk members which are angular in form and fitted within the main toe and heel calk members and secured in position by U-shaped bolts.

1,388,478. TENT. ALBERT R. NELSON, Sheridan, Wyo. Filed May 13, 1920. Serial No. 381,152. 2 Claims. (Cl. 135—1.)

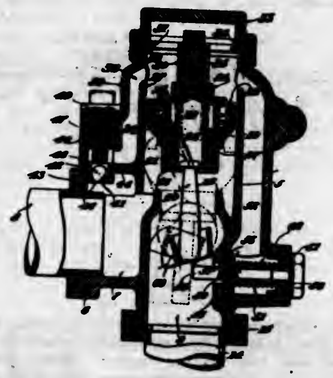
1. A tent comprising a fabric body, supporting bows positioned in the body with their ends engaging the ground and having their upper portions provided with studs passing through the body, and a reinforcing strip extending longitudinally of the body at the ridge and having free end portions extending beyond and out of engagement with the forward and rear ends of the body for engagement by guy ropes.



2. A shelter comprising a body and supporting arches for the body each formed of side members having upper and lower sections, sleeves slidably and releasably connecting the members and sections thereof, and resilient means positioned in the sleeves between the sections to retain the arches in tight engagement with the body.

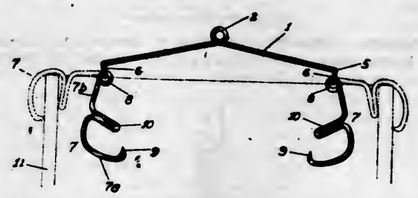
1,388,479. ELECTRICAL WATER-LEVEL-INDICATING APPARATUS. WALTER D. NICKUM, Glendale, Calif. Filed Sept. 16, 1918. Serial No. 254,845. 29 Claims. (Cl. 177—351.)

1. A signal system including a conducting medium, a series of contacts connected in succession by the conducting medium, a source of current, a conductor from one side of said source of current having branches connected respectively to certain of said contacts, an electro-responsive device in each of said branches, a conductor extending from a contact intermediate said first-named contacts to the other side of said source of current, a plurality of signals equal in number to the number of contacts and means operated by the electro-responsive devices for rendering the signals active one at a time in accordance with the position of the conducting medium relative to the contacts.



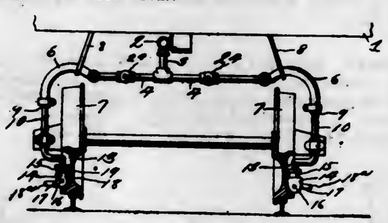
1,388,480. ART OF SEPARATING USEFUL PRODUCTS FROM THE EXHAUST OF INTERNAL-COMBUSTION ENGINES. AUGUSTE JEAN PARIS, Jr., Charleston, W. Va. Filed Apr. 12, 1919. Serial No. 289,767. 8 Claims. (Cl. 196—25.)

1. In the art specified, the process which consists in absorbing the heat from products of combustion from an internal explosive engine by introducing therein a suitable heat absorbing agent other than water, and thereafter condensing and separating out the liquefiable products.



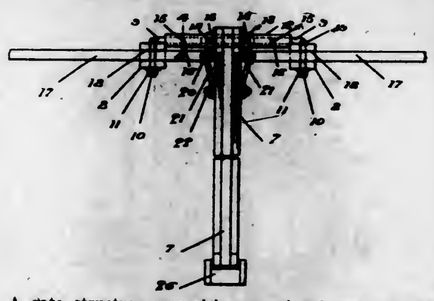
1,388,481. FLUSHING-VALVE. CHARLES H. PHILLIPS, Malden, Mass., assignor to Phillips Flushing Tank Company, Boston, Mass., a Corporation of Maine. Filed May 23, 1919. Serial No. 299,173. 11 Claims. (Cl. 137—93.)

9. A flushing valve having, in combination, an inlet, an outlet, a main valve normally closing the outlet, a by-pass leading from above the main valve to the outlet, an operating valve in said by-pass, a second by-pass leading from the inlet to above the main valve, and a ball valve in said second by-pass adapted to restrict the flow of water therethrough and to cause the ball to be completely inclosed within a body of water at each operation of the



valve and having provision whereby it may be adjusted from the exterior of the flushing valve to regulate the flow of water by the ball.

1,388,482. GRAPPLING-HOOK. FRANK J. PORTER, Kernan, Calif. Filed May 24, 1920. Serial No. 388,618. 5 Claims. (Cl. 294—78.)

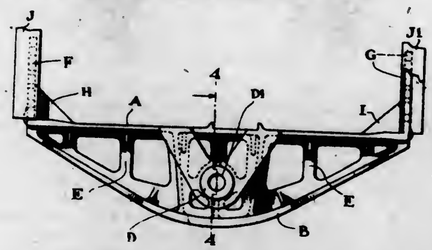


1. A grappling hook comprising a rigid beam adapted to be raised, and hook members flexibly mounted at the ends of the beam and constructed to be slipped over the sides of a box and to automatically and firmly engage said sides when the beam is raised.

1,388,483. AIR-BRAKE CONTROL. JOSEPH S. RASNICK, St. Paul, Va., and WALKER S. BLEVINS, Kingsport, Tenn. Filed May 26, 1921. Serial No. 472,678. 1 Claim. (Cl. 246—172.)

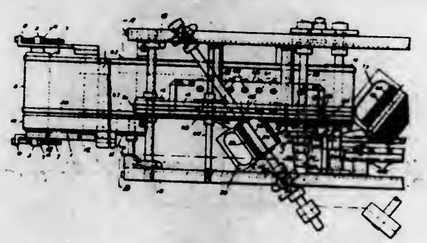
The combination with a railroad car having an air brake pipe and supported on wheels disposed on rails, of outwardly and downwardly extending pipes carried by the air line pipe, flexible connections in said outwardly and downwardly extending pipes, the lower ends of said outwardly and downwardly extending pipes being disposed within the outer chambers of the wheels, valves carried by the outwardly and downwardly extending pipes and means carried by the ends of the outwardly and downwardly extending pipe and so constructed that when it engages the rails air from the train line pipe will be released.

1,388,484. FARM-GATE. FLEMING C. RAWLEY, Houston, Tex. Filed Sept. 7, 1920. Serial No. 408,667. 1 Claim. (Cl. 39—60.)



A gate structure comprising a pair of posts, a gate between them, a hinge tube extending through the gate, collars on said tube bearing against opposite sides of said gate, a pair of alining transverse rods fitted within the opposite end portions of said tube and having at their opposite end portions extending at an angle and engaging through said posts parallel with the gate, means on the opposite ends of said rods for securing same to said posts, said rods having grooves within said tube, and means carried by the tube engaging in said grooves for holding the tube and rods together for the turning movement of the tube on the rods.

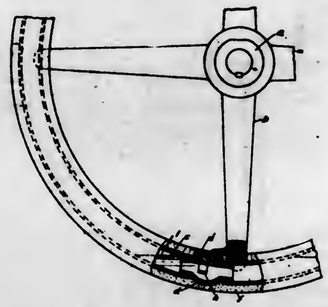
1,388,485. GROUND. JOSEPH E. ROSENFELD, Council Bluffs, Iowa. Filed June 14, 1919. Serial No. 304,351. 2 Claims. (Cl. 72—105.)



2. A ground comprising a perforated plate having a central opening, a block disposed within said opening, a continuous, inwardly projecting inclined flange on said plate, said block having an inclined portion extending co-extensively with the flange and engaged by said flange and a portion of uniform diameter projecting outside of said flange.

1,388,486. RAILWAY-CAR. HUGH W. SANFORD, CHARLES A. GRIFFITH, and GEORGE E. JONES, Jr., Knoxville, Tenn., assignors to Sanford-Day Iron Works, Knoxville, Tenn., a Corporation of Tennessee. Filed Dec. 2, 1920. Serial No. 427,772. 7 Claims. (Cl. 105—364.)

1. In a structure of the kind described, a one piece casting comprising an end sill, a bumper projecting therefrom, a draw bar element, and corner stiffeners for connection with the longitudinal sills, substantially as described.

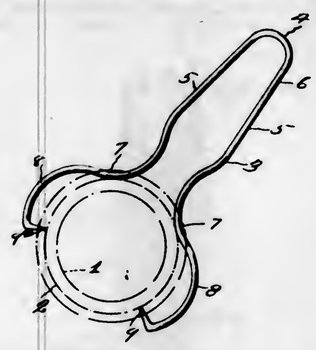


1,388,487. TOBACCO-STEMMING MACHINE. JAMES P. SCOVILL, Troy, N. Y., assignor, by mesne assignments, to Tolhurst Machine Works, a Corporation of New York. Filed Apr. 25, 1918. Serial No. 230,797. 41 Claims. (Cl. 131—57.)

1. A tobacco stemming machine including in combination a pair of leaf conveyers traveling side by side, one conveyer being longer than the other, a belt superposed upon the long conveyer, the long conveyer and superposed belt having coacting stem flexing and gripping devices, and means for stemming the projecting butt part of the leaf after it has passed the short conveyer and while it is held by the flexing grip between the other conveyer and the belt.

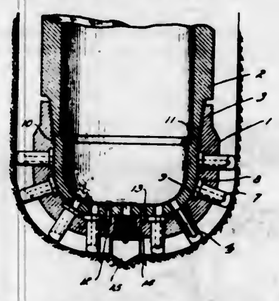
2. A tobacco stemming machine including in combination a pair of leaf conveyers traveling side by side, one conveyer being longer than the other, a belt superposed upon the long conveyer, the long conveyer and superposed belt having coacting stem flexing and gripping devices, and stem butt cleaning rolls arranged diagonally with respect to the conveyers, and acting to stem the butt end of the leaf and to bend the stems backwardly perpendicularly to the axis of the rolls whereby the pull of the rollers is at angle to the main line of the stem.

1,388,488. ELECTROVAPOR-HEATED STEERING-WHEEL. ARTHUR L. SENN, Seattle, Wash. Filed May 24, 1920. Serial No. 383,966. 4 Claims. (Cl. 219—19.)



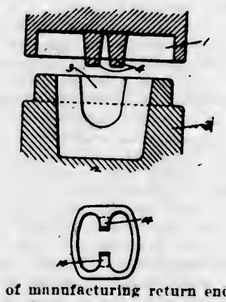
1. A steering wheel having a hollow rim forming a closed chamber, a heat-conveying liquid in said chamber, and an electrical heating element positioned to heat said liquid.

1,388,489. CARBON-SCRAPER. ALFRED BRUNO SEPPMANN, Lake Crystal, Minn. Filed May 5, 1921. Serial No. 467,161. 3 Claims. (Cl. 83—64.)



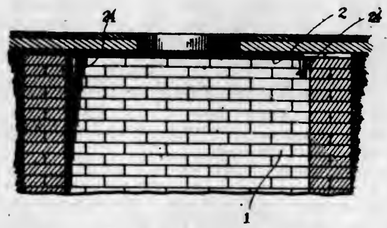
1. A carbon scraper for scraping carbon from piston ring grooves of pistons, said scraper being formed from a single piece of spring material bent upon itself to

form a U-shaped handle, the arms of said handle extending inwardly toward each other and forming portions adapted to be received by the piston ring grooves, said



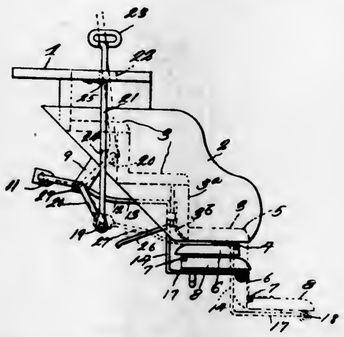
arms beyond the groove receiving portions extending outwardly and inwardly and terminating in scraping arms adapted to engage in the groove of the piston and scrape said groove upon a movement of the tool as a whole.

1,388,490. ROTARY EARTH-BORING DRILL. JOHN R. SUMAN, Houston, Tex. Filed Sept. 18, 1920. Serial No. 411,180. 8 Claims. (Cl. 255—61.)



1. A rotary earth boring drill comprising a head, radially projecting teeth on the outer face thereof, said teeth having cutting edges presented forwardly in the direction of rotation and means to discharge flushing water against the cutting edges of each of said teeth.

1,388,491. PIPE-COUPLING. ROBERT ABSALOM THOM, Manchester, England, assignor to The Superheater Corporation Limited, London, England. Filed Aug. 27, 1919. Serial No. 320,207. 3 Claims. (Cl. 29—157.6.)

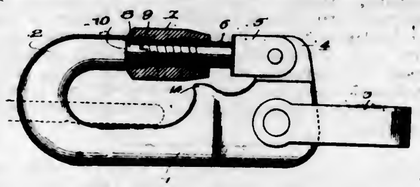


1. A method of manufacturing return ends for the elements or pipes of steam superheaters or the like, in which a solid piece or billet of metal is formed into a hollow forging having integral inwardly projecting solid webs or fins, the inner portions of which webs or fins are subsequently cut away to provide the passage way through the end, the forging being next operated upon to bring the remaining portions of said webs or fins together and produce circular orifices on either side of the web portions, the said web portions being then welded together where they meet, and suitable drilling or reaming operations being then performed to render the holes at the end of forging to which the pipes are connected truly circular, the metal being suitably heated as required for the forging operations.

1,388,492. MANHOLE-COVER. JOHN H. THOMSEN, Davenport, Iowa. Filed Apr. 19, 1920. Serial No. 374,944. 2 Claims. (Cl. 94—35.)

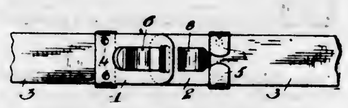
1. A man hole comprising a cover plate having inner and outer spaced annular ribs formed on the side, spaced pairs of radial arms having their intermediate portions extended through and turned into said outer ribs, said inner ribs being provided with openings slidably receiving the inner portions of said pairs of arms, pairs of latch bars carried by the other end of said pairs of arms, and coiled springs confined between the arms of said pair of arms for separating the outer portions of the arms in each pair and urging the latch bars outwardly.

1,388,493. EXTENSIBLE CAR-STEP. JASPER TOUTGES, Holland, Minn. Filed Mar. 22, 1921. Serial No. 454,478. 3 Claims. (Cl. 105—448.)



3. The combination with a foldable car step, said step comprising a hinged riser and tread and a right angled bracket having the end of one of its arms pivoted to the tread section adjacent its free edge and its vertical portion adapted to engage the rear face of the riser, of means for rigidly interengaging the vertical portion of the bracket with the riser when said car step is extended.

1,388,494. BUTT-HOOK. CHARLES VALA, Marshfield, Oreg. Filed Oct. 28, 1920. Serial No. 420,284. 3 Claims. (Cl. 24—241.)



1. A logging hook comprising a body having a choker engaging bill terminating in a reduced stem forming an

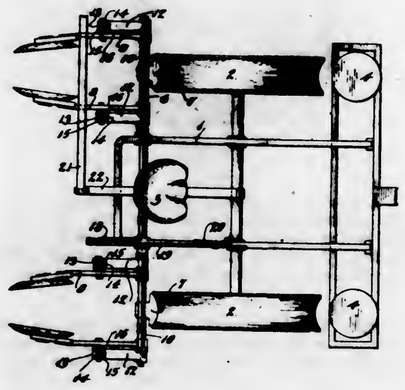
annular shoulder, a threaded locking stem having one end portion enlarged for forming a second shoulder and an attaching portion pivotally connected to said body, and a stem connecting sleeve of elongated formation threaded on said second named stem and confined between

said shoulders, said elongated sleeve receiving the major portions of said stems for protecting the stems and reinforcing the connection between the same, said sleeve having its ends counter-bored for forming enlarged entrance openings for said stems, said sleeve being adapted to connect the stems for closing the hook.

1,388,495. CLASP. ANNA L. VILANDRER, New York, N. Y. Filed Oct. 23, 1920. Serial No. 418,085. 8 Claims. (Cl. 24—265.)

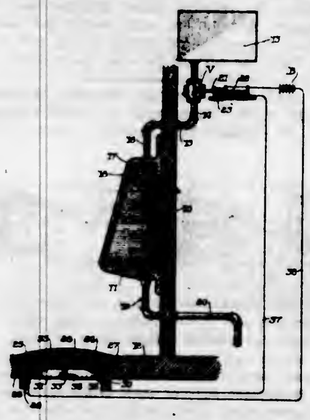
1. A clasp comprising complemental members having interengaging means to detachably connect them together, said means on one of said members being in position to engage a tube of a garment to prevent withdrawal therein, the other of said members having means to engage said tube to prevent withdrawal of said member into the tube.

1,388,496. ROTARY BORING-DRILL. FRANK L. O. WADSWORTH, Pittsburgh, Pa., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Jan. 29, 1919. Serial No. 273,715. 28 Claims. (Cl. 255—71.)



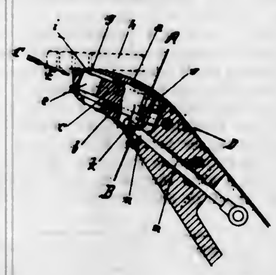
1. In a rotary well boring drill, the combination of a drill head, rotary cutters thereon, a hollow drill stem and a driving head interposed between the drill head and the drill stem and comprising two relatively reciprocable members, one of which is attached to the drill head, and the other of which is attached to the drill stem, said members acting when reciprocated to cause a positive rotation of said cutters.

1,388,497. ROTARY BORING-DRILL. FRANK L. O. WADSWORTH, Pittsburgh, Pa., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Original application filed Oct. 18, 1919, Serial No. 329,409. Divided and this application filed Apr. 13, 1920. Serial No. 373,493. 9 Claims. (Cl. 255—71.)



1. In a rotary disk drill, the combination of a head, and a rotatable disk member mounted thereon at a small angle to the axis of the head and provided with oppositely disposed cutting edges so positioned with reference to the drill axis as to exert a symmetrically balanced cutting action.

1,388,498. PLANTER ATTACHMENT. WILLIAM WELKE, Cleghorn, Wis. Filed Apr. 10, 1920. Serial No. 372,905. 2 Claims. (Cl. 97—91.)



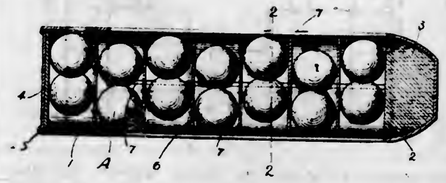
1. A coverer attachment for a planter or similar implement having furrow opening tools and a transversely extending shaft, said attachment comprising disk carrying arms pivotally mounted upon said shaft in pairs, each pair of arms being spaced apart upon opposite sides of the path of a furrow opening tool, disks mounted upon said arms in rear of said furrow opening tools, a controller shaft journaled upon said planter above said transversely extending shaft, arms arranged upon said controller shaft in spaced relation to correspond with the disk carrying arms, yieldable connecting means between each of said last mentioned arms and its corresponding disk carrying arm whereby said arms are adapted to yield vertically independently of each other, and a lever connected to said controller shaft for operating the same to simultaneously raise or lower all of said disks.

1,388,499. AUTOMATIC FLUSHING MECHANISM. JAMES CLAUDE ADELL, Cleveland, Ohio. Filed Jan. 8, 1917. Serial No. 141,155. 4 Claims. (Cl. 200—85.)

1. In a device of the kind described, a floor having an opening, a peripheral ledge in said opening below the floor level, a yielding closure in said opening, supported on said ledge, waterproof cement sealing the closure in the opening, the middle portion of the closure lying above the floor level, electric spring contacts beneath said closure adapted to be brought into contact to close a circuit by weight on the closure, and a spring normally holding such closure raised.

1,388,500. CUTTING DEVICE. ALBERT ANDRÄS, Cannstatt, Germany, assignor to the Firm of Fortunawerke, Spezial-Maschinen-Fabrik, G. M. B. H., Cannstatt-Stuttgart, Germany. Filed Sept. 24, 1919. Serial No. 326,102. 6 Claims. (Cl. 1—41.)

1. In a device of the character described, in combination, a work-supporting arm, a hollow cutting edge carrier carried by said arm and extending substantially longitudinally of it, a second cutting edge carrier concentrically arranged within the first-named carrier, and means for imparting to at least one of said carriers a movement about their common axis.



1,388,501. BINDER FOR BURNING COMPOSITIONS. EVELYN PAUL AURAND, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 5, 1921. Serial No. 467,129. 7 Claims. (Cl. 52—5.)

2. A non-explosive article of manufacture comprising an inflammable ingredient and a binder of gelatinized nitro-starch.

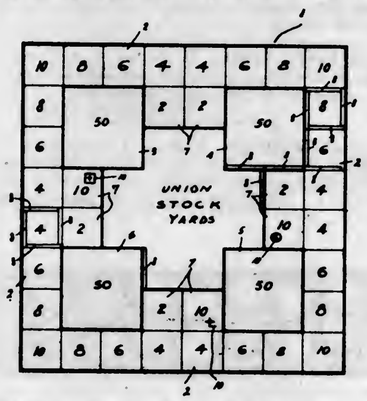
1,388,502. TORCH FUSE-LIGHTER. EVELYN PAUL AURAND, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 5, 1921. Serial No. 467,130. 5 Claims. (Cl. 52—23.)

1. As an article of manufacture and use, a torch for lighting fuses consisting of mealed black powder and analogous substances and a binding material which consists essentially of gelatinized nitro-starch.

1,388,503. CANISTER. EDWARD M. AYER, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Feb. 4, 1919. Serial No. 275,024. 1 Claim. (Cl. 102—33.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

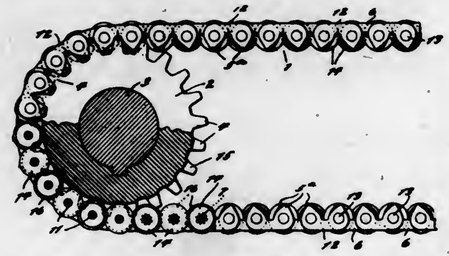
A canister for warfare, including a casing closed at its forward end and provided with longitudinal slots, a filler in the forward end of the casing, balls in the casing and arranged in layers, spacing disks between the layers of balls and a closure for the rear end of the casing.

1,388,504. TIME-RETARDED LAMP-EXTINGUISHING DEVICE. MALCOLM H. BAKER, Braintree, Mass.; Marie H. Baker, administratrix of said Malcolm H. Baker, deceased, assignor, by mesne assignments, to Tremont Products Company, a Corporation of Massachusetts. Filed Aug. 9, 1915, Serial No. 44,602. Renewed Nov. 4, 1920. Serial No. 421,792. 6 Claims. (Cl. 67—87.)



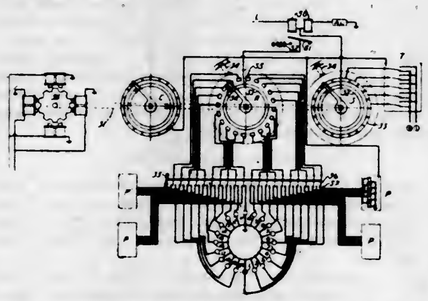
1. In combination with a gas burner and controlling valve therefor, means adapted upon designed manipulation to open the valve; actuating devices including a motor spring adapted to be energized, upon opening of the valve, to close the same; and mechanism arranged independently of the operation of said burner automatically to catch and to hold said devices inoperative for an indeterminate period after said valve is opened; said mechanism being separately actuatable by subsequent manipulation of said valve opening means thereby to fee said devices for operation while the burner is normally operating; together with retarding means automatically operative to slow down the valve-closing action of said devices, thereby to delay burner extinguishment after said subsequent manipulation of said means.

1,388,505. GAME. THOMAS HENRY RAMFORTH, North Vancouver, British Columbia, Canada, assignor of one-half to Ruby Mae Rawlings, Vancouver, Canada. Filed May 13, 1920. Serial No. 381,143. 3 Claims. (Cl. 46—64.)



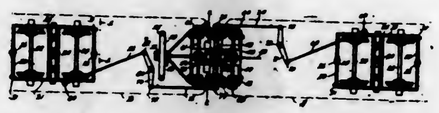
1. In a game of the character described, a board having a row of small outer squares along each side, larger squares at each corner of the space inclosed by the small squares, small inner squares between the large ones, the

remaining space forming a central inclosure bounded by the larger squares and the small inner squares, all of said squares having values, and bars adapted to be placed by



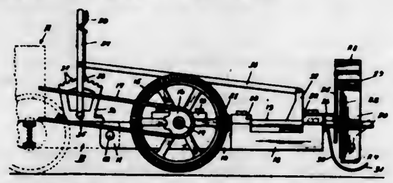
the players to inclose the squares whereby the player placing the last inclosing bar on a square scores the value of the square so inclosed.

1,388,506. DRIVE-CHAIN. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 8, 1919. Serial No. 322,462. 11 Claims. (Cl. 74—32.)



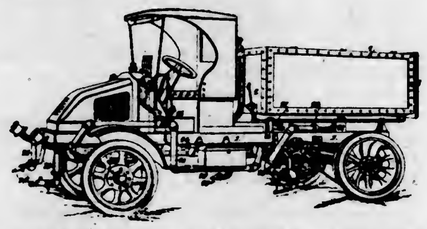
2. A sprocket drive chain provided with overlapping guide rollers.

1,388,507. SYNCHRONIZING SYSTEM. JOHN H. BELL, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 1, 1920. Serial No. 378,159. 4 Claims. (Cl. 178—53.)



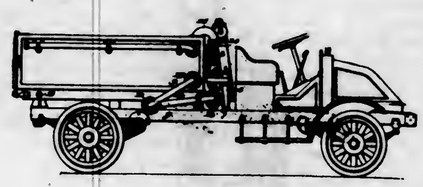
1. A synchronizing system comprising a correcting station and a corrected station, a current impulse distributer at said correcting station, a current impulse distributer at the corrected station, a recording mechanism at the corrected station adapted to be associated with the said current impulse distributer, means at the corrected station for indicating the relative phase displacement of said current impulse distributers, and means for connecting the indicating means to and disconnecting the recording mechanism from the current impulse distributer.

1,388,508. RAILWAY-TRUCK. SAMUEL B. BRILHART, New York, N. Y. Filed Mar. 27, 1920. Serial No. 369,196. 27 Claims. (Cl. 105—4.)



1. In railway truck construction, the combination with two car sections and means linking them together, of a truck for each car section remote from the point of connection, a single axle truck beneath the point of connection, a means connecting all of the trucks and serving to cause the transverse axis of each truck to operate in a position substantially in the radius of every track curve.

1,388,509. SNOW-REMOVER. HARLEY T. BROWN, Hubbardston, Mich. Filed June 18, 1920. Serial No. 389,901. 4 Claims. (Cl. 37—63.)



1. In combination with a tractor, a snow removing device for roads comprising a supporting structure pivotally mounted with respect to the tractor and carried thereby, a transverse shaft on said supporting structure having drive means adapted to be driven by the tractor mechanism, a pair of forwardly extending shafts journaled on said supporting structure and operatively connected with said first named shaft whereby to be driven thereby, fans secured upon the forward extremities of said second named shafts and rotating in a vertical plane, a shield carried by the forward end of the supporting structure and having its upper portion formed as a guard for the fans and also as a guide for snow thrown outwardly by the fans, and a shoe carried by the forward end of the supporting structure and extending between and below the fans.

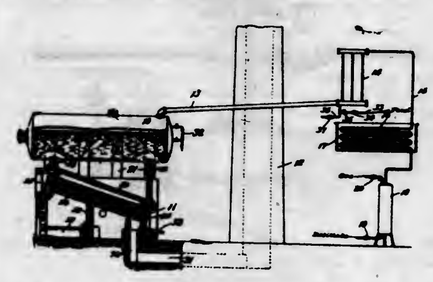
1,388,510. STREET AND SEWER CLEANING APPARATUS. ERNEST O. CARTWRIGHT, Springfield, Ohio, assignor to Charles F. Gardner, Springfield, Ohio. Filed April 8, 1919. Serial No. 288,613. 7 Claims. (Cl. 299—36.)

4. In apparatus of the class described, the combination of a tank, a pump and an ejector having an intake duct and a discharge outlet duct, the latter being connected to deliver into the tank, said ejector having a pressure supply port connected with the pump, and a valve for controlling passage through said outlet duct, and a set of sprayer pipes and valves mounted on the vehicle and connected with said ejector.

1,388,511. PORTABLE PUMPING APPARATUS. ERNEST O. CARTWRIGHT, Springfield, Ohio, assignor to Charles F. Gardner, Springfield, Ohio. Filed May 29, 1919. Serial No. 300,544. 6 Claims. (Cl. 37—9.)

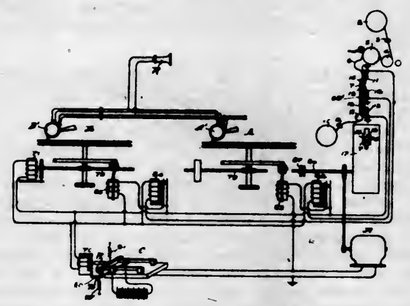
1. In apparatus of the class described, a supporting vehicle, a tank, a pump and an ejector fixedly mounted on the vehicle for elevating the material from the sump and depositing it into the tank, a duct between the outlet of the ejector and the tank for delivering the material into the tank, and an articulated non-collapsible pipe connecting the inlet of the pump with the tank for withdrawing material from the tank, the nossleway of the ejector being in communication with the outlet of the pump substantially as shown and described.

1,388,512. SECONDARY ELECTRIC CLOCK. THADDEUS STEPHENS CASNER, Plainfield, N. J. Filed Apr. 19, 1921. Serial No. 462,659. 10 Claims. (Cl. 58—26.)



1. In a secondary electric clock, in combination, a wheel having peripheral projections constituting an armature, an electro-magnet associated with the wheel and adapted to attract said projections successively as successive impulses pass through the magnet, and a detent for holding the wheel between impulses.

1,388,513. PROCESS OF TREATING WOOD. ASA C. CHANDLER, Houston, Tex. Filed Aug. 9, 1920. Serial No. 402,316. 2 Claims. (Cl. 91—68.)

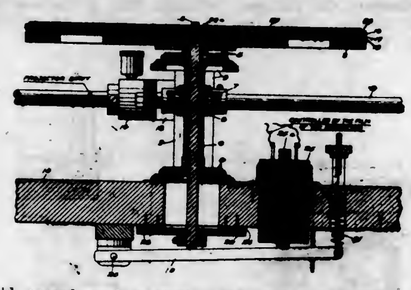


1. The process of preserving wood consisting of injecting into the wood a solution of copper carbonate in an alkaline carbonate solution and then allowing the copper carbonate to precipitate in the wood.

1,388,514. DISTILLATION OF PETROLEUM HYDROCARBONS. EDGAR M. CLARK, Alton, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Dec. 14, 1915. Serial No. 66,702. 4 Claims. (Cl. 196—25.)

1. The process of treating petroleum hydrocarbons of relatively high boiling points to produce therefrom hydrocarbons of lower boiling point which consists in distilling a liquid body of such high-boiling-point stock under a pressure sufficient to effect its decomposition, carrying off the vapors of distillation while under the said pressure through a suitable unheated conduit leading away from the still, introducing fresh stock into the said conduit and causing it to traverse the latter and enter the still therethrough, and condensing and collecting the said vapors.

1,388,515. TALKING MOVING-PICTURE APPARATUS. WILLIAM M. CLARK, Chicago, Ill. Filed July 12, 1915. Serial No. 39,326. Renewed May 23, 1921. Serial No. 471,968. 8 Claims. (Cl. 88—16.2.)



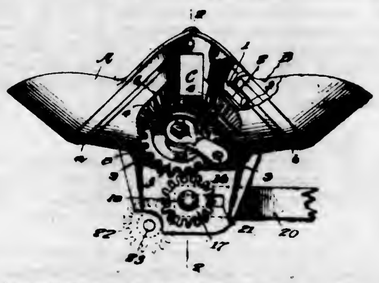
1. The combination of a switch operating moving picture film, a plate parallel to said film, a plurality of switches mounted on said plate, each switch having an element in the path of the film and controlled thereby, a circuit individual to each switch, a phonograph individual to each circuit and controlled thereover, a microphone controlled by each phonograph, a circuit common to said microphones, and a receiver under the control of said microphones in common, a driving element for operating the film and for operating the phonographs, and means controlled by one of said switches for stopping the driving element.

1,388,516. PHONOGRAPHIC APPARATUS AND COMBINED PHONOGRAPHIC AND MOVING-PICTURE APPARATUS. WILLIAM M. CLARK, Chicago, Ill. Filed Oct. 24, 1914. Serial No. 868,495. 16 Claims. (Cl. 88—16.2.)

1. In a phonograph, a record, a record driving element, means for driving the same, mechanism for bringing said record and said element into operative engagement and

for disengaging said element and record, a brake, means independent of gravity for operating said brake to stop

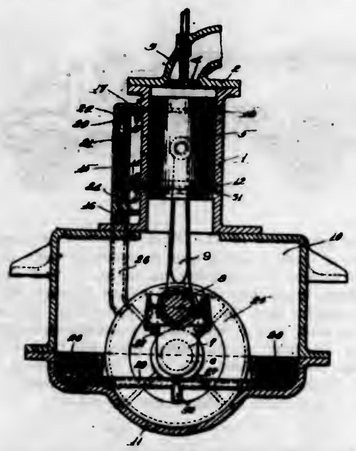
said record, and a single magnet for controlling the operation of said mechanism.



1,388,517. MANUFACTURE OF VISCOUS WATER-WHITE OILS AND OTHER DECOLORIZED PRODUCTS OF PETROLEUM. ERNEST B. COBB, Jersey City, N. J., assignor to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed July 23, 1914. Serial No. 852,671. 20 Claims. (Cl. 196—26.)

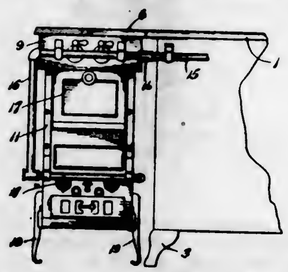
1. The process of making a decolorized hydrocarbon oil of viscous character, consisting in (1) subjecting stock which has a viscosity above forty seconds at 100° F. to the action of sulfuric acid so as to form an acid sludge which is removed, (2) distilling the acid treated oil with use of special agency to prevent the decomposition of component hydrocarbons and so obtaining distillate which has a viscosity above forty seconds at 100° F., (3) subjecting said distillate to the action of sulfuric acid so as to form an acid sludge which is removed, and (4) filtering the oil which has thus been twice subjected to sulfuric acid and to an intervening distillation through solid decolorizing material, substantially as described.

1,388,518. PROCESS OF INTERIOR DECORATION. ALBION P. COLE, Brockton, Mass. Filed Jan. 6, 1921. Serial No. 435,538. 1 Claim. (Cl. 91—68.)



The process of interior decoration consisting of the application in three portions of first, an adhesive portion consisting of flour, animal glue and molasses, and moisture to allow its free spreading; the application of the second portion consisting of wood pulps of various natural colors, mixed with flour for adhering, petrolatum for permanency of colors, and glycerin to prevent excessive drying, and moisture sufficient to permit application with a trowel or like implement; and the finishing of the second portion with the third portion consisting of petrolatum, glycerin, silicate of soda and camphor, to which are added as required, magnesia and silex, and wax and potato starch for polishes.

1,388,519. DUPLEX PLANTER. EUGENE M. COLE, Charlotte, N. C. Filed Jan. 14, 1920. Serial No. 351,280. 14 Claims. (Cl. 221—122.)

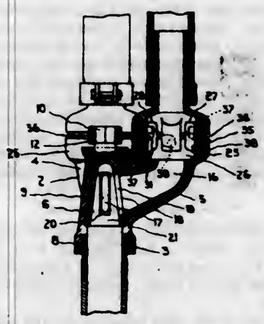


1. In a planter, the combination with a pair of hoppers, of a seed plate in each hopper, a gear rigid with each seed plate, a driving gear, all of said gears lying permanently in different planes, and means for shifting said driving gear into a position where it meshes with both seed plate gears simultaneously, or into positions where it meshes with either one of said gears, only.

1,388,520. LIQUID PACKING MEANS FOR ENGINE-PISTONS. EUGENE A. FOAD, Newton, Mass., assignor to R. E. D. Engine Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 6, 1920. Serial No. 415,176. 10 Claims. (Cl. 74—108.)

1. A piston packing means comprising in combination with a piston and an inclosing wall within which said piston is reciprocatable and is acted upon by fluid pressure, said wall having a groove surrounding the piston, means for maintaining a constant supply of packing liquid in said groove to compensate for leakage of the liquid therefrom, and means for applying the said fluid pressure externally upon the packing liquid.

1,388,521. INCINERATOR ATTACHMENT FOR GAS-STOVES. HARRY J. HOOVER, Norwood, Ohio. Filed Nov. 24, 1917. Serial No. 203,652. 1 Claim. (Cl. 126—224.)

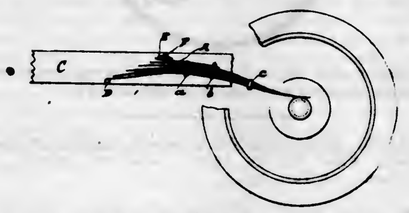


A device for use in connection with gas ranges having extension shelf slots in the top thereof, comprising a casing shaped to conform to the shape of the range, a fire insulated incinerator in said casing having a flue at the rear thereof, a gas burner box in the upper part of the casing having a top, gas supply pipes on said casing adapted to be secured to the gas pipes of the range, and extendible legs for said casing adapted to stand on the floor and to hold said burner box top on a level of the range top so as to form a continuation thereof, and lugs on the burner box top to engage the extension shelf slots in the range top, whereby an incinerator and cooking attachment for gas ranges is provided which requires no modification of the range and utilizes no kitchen floor space not given to cooking.

1,388,522. CUFF-BUTTON. CHARLES D. LYONS, Mansfield, Mass. Filed Feb. 14, 1919. Serial No. 277,054. 1 Claim. (Cl. 24—102.)

A separable cuff link button comprising independent button members each having an outer head and a flanged inner head, the latter adapted to pass through the button holes of the cuff and retain said member therein, and means for detachably securing the same together comprising a snap connection with means responsive to the pressure of the hand for releasing the same, said button members when connected being susceptible of a rocking movement relatively one to the other.

1,388,523. VALVE-COUPLING. ROBERT J. NOAKES, Montreal, Quebec, Canada, assignor, by direct and mesne assignments, to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed June 28, 1919. Serial No. 307,442. 4 Claims. (Cl. 251—109.)



1. A valve coupling for connecting an intake pipe line and a pair of branch lines; said coupling consisting of a unitary integral casting including a pair of offset outlets for connection to the branch lines, a valve within the casting and located on the axial line of the intake pipe line and controlling the outlets, and a blow-off passage in said valve adapted to successively relieve the branch lines of pressure when the valve is moved from open to closed positions.

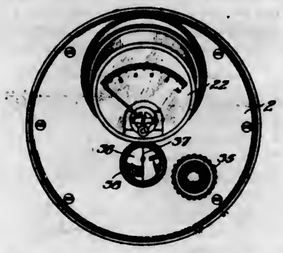
1,388,524. CONTROL FOR ARTIFICIAL ARMS AND LEGS. JOSEPH R. B. NORFOLK, Jessups, Md. Filed Aug. 18, 1920. Serial No. 404,479. 3 Claims. (Cl. 3—11.)

3. In a control for artificial limbs, the combination with two control strap sections, of an eye member secured to one section, a yoke member secured to the other section, and a rocking member mounted on the yoke member, said rocking member including a loop part passing through the eye of the eye member, said loop part having a relatively long end portion and a relatively short end portion with respect to the axis of rocking movement.

1,388,525. LAMINAR SUSPENSION OR SHOCK-ABSORBING SPRING FOR USE ON VEHICLES AND AIRCRAFT. ERNEST OWEN, FRANCIS CLARE PEARSON, and ARTHUR W. BERNDT, London, England. Filed July 16, 1920. Serial No. 396,727. 3 Claims. (Cl. 267—41.)

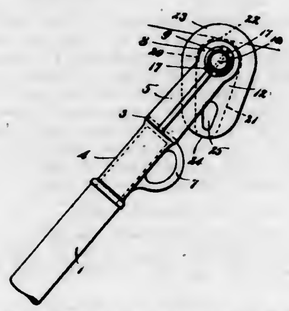
1. A laminar spring comprising a major leaf extending from one end to the other of the spring and adapted to bear yieldingly at its ends, a plurality of superposed reinforcing leaves arranged with one end of each leaf bearing directly on the next adjacent leaf and with the other ends of the leaves normally separated, and a bearing plate rigidly secured upon the superposed reinforcing leaves and having a free end separated from the leaves and projecting over the separated ends thereof, said free end of the bearing plate being adapted to receive the load.

1,388,526. HOT-AIR SYRINGE. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Aug. 13, 1917. Serial No. 185,863. 9 Claims. (Cl. 219—39.)



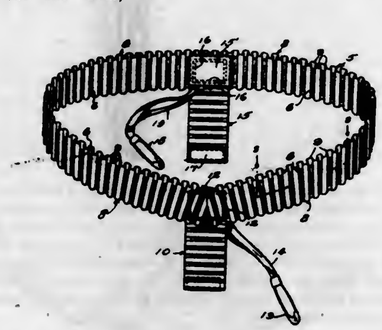
1. In an air syringe, the combination with a body having a recessed outer end and a transversely extending seat, of a sleeve located within the recess and having an inner end fitting the seat, a securing device fastening the end of the sleeve on the seat, said body and sleeve being provided with air passages each having laterally communicating portions formed therein at the point of union of the sleeve and seat.

1,388,527. IONIZATION-CURRENT REGULATOR. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Nov. 5, 1918. Serial No. 261,311. 8 Claims. (Cl. 219—56.)



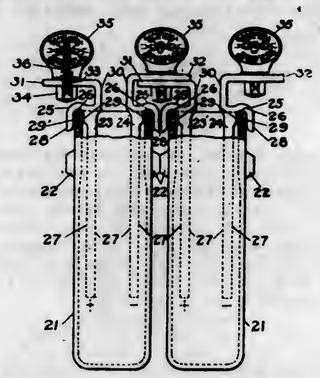
1. In a rheostat, a support, a member carried thereby in spaced relation, a resistance element carried by and

insulated from said member, a conductor carried by and insulated from said member, and an operating device



movably carried by said member and having connected contacts engaging said conductor and element.

1,388,528. TROLLEY-SHOE. LEWIS H. SHIPMAN, Boston, Mass. Filed July 18, 1918. Serial No. 245,491. 5 Claims. (Cl. 191—59.1.)



1. A sliding trolley shoe of the kind described, comprising two wire-engaging surfaces extending in divergent planes connected at the point of greatest divergence by a wire-engaging arc shaped surface.

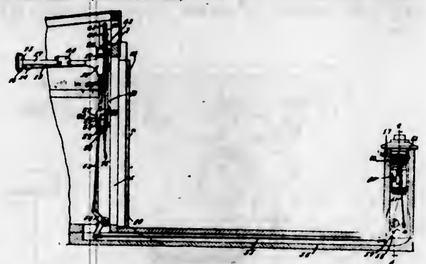
1,388,529. SUPPORTER OF CATAMENIAL SACKS OR NAPKINS. GOODWIN B. SMITH, Philadelphia, Pa. Filed Mar. 15, 1921. Serial No. 452,419. 7 Claims. (Cl. 128—291.)

1. A supporter of a catamenial sack or napkin, comprising a waist band, said band embodying an elastic webbing and a corrugated strip woven therewith, said strip forming arched cells extending laterally beyond the webbing for a substantial distance, said cells holding the webbing spaced from the body, and supporting elements carried by the band.

1,388,530. ELECTRODE FOR STORAGE BATTERIES. VINCENT C. STANLEY, Brookline, Mass., assignor to The Gamewell Fire Alarm Telegraph Company, New York, N. Y., a Corporation of New York. Filed Feb. 4, 1920. Serial No. 356,305. 7 Claims. (Cl. 204—29.)

1. In a storage battery electrode: a plate of desired polarity; a connecting strap; and a supporting lug for said plate positioned in suitably spaced relation between said plate and said strap, said lug being so formed and positioned for electrodes of respective polarities as to assume abutting relation to a corresponding lug of another such electrode of opposite polarity mounted in intended relation thereto in an adjoining cell of a battery, so as to suitably space the plates of such electrodes and to position said strap parallel to and for suitably engaging a corresponding strap of such other electrode, whereby said strap will not be so positioned for a corresponding strap of another similarly mounted electrode of like polarity.

1,388,531. MOTOR-FUEL. ELBRIDGE W. STEVENS, Baltimore, Md., assignor to Chemical Fuel Company of America, Inc., Louisville, Ky., a Corporation of Delaware. Filed Mar. 9, 1920. Serial No. 364,387. 2 Claims. (Cl. 44—9.)

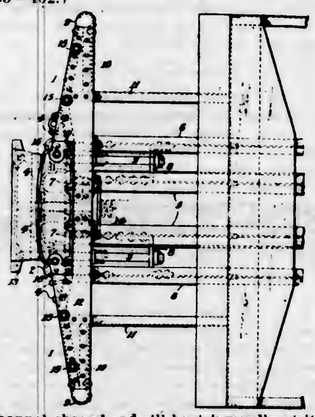


1. As a new motor fuel adapted for the same purposes as gasolene, a mixture containing a petroleum oil, in admixture with ethyl alcohol, methyl-ethyl ether and an oily body agent serving to blend the alcohol and oil and retain the ether.

1,388,532. FAUCET-LOCK. THEODORE G. STRATER, Brookline, Mass. Filed Aug. 4, 1919. Serial No. 315,056. 3 Claims. (Cl. 251—165.)

1. A valve comprising a valve casing, a valve plug rotatably mounted therein having a longitudinal chambered and transversely slotted stem and a winged handle, a locking member pivotally mounted in said stem having a handle extending through said slot and turned upwardly adjacent said winged handle, whereby it may be conveniently grasped with said winged handle, said casing having a recess adapted to receive said locking member when the valve is in closed position and a spring in said chambered stem normally tending to force said locking member into engagement with said recess.

1,388,533. DOOR-OPERATOR. GEORGE T. VAN HORN, Nutley, N. J. Filed Nov. 14, 1919. Serial No. 337,910. 2 Claims. (Cl. 268—9.)

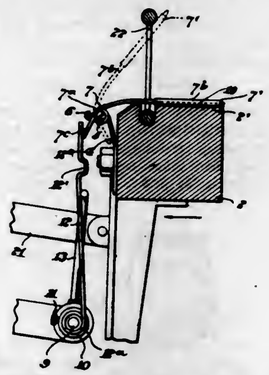


1. In combination with opposed hinged closures, an operating mechanism including rods having connection with the closures, an operating rod having connection with the rods, one of said rods including a sectional tubular portion, the sections of the tubular portion being normally held out of contact, means for forcing the sections together, for causing one closure to closed prior to the closing of the other closure, and means for releasing the closures.

1,388,534. MOLD FOR INGOTS AND OTHER HEAVY STEEL CASTINGS. ROWLAND VILLAGE, Ecclesall, Sheffield, England. Filed Jan. 26, 1921. Serial No. 440,094. 3 Claims. (Cl. 22—147.)

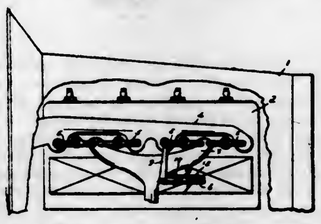
1. The combination with a mold for ingots and other heavy castings of a feeder head in the form of a detachable annular fire-place whose inner walls to extend the mold feed opening are integral with the fire-place, and are formed with undercut projections securing a renewable refractory lining inside the central opening of the feeder head, substantially as specified.

1,388,535. PLATFORM END SILL. WILLIAM VOSS, Wilmington, Del., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 25, 1920. Serial No. 391,596. 5 Claims. (Cl. 105—402.)



1. A channel-shaped end sill bent inwardly at its center, a buffer casting fitted to said bent portion and end castings carried by said sill.

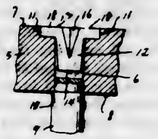
1,388,536. PENCIL. CHARLES E. WEHN, Alameda, Calif., assignor to Listo Pencil Company, Alameda, Calif., a Corporation of California. Filed Feb. 9, 1920. Serial No. 357,390. 9 Claims. (Cl. 120—18.)



9. A pencil of the character described comprising a pair of tubular shell sections of approximate equal length, a comparatively short intermediate tubular section connecting the same, a nut within the intermediate section supported thereby and turnable therein, a screw rod extending through the nut and entering the tubular shell sections, a flattened portion on the rod extending from end to end thereof, an end plate secured in the intermediate tubular section, an opening formed in said plate forming a guide for the screw rod and securing the screw rod against turning movement, a plunger on the forward end of the screw rod and a lead receiving member carried by one of the tubular shell sections into which the plunger rod extends.

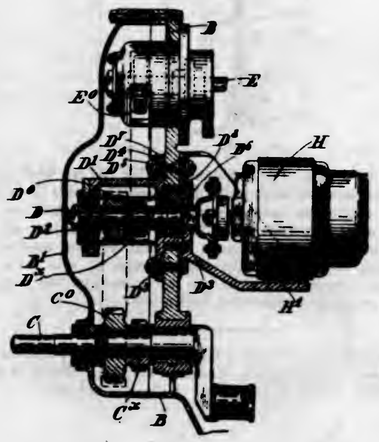
1,388,537. LOOM ATTACHMENT. JULIUS ALBERT WEITHAASE, Philadelphia, Pa. Filed Nov. 18, 1919. Serial No. 338,834. 7 Claims. (Cl. 139—74.)

1. In a loom, the combination with the lay and shuttle mechanisms, of bearings at the respective ends of the lay, pins carried by said bearings, levers fulcrumed on said pins so as to permit arms thereof to press against said lay the filling threads thrown by said shuttle mechanism, springs for effecting the engagements of said arms and means relative to which said lay is movable for engaging said levers and retracting said arms.



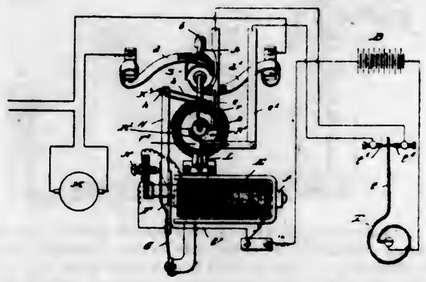
1,388,538. MANIFOLD-HEATER FOR AUTOMOBILES. HARRY J. WHEELER, Kansas City, Mo. Filed Dec. 13, 1919. Serial No. 344,726. 1 Claim. (Cl. 263—5.)

A manifold heater for automobiles, consisting of an open trough-shaped liquid fuel receptacle having an end basin and a vertically extending arm adapted for attaching



on the manifold, and a portable burner member lodged in the trough of said receptacle and extending into the basin therein, said burner member comprising a rolled pad of non-combustible material which is rolled in a perforated sheet of metal to form a wick.

1,388,539. HANDLE-SECURING WEDGE FOR TOOLS. ARTHUR H. WHITE, Pittsburgh, Pa. Filed June 24, 1920. Serial No. 391,335. 2 Claims. (Cl. 306—33.)

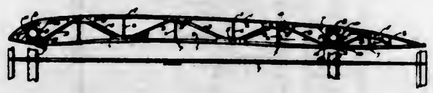


1. A device of the character described comprising a tool head having an eye adapted to receive a handle, the upper portion of the eye being larger than the lower portion, the upper portion of said head having registering dovetail slots communicating with the eye and a malleable tapering wedge, lugs projecting from the ends of the wedge, the upper portion of each lug projection above the upper surface of the wedge, said wedge being forced into the handle within the eye, said lugs being expanded into the dovetail slots, the upper portion of each lug lying flush with the upper surface of the wedge and tool head.

1,388,540. IGNITION AND LIGHTING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. ERNEST ALFRED WISE, Caversham, Reading, England, assignor to Herbert Merton, Caversham, Reading, England. Filed Apr. 21, 1920. Serial No. 375,585. 7 Claims. (Cl. 290—1.)

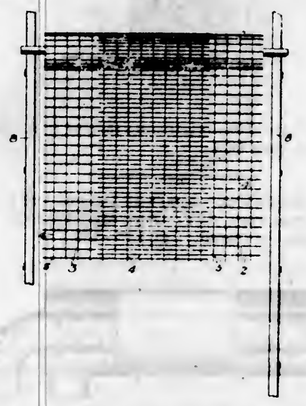
1. The combination with an internal-combustion engine-casing, a driving-shaft extending through one wall thereof, a dynamo-shaft, a magneto-shaft, all of which shafts are disposed parallel to each other but not all in the same plane, and whereof one is situated intermediate between the driving-shaft and the other shaft, and chain-gearing connecting all said shafts together on the same side of said wall, of a bearing-bracket adjustably mounted on said casing so that it can be bodily adjusted parallel to itself in any direction, which brackets has two bearings for the intermediate shaft situated one on either side of said chain-gearing, substantially as set forth.

1,388,541. CIRCUIT-CONTROLLING APPARATUS. HOMER C. WOODBURY, Providence, R. I., assignor to John Scheminger, Jr., Providence, R. I. Filed Feb. 13, 1919. Serial No. 276,849. 4 Claims. (Cl. 172—288.)



1. In circuit controlling apparatus for regulating the supply of electric energy to a motor-operated hydrocarbon burner, the combination of a rotary switch in the circuit of said motor, an electro-magnetic relay for operating said switch to effect the making or breaking of the motor circuit, a thermostat for controlling the relay circuit, and a second rotary switch also operated by the relay to break the relay circuit, after the operation of making or breaking the motor circuit shall have been completed, substantially as described.

1,388,542. WASHING-MACHINE. JOHN J. ZOFSAK, Greensburg, Pa. Original application filed Nov. 18, 1916, Serial No. 132,182. Divided and this application filed Nov. 19, 1917. Serial No. 202,875. 7 Claims. (Cl. 141—9.)



3. In a washing machine, an inclosing receptacle, a removable frame comprising a perforated cup holding member, and a hinged brush supporting member surmounted on the same, a number of vertical rotary brushes mounted in the said brush supporting member, adapted to revolve within the cups; and means for operating the said vertical brushes.

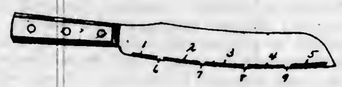
1,388,543. RIB FOR AIRPLANE-WINGS AND THE LIKE. WALTER H. BARLING, London, England. Filed July 3, 1920. Serial No. 393,900. 11 Claims. (Cl. 244—31.)

1. In a rib of the character described, upper and lower members having inwardly extending longitudinal flanges, diagonal bars extending between said upper and lower members, one of said bars having a relatively large intermediate portion and having its ends reduced in thickness adjacent to said flanges and arranged in line with said flanges, and means for attaching the ends of said bars to the respective flanges.

1,388,544. CONCRETE-ROADWAY-REINFORCING FABRIC. EDWARD L. BENEDICT, Pittsburgh, Pa., assignor of one-half to Herbert E. Marks, Glen Osborne, Pa. Filed Jan. 10, 1920. Serial No. 350,514. 5 Claims. (Cl. 94—8.)

1. A concrete roadway reinforcing fabric, comprising comparatively heavy transverse reinforcing elements adapted to be laid transversely of the roadway and comparatively light longitudinal flexible tie wires, substantially as described.

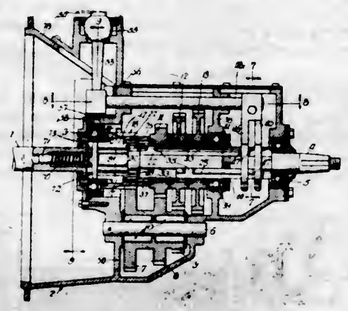
1,388,545. SELF-INTRENCHING SUBSURFACE-LAND-TORPEDO. WILLIAM J. BOHAN, St. Paul, Minn. Filed Dec. 3, 1917. Serial No. 205,087. 17 Claims. (Cl. 262—1.)



14. A self-contained, self-intrenching subsurface machine having an excavating device in front, a dirt packing device at the rear, means for transferring the earth from the front to the rear of the machine, a motor carried by said machine, and connections for driving the moving parts of said machine from said motor.

1,388,546. NAIL-POLISH. JOSEPH BRUECK, New York, N. Y. Filed Sept. 3, 1919. Serial No. 321,446. 2 Claims. (Cl. 167—9.)

1. A nail polish containing acetone and amyl acetate, and gun cotton dissolved therein.



2. A nail polish comprising the following ingredients in the proportions stated: acetone four gallons, amyl acetate one gallon, gun cotton thirty-two ounces, and alkanet root approximately four ounces.

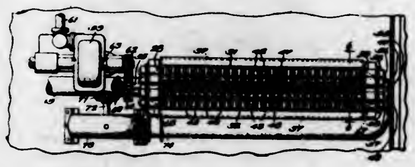
1,388,547. CUTTING-TOOL. JOSEPH E. BURNS, Syracuse, N. Y. Filed Sept. 25, 1919. Serial No. 326,364. 2 Claims. (Cl. 30—9.)

1. An edged tool provided with a plurality of series of obliquely disposed grooves forming a plurality of series of relatively fine accurately shaped ground teeth, the grooves of each series being inclined with respect to the edge of said tool in a direction offset to the direction of inclination of the adjacent series of ground grooves.

1,388,548. VARIABLE-SPEED-TRANSMISSION MECHANISM. LEON J. CAMPBELL, Buchanan, Mich. Filed Sept. 10, 1919. Serial No. 322,837. 16 Claims. (Cl. 74—59.)

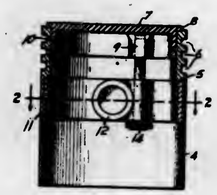
1. A variable speed transmission mechanism having in combination, a driving shaft, a gear on and connected with said shaft, a driven shaft having grooves extending lengthwise thereof, speed gears loose on said driven shaft, a lay shaft, gears on said lay shaft and constantly in mesh with the gears on the driving and driven shafts, respectively, keys rockably mounted in said grooves and arranged so that there is a separate key for each of certain of said speed gears for locking the same to said driven shaft, and means, including a shift lever, for rocking the keys independently of each other into and out of locking engagement with their respective speed gears.

1,388,549. GLOVE CONSTRUCTION. ROBERT N. CARSON, San Francisco, Calif. Filed Feb. 4, 1920. Serial No. 356,137. 9 Claims. (Cl. 2—9.)



1. The combination in a glove, of a palm member having slits cut therein convergent from the ends to an apex located adjacent to the inside line of the glove, a thumb member having semi-circular arched tops and curved lower ends, said arches and curves terminating respectively at points on opposite sides of a line central to the member, and said member being folded and stitched along the meeting edges and with the wider curve of the lower end within the slit of the palm member.

1,388,550. DIRECTION-INDICATOR FOR AUTOMOBILES. OWEN C. COOK, King county, Wash. Filed Feb. 19, 1920. Serial No. 359,999. 8 Claims. (Cl. 116—50.)



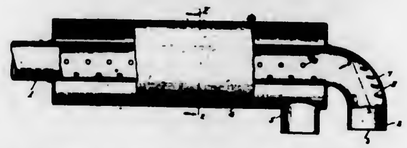
1. A direction indicator for automobiles comprising a laterally projectable support and a signal arm secured thereon to move relative thereto into a plurality of predetermined signaling positions, and stops for positioning said signal arm in each signaling position.

1,388,551. FUEL-PULVERIZING APPARATUS. JOSEPH H. COOPER, Chicago, Ill. Original application filed July 20, 1918, Serial No. 245,803. Divided and this application filed Apr. 7, 1919. Serial No. 288,007. 4 Claims. (Cl. 83—11.)

1. In a fuel pulverizer, the combination with spaced pulverizing disks each comprising a hub and a plurality of radially extending frusto-pyramidal projections, of a shaft upon which said disks are fixed, and a rigid wedge shaped arm positioned between said disks and substantially filling the space defined by the disks and the shaft.

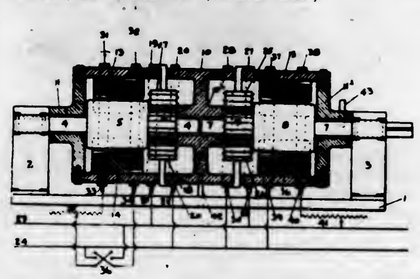
1,388,552. HIGH-SPEED PISTON. JOHN W. CORSER, Los Angeles, Calif. Filed Nov. 5, 1919. Serial No. 335,805. 1 Claim. (Cl. 74—108.)

A piston comprising a cylindrical shell of hard metal having an internal diameter reduced at the top to form an internal shoulder for a wrist pin ring, a head of light weight metal detachably mounted on said shell and having a portion telescoping within said shell so that it may be turned, a wrist pin ring of light weight metal having diametrically disposed openings extending therethrough forming seats for a wrist pin mounted within said shell so as to turn and abutting said shoulder, an adjustable means detachably securing said head to said ring.



1,388,553. KNOTTER. ALBERT EARL CRANSTON, Spokane, Wash. Filed Oct. 29, 1920. Serial No. 420,519. 6 Claims. (Cl. 140—101.)

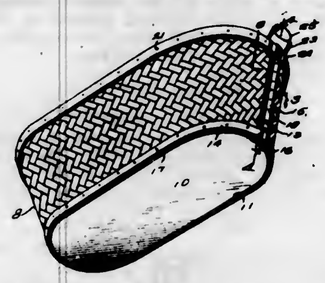
1. A knotter comprising, a stationary member and a movable member, means carried by the movable member and coöperating with the confronting face of the stationary member for receiving the two ends of a wire, bending and gripping the same between the members so that they will move with the movable member to effect a twisting of



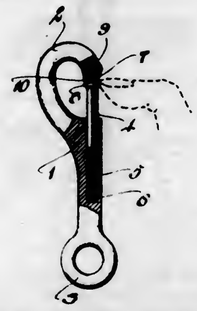
the wire and an ultimate releasing thereof in a manner to maintain the ends bent.

1,388,554. MUFFLER. HARRY F. DUBBEN and FRANK B. EASTON, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,480. 2 Claims. (Cl. 137—160.)

1. A muffler for exhaust gases comprising an exhaust pipe having an outlet and a casing surrounding said pipe, and pipe passing through the casing but communicating with the interior of same, said casing having an outlet for the exhaust gases adjacent the outlet of the pipe, whereby the gases pass from the exhaust pipe through both said outlets without substantial change of direction, and back pressure due to said gases, is eliminated.



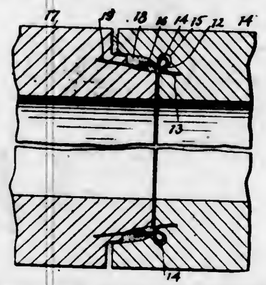
1,388,555. DYNAMO-ELECTRIC MACHINE. HERBERT S. EADES, Philadelphia, Pa. Filed June 29, 1920. Serial No. 392,854. 8 Claims. (Cl. 172—239.)



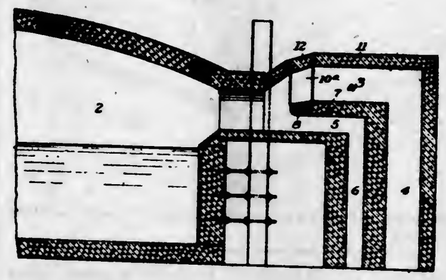
1. A multiple dynamo electric machine comprising a plurality of armature members, a field frame having a field for each of said armatures, said frame being adapted to rotate relative to both of said armatures, means for locking said frame against rotation, and means for locking said frame to rotate integrally with one of the armatures.

1,388,556. BASKET. HENRY R. GARRITSON, Logansport, Ind. Filed Apr. 9, 1920. Serial No. 372,527. 3 Claims. (Cl. 217—122.)

1. The herein-described method of producing a basket, which consists in weaving a narrow elongated strip of relatively short diagonal splints, the intersecting splints being disposed at substantially right angles to each other and at substantially an angle of 45° to the longitudinal axis of the strip, stamping a plurality of curved body portions from the strip in end to end relation, assembling one of these body portions above a bottom by extending the body portion around the bottom with its ends overlapping, securing the assembled body portion to the bottom, securing the overlapping ends together, and reinforcing the upper edge of the assembled body portion.



1,388,557. SNAP-HOOK. KARL F. GERHARD, Hatton, Wash. Filed Aug. 23, 1920. Serial No. 405,457. 1 Claim. (Cl. 24—239.)



The combination in a snap hook with its hollow shank, spring projected pin, and hook-end having a socket to receive the pin point, of an annular head on the pin larger than the socket and of the same peripheral outline as the hook-end and complementary thereto to form a continuous surface with the inner portion of the hook-end, and said hook end having a beveled outer face to expose a portion of the pin head for thumb pressure, for the purpose described.

1,388,558. EXPANSIBLE-JOINT CONSTRUCTION. CHARLES GILMAN, Plainfield, and WALTER C. PARMLEY, Montclair, N. J. Filed Jan. 27, 1919. Serial No. 273,276 11 Claims. (Cl. 72—53.)

1. The combination of two adjacent bodies of concrete, one of said bodies having an inwardly extending recess, of an expansion joint between said bodies, said joint comprising a continuous strip of impervious material having an open rounded fold between the ends thereof, the ends being anchored with respect to the two bodies to form a bridge between the bodies, the fold in the strip extending within the aforesaid recess.

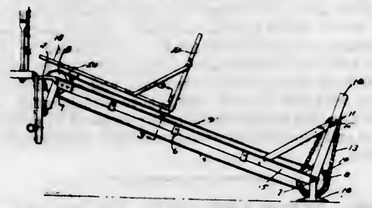
1,388,559. PORT CONSTRUCTION FOR FURNACES. ARLIE H. GOODMAN, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1919. Serial No. 336,939. 2 Claims. (Cl. 122—6.5.)

1. The combination with a furnace having an air port, a gas port, and a refractory wall between said ports, of a hollow water cooled member extending transversely across the furnace and forming an inward continuation or extension of said wall, said member being seated at its ends in the side walls of the furnace structure, and said side walls, together with the furnace roof, above said member, each having a section which can be bodily removed to permit of removal and replacement of said member, substantially as described.

1,388,560. FURNACE-CLEANER. JAN DE GRAFF, Detroit, Mich. Filed Oct. 18, 1919. Serial No. 331,527. 3 Claims. (Cl. 287—101.)

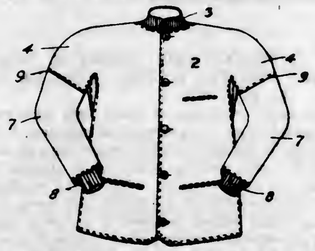
3. A flexible device comprising a plurality of tubular members, pins pivotally connecting said members, and caps at the ends of said members and having prongs engaging the edges of said members, said caps having pressed out portions engaging said pins.

1,388,561. DISPLAY-CARD. ROBERT E. GROTE, St. Louis, Mo. Filed Feb. 13, 1920. Serial No. 358,438. 1 Claim. (Cl. 211—34.)



A display card for strings of tinsel, said card comprising an elongated sheet of cardboard slitted near its upper end to provide a flexible upright hanger tongue whereon the strings of tinsel may be folded, said upright hanger tongue being deflected from the body of the cardboard to receive the folded portion of the tinsel, and lower portions of said card being slitted to provide a lower retaining tongue and an intermediate retaining tongue between said lower tongue and the hanger tongue, said retaining tongues being arranged at an angle to said hanger tongue and

extended in opposite directions from opposite sides of the tinsel receiving space, so as to overlie lower portions of

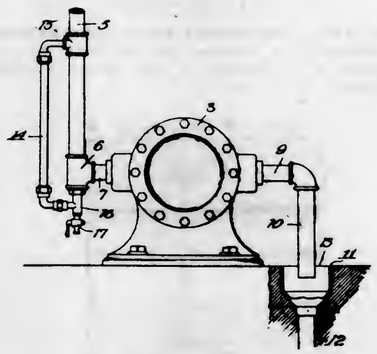


the tinsel and prevent free displacement thereof in either direction.

1,388,562. PIANO-MOVER. DAVID F. HAGERTY, Sioux City, Iowa. Filed June 6, 1919. Serial No. 302,235. 1 Claim. (Cl. 187—10.)

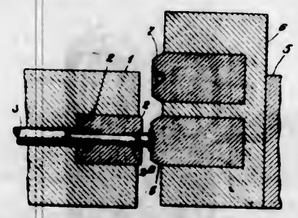
A device of the class described including side members, support engaging members diverging from one end of each side member, connections between the side members, transverse shafts carried by the end portions of the side members, supports detachably engaged by the end portions of one of the shafts, pulleys on the shafts, endless belts mounted on the pulleys cross strips connecting the belts, a carrier secured on the cross strips and having an upstanding portion, said carrier being parallel with the belt, an upstanding portion fixedly connected to the side members at one end thereof and means carried by said last mentioned upstanding portion and one of the shafts for driving the belts to move the carrier longitudinally of the side members.

1,388,563. SLEEVE-VEST. HARRY C. HANSON, St. Paul, Minn., assignor to Guiterman Bros., St. Paul, Minn., a Corporation of Minnesota. Filed July 31, 1919. Serial No. 314,403. 2 Claims. (Cl. 2—61.)



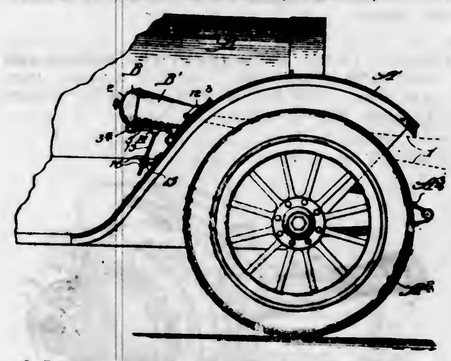
1. A garment comprising a body having integral shoulder extensions projecting beyond and below the shoulders, sleeves attached to the shoulder extensions, the side portions of the body adjacent and beneath the shoulder extensions being cut-away and the cut-away openings extending throughout the underarm portions of the respective extensions, and gores closing the cut-away openings and attached to the adjacent sleeves.

1,388,564. EXPANSIBLE PLUG FOR WELLS. WILLIAM G. HAYNES, Coffeyville, Kans., assignor of one-half to Fred E. Remington, Coffeyville, Kans. Filed Nov. 29, 1918, Serial No. 264,628. Renewed Apr. 12, 1920. Serial No. 373,389. 11 Claims. (Cl. 166—13.)



1. An expansible plug for wells, comprising a telescopic section composed of a polygonally sided wedge pin or core and a plurality of oppositely tapered staves encircling the wedge pin and having angular grooves on their inner side faces fitting the angular faces of the wedge pin.

1,388,565. VACUUM-DISCHARGE APPARATUS. HERMAN HEUSER, Evanston, Ill. Filed Nov. 21, 1919. Serial No. 339,772. 1 Claim. (Cl. 103—79.)

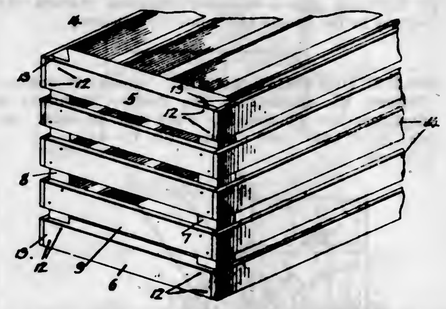


In combination, a discharge line, a vacuum pump, the intake of which is directly connected to the discharge line and a liquid-gage connected to said discharge line at points above and below the intake of the vacuum pump.

1,388,566. RIVET MANUFACTURE. HENRY C. HINCHCLIFF, Brooklyn, N. Y. Filed May 3, 1920. Serial No. 378,464. 7 Claims. (Cl. 10—12.)

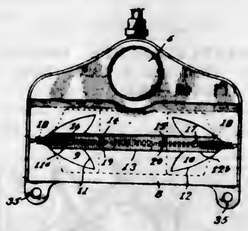
6. In a machine of the character described, a rivet blank receiving die adapted to form a rivet body having a portion of a relatively reduced cross sectional area, and means adapted for positioning, dividing, and extruding the reduced portion of the rivet body.

1,388,567. LAMP FOR MOTOR-VEHICLES, &c. PETER M. HOFFMAN, Des Plaines, Ill. Filed Feb. 16, 1920. Serial No. 358,831. 10 Claims. (Cl. 240—7.)



6. The combination with a front fender of a motor-vehicle, said fender having a perforation in its rear wall, of a lamp device comprising a tubular shield having its front end disposed at said perforation, whereby the fender will serve as a shield-extension, and a lamp-unit mounted in the rear portion of said shield.

1,388,568. METHOD OF MANUFACTURING DRAWN LINKS FOR ELECTRIC FUSES. SLAUGHTER W. HUFF, New York, N. Y. Filed Mar. 17, 1919. Serial No. 283,116. 2 Claims. (Cl. 200—135.)



1. The process of forming drawn wire links of the character described, which consists in flattening out an intermediate portion of the wire link by pressure to the desired thickness; and then cutting off a transversely extending portion created thereby to leave a remaining portion of reduced sectional area limited in both lateral and longitudinal extent and corresponding to the carrying capacity desired.

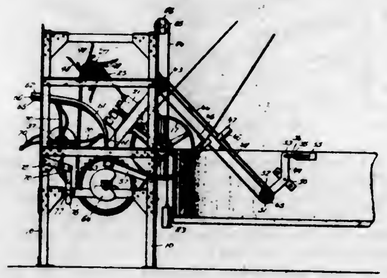
1,388,569. CRATE. JOHN HUGHES, Pullman, Mich., assignor to Pullman Manufacturing Company, Pullman, Mich., a Corporation of Michigan. Filed Oct. 13, 1920. Serial No. 416,626. 2 Claims. (Cl. 217—43.)

1. A packing crate including an end frame comprising a bottom and top and two upright cleats each of triangular form and cross section, the bottom and top cleats each being positioned with one flat side outwardly, each of said bottom and top cleats being further provided with a triangular pocket in each end to receive the upright cleats, one wall of each pocket being extended parallel with the outer face of said bottom and top cleats and adapted for engagement with the outer face of said upright cleats while the remaining wall of each pocket being extended at an angle and adapted for engagement with the angular inner faces of said upright cleats, end slats connecting the upright cleats upon their outer faces, said bottom longitudinal cleats secured respectively to the flat side faces of the upright cleats and the flat lower faces of the bottom cleats.

1,388,570. DIRECTION-INDICATOR. HARRY H. JEWELL, Oakland, Calif. Filed Sept. 9, 1920. Serial No. 409,181. 5 Claims. (Cl. 116—44.)

1. A direction indicator comprising a plate having an elongated slot formed therein, a pair of plates always forming a partial closure for the slot and slidable along the longitudinal axis of the slot, and means for imparting a sliding movement to the plates independent of each other and in unison, said plates by their movement with relation to the slot and by the different positions assumed forming a series of visible signals.

1,388,571. TOOL-HANDLE. GEORGE T. JOHNSON, Waco, Tex. Filed Mar. 10, 1921. Serial No. 451,189. 1 Claim. (Cl. 145—61.)

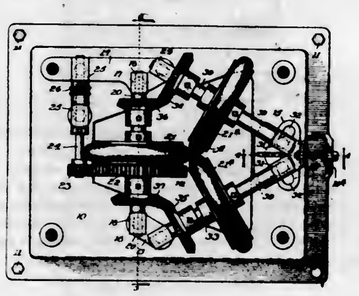


A tool handle having a slit extending longitudinally and edgewise thereof terminating at its inner end in diagonally opposed shoulders, the said handle having a transverse aperture, a reinforcing element comprising a

plate having an aperture alining with the aperture of the handle and a recess in its end conforming to the shoul-

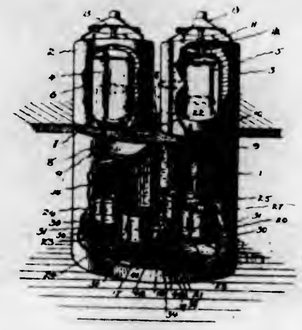
ders, whereby the end of the reinforcing element contacts the shoulders, and a fastening extending through the apertures of the handle and reinforcing element.

1,388,572. DEHAIRING-MACHINE. ROBERT E. JORDAN, Chicago, Ill., assignor to The Packers Machinery & Equipment Co., Chicago, Ill. Filed Sept. 20, 1920. Serial No. 411,367. 109 Claims. (Cl. 17—11.)



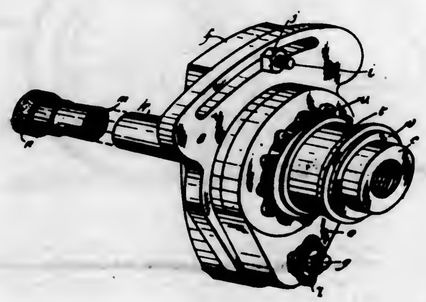
1. In a machine of the character described carcass supporting means, dehairing elements adapted to operate on the carcass while in position on said supporting means, and means for automatically ejecting said carcass independent of said supporting means.

1,388,573. ANESTHETIC COMPOUND. OLIVER KAMM, Urbana, and ERNEST H. VOLWILER, Chicago, Ill. Filed June 14, 1920. Serial No. 388,803. 2 Claims. (Cl. 23—24.)



1. As a new article of manufacture, diallyl amino alcohol ester of an aromatic acid containing a benzene nucleus.

1,388,574. PEANUT-BLANCHER. GUSTAVE C. KELLING, Chicago, Ill. Filed Aug. 6, 1920. Serial No. 401,706. 14 Claims. (Cl. 146—14.)

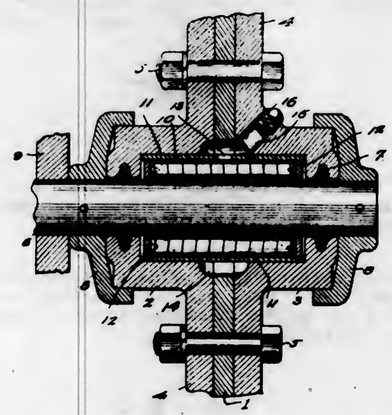


1. In a peanut blancher, a plurality of wheels set at an angle to each other and lying near each other at one point so as to grip a peanut placed therebetween, and means for feeding peanuts to the space between said wheels, said wheels being rotated at different peripheral speeds.

1,388,575. FURNACE. CHARLES F. KENWORTHY, Waterbury, Conn. Filed Sept. 26, 1919. Serial No. 326,655. 29 Claims. (Cl. 266—4.)

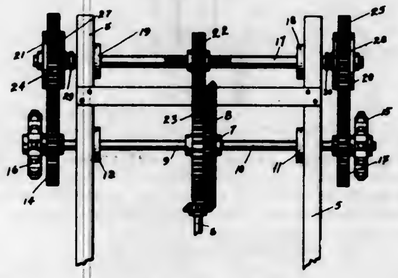
1. In an apparatus of the class described, a conveyer; and automatic mechanical means for effecting self-rotation thereof.

1,388,576. LATHE ATTACHMENT FOR BORING AND GRINDING CYLINDERS. CALVIN I. KEPHART, Portland, Oreg. Filed Jan. 20, 1920. Serial No. 352,876. 7 Claims. (Cl. 51—261.)



1. In a lathe attachment the combination of, a face-plate provided with a lateral projection adapted for mounting the face-plate on the spindle of the lathe, a shaft journaled in said face-plate to one side of the axis of rotation of said spindle, an offset-plate carried by said shaft and having a sliding bearing on said face-plate, the bearing face of the offset plate being provided with a recess, means for adjustably holding the offset-plate in place on the face-plate, a hollow arm projecting from said offset-plate, a spindle journaled in said arm, means operatively connecting the last mentioned spindle with said shaft, such means being housed in said recess, and means carried by said face plate for rotating said shaft independently simultaneously with the rotation of the face-plate by the lathe spindle.

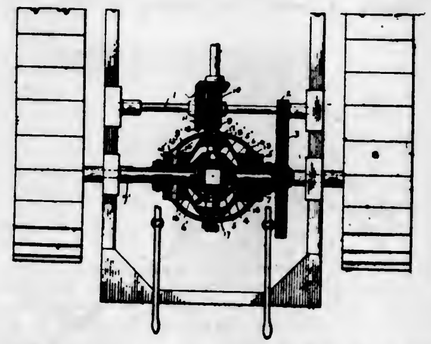
1,388,577. HUB FOR ROTARY COLTERS. WILLIAM R. KINNEY, Reading, Mich. Filed Mar. 25, 1920. Serial No. 368,520. 3 Claims. (Cl. 64—26.)



1. In combination a colter, hub sections at the sides of the colter, each consisting of a hollow portion and a flange, the outer ends of the hollow portions having openings to receive the axle and the walls of the said openings being grooved to receive a packing, the hub opening being enlarged to receive a roller bearing and further en-

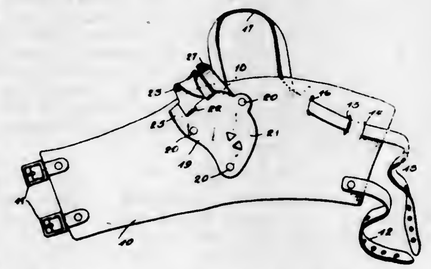
larged to provide an annular oil chamber from which extends a feed opening in which is fitted a normally closed

element and a roller bearing disposed within the enlarged portion of the hub opening.



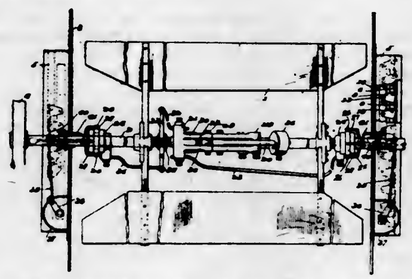
1,388,578. TRACTOR. ALBERT L. KINS, Farmington, Calif., assignor of one-half to Lloyd H. Housten, Farmington, Calif. Filed Mar. 31, 1919. Serial No. 286,437. 1 Claim. (Cl. 180—17.)

In a motor propelled vehicle, a pair of driving shafts each adapted to operate a driving wheel or the like, a differential mechanism between said shafts, power means actuating said differential a secondary shaft parallel with said driving shafts and driven by said differential a gear train from each of said driving shafts to gears loosely mounted on said secondary shafts, and independent clutch means between said secondary shaft and said loosely mounted gears, as and for the purpose set forth.



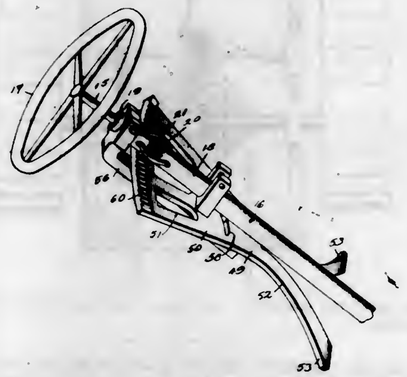
1,388,579. TURNING MECHANISM FOR TRACTORS AND THE LIKE. ALBERT L. KINS, Farmington, Calif. Filed Aug. 18, 1919. Serial No. 318,089. 2 Claims. (Cl. 180—17.)

1. In driving mechanism for motor propelled vehicles a pair of alined axles, a pair of gears loosely mounted on a sleeve, said sleeve carried on both axles, a driving member having a hub extension rotatable about said sleeve, independently operable clutch means between each of said hub extensions and said gears, said driving member inclosing differential pinions interiorly disposed and engaging both of said gears and carried by a central frame connecting said sleeves and each of said pinions having a shaft and another pinion, the last named pinion engaging two opposite faced pinions which are mounted one on each of said axles, and means constructed and adapted



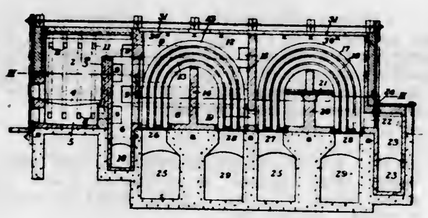
to drive the sleeve at a different rate from the driving member.

1,388,580. HUSKING-HOOK. JOSEPH M. KOZIOL, Pender, Nebr. Filed Apr. 22, 1921. Serial No. 463,649. 3 Claims. (Cl. 130—4.)



1. A husking hook comprising, in combination, a member adapted to fit the hand, a plate carried by said member, a hook hinged to said plate, a bifurcated resilient member secured to said plate, one portion thereof providing a husk slitting knife and the other portion a spring to press said hook forwardly.

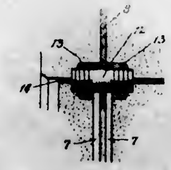
1,388,581. FAN-BLAST REGULATOR. ALFRED LARSON, Scobey, Mont., assignor of one-half to Gustav Ole, Scobey, Mont. Filed May 1, 1920. Serial No. 378,163. 6 Claims. (Cl. 230—11.)



1. The combination with a fan, and a fan casing having an opening in its side, of a shutter mounted on the fan casing over the opening therein, and means operatively connected with the fan for actuating said shutter to open or close the same as the speed of the fan shaft decreases or increases.

1,388,582. MEANS FOR OPERATING THE STEERING-POSTS OF AUTOMOBILES. EDWARD P. LE COMPTE, Park City, Utah. Filed Oct. 10, 1919. Serial No. 329,672. 5 Claims. (Cl. 74—33.)

1. The combination with the steering post and housing of an automobile, of a gear secured to the steering post, a lever like relatively rigid member pivotally connected with the housing and extending longitudinally thereof, the lower end of the member being adapted to terminate near the floor of the automobile and to be engaged by the lower limbs and shifted generally horizontally and laterally, and a rack carried by the member and engaging the gear to rotate the same.

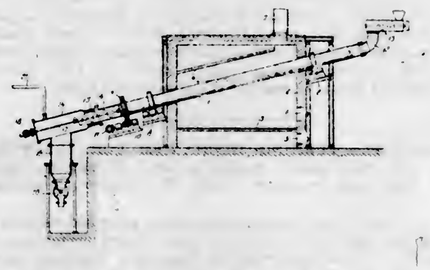


1,388,583. AIR-HEATING FURNACE. LEIF LEE, Youngstown, Ohio. Filed Mar. 1, 1921. Serial No. 448,929. 9 Claims. (Cl. 126—104.)

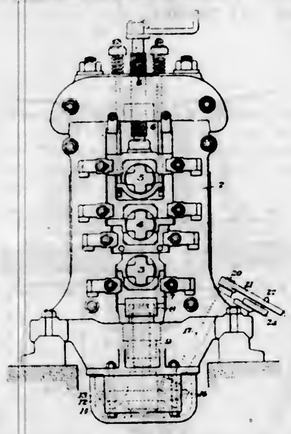
1. An air heating furnace, comprising a pair of combustion chambers arranged side by side, a pair of heating chambers located side by side in front of the combustion chambers, a longitudinally extending partition wall intermediate the combustion chambers, said wall having a plurality of flues therein arranged one above another, flues intermediate the combustion chambers and the heating chambers and with which the flues in the partition wall communicate, and a plurality of air heating pipes or tubes arranged in each of the air heating chambers, said flues communicating with the forward portions only of the heating chambers, and there being baffle means to prevent entrance of the products of combustion to the rear portions of said chambers, substantially as described.

1,388,584. ARCH-BRIDGE CONSTRUCTION. JAMES B. MARSH, Des Moines, Iowa. Filed Apr. 11, 1918. Serial No. 227,860. 13 Claims. (Cl. 72—56.)

1. In a bridge construction a hanger formed of reinforced concrete, and means in the plane of intersection of said hanger with the adjacent parts of said bridge connecting said hanger to said adjacent parts in such manner as to permit movement of the hanger with relation to said parts to prevent rupture of the concrete.

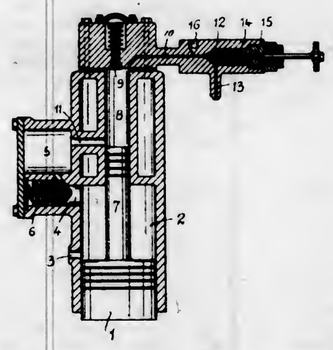


1,388,585. ADJUSTABLE FLUSH-VALVE-SEAT-CUTTING TOOL. JAMES MARTINO, White Plains, N. Y. Filed Apr. 23, 1920. Serial No. 375,998. 7 Claims. (Cl. 90—12.5.)



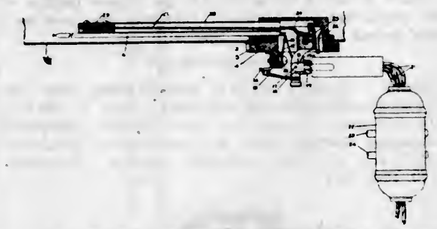
1. In a cutting device for the valve of a flush tank, a tool for cutting the flush valve seat, an operating stem secured thereto, a frame comprising brackets within which said operating stem has its bearings, and means for adjustably securing said frame to the overflow pipe for the flush valve.

1,388,586. PROCESS OF MANUFACTURE OF ALKALI METAL CYANID. FLOYD J. METZGER, New York, N. Y. Filed Mar. 16, 1918. Serial No. 222,812. 6 Claims. (Cl. 23—13.)



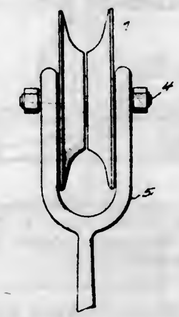
1. The process of producing alkali metal cyanids, which consists in filling the reaction zone of a retort with a mixture of an alkali and a carbonaceous material, passing a nitrogenous gas through said mixture, and tumbling the mixture while subjecting it to a high heat; substantially as described.

1,388,587. ROLL-ADJUSTING MECHANISM. RICHARD W. MOSSE, Coraopolis, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1920. Serial No. 353,040. 4 Claims. (Cl. 80—56.)



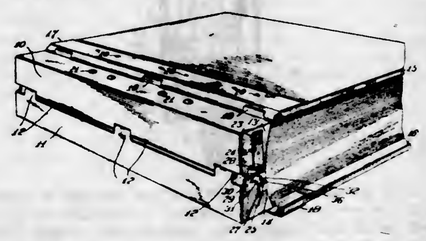
3. The combination with a roll housing and a mill roll mounted for vertical movement therein, of an adjusting shaft for said roll extending upwardly through the base of the housing, an actuating shaft extending obliquely in a lateral and upward direction through the base of the housing, an internal bevel gear on said adjusting shaft and said actuating shaft having a pinion engaging said internal gear, and means for operating the actuating shaft, said gearing being below the housing proper, and a removable cap inclosing said gearing, said cap having a step-bearing for the adjusting shaft, substantially as described.

1,388,588. FUEL-INJECTING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. JOHAN KARLSEN MÖYSTAD, Christiania, Norway. Filed July 24, 1917. Serial No. 182,449. 4 Claims. (Cl. 123—33.)



1. In a fuel injector for engines, an air compressor having an outlet conduit, a valve seating and housing formed co-axially with said conduit, a cylindrical valve mounted as a sliding fit in such housing and normally closing said conduit, the head of said valve being directly operated upon by compressed air for opening said conduit, a fuel supply inlet communicating with said conduit between the air compressor and valve housing and an outlet for air and fuel normally closed by said valve, such that the air and fuel are deflected to a minimum extent and pass exteriorly of the valve body and valve seating.

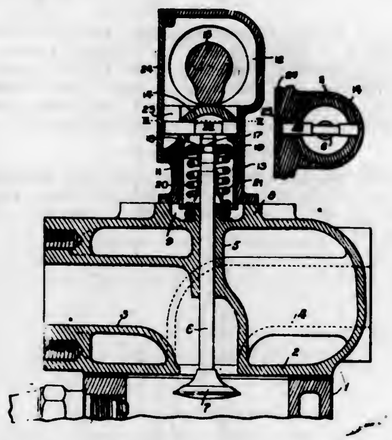
1,388,589. HEATING-ELEMENT-CONTROLLING DEVICE. PAUL M. MUELLER, Erie, Pa., assignor to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1920. Serial No. 368,246. 10 Claims. (Cl. 219—20.)



1. In a heating element controlling device, the combination of a heating element; an inclosing casing; a thermally sensitive element in direct thermal relation with the casing; a conductor leading to the heating element; a switch in the conductor; and means controlled by the thermal element opening the switch.

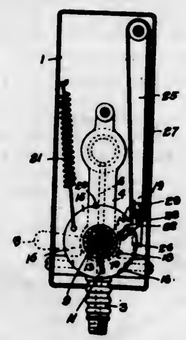
1,388,590. TROLLEY-WHEEL FOR ELECTRIC STREET-CARS. JULIO SOTO NAVARRO, Habana, Cuba. Filed Mar. 21, 1921. Serial No. 454,232. 2 Claims. (Cl. 191—59.)

1. A trolley wheel for electric cars comprising separate halves in disk form, both halves to be used mounted together on same axle, each half being free to rotate independently of the other, and means for maintaining said halves apart to insure independent rotation.



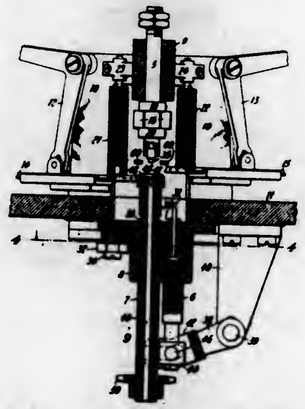
1,388,591. LOOSE-LEAF BINDER. CHARLES RUDOLPH NELSON, Chicago, Ill., assignor to C. R. & W. A. Nelson, Chicago, Ill., a Firm composed of Charles Rudolph Nelson and Wilbur A. Nelson. Filed Mar. 22, 1920. Serial No. 367,592. 3 Claims. (Cl. 129—17.)

2. A loose leaf binder comprising, separable portions having abutting edges, a resilient latch member secured to one of said portions and having an angularly project-



ing element passing through a slot therein, a connecting portion extending from the end of said element parallel with said binder portion past the abutting edges and a catch member projecting angularly from said connecting portion having a reduced neck, said other binder portion having a T-shaped recess therein, the narrow portion of said recess forming a passage adapted to pass said neck when sprung into alinement therewith.

1,388,592. TAPPET-VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. EMIL A. NELSON, Detroit, Mich., assignor to E. A. Nelson Automobile Company, Detroit, Mich., a Corporation of Delaware. Filed July 19, 1918. Serial No. 245,739. 10 Claims. (Cl. 123—90.)



1. As a new article of manufacture, a tappet valve adjusting member having facets at different distances from the axis of said member adapted to be engaged by a valve operating member.

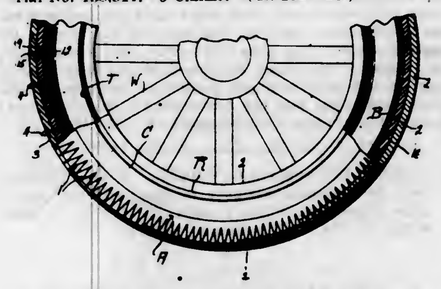
1,388,593. AUTOMATIC CUT-OFF FOR GAS-VALVES. ROBERT E. NEWELL, Irwin, Pa. Filed July 2, 1919. Serial No. 308,196. 8 Claims. (Cl. 67—117.)

1. In an automatic cut-off for gas burners, a valve plug and a valve bushing adapted to coöperate to open said valve and adapted to independently closed said valve, a member normally holding said bushing in closed position, means adapted to hold said bushing in open position and a thermostatically controlled hook for releasing said means.

1,388,594. MACHINE FOR ATTACHING STRING TO ENVELOPS AND THE LIKE. ABRAHAM NOVICK, New York, N. Y., assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1920. Serial No. 352,708. 5 Claims. (Cl. 93—61.)

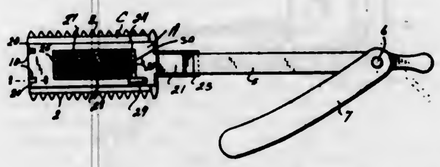
1. In a machine of the character described the combination of an upper tool-carrying-plunger axially-slidable in a fixed bearing, a plurality of lower tool-carrying-plungers axially-slidable in parallelism with one another and with the upper plunger, one of said lower plungers being rotatable, means for bringing said lower plungers one at a time into axial alinement with said upper plunger, and means for sliding said upper plunger and that lower plunger in alinement therewith into coacting relation.

1,388,595. GUIDE FOR QUILL-WINDERS. JOHN A. OLSON, Paterson, N. J. Filed May 29, 1920. Serial No. 385,116. 4 Claims. (Cl. 242—157.)



1. The combination with a quill winder embodying a tension wire and an eye detachably arranged thereon, said eye being provided with the usual guide opening and with an opening adapted to receive the end of the tension wire, of means for securing said eye to the tension wire, said means comprising a fastening element of wire secured to the tension wire engaging the guide opening of the eye.

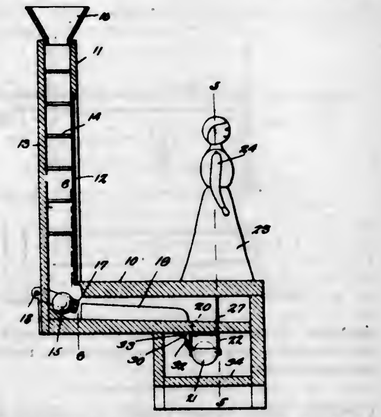
1,388,596. HOG-RING. SAMUEL W. ORR, Green Valley, Ill. Filed Nov. 26, 1920. Serial No. 426,525. 2 Claims. (Cl. 119—135.)



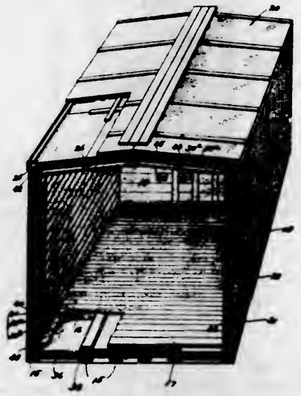
1. A hog ring in the form of an open loop having parallel prongs bent to an acute angle with the loop, the ends of said prongs being bent to form projections extending transversely to said prongs, said loop and projections being located on opposite sides of the plane of said prongs.

1,388,597. PROTECTING-ARMOR FOR TIRES. HARRY N. PAPPAS, Okmulgee, Okla. Filed May 11, 1921. Serial No. 468,511. 6 Claims. (Cl. 152—16.)

1. An internal armor for a tire casing embodying an expansible member adapted to coact with the tread portion of the casing and extend circumferentially thereabout, and means for expanding or contracting said member.



1,388,598. RAZOR. RICHARD E. PERKINS, Boston, Mass. Filed Sept. 4, 1920. Serial No. 408,171. 7 Claims. (Cl. 30—12.)

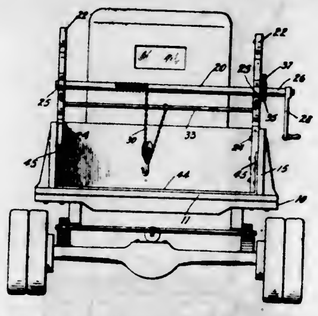


1. A razor of the class described comprising a guard member provided with a slot, a blade carrier overlying said guard member and also provided with a slot, a blade interposed between the guard member and the blade carrier, said blade being provided with a slot, a clamping member overlying the blade carrier and engaged with the guard member, a wing carried by the blade carrier and extending through the slots of the blade and guard member, a roller carried by the clamping member, said clamping member being provided with a slot through which the roller extends, and coacting means carried by the wing and the roller whereby the blade carrier is reciprocated upon rotation of the roller.

1,388,599. GAME. CHARLES J. PFEIL, Washington, D. C., assignor of one-half to Mrs. Catherine McGraw, Washington, D. C. Filed Sept. 25, 1920. Serial No. 412,799. 5 Claims. (Cl. 46—57.)

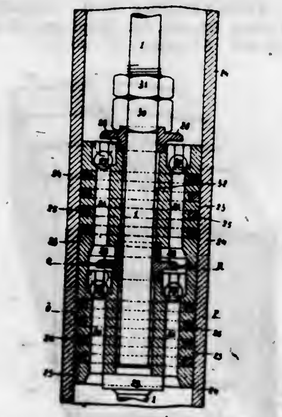
1. In a device of the class described, a signal; means, responsive to the action of a predetermined weight, for operating the signal; a plurality of rolling elements, one of which differs in weight from the others and is of said predetermined weight; and mechanism for directing the rolling elements at random upon the operating means.

1,388,600. REFRIGERATOR-CAR CONSTRUCTION. EDWARD POSSON, Chicago, Ill. Filed Dec. 19, 1917. Serial No. 207,833. 5 Claims. (Cl. 20—4.)



1. In a refrigerator car, an insulated wall comprising a plurality of sectional heat insulators each comprising a plurality of relatively thick layers of flexible insulating material united and supported by sheets of stiffening material cemented thereto, and a framework for uniting and supporting said sections, some of said layers being arranged to abut against said framework, and other layers being arranged to overlap said framework and abut against each other, whereby a continuous sheet of heat-insulating material is formed throughout the car wall.

1,388,601. LOADING DEVICE. EXZEOR PRAIRIE, West Kankakee, Ill. Filed Aug. 6, 1920. Serial No. 401,580. 1 Claim. (Cl. 212—142.)

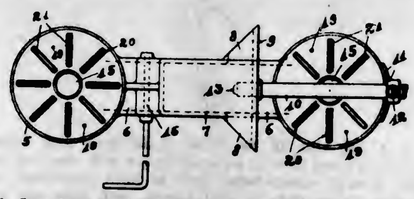


A loading device comprising in combination with a vehicle body having a floor and sides, standards secured to and rising above the sides of the vehicle body, a shaft journaled upon the standards, a rod secured to and extending between the standards parallel with the shaft, a flexible lifting element secured at one end to the shaft to wind thereon and having its opposite end loosely engaged

upon said rod to slide along the same as its main portion winds upon the shaft, a load-engaging device movably

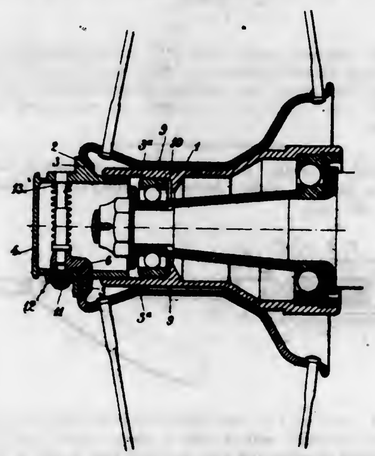
supported by the flexible lifting element, means for turning the shaft, and means for preventing reverse movement of the shaft.

1,388,602. DEEP-WELL PUMP. PAUL CHARLES ALBERT ROTTELEUR, Maurecourt, France. Filed May 21, 1919. Serial No. 298,639. 4 Claims. (Cl. 103—83.)



1. An apparatus for raising liquids from borings of considerable depth, comprising a column and successive pumps of unequal capacities with their pistons connected to a single rod for simultaneous reciprocation, the inlet to the column being beneath the bottom pump, whereby the liquid being pumped passes serially through the successive pumps, a pump thereof comprising a pump piston in sections fastened upon the pump rod, each section having a central opening for the rod, and lateral passages for the liquid, said passages enlarged to form valve chambers, and valves therein, and the sections having valve stops for limiting the lift of the valves.

1,388,603. PROCESS OF MAKING METAL NITROGEN-CONTAINING COMPOUNDS AUGMENTED BY GASEOUS CATALYSTS. JAMES HENRY REID, Pittsburgh, Pa., assignor to International Nitrogen Company, a Corporation of Delaware. Filed Sept. 12, 1917. Serial No. 191,053. 22 Claims. (Cl. 23—13.)

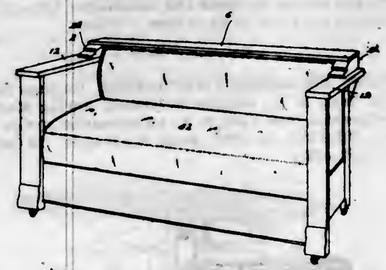


1. The process of making metal nitrogen containing compounds which comprises exposing a metal carbid while associated with a gaseous catalyst to the action of nitrogen and heat and maintaining the temperature below that at which a metal cyanamid is formed.

1,388,604. HYDROCARBON-BURNER. HERMAN F. RICHTER, Los Angeles, Calif. Filed Apr. 16, 1919. Serial No. 290,627. 3 Claims. (Cl. 158—65.)

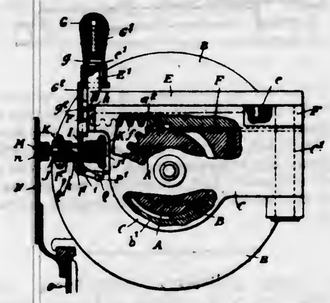
1. In a burner of the class described, burner heads having an intercommunicating conduit, a mixing box extending upwardly from the conduit to a suitable point above the top of the burner heads having a curved portion projecting toward one of the burner heads opening sidewise, the closed side of the upper termination of the mixing box nearest the burner head toward which it projects being of greater width than the mixing box proper forming a preheating partition and adapted for keeping the ingoing cool air away from this burner head, and a supply tube disposed over such last-named burner head projecting through said enlarged preheating partition in the closed end of the said box terminating within the box at a point intermediate the side openings in the box.

1,388,605. DETACHABLE WHEEL. LOUIS ROUANET, Ivry Port, France, assignor to Compagnie D'Applications Mecaniques, Paris, France. Filed Feb. 16, 1920. Serial No. 358,877. 2 Claims. (Cl. 301—9.)



1. A detachable wheel construction comprising in combination a false hub, driving teeth on said false hub, a wheel hub surrounding said false hub, driving teeth on said wheel hub, adapted to engage the driving teeth on the false hub, locking teeth on said wheel hub, a locking nut adapted to be secured to the false hub and to engage with the wheel hub, and a bolt carried by said locking nut, and adapted to engage the said locking teeth, the driving teeth and the locking teeth on the wheel hub being in alinement and thereby adapted to be cut in one operation.

1,388,606. DAVENPORT. WILLIAM SCHICK, Topeka, Kans. Filed May 21, 1920. Serial No. 383,172. 1 Claim. (Cl. 5—48.)



An article of furniture of the character described, consisting of a foldable seat, a frame having arms at its ends

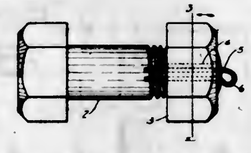
and adapted to support said seat, and a movable upholstered rectangular back consisting of a continuous top rail which extends over the arms, a continuous bottom

rail adapted to rest upon the seat, end pieces rigidly connecting said top and bottom rails, and blocks fixed to the top rail and said end pieces and adapted to rest on top of the arms.

1,388,607. SAFETY APPARATUS FOR PREVENTING THE OPENING OF THE BREECH OF A GUN BEFORE THE RECOIL OF THE GUN-BARREL. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Dec. 28, 1920. Serial No. 433,658. 6 Claims. (Cl. 89—20.)

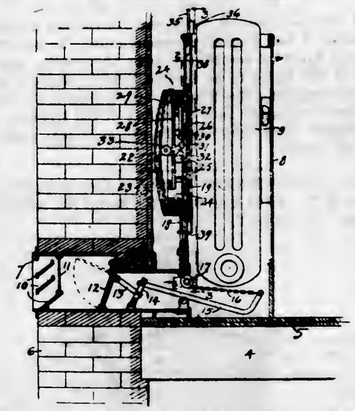
1. In a safety apparatus for preventing movement of the breech mechanism of a gun before recoil of the gun barrel, the combination of a cradle, a gun barrel carried within the cradle and provided with a breech mechanism, means for locking the breech mechanism in closed position made effective by a longitudinal movement of the breech mechanism operating handle, and means operable to engage and prevent movement of said handle after said locking means has been made effective.

1,388,608. CALF-WEANING DEVICE. MARTIN C. SCHOW, Regent, N. D. Filed Nov. 12, 1920. Serial No. 423,653. 3 Claims. (Cl. 119—130.)



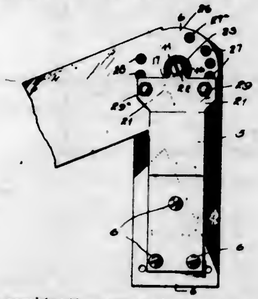
1. A device of the class described comprising a frame formed with an annular central portion, laterally extending offset portions, and radial devices projecting from said offset portions, an inner element of flexible material secured to the inner portion of the frame, and an outer element of flexible material connected with the flexible element first named and inclosing the offset portions of the frame.

1,388,609. GAS-BURNER. ALEXANDER B. SHARP, Steubenville, Ohio. Filed Oct. 27, 1920. Serial No. 420,037. 1 Claim. (Cl. 158—104.)



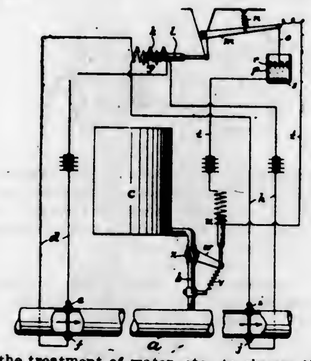
A gas burner consisting of a single integral casting and including a lower leg having an inlet opening at one end, the cross sectional area of the leg progressively increasing from said inlet end to the opposite end, a vertically disposed return bend leading upwardly from the end of the lower leg remote from the inlet end, an upper leg extending from the bend longitudinally over the lower leg and progressively decreasing in cross sectional area from the bend, a channeled burner face extending along the upper side of the upper leg and open through its entire bottom to the said leg, and a series of burner spuds extending along the top of the burner face from end to end thereof and each having a plurality of outlet openings.

1,388,610. NUT-LOCK. LEAVITT A. SHEETZER, Massillon, Ohio, assignor of one-half to Edison W. Hart, Massillon, Ohio. Filed May 9, 1921. Serial No. 467,797. 3 Claims. (Cl. 151—25.)



1. The combination of a bolt and a nut thereon, one of said parts having an aperture, and a forked resilient locker in the aperture, the aperture having means to cam the locker into biting engagement with a threaded surface on backward movement of the nut.

1,388,611. AUTOMATIC VENTILATOR. CLARENCE C. SHIPP, Indianapolis, Ind. Filed Jan. 19, 1920. Serial No. 352,357. 5 Claims. (Cl. 236—38.)

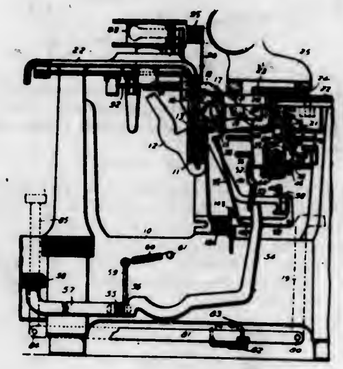


3. The combination with a heat radiator, of a sheet metal radiator-box having a recess pressed in its wall, and a disk closure forming a sealed chamber in said recess the outer wall of the recess forming one of the walls of the sealed chamber.

1,388,612. COMBINATION-SQUARE. HENRY SIMON, Laguna Beach, Calif., assignor of one-half to Joseph W. Skidmore, Laguna Beach, Calif. Filed Jan. 7, 1920. Serial No. 349,916. 24 Claims. (Cl. 33—120.)

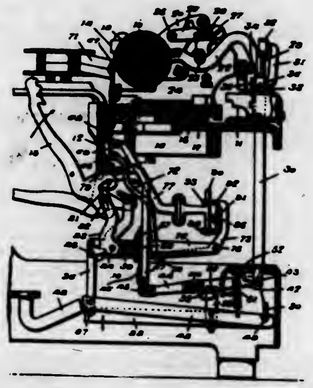
1. In a combination square having a movable blade, automatic blade-arresting means overlapping one face of the blade, a push piece having an accessible portion movable toward and from the opposite face of the blade and capable of transmitting disengaging forces upon the blade-arresting means, and means for frictionally clamping the blade in various positions of adjustment.

1,388,613. PROCESS OF AUTOMATICALLY REGULATING THE ADDITION OF A TREATING AGENT TO WATER. JULIAN S. SIMSOHN, Philadelphia, Pa. Filed Oct. 25, 1918. Serial No. 259,695. 7 Claims. (Cl. 204—24.)



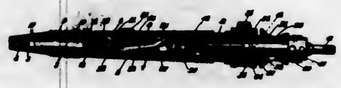
1. In the treatment of water, etc., to change its quality, the process of automatically proportioning the addition of a treating agent in accordance with the quality and rate of flow of the water to be treated, which consists in continuously supplying the treating agent during the flow of water and varying the rate of supply of the treating agent in accordance with variations in the electrical conductivity of the water.

1,388,614. EGG-COOKER. GUSTAV ANTON SORENSEN, Jamaica, N. Y. Filed Dec. 5, 1919. Serial No. 342,587. 3 Claims. (Cl. 116—1.)



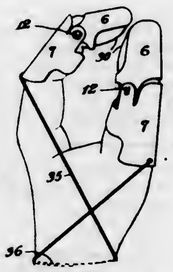
1. An alarm for a cooking vessel including a cover for said vessel, a sleeve secured to the cover and provided with an opening intermediate its ends, and a tube having its ends open extending through the cover externally of the sleeve and having its upper end terminating adjacent the opening in the sleeve so as to form a whistle.

1,388,615. ESCAPEMENT MECHANISM. CHARLES SPIRO, New York, N. Y., assignor to Federal Adding Machine Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1920. Serial No. 358,591. 26 Claims. (Cl. 197—82.)



1. In a typewriter, a carriage, a motor member therefor provided with an escapement wheel, a movable member pivoted upon an axis intersecting that of the wheel and carrying fixed and movable dogs coöperating with said wheel, a space bar action arranged to engage and actuate said movable member, and a universal bail having means to actuate said movable member independent of the space bar action.

1,388,616. CASE-SHIFTING MECHANISM. CHARLES SPIRO, New York, N. Y., assignor to Federal Adding Machine Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1920. Serial No. 358,593. 18 Claims. (Cl. 197—155.)

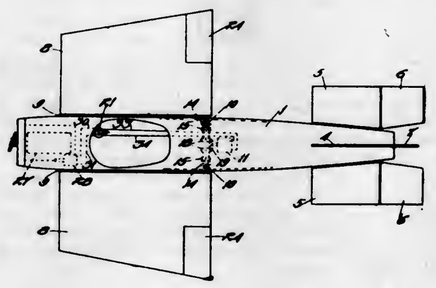


1. In a typewriter, a frame, a horizontal cross bar therein, a slide block carried by one face of said bar, a ribbon vibrating member carried by a support slidably mounted upon said block, and means for case shifting said support and member upon said bar.

1,388,617. HANDPIECE FOR DENTAL ENGINES. RUFUS G. STANBROUGH, New York, N. Y., assignor to Margaret E. N. Stanbrough, New York, N. Y. Filed Feb. 20, 1920. Serial No. 360,032. 5 Claims. (Cl. 32—15.)

2. In a dental hand piece, the combination with a casing, a rotary sleeve in the casing, a chuck having a longitudinal tool aperture, and a longitudinally movable chuck closer, in axial alinement with the chuck, of a dog for actuating the chuck closer, comprising an angular plate having a member disposed longitudinally of the sleeve and a member disposed transversely of the sleeve, the outer end of said transverse member having a fulcrum end in the plane of the longitudinal member and engaging an aperture in the wall of the sleeve, such chuck closer and said transverse arm being provided, the one with a recess and the other with a screw engaging said recess having its axis coincident with the axis of the chuck closer for holding said dog from movement transversely of the sleeve, and transmitting pressure to the chuck closer axially thereof, and actuating means for engaging the longitudinal arm of the dog.

1,388,618. FINGER-PROTECTOR. ALEC STEIN and GEORGE STEIN, New York, N. Y. Filed June 17, 1920, Serial No. 389,557. Renewed July 14, 1921. Serial No. 484,818. 4 Claims. (Cl. 2—104.)

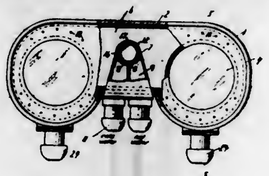


1. A finger guard comprising an outer finger tip section and a rear section, means for pivoting the one section upon the other, both of said sections being substantially semicircular in cross section and each of said sections having bottom retaining lugs, and means for attaching the said finger guard to the hand of the user thereof.

1,388,619. METHOD OF MAKING CONCRETE-LINED PIPE. WILLIAM SYMONS, Iron River, Mich. Filed Dec. 1, 1920. Serial No. 427,573. 9 Claims. (Cl. 25—38.)

1. The method of lining a pipe section with concrete comprising a placing a tapered core in said pipe, bracing said core substantially equidistantly from the pipe walls, filling the space between the core and pipe with concrete, periodically lifting the core a short distance and permitting it to settle back in place during the setting of the concrete.

1,388,620. AEROPLANE. ALAN LE OLEN TURNER, Carson City, Nev., assignor of one-fourth to Charles M. Hartt, Hartford, Conn., one-fourth to Frederick E. Skinner and one-fourth to Edward N. Tripp, Carson City Nev. Filed Aug. 12, 1920. Serial No. 403,011. 1 Claim. (Cl. 244—29.)



An aeroplane having two laterally extending side wings, one on each side, which are pivotally connected with the machine at their forward ends, and which are vertically movable at their rear ends, a worm screw for operating each of said wings to turn them on their pivots, a threaded block with which said worm engages, and connection between said block and the wing, whereby the rotation of the worm will actuate the wing to turn it up or down on its pivot, a motor having driving connection with each of said worms, and means under the control of the operator for making driving connection between the motor and the worms, for reversing the direction of rotation and for breaking the connection at will.

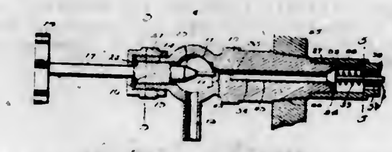
1,388,621. DEVICE FOR TREATING THE EYES. HENRY P. UMBSEN, San Francisco, Calif., assignor to Umbsen Manufacturing Corporation, a Corporation of Delaware. Filed Sept. 8, 1919. Serial No. 322,322. 11 Claims. (Cl. 128—249.)

1. In a device for treatment of the eyes, the combination of a casing, closed at the front side and open at the rear side, and of a form to fit closely against the face of the

patient around the eyes, annular chambers in said casing having discharge openings in their rear walls, means for

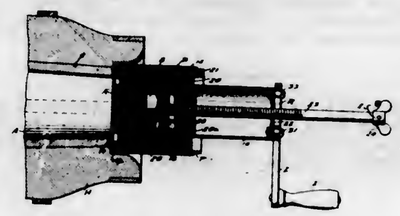
admitting a stream of liquid into said chambers, and means for directing the flow of liquid from said casing.

1,388,622. SCREW-THREADED CONNECTION. LEE J. VOORHEES, Binghamton, N. Y., assignor to National Carton Company, Inc., a Corporation of New York. Filed May 29, 1920. Serial No. 385,378. 6 Claims. (Cl. 285—146.)



6. Process of connecting a screw-threaded tubular member to a second member made of a material differing from the material of the tubular member in the change of dimensions which it exhibits under the influence of the same change in conditions, which comprises forming on the second member a screw-thread adapted to engage the thread of said tubular member, slotting the end of the tubular member to increase its resiliency, forming on said second member an inclined surface adapted to force and hold the respective threaded portions in closer contact when the members are screwed together, and then screwing the members together.

1,388,623. BELT-BUCKLE. THOMAS D. WALKER, New Britain, Conn., assignor to The Traut & Hine Mfg. Company, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 29, 1921. Serial No. 465,421. 2 Claims. (Cl. 24—191.)

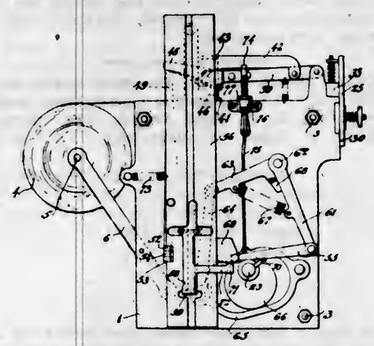


1. A belt buckle comprising a body portion having rearwardly extending flanges forming a channel between them at the back of said body, a tilting gripping plate pivoted at its ends and intermediate its upper and lower edges to said flanges, a swinging lever pivoted adjacent to the gripping plate at the back of the body and coöperating therewith, and having a limited amount of lost motion relatively thereto and adapted when swung to move said gripping plate into or out of the belt gripping position by engaging portions thereof on opposite sides of its pivotal axis.

1,388,624. SAFETY SCALEPROOF AUTOMATIC GAGE-COCK. LESSIE WHIPPLE and ZACK ONEAL, Shreveport, La. Filed Nov. 16, 1920. Serial No. 424,507. 2 Claims. (Cl. 73—54.)

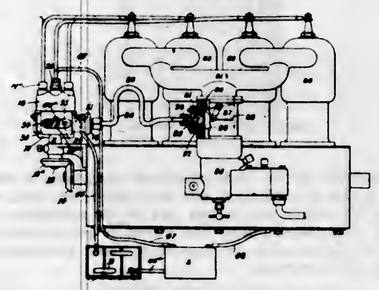
2. In a gage cock, a body portion having a spherical main valve chamber adjacent one end and a manually operated, main valve screwed into such end, said body portion adapted to be screwed into a boiler head and having a central bore, a cage screwed onto the other end of the body, said cage having a central opening in its end wall, an auxiliary valve carrying a plunger extending into said bore and loosely mounted in said cage and adapted to automatically control the inner end of the bore of the body, said plunger coöperating with the main valve, a stem projecting through said central opening in the end wall of the cage, said end wall having a series of openings surrounding said central guide opening.

1,388,625. GREASE-GUN. ANDREW WHITE and MARTIN GRANUM, Montevideo, Minn. Filed Jan. 19, 1920. Serial No. 352,353. 9 Claims. (Cl. 64—27.)



1. In combination, an axle skein, including a threaded head, and a grease gun comprising, a barrel, a plunger movable within the barrel, means for actuating said plunger, and means for attaching said barrel to said skein comprising, a sleeve nut having right and left hand screw threads, and a threaded spindle for actuating the nut.

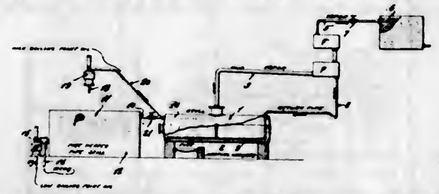
1,388,626. TALKING-MACHINE. GUY L. WILLETT, Louisville, Ky. Filed Feb. 28, 1921. Serial No. 448,341. 2 Claims. (Cl. 274—35.)



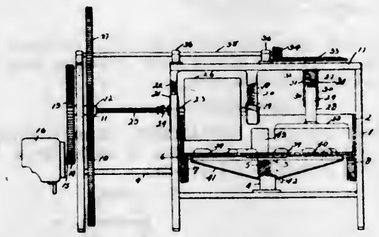
1. In a phonograph reproducer, a diaphragm, a stylus arm, a triad of posts fixed to the diaphragm in triangular relation, and a three armed spider having eyes at the ends of its arms embracing and gripping the posts, said spider further being firmly connected to the stylus arm.

1,388,627. VENDING-MACHINE. ABRAM L. ZENT, Dayton, Ohio, assignor to The Bushnell Manufacturing Company, Kansas City, Kans., a Corporation of Kansas. Filed Aug. 18, 1919. Serial No. 317,110. 55 Claims. (Cl. 194—2.)

1. In a mechanism of the character described, a feeding device for a series of connected articles having bodily movement to advance one or more of said articles to a discharge position, means for moving said device to its fully retracted position upon each operation of said mechanism and for advancing the same different distances to move different numbers of said articles to discharge position, and coin controlled means for controlling the distance said device is advanced.



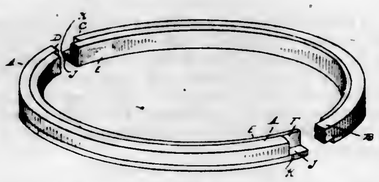
1,388,628. IGNITION-CONTROLLER. ALBERT E. BERDON, Anderson, Ind., assignor to Remy Electric Company, Anderson, Ind., a Corporation of Indiana. Filed Jan. 10, 1917. Serial No. 141,508. 34 Claims. (Cl. 123—117.)



30. In an ignition controller for internal combustion engines, the combination with a timer device, of a timer setting device controlled automatically by the suction of the engine, and including provisions leading into the engine intake conduit at different points whereby the suction pressure effecting the operation of the timer setting device is the result of the differential action of the suction pressures at said different points, said differential action varying in accordance with the extent of opening of the engine throttle valve.

1,388,629. ART OF CRACKING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla., assignor to The Process Company, Tulsa, Okla., a Corporation of Maryland. Filed Sept. 27, 1917. Serial No. 193,472. 5 Claims. (Cl. 196—25.)

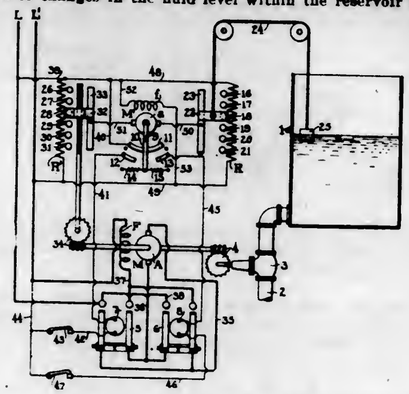
1. In the art of cracking high boiling point and low boiling point hydrocarbon oils, the method which comprises maintaining a body of the high boiling point oil in a cracking still, forcing the low boiling point oil into a cracking coil, discharging the contents of the cracking coil into said high boiling point oil in the still, maintaining the low boiling point oil under a relatively high pressure and at a relatively high temperature, and maintaining the high boiling point oil under a lower pressure and at a lower temperature.



1,388,630. VEGETABLE-CLEANER AND THE LIKE. HERBERT E. COLLETT, Philadelphia, Pa. Filed June 19, 1920. Serial No. 390,110. 6 Claims. (Cl. 146—14.)

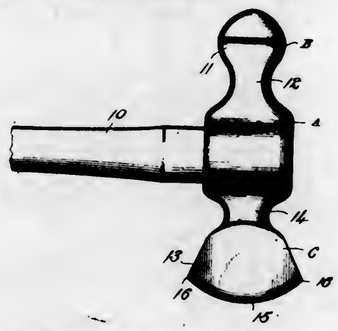
1. In a machine of the character described, a frame, a post carried by said frame, a receptacle mounted upon said post, means for revolving the receptacle, a cross bar carried by the frame, a short vertical shaft journaled in the cross bar, means for revolving said shaft, a socket carried by said shaft, a shank projecting into said socket having a limited vertical movement therein and revolving therewith, and a brush secured to the lower end of said shaft.

1,388,631. PISTON-RING. DAVID E. CREECH, Jackson, Mich. Filed Mar. 10, 1919. Serial No. 281,696. 2 Claims. (Cl. 74—109.)



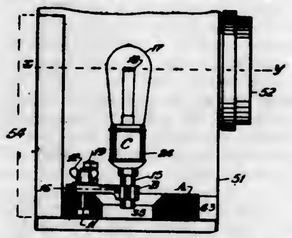
2. A piston ring, comprising members having complementary eccentric portions, the combined members having concentric inner and outer faces and each member being split at the thinnest point of its eccentric portion, one of said members being of L-shaped cross-section with the laterally extending portion thereof lying adjacent to the side of the other member, and the eccentric portion of the said L-shaped member being relatively thinner than the eccentric portion of the complementary member so that the tension upon contraction of said L-shaped ring is substantially equal to the tension upon equal contraction of the complementary ring.

1,388,632. MEANS FOR REGULATING THE FLOW OF FLUIDS. PETER P. DEAN, New York, N. Y. Filed Feb. 10, 1919. Serial No. 276,008. 5 Claims. (Cl. 137—68.)



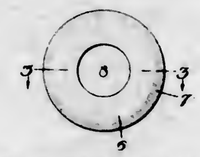
1. The combination with a valve and a motor for operating said valve to varying degrees, of starting and

stopping means for said motor, said means being responsive to changes in the fluid level within the reservoir for



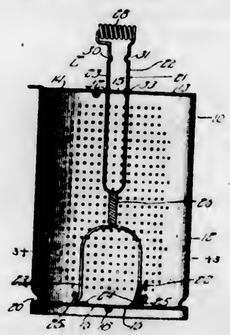
starting said motor and including means rendering the duration of operation of said motor dependent upon the degree of change in fluid level.

1,388,633. FELLING IMPLEMENT. BOYD T. DICKINSON, Billings, Mont. Filed Oct. 5, 1920. Serial No. 414,784. 2 Claims. (Cl. 17—30.)



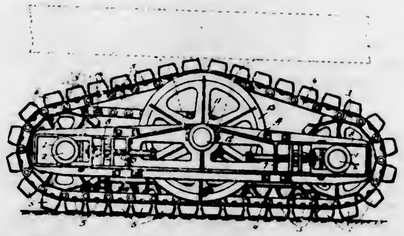
1. A felling implement comprising a handle, and a head on the handle including a body portion, and a wedging element on one side of the body portion connected with the latter by a reduced neck, said wedging element being fan-shaped and terminating at its outer end in a convex working edge rounded transversely, the width of said element being greater than the longitudinal extent of the body portion.

1,388,634. MEANS FOR POSITIONING LAMPS. EDWARD A. EVERETT, New York, N. Y. Filed June 14, 1919. Serial No. 304,260. 1 Claim. (Cl. 240—44.)



In combination a lamp and socket, a lamp housing having an opening, a loose block placed in said lamp housing and locked in position by a screw, a horizontal arm secured to said block by a thumb screw and capable of movement in a horizontal plane, said arm having jaws offset at a right angle and having a clamping screw, said lamp socket clamped to said arm by said clamping screw, said thumb screw located opposite said opening, the screws for locking said block and clamping said socket being in a direct line with said opening.

1,388,635. SPOOL-HEAD. CLARENCE HARRY FORNEY, Jersey City, N. J., assignor to Forney Fibre Company, Jersey City, N. J. Filed Aug. 6, 1919. Serial No. 315,585. 3 Claims. (Cl. 242—119.)

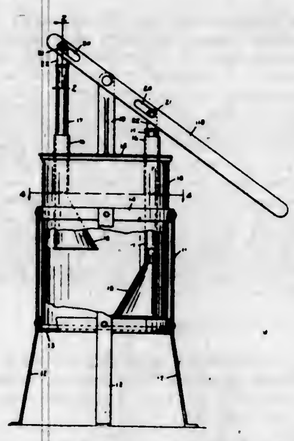


1. A fibrous disk shape spool head having its outer integral edge portion hardened and other integral portion adjacent its axis comparatively soft; substantially as described.

1,388,636. KITCHEN UTENSIL. EDWARD F. FRAUTNICK, Elgin, Ill. Filed Apr. 16, 1921. Serial No. 461,983. 8 Claims. (Cl. 53—3.)

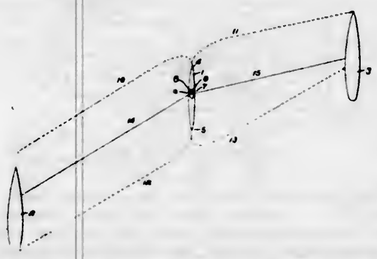
1. A device of the class described, comprising a receptacle having a perforated side wall and a top wall, and means for sealing the bottom end of the receptacle, the means comprising a door, and means co-acting with the top wall for securing the door in a closed position relative to the receptacle.

1,388,637. MULTIPEDAL TRACTOR. JAMES C. FRENCH, Chicago, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed Sept. 24, 1917. Serial No. 192,896. 17 Claims. (Cl. 180—91.)



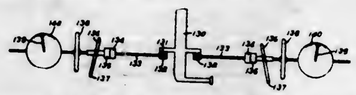
1. In a traction device, an endless belt composed of sprocket chains and treads held together by said chains

to travel on the ground, a frame, rotary elements on said frame to support and operate said belt, rotary members to support the frame on the lower portion of said belt, rotary means on said frame to prevent lateral displacement of said belt, said members engaging the treads centrally between the sprocket chains, so that said members roll on the unconnected portions of said treads, and said means confiningly engaging both sides of each of said sprocket chains at opposite sides of the path of travel of said members, whereby said engaging means are supported by the connected portions of the treads.



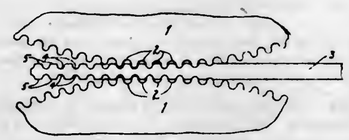
1,388,638. [WITHDRAWN.]

1,388,639. BUTTER-MAKING MACHINE. CHARLES H. HALT, New Haven, Ind., assignor to Non-Explosive Appliance Company, Fort Wayne, Ind., a Corporation. Filed Oct. 18, 1919. Serial No. 331,633. 3 Claims. (Cl. 259—112.)

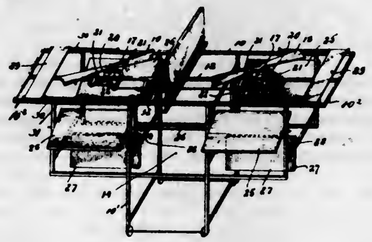


1. A churn including an elongated elliptical tank, a lid therefor, a pair of oppositely located tubular guides in said lid near the ends thereof, dasher members vertically reciprocatory in said guides, dashers secured eccentrically to the lower ends of said members and extending inwardly toward each other at their lower ends, so that one dasher operates at each end of the tank and extends almost to the middle thereof, a handle pivotally connected with the upper ends of said members, and means between said pivotal connections for fulcruming the handle lever between its connections with said dasher members, whereby the dashers will have relatively great vertical movement.

1,388,640. APPARATUS FOR CONTROLLING TORPEDO-FIRING. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Aug. 5, 1915, Serial No. 43,879. Renewed Jan. 11, 1921. Serial No. 436,614. 23 Claims. (Cl. 114—235.)



1. Apparatus for controlling torpedo firing comprising sighting means, a torpedo, direction maintaining apparatus for the torpedo, and means controlled by said sighting means to modify the action of said direction maintaining apparatus upon said torpedo, said means being

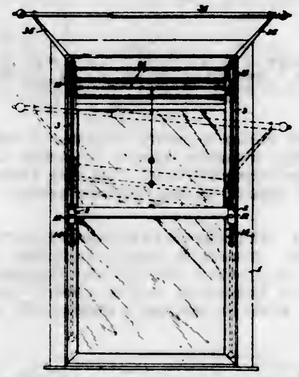


adjustable further to modify the action of said direction maintaining apparatus, whereby the actual path of the discharged torpedo is varied from that which otherwise would be imparted by said modifying means.

1,388,641. METHOD OF AND MEANS FOR EMBOSSING PAPER. HERMAN R. HARRIGAN, Holyoke, Mass., assignor to American Writing Paper Company, Holyoke, Mass., a Corporation of New Jersey. Filed Apr. 9, 1919. Serial No. 288,704. 3 Claims. (Cl. 101—23.)

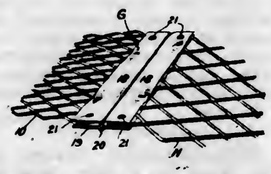
1. The method of embossing paper consisting in passing the paper between compression rolls which have therein continuous indentations parallel with the axes of said rolls, and arranged to leave uncompressed diametrically opposite portions of the paper on opposite sides thereof, the unindented portions of said rolls penetrating the paper without meeting, and the indented portions of said rolls at their deepest parts contacting with the normal exterior surfaces of the paper.

1,388,642. FLYING-MACHINE. WENZEL HAUPT, New York, N. Y. Filed Oct. 8, 1920. Serial No. 415,526. 27 Claims. (Cl. 244—15.)



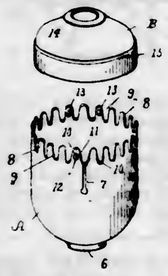
1. In a flying machine of the helicopter type, oppositely and horizontally revolving propellers, driving planes arranged below said propellers and capable of adjustment to different angles of inclination relative to said propellers and balancing planes arranged below said driving planes and capable of adjustment to different angles of inclination relative to said driving planes.

1,388,643. WINDOW-FIXTURE. AUGUSTIN HELLMUTH, West New York, N. J. Filed May 25, 1920. Serial No. 384,141. 10 Claims. (Cl. 156—27.)



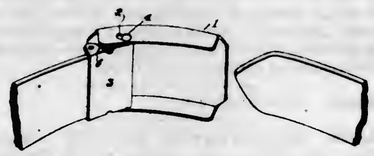
8. A fixture for a window comprising a pair of rods fitted to opposite sides of the window frame for independent vertical adjustment, a link pivoted to the upper end portion of each rod, for movement in a plane parallel with the window, a shade roller having its flat end pin non-rotatably supported in the free end of one of the

links, a member secured to the other end of the roller for rotatably mounting the same and having an articulate



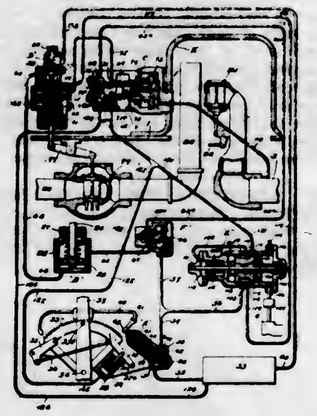
connection to the free end of the other link for permitting movement of the member parallel with that of the links.

1,388,644. GUARD DEVICE. THOMAS R. HERBERT, Jr., Philadelphia, Pa., assignor to Consolidated Expanded Metal Company, Braddock, Pa., a Corporation of Pennsylvania. Filed Mar. 15, 1919. Serial No. 282,970. 3 Claims. (Cl. 74—56.)



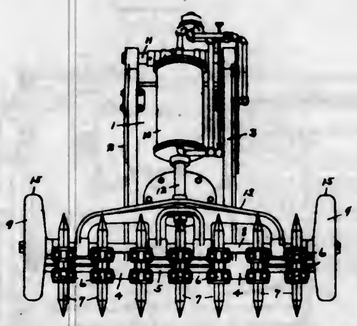
1. A device suitable for guards and the like, comprising in combination a frame, a plurality of sheets of open mesh fabric, and means for splicing the fabric consisting of a member having oppositely disposed U shaped portions, said splicing member being provided with means for attachment to the frame.

1,388,645. ELECTRIC-LAMP SOCKET. DAVID HJORTH, Bridgeport, Conn., assignor to The General Machine & Manufacturing Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 27, 1919. Serial No. 285,522. 3 Claims. (Cl. 173—362.)



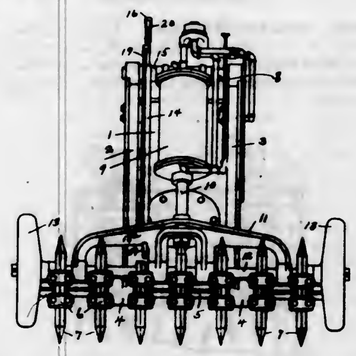
1. An incandescent lamp socket comprising a shell having a series of notches in the upper end thereof defining a series of resilient teeth, some of said teeth being provided with outwardly struck portions and a cap having an inwardly projecting ledge with the struck out portions of said teeth engaging the upper edge of said ledge for retaining the cap upon the shell.

1,388,646. BELT-BUCKLE. ERNEST N. HUMPHREY, New Britain, Conn. Filed Apr. 29, 1921. Serial No. 465,464. 1 Claim. (Cl. 24—191.)



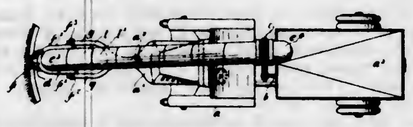
In a belt buckle, a body having rearwardly extending flanges along its upper and lower edges forming a belt passage between them, an oblique slot in each flange near one end thereof, a swinging lever pivotally mounted at one end in said slots and slidable therein, a belt gripping portion on the lever adjacent to the pivotal portion thereof, means for securing one end of a belt to said lever, the other end of the belt being arranged to pass between the body and the belt gripping portion of the lever, whereby when said lever is straightened out the belt gripping portion thereof will grip the belt between it and the back of the body, and whereby tension on the belt will tend to slide the lever bodily in a direction to cause the edges of the oblique slots to move the lever and belt gripping portion thereof into more intimate gripping contact with the belt.

1,388,647. CONTROL OF BOOSTER-MOTORS FOR LOCOMOTIVES. HOWARD L. INGERSOLL, White Plains, N. Y. Filed Oct. 20, 1919. Serial No. 331,876. 50 Claims. (Cl. 105—48.).



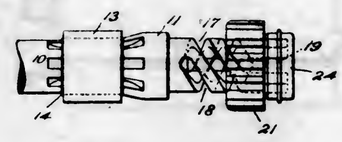
50. In combination with the main driving means of a locomotive, a booster motor and means whereby the booster motor can not be operatively connected with the locomotive while the main driving means is in operation or the locomotive is drifting faster than a predetermined speed.

1,388,648. GAGE-WHEEL FOR SCARIFYING DEVICES. HENRY D. JONES, Springfield, Ohio, assignor to The Buffalo-Springfield Roller Company, Springfield, Ohio, a Corporation of Ohio. Filed Sept. 13, 1920. Serial No. 410,069. 4 Claims. (Cl. 37—50.)



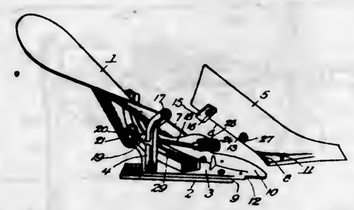
1. In a scarifying apparatus, a series of scarifying tools, gage wheels associated therewith, the side of each wheel being inclined outwardly away from its adjacent tool, for the purpose specified.

1,388,649. SUPPORT FOR SCARIFYING DEVICES. HENRY D. JONES, Springfield, Ohio, assignor to The Buffalo-Springfield Roller Company, Springfield, Ohio, a Corporation of Ohio. Filed Sept. 13, 1920. Serial No. 410,070. 3 Claims. (Cl. 37—50.)



1. In a scarifying apparatus, a series of scarifying devices arranged to be raised and lowered, a support for holding said devices in raised position, and a pivoted latch on said support for locking the same to said devices.

1,388,650. MOTOR-TRUCK EXCAVATOR. LYMAN COLT JOSEPHS, Jr., New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 27, 1920. Serial No. 384,540. 1 Claim. (Cl. 37—32.)

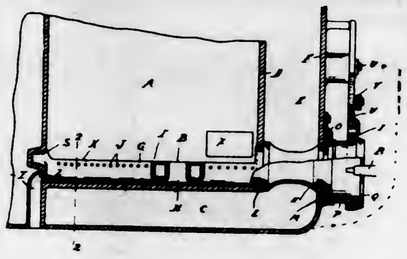


In a motor vehicle, in combination with the prime mover therefor, a power operated excavator head, a support therefor pivoted on the vehicle body and movable in a horizontal plane, a pivotal connection between the head and said support for movement of the head in a vertical plane, operative driving connections between said head and the prime mover and a conveyer pipe movable with the head and terminating in discharge position over the vehicle body.

1,388,651. GEAR-RELEASE. CHARLES H. KLOER, Jersey City, N. J. Filed Aug. 13, 1919. Serial No. 317,121. 19 Claims. (Cl. 74—7.)

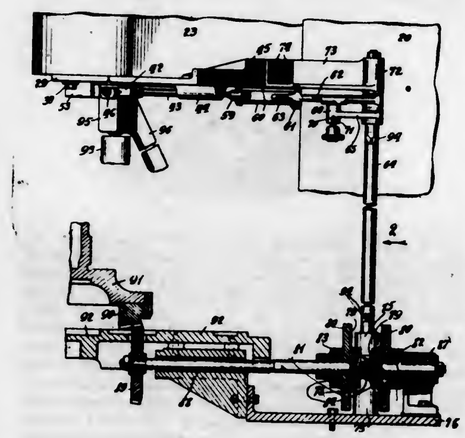
1. Automatic gear shifting means comprising a pinion supporting member with a flexible hollow extension having spiral slots through its wall, a pinion carried loosely on said flexible extension and engaging said slots, and means for rotating said pinion support.

1,388,652. DETACHABLE PLOWSHARE. ALVARO S. KROTZ, Janesville, Wis., assignor to Janesville Machine Company, Janesville, Wis., a Corporation of Wisconsin. Filed Oct. 19, 1918. Serial No. 258,883. 8 Claims. (Cl. 97—18.)



1. A quick detachable plow share construction for plows, comprising a frog and a moldboard secured thereto, a plow share, and mechanism including an element formed with a protuberance which fulcrums and slides on the smooth under surface of the frog to draw the plow share firmly into position, and adapted to permit detachment of the share from said element merely by a reverse adjustment of the mechanism, said frog having a portion with a notch which extends under the plow share, with a projection on the under side of the plow share to enter said notch, and said element comprising a yoke with a hook to engage said projection, and having portions which engage the under side of the frog to provide the fulcrum therefor, a rod connected to said yoke, a bearing for said rod, and a nut on said rod to engage said bearing, the rod being disposed at an angle to the yoke, so that tightening of the nut causes the yoke to operate as a lever on its said fulcrum, thereby to hold the under side of the plow share tightly against the upper surface of the frog, as well as to draw the plow share against the edge of the moldboard.

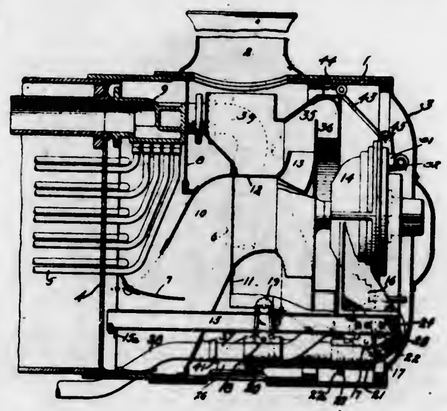
1,388,653. COMBINATION COAL AND GAS RANGE. JOHN H. LANE, Detroit, Mich., assignor to Peninsular Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 16, 1918. Serial No. 254,174. 6 Claims. (Cl. 126—36.)



1. In a combination coal and gas stove, an inner casing forming an oven having a grooved bottom and an aperture in alinement with said groove through its end wall, an outer casing spaced from said inner casing to form bottom and side flues, the side wall thereof having an aperture in alinement with an aperture in the inner casing, and a burner extending through said alined apertures having an eccentric portion lying in said groove in one position of ad-

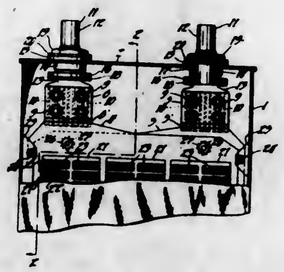
justment and raised above the oven bottom in another position of adjustment, and shoulders on said burner for co-

operating with the inner and outer side walls to form a sealed joint.



1,388,654. MECHANISM FOR CUTTING OFF MOLTEN GLASS. FRANK H. LOBB, Millville, N. J., assignor to United Bottle Machinery Co., New York, N. Y., a Corporation of New York. Filed Sept. 17, 1917. Serial No. 191,665. 19 Claims. (Cl. 49—55.)

10. In a device of the character described, a discharge member having an outlet, a shearing member movable across and in contact with said outlet, a carrier located on the side of the shearing member opposite to that facing the outlet, said carrier and shearing member being provided, on their adjacent faces, with coöperating rib and groove formations transverse to the path of the shearing member, said rib being in contact with the groove along a single line parallel to the path of the shearing member, and the shearing member being adapted to rock on the carrier transversely of said path, and means for moving the carrier.

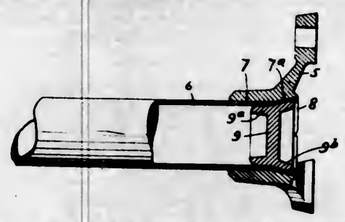


11. In a device of the character described, a discharge member having an outlet, a shearing member movable across and in contact with said outlet, a movable carrier for said shearing member, the said carrier and shearing member being provided, one with a rib extending transversely of the path of the shearing member and curved in said direction at its free surface, and the other with a transverse groove with the surface of which said curved surface of the rib is in rocking engagement, and means for operating said carrier.

1,388,655. LOCOMOTIVE DRAFT APPLIANCE. NATHAN M. LOWRY, Bellevue, Pa., assignor to The Locomotive Stoker Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 3, 1919. Serial No. 308,683. 7 Claims. (Cl. 110—162.)

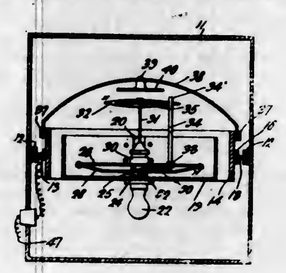
5. Supporting means for locomotive fan exhausting apparatus, comprising a frame and means for slidably mounting said frame for movement into or out of the smoke box and means for securing the frame to the adjacent structure when moved into the smoke box.

1,388,656. STORAGE BATTERY. LAMAR LYNDON, West Orange, N. J., assignor to Edison Storage Battery Company, West Orange, N. J., a Corporation of New Jersey. Filed Apr. 30, 1919. Serial No. 293,791. 5 Claims. (Cl. 204—29.)



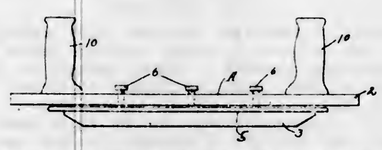
1. In a storage battery having a set of positive and a set of negative elements or plates, means for rigidly and electrically connecting the plates of each set together comprising spacing members each disposed between a pair of adjacent plates in the set, a face of each of said spacing members being provided with spaced ribs in contact with the respective adjacent plate, substantially as described.

1,388,657. ART OF JOINING METAL PARTS. HARRY P. MACDONALD, Montclair, N. J., and WILLIAM S. THOMSON, Plantsville, Conn., assignors to The Snead & Co Iron Works, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 4, 1919. Serial No. 287,570. 3 Claims. (Cl. 285—56.)



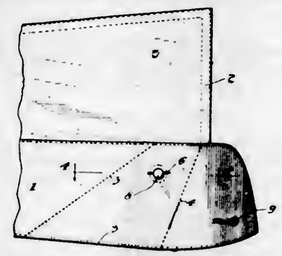
1. As a new article of manufacture, a torque transmitting device comprising a tubular member, a spider member adapted to connect said tubular member to an adjacent part, said spider having a hub to receive an end of the tubular member, the opening in the hub being enlarged

to a non-circular section of greater diameter than the tubular member, a wedge for expanding the tube in such en-



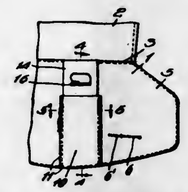
larged portion, and lug means on the spider member overlying the end of the tubular member and the wedge.

1,388,658. MAGNETIC CONTROLLING DEVICE. CESAR MARSHALL, New York, N. Y. Filed Oct. 16, 1917. Serial No. 196,833. 2 Claims. (Cl. 102—3.)



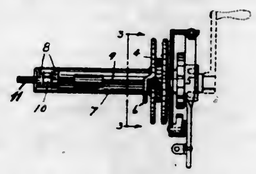
1. A circuit closer including a non-magnetic casing, a gimbal mounted in said casing and consisting of two members each insulated from the other and from the casing, a rotatable body carried by the inner member of the gimbal, said body being non-magnetic, a plurality of permanent magnets carried bodily thereby, said magnets being in parallel with their poles in the same direction, a vertical shaft carried axially of the rotatable member, a magnetic needle mounted for independent movement upon the upper end of said shaft with its north pole in an opposite direction to the north poles of the first mentioned magnets, a Y-shaped non-magnetic antenna carried by the rotatable body and disposed to have the terminals thereof fitting astride one end of the magnetic needle, contact members carried by the magnetic needle for engaging the antenna, said contact members being normally held out of contact with the antenna due to the magnetic affect on the first mentioned permanent magnets upon the magnetic needle, and circuit connections with the shaft and antenna and insulated from each other whereby the circuit is normally open.

1,388,659. SKATE-SHARPENER. VERNON V. MITCHELL, Whitney Point, N. Y. Filed Aug. 28, 1919. Serial No. 320,342. 3 Claims. (Cl. 76—83.)



1. A skate sharpener consisting of a handle mounting plate, a guide flange projecting from beneath the same, a rectangular longitudinal recess extending the length of the guide flange, adapted to receive and hold a flat file, means for removably clamping said file therein, and a flat file so mounted therein.

1,388,660. COLLAR. JAMES L. MURPHY, Chicago, Ill. Filed Mar. 6, 1919. Serial No. 280,925. 2 Claims. (Cl. 2—69.)



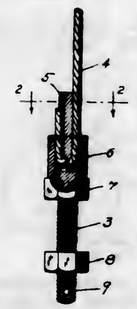
1. In a collar having the two ends of the neck band constructed to overlie, and provided with a button hole in the back and in each of the ends to engage the buttons carried by the shirt band, the neck band of the collar being formed of two layers of material secured together along their edges, and having near one end a pocket formed therebetween and opened at the bottom edge of the band, with a button hole formed in the outermost wall of the pocket, the opposite end of the collar extended to be positioned between the band and the folded over part to overlie the button hole, and having a registering button hole formed therein.

1,388,661. COLLAR. JAMES L. MURPHY, Chicago, Ill. Filed July 31, 1920. Serial No. 400,414. 8 Claims. (Cl. 2—69.)

1. In a collar of the kind described and in combination, a neck-band having the two ends of the same constructed to overlie, and provided with buttonholes for engaging the buttons carried by a shirt-band, and a stay detachably carried by said neck-band adjacent one end to one side of the buttonhole at said end and provided with engaging means, the opposite end of the neck-band provided with means for coöperating with said engaging means.

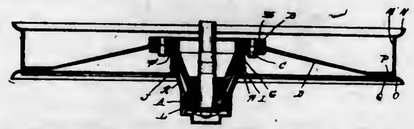
1,388,662. MEANS FOR CONNECTING FLEXIBLE ELEMENTS TO DRUMS. WYMAN L. OFFICER, Warren, Minn. Filed May 25, 1920. Serial No. 384,215. 1 Claim. (Cl. 254—150.)

In a device of the class described, the combination of a shaft journaled in plates for rotation, flanged winding drums carried by the shaft, a slot formed in one of the flanges of each drum for extending a flexible element through it, an angular guard provided on said flange and extending across the slot for holding the flexible element in place, spaced lugs provided on each drum



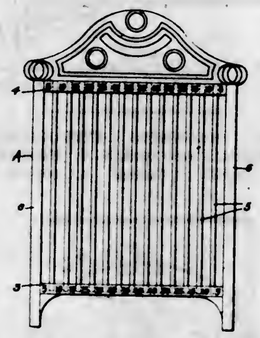
hub with eyes in them, a threaded bolt secured to the flexible element and passed through the said eyes, and a nut threaded on the bolt between the spaced lugs, whereby the flexible element is adjustably secured.

1,388,663. ROPE-END HEAD. WYMAN L. OFFICER, Warren, Minn. Filed May 25, 1920. Serial No. 384,217. 1 Claim. (Cl. 24—124.)



In a device of the class described, the combination of a forked plate with a raised groove, shoulders provided integrally on the groove and plate, eyes provided in the shoulders, rivets extending through the eyes for clamping a cable to it, and means for connecting it to a lug.

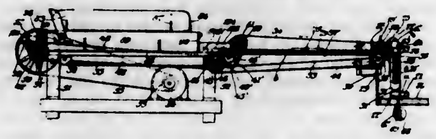
1,388,664. ROPE-END HEAD. WYMAN L. OFFICER, Warren, Minn. Filed Apr. 7, 1921. Serial No. 459,506. 1 Claim. (Cl. 24—124.)



In a device of the class described, the combination of a threaded bolt carrying a nut and a sleeve, said bolt having an eye in it connected by ridged grooves, a cable extending through the eye and bent over into the grooves by the sleeve when the nut is turned up snug against them, and means for attaching it to a lug and adjusting the effective length of the cable down to a minimum.

1,388,665. VEHICLE-WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed May 3, 1917. Serial No. 166,079. 6 Claims. (Cl. 301—9.)

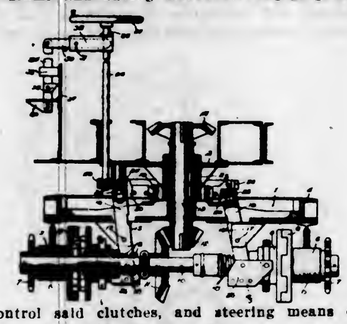
1. In a vehicle wheel, the combination with a centrally-apertured disk, of a hub for engaging the aperture in said disk and provided with an outwardly-extending flange on one side of the disk, driving pins projecting laterally from said flange and engaging registering apertures in the disk, a reinforcement for the central portion of the disk correspondingly apertured for engagement with said driving pins and provided with an outwardly-extending annular flange, and a hub-cap having a threaded engagement with said hub and a grooved bearing for engaging the outer end of said annular flange.



1,388,666. GAME. WALTER F. ROOT, Philadelphia, Pa., assignor of one-half to Frederick Beissel, Darby, Pa. Filed Apr. 17, 1920. Serial No. 374,580. 3 Claims. (Cl. 46—59.)

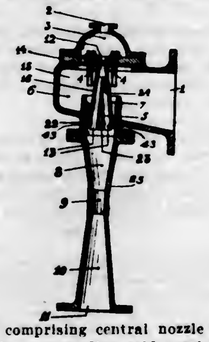
3. A game comprising in combination a frame adapted to rest on the floor and provided with a series of spaced bars, and a hoop of a diameter greater than the distance between any two bars adapted to be tossed toward the frame to bounce between two bars, the various spaces being given differing values.

1,388,667. [WITHDRAWN.]



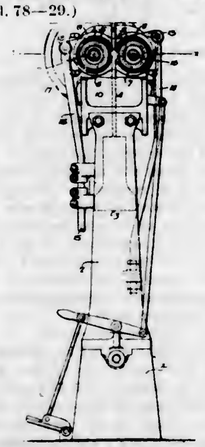
1,388,668. SHUCK-FEEDING MECHANISM FOR BOX-FILLING MACHINES. HENRY C. SCHUMACHER, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1920. Serial No. 353,035. 20 Claims. (Cl. 193—48.)

11. The combination with a chute, of means for feeding shucks successively in endwise relation to each other into said chute, from one side of the latter, said means including pressure mechanism for acting upon the top of each succeeding shuck before its delivery to the chute, and means for bodily depressing each succeeding shuck as rapidly as it is fed into the chute.



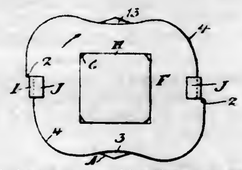
1,388,669. COMBINED DRIVING AND STEERING GEAR. CHARLES E. STAHL, Winthrop Harbor, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed Oct. 18, 1919. Serial No. 331,604. 18 Claims. (Cl. 180—17.)

1. In driving and steering gear for motor driven vehicles, the combination of oppositely arranged clutches, one for each side of the vehicle, a truck frame on which said clutches are supported, a turn-table body supported on the truck frame to turn about a vertical axis, power transmitting instrumentalities for communicating power to said clutches from a source on said body and through said axis thereof to drive the vehicle, a cam mounted to rotate about said axis, mechanism supported on said truck frame and having means for engaging said cam



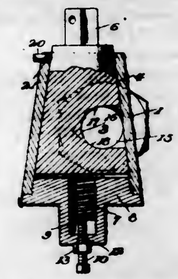
to control said clutches, and steering means on said body to rotate said cam.

1,388,670. FLUID-COMPRESSING APPARATUS. ROBERT SUCZEK, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 21, 1918. Serial No. 212,936. 56 Claims. (Cl. 230—13.)



1. An ejector comprising central nozzle structure, and a group of nozzles surrounding said nozzle structure, the total throat area of said central nozzle structure being greater than the total throat area of said group of nozzles.

1,388,671. BOARD-HAMMER. HOWARD TERHUNE, Cleveland, Ohio. Filed Sept. 1, 1920. Serial No. 407,489. 3 Claims. (Cl. 78—29.)

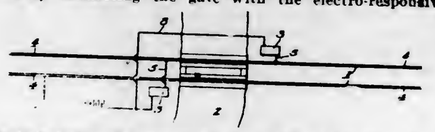


1. The combination in a board hammer, of standards; a hammer guided in the standards; a board attached to the hammer; two rollers arranged to engage the board and to lift the hammer; bearings at the upper end of the structure; rocking frames mounted eccentrically in the bearings; means for turning the rocking frames; bearings for the rollers mounted in the frames; and a driving shaft for each roller having its bearing in the rocking frame and passing freely through an opening in one end of the roller and attached at its inner end to the opposite end of the roller so that the wear of the shaft in its bearing will not affect the position of the roller in respect to the board.

1,388,672. LUBRICATOR. WILLIAM MCCRAE THURSBY, Watrous, Saskatchewan, Canada. Filed Apr. 21, 1921. Serial No. 463,271. 2 Claims. (Cl. 184—48.)

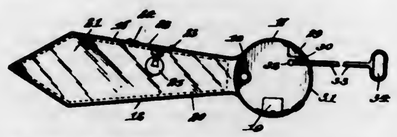
2. In a lubricator, in combination a grease cup provided with an internal thread; a plug, in part, externally threaded and adapted to co-act with said cup to feed the grease; a removable plate having a substantially central aperture shaped to conform to the shape of the external stem of said plug so that these parts cannot independently move to any considerable extent around the axis of the lubricator; a pair of resilient dogs externally carried by said cup on opposite sides thereof and each having an in-turned hook-shaped end which overhangs said plate; the periphery of said plate being rounded in opposite corners and recessed in opposite sides, and further provided with stops to co-act with said dogs, for the purpose specified.

1,388,673. VALVE. THOMAS EDGAR TRAINER, San Antonio, Tex. Filed Dec. 3, 1919. Serial No. 342,150. 2 Claims. (Cl. 251—92.)



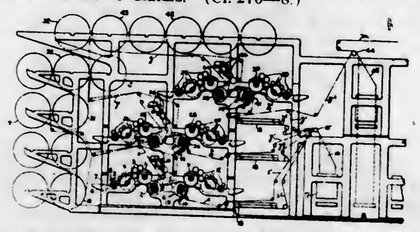
1. Valve mechanism including a casing having an inlet and an outlet, and a valve seat, said inlet and said outlet being in a direct line which is offset from the center line of said valve seat, and a solid plug having a passageway in one side adapted to communicate with said inlet and outlet, the walls of the passageway being substantially right angular at the inlet side of the plug and substantially circular throughout the main portion of its length and at the outlet side, said circular portion providing, in the full open position of the plug, a direct and unvarying line between the inlet and outlet of the valve casing.

1,388,674. CROSSING-GATE. SPIRO J. TSENES, St. Louis, Mo. Filed Mar. 29, 1921. Serial No. 456,728. 3 Claims. (Cl. 246—128.)



1. In combination with rails insulated from other rails of a track to provide a block over which a rolling stock travels, and electric conductors connected to the rails in

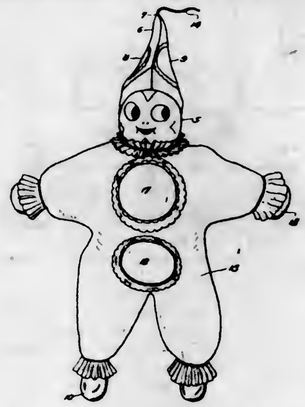
the block and in circuit with a source of electricity, of electro-responsive devices in said circuits, pivotally supported weight influenced gates, adjustable springs influencing the gates against their weighted means, means loosely connecting the gate with the electro-responsive



means, and buffer means actuated by the electro-responsive means when the same is energized and influences the gates to closed position when a rolling stock travels in the block, and said buffer means also influencing the gates against their weighted means for preventing the rapid swinging of the gates to their elevated positions.

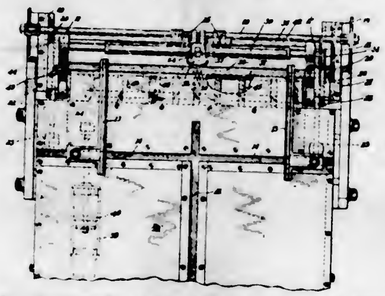
1,388,675. VEHICLE-SIGNAL. THOMAS TURNER, JOHN E. KESSLER, and WILLIAM L. HIGGINS, Huntington, W. Va. Filed Feb. 9, 1920. Serial No. 357,393. 1 Claim. (Cl. 177—311.)

A vehicle signaling device comprising a pivotally mounted hollow casing having a substantially circular base and a pointed arm extending therefrom, said casing being divided into a switch compartment and a signal compartment, the latter including the arm and having opposite transparent walls, an electric lamp located within the signal compartment and included in an electric circuit, an operating lever having one end pivotally secured within the switch compartment and its opposite end extending through a slot in the casing, a normally open switch located in the switch compartment in the path of the operating lever and connected in the lamp circuit, whereby when the signal is moved to an active position, the lever will engage and close the switch.



1,388,676. PRINTING-PRESS. JOSEPH J. WALSER, Ann Arbor, Mich., assignor to Goss Printing Press Company, a Corporation of Illinois. Filed Mar. 12, 1920. Serial No. 365,283. 8 Claims. (Cl. 270—8.)

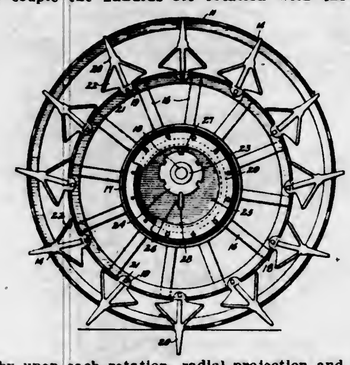
1. A printing press including in combination a rotary printing couple printing one side of a web, a rotary couple printing the other side of the web, and a rotary late news device separate from but located adjacent to the printing couple, and means directing the web alternatively primarily to the printing couple or to the late news device to cause the late news device to selectively print upon one side or the other of the web.



1,388,677. DOLL. BESSIE M. WEATHERLY, Rome, Ga. Filed Aug. 9, 1920. Serial No. 402,133. 3 Claims. (Cl. 46—40.)

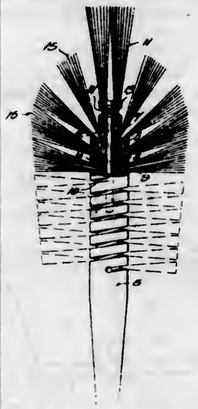
1. A doll of the class described, comprising a stuffed fabric body and foot and hand members, flexible strips connecting said foot and hand members to said body, and a head carried by the upper end of said body and having a comparatively stiff connection therewith, a loose bifurcated dress encompassing said body and limbs, the legs

and sleeves being gathered at their free ends and secured to said hands and feet, adjacent their connection with said strips, and combined props and ornaments mounted on the front of said dress and adapted to assist in holding the doll in erect sitting posture.



1,388,678. SHEET-FEEDING MECHANISM. WILLIAM A. WEIGHTMAN and CHARLES H. NITSCH, Philadelphia, Pa., assignors to Stokes and Smith Company, Summerdale, Pa., a Corporation of Pennsylvania. Filed Oct. 31, 1919. Serial No. 334,646. 12 Claims. (Cl. 271—29.)

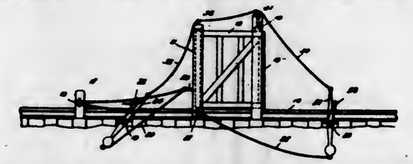
2. In sheet feeding apparatus, a stationary support for a pack of sheets, a reciprocating carrier, sheet engaging means movably mounted on said carrier and located beneath the pack, means for shifting said engaging means during the forward movement of said carrier to engage the end of said bottom sheet and operable during the return motion of the carrier to retract the engaging means and bend said end away from the pack, means controlled in accordance with carrier movement and having sheet-gripping engagement only substantially at the end of return movement of the carrier for gripping said end, withdrawing the sheet from the pack, and feeding it forward, and means for releasing said sheet engaging means prior to the operation of said gripping means.



1,388,679. TRACTOR-WHEEL. EVERETT HOUSTON WHITING, Santa Rosa, Calif. Filed May 27, 1920. Serial No. 384,659. 8 Claims. (Cl. 301—48.)

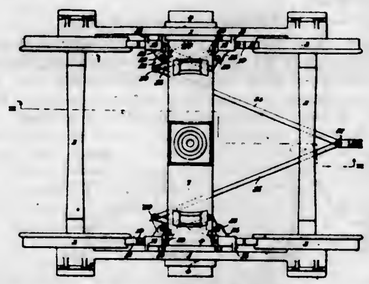
7. A tractor wheel comprising a hollow ground engaging wheel having a plurality of openings in the tread thereof, an axle spindle upon which said wheel is concentrically mounted, a cam secured to said spindle, an annulus mounted on the cam, traction elements pivoted to the outer periphery of the annulus having their free extremities arranged in the openings, said traction elements serving to couple the annulus for rotation with the wheel

whereby upon each rotation, radial projection and retraction of the traction elements will be effected at opposite points in its cycle of rotation.



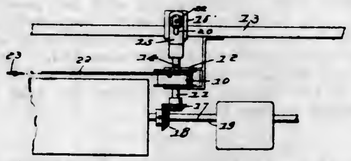
1,388,680. BRUSH. ADOLPH RICHARD WIENS, Omaha, Nebr. Filed Aug. 18, 1919. Serial No. 318,161. 2 Claims. (Cl. 141—7.)

1. A brush of the class described comprising a wooden stem having circumferentially extending bristle seating grooves adjacent one end and an axial bore in said end, a combined reinforcing and end tuft carrying rod disposed in said bore and having one end projecting beyond the end of the stem, end tuft bristles, means for securing the end tuft bristles to the exposed end of the rod, the other or shank portion thereof serving to reinforce said stem, bristles disposed in said grooves, and a retaining wire wound in the core grooves to secure the bristles therein, one end being attached to the stem and the other end anchored to said rod between the end of the stem and the end tuft bristle securing means.



1,388,681. AUTOMATIC TRAPDOOR FOR MINES. WILLIAM W. WINGO, Wilburton, Okla. Filed May 14, 1920. Serial No. 381,351. 2 Claims. (Cl. 246—299.)

1. In combination with a track way, a vertical, pivoted, gravity controlled door disposed transversely of the track way, rock shafts journaled transversely of the track way on opposite sides of the door, car engaging lugs carried by the rock shafts and positioned in the track way, weighted levers carried by the outer ends of the rock shafts, an offset latch post and latch carried thereby, flexible elements connecting the said levers with the gate and latch whereby the gate is open when the

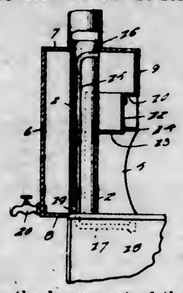


rock shafts are actuated and automatically closed after the car passes the gate.

1,388,682. RAILWAY-CAR BRAKE. JOHN WISNIEWSKI, Milwaukee, Wis. Filed Oct. 19, 1920. Serial No. 417,970. 8 Claims. (Cl. 188—53.)

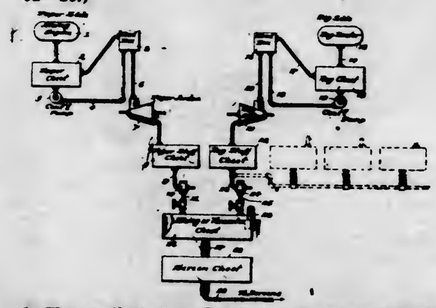
1. A railway car brake comprising in combination with the side bars of a truck frame, mounting brackets, a lever pivoted in each bracket, a brake shoe resiliently mounted in the brackets, a foot extension carried by each lever for engagement with an adjacent brake shoe and operating means for the levers.

1,388,683. PULLING APPARATUS FOR AUTOMOBILES. JOSEPH H. WOOD, Blanks, La. Filed June 2, 1920. Serial No. 385,875. 1 Claim. (Cl. 254—166.)



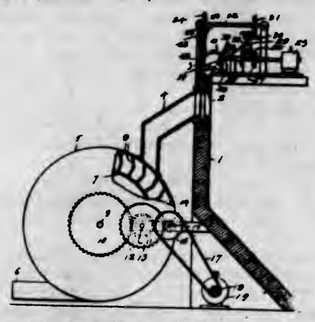
A pulling attachment for motor vehicles having a revoluble drum, a pulling cable having one terminal attached to said drum, a drum shaft having a key and slot connection with the drum to permit relative axial movement of the same with respect to the drum, a gear couple of which one unit is attached to one terminal of said shaft and the other unit designed for attachment to the transmission shaft of the vehicle, a guide for attachment to the vehicle frame, the said drum shaft being provided with a head carried in said guide, and means for locking the head in adjusted positions in the guide for the purpose specified.

1,388,684. WATER-HEATER. WILLIE WRIGHT, Thomasville, Ga. Filed Nov. 8, 1919. Serial No. 336,640. 1 Claim. (Cl. 126—34.)



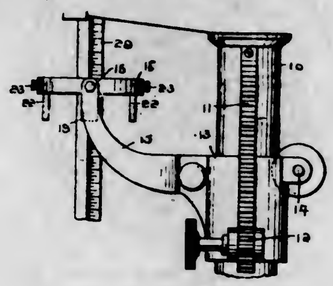
A water heater for stoves comprising a chamber having a smoke pipe projecting upwardly therethrough, the rear wall of said chamber being bent backwardly to form a curved water circulating space about said smoke pipe, said chamber having an overhanging part at the upper front portion thereof, and a water circulating tube open-

ing into the overhanging part and passing downwardly through said pipe and into the fire box of the stove and



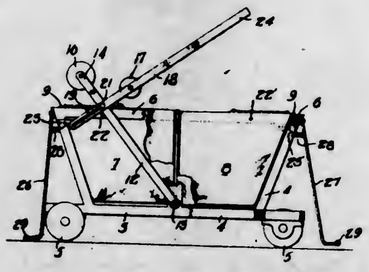
also opening into the lower part of the curved space beforementioned.

1,388,685. METHOD OF AND APPARATUS FOR PRODUCING FELT PAPER OR FELT. GEORGE R. WYMAN, East Walpole, Mass., assignor to Bird & Son, Inc., East Walpole, Mass., a Corporation of Massachusetts. Filed Sept. 3, 1918. Serial No. 252,374. 4 Claims. (Cl. 92—20.)



1. That method of producing felt for use in the manufacture of roofing material, which consists in producing paper stuff and passing it through a paper jordan to a paper stuff chest; producing rag stuff and passing it through a rag jordan to a rag stuff chest; discharging said stuffs in the proper portion, to produce a felt which has the desired degree of absorptiveness, into a mixing chest; then discharging such admixed pulp into a chest leading to screens; and finally forming the sheet from said admixed screened stuff.

1,388,686. GATE-OPERATING MECHANISM FOR WATER-WHEELS. WILLIAM ZAUGG, Chattanooga, Tenn. Filed Apr. 16, 1920. Serial No. 374,375. 3 Claims. (Cl. 253—136.)

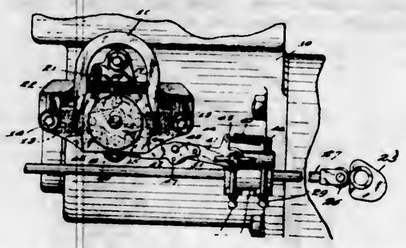


1. In a gate operating mechanism for the purpose described, means operable to move the gate in opposite directions, and control means operable through movement of the gate to determine the direction of movement of the first means.

1,388,687. ENGRAVING-MACHINE. CHARLES RALPH ZIMMERMAN, Memphis, Tenn. Filed July 3, 1920. Serial No. 393,948. 6 Claims. (Cl. 33—24.)

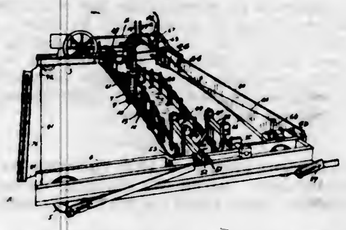
1. In a universal fulcrum for the transmitter of an engraving machine, an intermediate supporting element having an adjustable pivotal mounting, recessed members carried by the supporting element arranged intermediate the pivotal mountings of the latter, a transmitter engaging element, and adjustable pivotal members carried by the transmitter engaging element relatively engageable in the recesses.

1,388,688. MOP-WRINGER. NICHOLAS BAILHACHE, Berkeley, Calif. Filed Jan. 12, 1920. Serial No. 350,785. 1 Claim. (Cl. 15—12.)



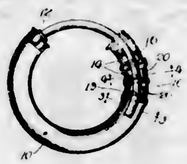
A device of the class described comprising a frame mounted upon wheels and adapted to removably support a pair of buckets thereon, arms pivoted to the opposite sides of said frame, a roller supported by said arms and arranged to overlie either of said buckets, a lever, a roller mounted on said lever and arranged to coöperate with said first roller, and connections between said lever and said arms whereby said second roller may be moved to coöperate with said first roller from either of the opposite sides of the latter.

1,388,689. IGNITER TRIP MECHANISM. ARTHUR B. BAKER, Indianapolis, Ind., assignor, by mesne assignments, to Charles G. McCutchen, Indianapolis, Ind. Filed Aug. 11, 1919. Serial No. 316,735. 13 Claims. (Cl. 123—149.)



1. A magneto having an oscillating movable member which is spring-pressed to one position, in combination with a pushing member, a breakable toggle forming a thrust interconnection between said pushing member and said oscillating movable member, and a toggle-breaking

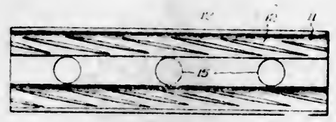
member carried by said oscillating movable member and engaging one part of said toggle to cause the toggle to



break upon a predetermined movement of said oscillating movable member.

1,388,690. PAVING APPARATUS. ROBERT D. BAKER, Detroit, Mich. Filed Aug. 11, 1915. Serial No. 44,916. 26 Claims. (Cl. 94—45.)

1. In a paving apparatus, the combination of a frame, a surfacing section mounted on the frame, a rotary shaft, a knocker on the shaft, and a projection on the surfacing section in the path of the knocker, whereby a vibration of the surfacing section is effected.

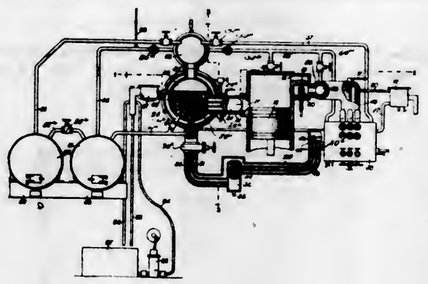


1,388,691. PERMUTATION LOCKING-RING. GEORGE BENTLEY BERGEN, Chicago, Ill. Filed Feb. 6, 1919. Serial No. 275,303. 6 Claims. (Cl. 70—19.)

1. In a locking device, the combination of a hollow, incomplete annulus, an arcuate bolt movable in said annulus and adapted to complete the same, a plurality of locking cylinders mounted within the annulus and adapted to surround the bolt, each of said cylinders being provided with a notch, and projections on said bolt adapted to coöperate with the notches when the cylinders are properly disposed, substantially as described.

1,388,692. METHOD OF MANUFACTURING GUY-CLAMPS. ANTHONY J. BLAESER, Chicago, Ill., assignor to Joslyn Mfg. & Supply Co., Chicago, Ill., a Corporation of Illinois. Filed May 19, 1921. Serial No. 470,778. 4 Claims. (Cl. 24—135.)

1. The method of making guy clamps, which consists in rolling strips of metal to provide on one flat surface a pair of parallel, longitudinal grooves having helical grooves disposed therein, then severing sections of desired length therefrom and punching said sections, and then assem-

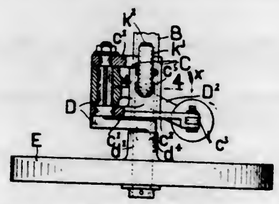


bling promiscuous sections to form properly coöperating clamps for guy cables.

1,388,693. LEAD-FEEDING PENCIL. LORING L. BLAKE, Chicago, Ill., assignor to Blake Pencil Co., Chicago, Ill., a Corporation of Illinois. Filed June 26, 1920. Serial No. 391,970. 10 Claims. (Cl. 120—18.)

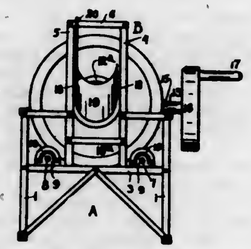
8. In a lead-feeding pencil, a tubular casing, a lead-holder movable therein, a handle member rotatable on the casing, means associated with the handle member and the lead-holder for causing a rotation of the former to move the lead-holder longitudinally of the casing, and a plurality of means for latching the handle member in the casing, the said latching means being arranged for releasing the handle member from the casing after a plurality of successive rotational movements of the handle member with respect to the casing, the handle member having a threaded collar equipped with a lateral recess; the latching means including an inwardly projecting finger fast with respect to the casing and adapted to pass by the said shoulder when the recess in the latter is in alinement with the finger, and a flange fast within the casing back of the finger and threaded to match the threading on the collar.

1,388,694. POWER PLANT. OLE K. BOGSTRAND, Brooklyn, N. Y. Filed May 12, 1917. Serial No. 168,118. 7 Claims. (Cl. 123—122.)



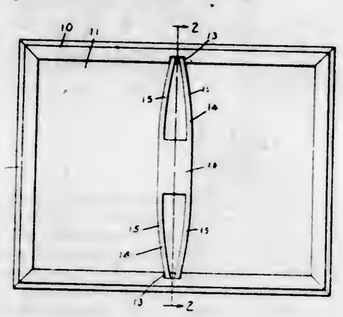
1. In a power plant, the combination with an internal combustion engine having a plurality of cylinders and an exhaust manifold, of a pair of drums having heating pipes communicating with said manifold, means for passing any desired portion or all of the products of combustion either through said manifold or through the heating pipes, and means for supplying water to one of said drums and oil to the other as and for the purpose specified.

1,388,695. VEHICLE-SPRING. FRANZ BÖMINGHAUS, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,095. 4 Claims. (Cl. 301—133.)



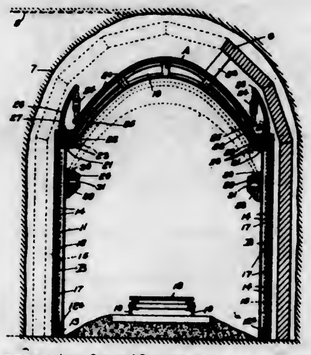
1. In a vehicle suspension mechanism, the combination with an axle of a limb or extension thereof, a bearing

piece in which said limb is mounted parallel to and eccentrically of the axle but with its pin substantially coaxial



with the axle, and a spring arranged to take up relative motion between the limb and axle.

1,388,696. DISCHARGE-CHUTE. JOHN W. BRABANT, La Crosse, Wis. Original application filed July 3, 1917, Serial No. 178,498. Divided and this application filed Nov. 21, 1917. Serial No. 203,088. 7 Claims. (Cl. 193—29.)

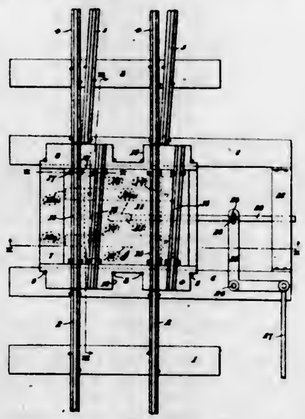


1. In a discharge chute, the combination of a frame, a discharge chute, a loose connection between the center of the chute and the frame permitting the chute to be moved to discharging and to non-discharging position, and means for holding the chute in non-discharging position, the chute when released being adapted to automatically adjust and hold itself in discharging position.

1,388,697. RETAINING MEANS FOR FRAMES. CARL F. BRECHT, Indianapolis, Ind. Filed Oct. 2, 1920. Serial No. 414,345. 3 Claims. (Cl. 40—156.)

1. In combination with a frame having a glass mounted therein, of a display and a backboard for retaining said display in position in said frame, said frame being provided with a plurality of notches therein extending transversely thereof, of a retaining member comprising resilient prongs each prong being adapted to engage a transverse side of a notch for holding said display and backboard therein.

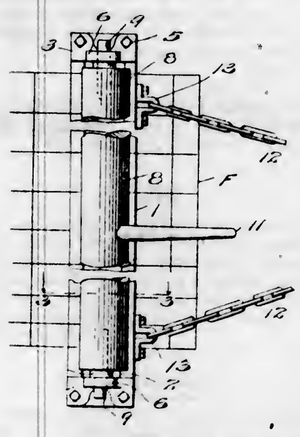
1,388,698. METHOD OF AND APPARATUS FOR WIDENING TUNNELS. CHRISTIAN BRYNOLDT, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed July 22, 1918. Serial No. 246,238. 13 Claims. (Cl. 61—84.)



11. In apparatus for widening the bore of existing tunnels, the combination of a temporary, knockdown shield fitting within the tunnel but clear of the wall to be removed, said shield comprising side and arch members adapted to be detachably secured together to straddle the roadway so as not to interfere with traffic thereon, and means for moving the shield members.

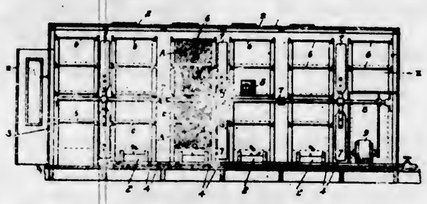
1,388,699. FOOD PRODUCT AND PROCESS OF PREPARING SAME. RALPH W. CROCKER, Chicago, Ill. Filed May 26, 1919. Serial No. 299,898. 3 Claims. (Cl. 99—8.)

1. A method of preparing and preserving food for market, comprising finely chopping and thoroughly mixing meat with milk and a little flour; filling the mixture into molds; subjecting the molds to heat, whereby is accomplished a slight shrinkage and skin formation without substantial change of form or size; filling cans with the masses thus molded; and sterilising and sealing them.



3. A canned food product comprising a combination of finely chopped meat and milk, thoroughly mixed; in pasty condition and having a skin made from the material thereof and externally non-adhering.

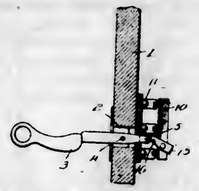
1,388,700. RAILWAY-SWITCH. ALBERT CWOJNA, Carnegie, Pa. Filed May 5, 1921. Serial No. 466,953. 5 Claims. (Cl. 246—430.)



1. A railway switch of the type described comprising in combination with fixed rail sections, a rigidly mounted base plate, a switch rail supporting plate slidably mounted on the base plate and adapted to bodily move the switch rails for alining with the fixed rail sections and cooperating means carried by the base plate and switch rail supporting plate for limiting the movement of the switch rail supporting plate, said means including elongated openings formed in the base plate and cleats carried by the other plate received in said openings and of less length than said openings.

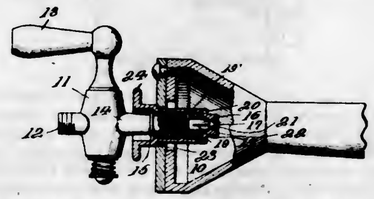
1,388,701. FENCE-WIRE CLAMP. DARGAN P. ELLIOTT, Rimini, S. C. Filed May 14, 1921. Serial No. 469,617. 2 Claims. (Cl. 254—83.)

1. In a device as described, the combination with a grooved base bar having end brackets and open, angular bearing slots in said brackets, of a clamp bar co-acting with said grooved bar, a handle bar on said clamp bar, and eccentric bearing pins at the ends of said clamp bar seated in said slots in the end brackets.



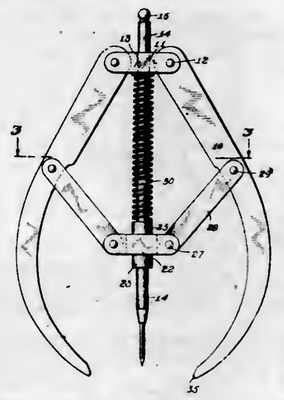
1,388,702. METHOD OF AND APPARATUS FOR DRYING MACARONI AND THE LIKE. ALEXANDER GALLERANI, Pittsburgh, Pa., assignor to H. J. Heinz Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1920. Serial No. 371,638. 6 Claims. (Cl. 34—19.)

1. The herein described method of drying macaroni and the like, hung fringe like from a support, which consists in maintaining the material in an atmosphere adequate to effect drying and, while so maintaining it, subjecting it to swaying impulses, alternately opposite in direction and operative in abrupt succession one upon another.



1,388,703. RECEIVER-HOOK SWITCH. JOHN T. GRAY, Great Falls, Mont. Filed Aug. 13, 1919. Serial No. 317,232. 3 Claims. (Cl. 179—164.)

1. A receiver hook switch for telephones comprising a pivoted receiver hook, fixed contacts, interconnected switch arms coöperating with said fixed contacts and a cam for actuating said switch arms, said cam being disposed in the path of the inner end of the receiver hook and

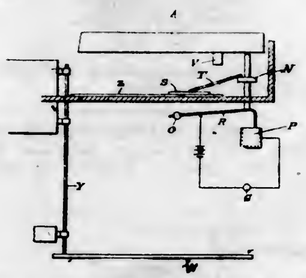


operable thereby to correspondingly close and open the circuits controlled by the switch.

1,388,704. FLOW-REGULATING DEVICE FOR GAS-BURNERS. JOHN T. GRIFFIN, Baltimore, Md. Filed Feb. 24, 1921. Serial No. 447,603. 16 Claims. (Cl. 67—121.)

1. A gas regulator of the character described comprising a regulator tube having means whereby it may be adjustably connected with a burner cock, means for locking said tube in any adjusted position, and regulating means carried by the locking means for controlling the volume of gas discharged through said regulator tube.

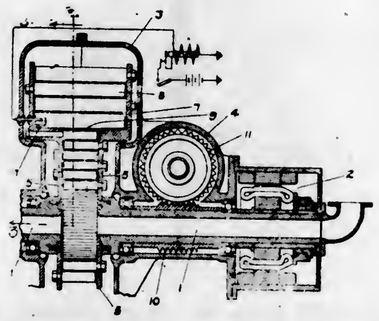
1,388,705. CALIPERS. WILLIAM HENRY HARRIS, Laurium, Mich. Filed Feb. 18, 1921. Serial No. 446,021. 3 Claims. (Cl. 33—191.)



1. A device of the class described comprising legs, a member pivotally connected to said legs, a centering rod rigidly secured to said member, a slide movably mounted on said rod, links operatively connecting said slide with said legs, and a helical spring interposed between said slide and the member to which the legs are pivotally connected.

1,388,706. APPARATUS FOR PRODUCING COLOR-MUSIC. ALEXANDER BURNETT HECTOR, Greenwich, near Sydney, New South Wales, Australia. Filed July 9, 1917. Serial No. 179,460. 3 Claims. (Cl. 84—464.)

1. In an apparatus of the character described, the combination with a keyed musical instrument, of means



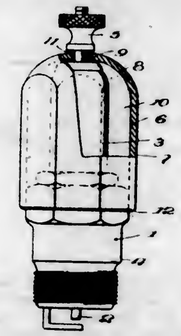
for displaying a variety of colors corresponding to the several notes struck, circuit closing devices operated by the several keys for controlling said displaying means, each of said circuit closing devices comprising a mercury cup and a lever having a portion adapted to dip into said cup, and a coupler mechanism coöperating with said controlling devices for causing a plurality of said colors to be simultaneously displayed upon operation of a single key.

2. In an apparatus of the character described, the combination with a musical instrument and means controlled thereby for producing varied color effects in accordance with the notes sounded by said instrument, of means under the control of the player and including one or more electric contacts and one or more electro-magnetic relays having a time element for varying the operation of said color producing means to produce a sustained effect therein.

3. In an apparatus of the character described, the combination with a musical instrument and illuminating means controlled thereby for projecting a variety of colors in accordance with the notes sounded by said instrument, of means controlled by said instrument for discharging a body of fluid upon which said colors are projected.

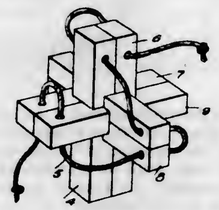
1,388,707. TURBINE. JOHN O. HEINZE, Boyne City, Mich. Filed Oct. 1, 1918, Serial No. 256,449. Renewed Jan. 7, 1921. Serial No. 435,756. 3 Claims. (Cl. 60—41.)

1. A turbine engine having opposed rotor disks, and having an inner compression and suction chamber, and an outer concentric expansion and combustion chamber of greater area than the first chamber.



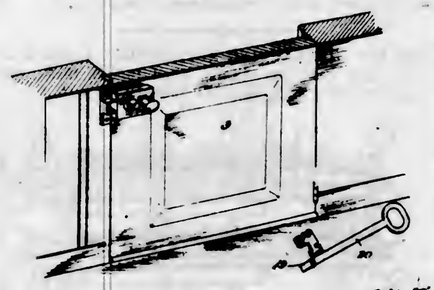
1,388,708. EXTENSION-TABLE. JOHN HERMANS, Vancouver, Wash. Filed Apr. 1, 1920. Serial No. 370,407. 3 Claims. (Cl. 45—113.)

1. An extension table comprising a rigid top frame including slotted cross rails and a central transversely disposed cross piece, adjustable inner and outer leaves normally supported upon the frame in the plane of the cross piece, permanent leaves supported by the cross piece and normally overlying the adjustable leaves, the outer adjustable leaves having cross bars supporting handles, and arms carried by the several adjustable leaves and coöperating with the slots of the cross rails, said arms of



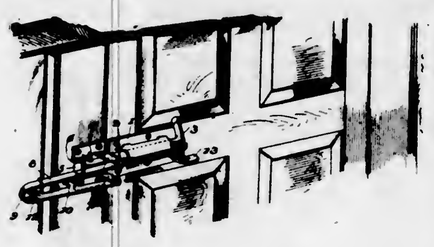
the outer adjustable leaves having angular pieces at their inner ends engageable with the inner ends of the arms of the inner leaves to cause simultaneous outward movement of the inner and outer leaves during a portion of the outward movement of the outer adjustable leaves, as and for the purpose described.

1,388,709. PROTECTING-SHELL FOR SPARK-PLUGS. IRL R. HICKS, Centralia, Mo. Filed Dec. 5, 1918. Serial No. 265,422. 2 Claims. (Cl. 123—169.)



1. A protecting shell for spark plugs comprising a cylindrical body having a convexed closed end and an opposite open end, said closed end having a central aperture therein adapted to receive the central electrode of said plug when the body is telescoped thereover, said body being freely removable therefrom, and being of a diameter considerably greater than the upper portion of the plug to space the inner surface of said body from the shell of the plug and having its open end shaped correspondingly to the shell of said plug to snugly embrace the same.

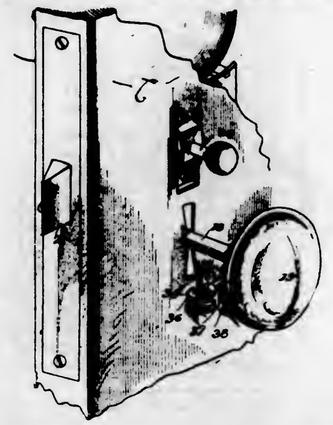
1,388,710. PUZZLE. CLINT T. HIME, Hindes, Tex. Filed Aug. 24, 1920. Serial No. 405,776. 2 Claims. (Cl. 46—41.)



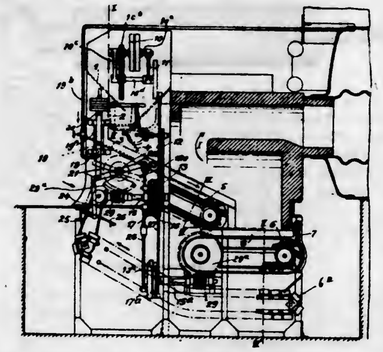
1. The combination of a puzzle made up of a plurality of bars having central notches and lugs in the notches designed to interengage, and a wedge bar for locking the remaining bars in the shape of a Chinese cross; of a flexible element slidable through one end of each of the bars and the ends of the said flexible element being knotted.

1,388,711. LOCK. CARL HOFFMAN, Allentown, Pa. Filed July 16, 1920. Serial No. 396,695. 7 Claims. (Cl. 70—29.)

2. A door lock including a spring tensioned lock-latch, an actuating spindle therefor, a handle for operating said spindle from inside the door, said spindle being operable by a key from outside the door, a guard plate having an aperture through which the key must be projected to engage said spindle, and a tumbler controlled actuating slide to shift said plate.



1,388,712. DOOR-BOLT. CARL HOFFMAN, Allentown, Pa. Filed July 16, 1920. Serial No. 396,696. 3 Claims. (Cl. 292—262.)

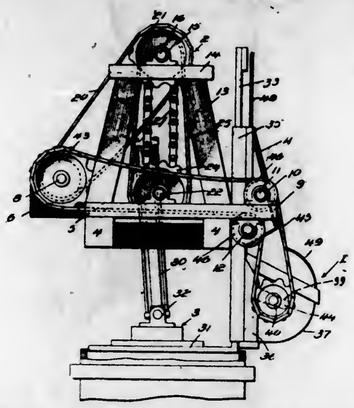


1. A fastening device for a door including a sliding bolt, a keeper on the door frame to receive said bolt, an auxiliary keeper also on the door frame and with which said bolt may be caused to engage to lock the door in a partly opened position, and means in part carried by said bolt and in part by said auxiliary keeper to maintain said bolt and said auxiliary keeper in locked engagement, said bolt being adapted for turning movement to free it of engagement with said auxiliary keeper.

1,388,713. LOCK. CARL HOFFMAN, Allentown, Pa. Filed July 16, 1920. Serial No. 396,697. 5 Claims. (Cl. 70—29.)

1. In a lock, a tensioned lock-latch, an actuating lever therefor, a handled spindle for operating said lever, tumbler controlled means for engaging and moving said lever to retract said lock-latch, and a tumbler controlled means for locking said lever against movement, in combination with a key for effecting movement of each of said last mentioned means.

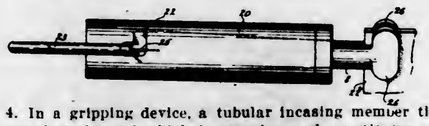
1,388,714. MECHANICALLY-STOKED FURNACE. ALFRED HOFMANN, Zurich, Switzerland. Filed Oct. 31, 1918. Serial No. 260,560. 2 Claims. (Cl. 110—40.)



1. In a furnace, an inclined upper traveling grate, a lower traveling grate extending partially beneath the upper grate and receiving the fuel directly dropping from the upper grate and conveying away the slag, means for driving the traveling grates at adjustable different speeds, and boiler steam controlled means for regulating the air supply and the conveying away of the slag to suit the steam consumption.

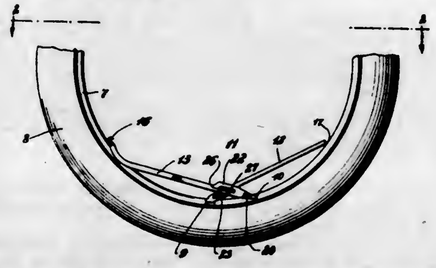
1,388,715. COTTON-TRAMPER. ANDREW J. HOPKINS, Kaufman, Tex. Filed Oct. 8, 1919. Serial No. 329,249. 6 Claims. (Cl. 100—25.)

1. A device for tramping cotton comprising a tramping member and a feed member, a closure carried by said tramping member for regulating the amount of cotton transmitted by the feed member to the tramping member and means carried by said closure for regulating the amount of cotton transmitted to the feed member.



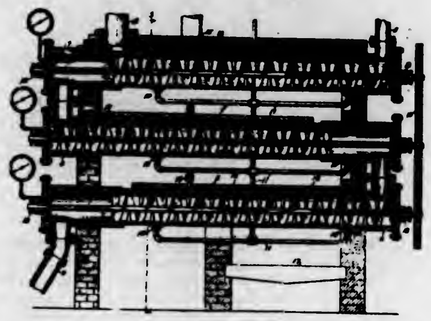
5. A device for tramping cotton comprising a tramping member and a feed member, a partition having openings therein carried by said tramping member for regulating the quantity of cotton delivered by the feed member to the tramping member, a movable cover carried by the partition for limiting the amount of cotton delivered to

the feed member, means for limiting the movement of the cover with respect to the feed member and means for



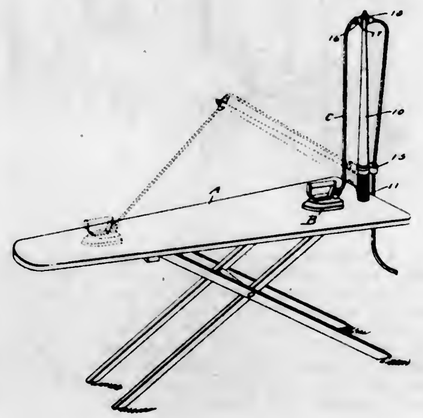
simultaneously actuating said feed member and tramping member.

1,388,716. DEVICE FOR TIGHTENING CABLES. THOMAS JEFFERSON HUGHES, Seattle, Wash. Filed Apr. 12, 1920. Serial No. 373,440. 5 Claims. (Cl. 24—136.)



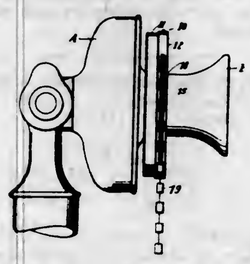
4. In a gripping device, a tubular incasing member the internal surface of which is tapering and constitutes an internal wedge, a plurality of gripping members positioned for frictional contact with said internal wedge surface of the incasing member, said gripping members being exposed at one end beyond the incasing member and said exposed portions constituting gripping jaws unitary with said gripping members, and a strain-applying member connected with said incasing member.

1,388,717. AUTOMOBILE-TIRE TOOL. WILLIAM T. IVEY, Lyons, Ga. Filed Jan. 9, 1920. Serial No. 350,337. 1 Claim. (Cl. 157—1.)



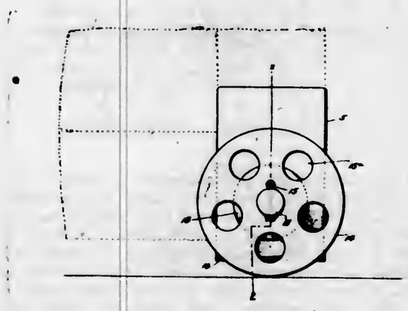
A tool for split auto rims comprising an outer yoke-shaped member, including a pair of parallel arms having alined notched elongated slots therein adjacent the free ends thereof and a connecting member having spaced elongated slots therein, adjustable hooks slidably mounted in the slots in said connecting member, inwardly extending lugs formed integrally with the free ends of said arms, an inner yoke-shaped member of a shorter length than the outer yoke-shaped member, including a pair of spaced parallel arms having alined elongated slots therein adjacent to the free ends thereof and a connecting member forming an operating handle therefor, inwardly extending lugs formed integrally with the free ends of the last mentioned arms, a headed shaft provided with a threaded end passing through the slots in the arms of said yoke-shaped members and loosely connecting the same and a thumb-screw carried by the threaded end of said shaft.

1,388,718. EXTRACTING APPARATUS. JAMES B. JENSON, Salt Lake City, Utah. Filed June 8, 1918. Serial No. 238,966. 8 Claims. (Cl. 196—19.)



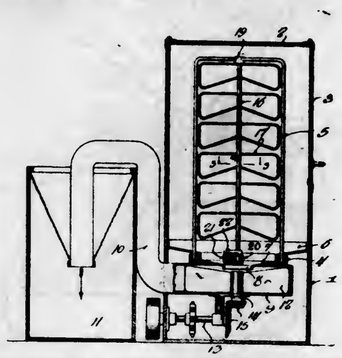
6. In an extracting apparatus of the class described, a plurality of interconnected superimposed units, each unit being in the shape of an elongated completely closed cylinder, means for supplying heat to said units, a revolving conveyer in each of the units mounted eccentrically therein at the bottom so that a clearance space is formed between the conveyer and the upper side of the unit, and means to cause obstruction of the passage of material at the discharge end of each unit.

1,388,719. ELECTRIC IRON. JAMES W. JOHNSTON, Salt Lake City, Utah. Filed Apr. 5, 1920. Serial No. 371,409. 2 Claims. (Cl. 219—23.)



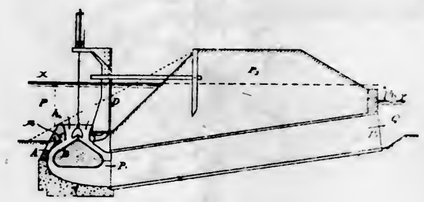
1. The combination with an electric device and its conductor, of a support, an arm arranged above the support, a coiled spring providing a connection between the arm and support whereby the arm is mounted for universal movement, and means carried by the arm and associated with said conductor whereby the latter is held taut between its point of connection with the arm and said electric device.

1,388,720. TELEPHONE ATTACHMENT. CHARLES EDWARD JONES, New York, N. Y. Filed May 17, 1920. Serial No. 382,093. 1 Claim. (Cl. 179—188.)



A telephone attachment comprising a casing formed of detachably connected sections, one section being formed with an outwardly extending central flange externally threaded for engagement within the threaded hole of a telephone transmitter and the other section being formed with a central internally threaded hole for engagement therein of the threaded end of the telephone mouth piece, a shutter pivoted within said casing and including a relatively large plate-like head portion and a relatively long and narrow extension constituting a handle, the side of the casing being formed with a slot through which said handle extension extends, said shutter being formed at one end of the head portion with a hole adapted to register with the hole encircled by said flange, and a leaf spring secured within the casing and engaging said head portion for normally holding the shutter with the hole therein registering with the hole in the transmitter.

1,388,721. CASTER. THOMAS J. KEEPING, Los Angeles, Calif. Filed Feb. 24, 1921. Serial No. 447,573. 2 Claims. (Cl. 280—58.)

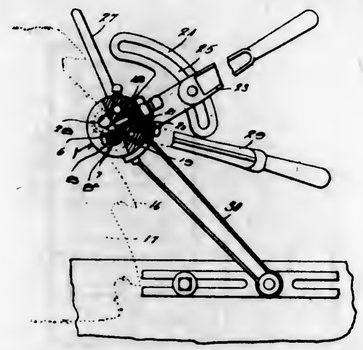


1. In a device of the class described comprising an L-shaped supporting pedestal, a horizontal spindle removably secured to the vertical wall of said pedestal and in proximity to the bottom thereof, a wide caster wheel journaled on said spindle, and a plurality of removable, sharp, securing members on the horizontal base of said pedestal.

1,388,722. BAG-CLEANING APPARATUS. JOHN M. KELLY, Manitowoc, Wis. Filed Sept. 21, 1920. Serial No. 411,691. 4 Claims. (Cl. 15—8.)

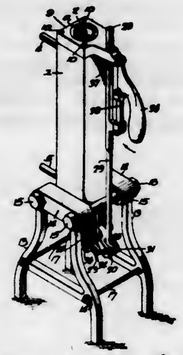
1. In an apparatus of the class described, a supporting base, a bag holding frame on the base, a shaft journaled in said frame, beater arms extending from the shaft, and means for oscillating the shaft to intermittently engage the beater arms with a bag disposed on said frame.

1,388,723. DEVICE FOR CONTROLLING A SUPPLY OF WATER FOR IRRIGATION OR OTHER PURPOSES. ROBERT G. KENNEDY, Sidney, Vancouver Island, Canada; The Royal Trust Company executor and trustee of the will of said Robert G. Kennedy, deceased. Filed Sept. 19, 1918. Serial No. 254,795. 8 Claims. (Cl. 61—23.)



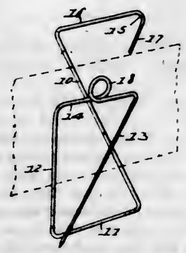
1. In devices for controlling water supply, the combination of a flume having contracted and expanded parts connecting a supply channel, with an outfall channel, means for subjecting water at the contracted part to atmospheric pressure for artificially increasing the velocity head of the water whereby the discharge passing the contracted part is independent of the outfall level, and means for varying the area of the contracted part for varying the discharge passing therethrough.

1,388,724. SAW-SWAGE. HENRY M. KING, Clayton, Okla. Filed Aug. 23, 1919. Serial No. 319,335. 1 Claim. (Cl. 76—54.)



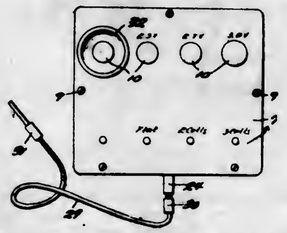
A saw swage comprising a body having openings and a saw receiving slot, an anvil carried by said body, a spindle extending through the openings and slot and having concentric outer portions located in the openings and one of said portions spaced from the wall of its respective opening, and of a diameter less than the diameter of the other portion, a sleeve on the small concentric portion and engaging the wall of said last opening and having one end extending beyond the body and provided with an annular groove, a plate pivoted to the body and having a curved edge engaging the groove, an eccentric portion formed on the spindle and located in the slot, a ring mounted on said

eccentric portion and engaging the large concentric portion at one end and engaging the sleeve at its other end and of



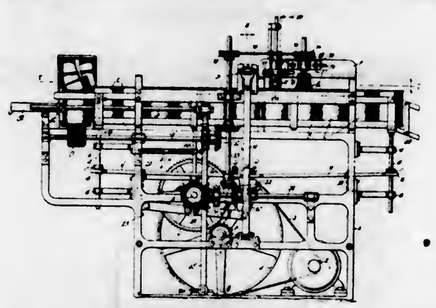
a diameter greater than the diameter of the small concentric portion, and an operating means for the spindle.

1,388,725. MOLD FOR CASTING PIGS FOR LINOTYPE-MACHINES. JOHN H. W. KNOOP, Upper Darby, Pa. Filed Nov. 2, 1920. Serial No. 421,346. 6 Claims. (Cl. 22—148.)



1. The combination in a mold for casting metallic pigs, of a mold body; a plug adapted to extend into the mold chamber; and means for actuating the plug so that it will first be withdrawn and then moved clear of the path of the pig, as the pig is discharged from the mold.

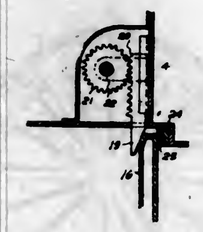
1,388,726. TAG-HOLDER. JOHN L. KOLBE, Wauwatosa, Wis. Filed June 13, 1919. Serial No. 303,926. 2 Claims. (Cl. 40—26.)



1. A holder for the purpose indicated formed from a single strand of wire bent to provide two substantially triangular frames with their bases oppositely disposed, the said frames having a spring tendency toward each other to permit the insertion therebetween of a tag to be supported, the leg of one of the frames constituting the free terminal of the wire having a spring tendency toward its attendant frame to permit the insertion of the tag between it and its frame, the remaining terminal of the wire having a pointed extremity for engagement with the bolt or wrapping of an article in connection with which the tag is to be displayed.

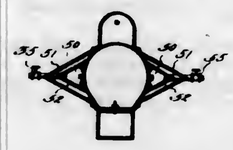
1,388,727. BATTERY-TESTER. LEWIS LINCOLN LASKA, Cordova, Alaska. Filed Aug. 9, 1919. Serial No. 316,411. 2 Claims. (Cl. 175—183.)

1. A battery tester including a body plate, a plurality of incandescent lamps supported therein, a contact point arranged opposite each incandescent lamp and electrically connected therewith, said contact points being engageable with one pole of an electric battery, a socket member electrically connected with the several incandescent lamps, and a flexible contact element detachably engaged with the socket member engageable with the opposite pole of the battery.



1,388,728. LABELING MACHINE. JAMES QUINCY LEAVITT, Ogden, Utah, assignor of one-half to Herbert L. Herrington, Ogden, Utah. Filed Aug. 20, 1920. Serial No. 404,811. 15 Claims. (Cl. 216—38.)

7. A can labeling machine, comprising a frame, a vertically movable track on the frame, means for compelling the movement of cans on the track a distance of one can at each operation thereof, a paste dauber, a label receptacle, a rotary brush supported above the track and in position to be engaged by the cans when the track is elevated, a paste receptacle at one side of the track, a paste roller in the receptacle, and means for moving the dauber from its position over the cans into engagement with the roller.

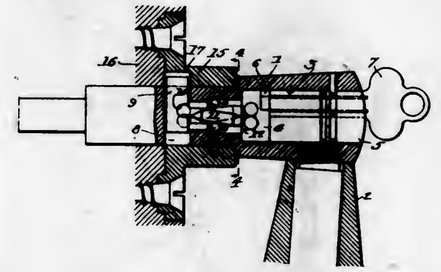


1,388,729. IMMERSIBLE SALVAGE VESSEL. ALBERT JOHN FREDERICK LEE, Montreal, Canada. Filed Aug. 22, 1919. Serial No. 319,115. 2 Claims. (Cl. 61—82.)

1. A submersible salvage vessel comprising a central tunnel approximately of an inverted U section, forming a chamber inclosed above and at the sides and open below to the sea water, the said chamber being adapted to be closed at at least one end by a vertical door pivoted about horizontal hinges, and means for securing

the door in the closed positions including a jamb and a resilient seating therefor, wedges for forcing the door against the jamb, and means for sliding said wedges into operative positions.

1,388,730. SUBMARINE BOAT. JOHN B. LOCKER, St. Louis, Mo., assignor of one-half to Joseph B. Crawford. Filed Sept. 22, 1917. Serial No. 192,733. 1 Claim. (Cl. 114—16.)



In a device of the class described, a hull including a plurality of compartments and air chambers, an additional air chamber located on each side of the hull and projecting laterally therefrom, the upper and lower walls of the additional chambers converging at their outer portions, means for admitting air to the chambers last named, and means for protecting each of the chambers last named, comprising a guard member extending longitudinally thereof, providing converging supporting surfaces.

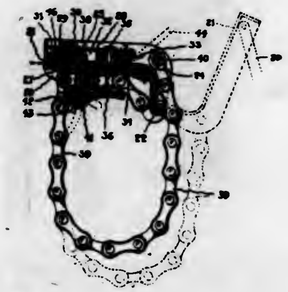
1,388,731. PIPE-PATCH. WILLIAM LOUIS LONG, Coffeyville, Kans. Filed Mar. 6, 1919. Serial No. 280,890. Renewed Apr. 15, 1921. Serial No. 461,675. 2 Claims. (Cl. 285—194.)

1. In an attachable pipe patch of the character described, the combination with a curved patch plate and the gasket of a clamp comprising a U-shaped yoke having a hook at one end and threaded at its opposite end, a presser bar having a hook for engagement with the hook of the yoke, and an eye to receive the threaded end of the yoke, with a nut for holding said eye in adjusted position.

1,388,732. LATCH-LOCK. WILLIAM H. MCFALL, Philadelphia, Pa., assignor to Edward Reukauf and William H. McFall, Copartners, trading under the firm style of Carey-McFall Co., Philadelphia, Pa. Filed July 31, 1920. Serial No. 400,435. 7 Claims. (Cl. 70—91.)

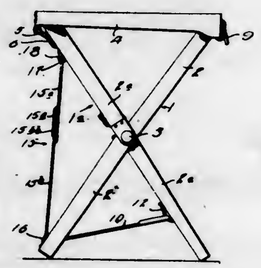
1. In a lock, the combination of a reciprocatory bolt member, a pin having one end operably connected with said bolt member, a universal bearing for said pin intermediate the ends, and means for moving the free end of said pin in an arcuate path.

1,388,733. SMOKING-PIPE. HENRY J. MCGUCKIN, New York, N. Y. Filed May 28, 1920. Serial No. 384,887. 3 Claims. (Cl. 131—12.)



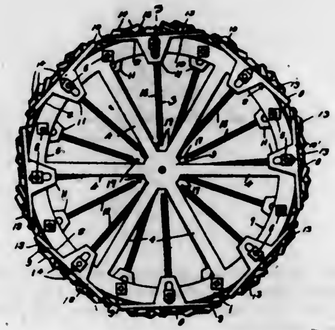
3. A smoking pipe comprising an integral spherical bowl formed with an integral stem radiating therefrom, said bowl having an opening therein diametrically opposite said stem, and said stem having a smoke passageway therein in axial alinement with said opening.

1,388,734. RAILWAY-RAIL BRACE. CLARENCE R. MCMICHAEL and BENJAMIN W. WALL, Patmos, Ark. Filed Nov. 9, 1920. Serial No. 422,831. 2 Claims. (Cl. 238—51.)



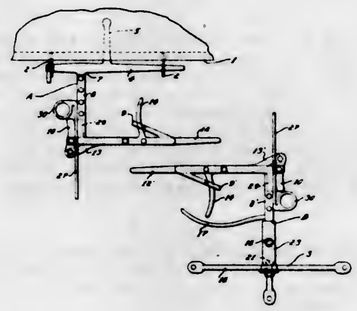
1. A railway rail brace comprising an upper continuous member of uniform width throughout with the lower faces at the ends beveled to bear over the confronting portions of the rail flanges, coacting lower members bearing beneath the upper member and extending beneath the rails, each of said lower members having a depressed seat to respectively receive the rail flanges and holding the rails from inward movement, clamping means uniting the upper and lower members, and an integral brace portion extending upwardly from each of the lower members at their outer ends, each of said brace portions having a recess to receive the adjacent edge of the rail flange and an obliquely directed extension bearing beneath the rail heat at its juncture with the rail web.

1,388,735. **FASTENER FOR MAIL-BAGS AND THE LIKE.** ALBERT MACDONALD, Burnside, and THOMAS WILLIAM WALLACE, Clare, South Australia, Australia. Filed Mar. 18, 1921. Serial No. 453,449. 14 Claims. (Cl. 24—30.5.)



14. A fastener for mail bags and the like comprising two pivotally connected interlocking parts, an arm projecting from one part having a pivotal connection with a bar, a locking member on the free end of the bar, a hole in the bottom of a cup or depression on the first mentioned part of the fastener adapted to receive the locking member on the bar, a recess in the locking member, a locking piece pivotally mounted in the cup or depression and having a bearing face adapted to be placed in engagement with the recess in the locking member, and means for affixing a seal to retain the locking piece in its locked position.

1,388,736. **STOOL.** ERNEST E. MALLORY, Los Angeles, Calif. Filed Oct. 22, 1920. Serial No. 418,725. 6 Claims. (Cl. 155—136.)

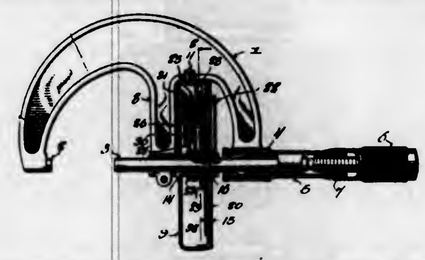


1. A device of the type described including main-members, each of these members comprising sections having their meeting or convergent ends pivotally connected to a common pivot, a seat-member, means at the rear edge of said seat-member integral therewith, means integral with one of said main-member sections and means forming freely movable connection between the aforesaid seat-member and said main-section.

1,388,737. **SELF-LAYING TWIN TRACTOR-WHEEL.** FRED D. MARIS, Toppenish, Wash. Filed May 14, 1920. Serial No. 381,414. 2 Claims. (Cl. 305—13.)

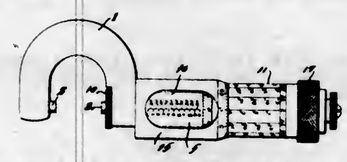
2. A wheel of the class described having a movable traction element, a rod extending through the traction element having terminal means to secure it to the element and to serve as a tractive means, and a return spring secured to the rod.

1,388,738. **MAIL CATCHING AND DELIVERING DEVICE.** FRANK L. MARTIN, RICHARD P. MARTIN, and LUKE H. MARTIN, Thornville, Ohio. Filed Aug. 28, 1920. Serial No. 406,597. 8 Claims. (Cl. 258—15.)



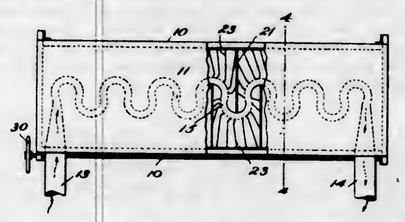
1. In combination with a mail car and a supporting frame placed along the track, a pair of members, one carried by the car and the other by said frame, each member comprising a supporting frame, a lever pivoted thereon for locking the bag to be delivered to the frame, a second lever for locking the caught bag to the frame, links connecting the two levers together so that the movement of one lever will be communicated to the other and means for moving the first lever into unlocking position and the second lever into locking position when the mail bag is engaged.

1,388,739. **MICROMETRIC INDICATOR.** FRANK H. MILLER, Racine, Wis. Filed Apr. 12, 1920. Serial No. 373,088. 3 Claims. (Cl. 33—166.)



1. In a measuring instrument including an extensible and retractable spindle, a relatively stationary dial having a series of sight openings therein, a dial plate having

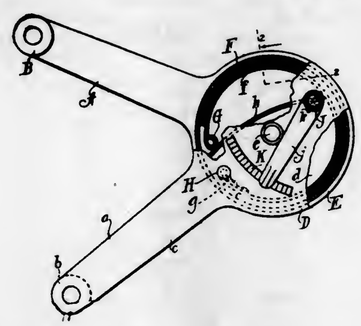
a series of graduations, said plate being rotatable to aline the graduations with the sight openings, and means oper-



able by the rotation of the spindle for moving the dial plate to record the amount of movement of said spindle.

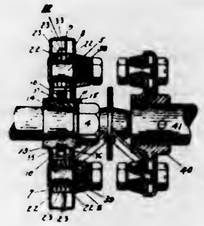
1,388,740. **MICROMETER-CALIPER.** FRANK H. MILLER, Milwaukee, Wis. Filed Oct. 15, 1920. Serial No. 417,069. 2 Claims. (Cl. 33—164.)

1. A micrometer caliper comprising a U-frame, a sleeve fixed in one end of said frame, a second sleeve spaced from and inclosing the first sleeve and having an opening therein, a third sleeve movable between the first two and having a measuring spindle fixed thereto, there being graduations upon the first and third sleeves coöperating with graduations upon the third and second sleeve, the graduations on the first sleeve being visible through the opening in the second sleeve.



1,388,741. **DUST-SEPARATOR.** HUMPHREYS MILLIKEN, New York, N. Y. Filed Mar. 1, 1921. Serial No. 448,788. 10 Claims. (Cl. 183—79.)

1. The process for separating dust from air and gases which consists in forcing the dust-laden gas to move through a series of curved paths in opposed directions while confining the dust only on the inner side of each curve, and preventing exterior circulation of air on the convex side of each curve.

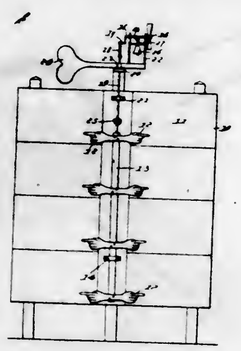


1,388,742. **SHOCK-ABSORBER.** CHARLES M. MOHLER, Richmond, Ind. Filed Aug. 19, 1920. Serial No. 404,695. 3 Claims. (Cl. 188—130.)

1. In a shock absorber, the combination with two arms angularly disposed, of an annular and two circular members connected with the said arms and with each other and being given rotary movements by the said arms, the said members being arranged to form a flat cylindrical box, a friction strip located within the box formed by said circular and annular members and arranged against the annular member, a friction spring arranged against the said friction strip and having one free end and one end attached to said circular members, a tension spring located

within said box and having one end bearing against the free end of the said friction spring, and adjustable devices arranged to act upon and to vary the tension of the tension spring.

1,388,743. **GOVERNING DEVICE FOR INTERNAL-COMBUSTION ENGINES.** EDWARD MOORE, Newark, N. J. Filed Feb. 18, 1918. Serial No. 217,862. 14 Claims. (Cl. 264—16.)



1. In a device of the character described, the combination of a multi-part driving member and a driven member, said driven member being housed within the driving member, studs on one of the parts of said driving member provided with means to bind the said parts together, weighted arms responsive to centrifugal force pivoted on said studs, links connecting said arms to the driven member whereby the driven member is responsive to movement of said arms and means for opposing the effect of centrifugal force on said arms as they are rotated.

1,388,744. **SPUD-TOOL.** JOHN T. MORRISSEY, Lincoln, Nebr. Filed Dec. 18, 1920. Serial No. 431,661. 3 Claims. (Cl. 81—79.)

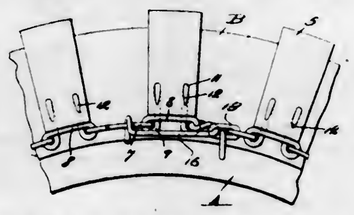
1. A tool of the character described comprising two pivotally connected levers having overlapping ears formed adjacent their ends, said levers being disposed on opposite sides of the pivot and provided with angular gripping jaws at the extreme ends thereof presenting outer gripping surfaces, and means for locking the opposite free ends of said levers in their operative position.

1,388,745. ADVERTISING DISPLAY-STAND. RUFUS J. MORTON, Greensboro, N. C. Filed June 8, 1920. Serial No. 387,331. 3 Claims. (Cl. 40—139.)

1. An advertising display stand having a sign supporting rack, indicating elements movably supported in operative relation with the surface of said rack, a common actuating means for said indicating elements, and a wind motor having a swivel connection with said means and a vane to dispose it in operative relation with the wind, whereby said elements may be actuated irrespective of the direction in which the wind is blowing.

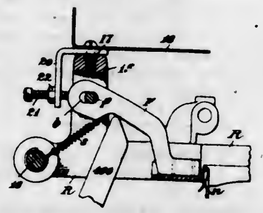
1,388,746. SUPPORTING MEANS OF THE TEN-PIN, HUNDRED-PIN, &c., OF THE CALCULATING-WHEELS IN CALCULATING-MACHINES. VALENTIN JAKOB ODHNER, Turisthotellet, Hindås, Sweden. Filed Feb. 18, 1920. Serial No. 359,628. 3 Claims. (Cl. 235—79.)

1. In calculating machines, the combination with a calculating wheel provided with a groove, of a pin loosely mounted in said groove and movable in a plane extending radially of the wheel, and resilient means operatively connected to said pin for normally holding the same in predetermined position.



1,388,747. METHOD OF BUILDING CORD TIRES. CHASE F. OFFENSEND, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 6, 1921. Serial No. 467,413. 2 Claims. (Cl. 18—56.)

1. The hereindescribed method of manufacturing cord tires which consists in applying the tire material, including the cord structure, to an inflated elastic core, placing the core with the tire material carried thereby in a closed mold, subjecting the core to increased internal

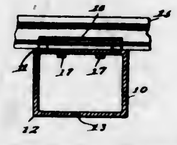


pressure to stretch the tire material, and subjecting it to vulcanizing heat while so expanded.

1,388,748. TIRE-PROTECTOR. ALDEN C. OLANDER, Billings, Mont. Filed Aug. 28, 1919. Serial No. 320,497. 1 Claim. (Cl. 152—16.)

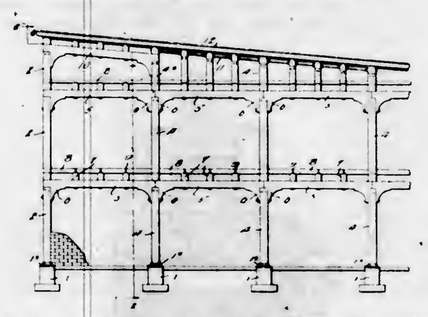
In a device of the character described comprising spaced, transverse, tread members adapted to embrace a vehicle tire, U-shaped, normally upright hooks having sharpened upper terminals retaining said tread members and preventing longitudinal movement thereof with respect to the tire, the lower portion of said hooks being provided with reversely directed attaching eyes, loosely connected short chains connecting certain of the eyes of the adjacent hooks and closed links attached to the opposite eyes of said hooks.

1,388,749. YARN-FEED FOR KNITTING-MACHINES. ALBERT E. PAGE, Laconia, N. H., assignor to Scott and Williams, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Jan. 14, 1919. Serial No. 271,128. 3 Claims. (Cl. 66—12.)



1. A knitting machine having needles and a yarn feeding finger therefor having a rounded rear end in combination with screw means to bear against the rear end of the yarn finger to adjust the yarn finger toward or from the needles.

1,388,750. TRACTOR ATTACHMENT. HAROLD N. PALMER, Putnam, Conn. Filed Mar. 4, 1920. Serial No. 363,166. 3 Claims. (Cl. 305—3.)



1. In an apparatus of the class described including an axle and an axle housing, a support depending from said housing and having a segmental socket, a frame having a segmental track extending upwardly therefrom intermediate the ends and engaging in said socket, tread chain wheels mounted for rotation in said frame at opposite sides of said axle, a tread chain including ground engaging lugs operating around said tread chain wheels, and means for transmitting the motion of said axle to said tread chain wheels.

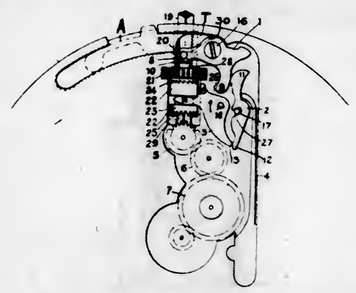
1,388,751. CROSSTIE. WILLIAM F. PALMER, Charleston, W. Va. Filed Jan. 13, 1920. Serial No. 351,191. 1 Claim. (Cl. 238—77.)

The herein described railway tie formed from a single blank of resilient sheet metal, reduced to rectangular form in cross section and open throughout its length and at its ends and having its free longitudinal edges spaced apart throughout its length and also having at its underside and at opposite sides of the said longitudinal space serrations disposed at acute angles to the length of the space, for the purpose set forth.

1,388,752. REINFORCED-CONCRETE BUILDING. JOSEPH P. PAULISSEN, Kankakee, Ill. Filed Jan. 24, 1921. Serial No. 439,443. 2 Claims. (Cl. 72—1.)

2. In a building of the kind described, the combination with concrete upright columns, concrete beams supported by said columns, and reinforced concrete floor sections, said sections having a tongue and groove joint along their sides with a V-shaped groove formed above the tongue and joint, and having beveled ends forming a deep V-shaped groove at the meeting ends of the sections, a roofing composition inserted between the various sections, and a waterproof filler positioned in the grooves, and flush with the floor surface.

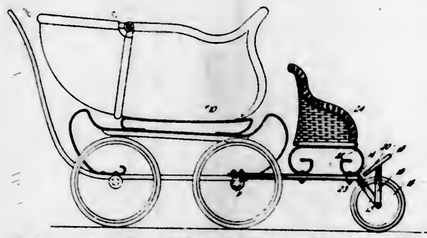
1,388,753. MODULATING DEVICE FOR SOUND-REPRODUCERS. GILBERT S. PEASE, Richfield, Wis. Filed Mar. 9, 1920. Serial No. 364,447. 2 Claims. (Cl. 274—27.)



1. In a sound reproducer, a sound box provided with a diaphragm, a segmental modulating member interposed between the sound box and the rear face of the diaphragm and engaging the latter throughout its length, a pivot carrying the said member and journaled in the said sound box, and a handle on the outer end of the said pivot to permit of moving the said modulating member nearer to or farther from the center of the diaphragm.

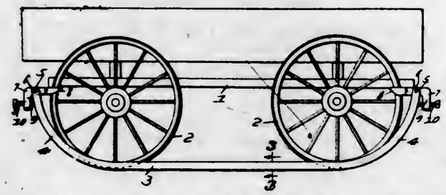
1,388,754. PROCESS FOR THE MANUFACTURE OF METALLIC DIAPHRAGMS OF ELECTROLYTIC CELLS. RODOLPHE PECHKRANZ, Carouge-Geneva, Switzerland. Filed June 1, 1920. Serial No. 385,715. 9 Claims. (Cl. 204—28.)

1. A process of manufacturing metal diaphragms for electrolytic cells, comprising the steps of depositing electrolytically upon a foundation a coating of a metal which will be inert to the chemical reactions of the electrolyte in the cell in which it is to be used; and then detaching the metal coating from the foundation.



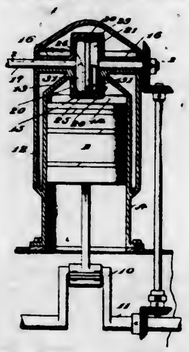
1,388,755. WATCH WINDING AND HANDS-SETTING MECHANISM. EDMOND PELLATON, Le Locle, Switzerland, assignor to Fabriques Des Montres Zenith Successeur De Fabriques Des Montres Zenith Georges Favre-Tacot & Cie. Filed May 10, 1921. Serial No. 468,381. 7 Claims. (Cl. 58—68.)

1. In a winding and hands setting mechanism for watches, an actuating spindle, a winding pinion thereon, a hands setting gear, a slidable pinion on the actuating spindle arranged to be coupled alternately with the winding pinion or with the hands setting gear, two levers each pivotable about a fixed axis and engaging, the first or hands setting lever, with said slidable pinion



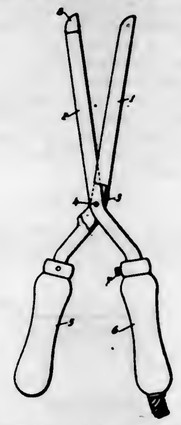
and the second with said winding spindle, one single spring for said two levers and a common rocking member between them and said spring, the latter being arranged so as to directly attack said common rocking member, substantially as and for the purpose described.

1,388,756. ATTACHMENT FOR CHILDREN'S CARRIAGES. FREDERICK PETERS, New York, N. Y. Filed Aug. 24, 1920. Serial No. 405,598. 2 Claims. (Cl. 280—47.)



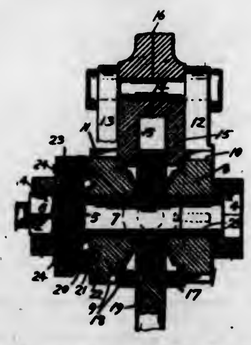
1. In combination with a child's carriage, an auxiliary seat comprising a platform, a single wheel for supporting the forward end of said platform, a seat carried by the platform, and means carried by the rear end of the platform for detachably securing said rear end to the forward axle of the carriage to which it is attached.

1,388,757. RUNNER FOR WHEELED VEHICLES. ARTHUR N. PURCELL, Corona, N. Y. Filed May 7, 1920. Serial No. 379,555. 1 Claim. (Cl. 280—13.)



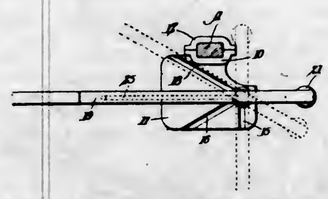
A runner for the purpose indicated which is channel shaped in cross section and curved upwardly at its forward and rear ends, bent levers pivotally mounted in the extremities of the runner and formed each at one end with a wheel engaging fork, and set screws threadingly engaging the remaining ends of the levers and bearing against the web of the runner, whereby the levers may be maintained in engagement with the wheels.

1,388,758. ROTARY-VALVE MOTOR. FRANZ P. RAHMEYER, Hampton, Nebr. Filed Mar. 13, 1919. Serial No. 282,283. 4 Claims. (Cl. 123—190.)



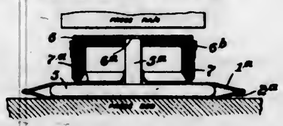
1. In a rotary valve, the combination with a cylindrical casing having diametrically opposite intake and exhaust passages through its periphery out of line with each other; and ports through its sides in alinement with each other; of a valve mounted for rotation within said casing and having a drum-like body containing independent intake and exhaust compartments, and packing around the periphery thereof contacting with the casing, said body having in its periphery intake and exhaust slots on opposite sides of a line through said packing and opening into the respective compartments, and having also through its sides intake and exhaust openings communicating with the respective compartments and adapted to aline with said ports.

1,388,759. ELECTRIC FOLDING AND CURLING IRON. GAETANO RAPIZZI, Parabiago, Italy. Filed Sept. 15, 1920. Serial No. 410,370. 2 Claims. (Cl. 219—24.)



1. In an electric folding and curling iron of the character described comprising two pivotally connected metallic branches one of which is of a tubular shape and closed at its outer end, handles on the inner ends of the branches, terminals on the handle of the tubular branch, a heating unit mounted in said tubular branch and connected to the terminals, said unit consisting of a pair of insulating plates, a resistance wire wound continuously about said plates, means for insulating said plates from one another as well as at their external sides, and an insulating cord arranged about all of the plates and wire.

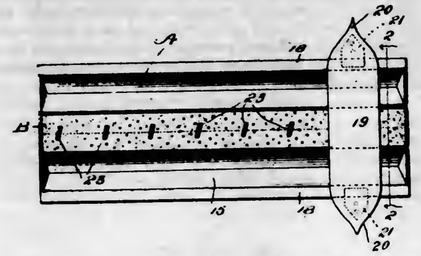
1,388,760. RATCHET-SPANNER. JOHN RAVEN, Deervale, via Armidale, New South Wales, Australia. Filed Apr. 12, 1920. Serial No. 373,251. 2 Claims. (Cl. 81—61.)



1. In ratchet spanners, the combination of a hollow spindle, two bevel wheels mounted on said spindle in spaced relation, one of said bevel wheels being secured to the spindle, opposite ratchets on said bevel wheels, a reciprocatory operating lever, pawls carried by said lever and adapted to alternately rotate said wheels in accordance with the movements of the lever, a holding arm interposed between said wheels, bevel pinions carried by said holding arm and meshing with said bevel wheels, said spindle having a socket at each end for engaging the nut of a bolt whereby said nut may be continuously rotated in one direction by the reciprocation of said lever, and the threaded end of the bolt may pass through said hollow spindle.

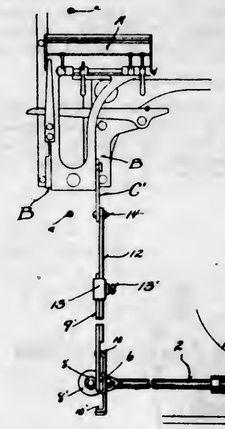
1,388,761. TRAFFIC-SIGNAL. GENEVIEVE REED, Naugatuck, Conn. Filed Feb. 15, 1921. Serial No. 445,175. 2 Claims. (Cl. 116—52.)

1. A device of the character described comprising a bracket member detachably engaged upon one side of a wind shield frame and including a horizontal platform portion provided with a hole and with a plurality of radial grooves, a pointer formed as a body of arrow shape, a bolt depending from said body and revolubly engaged through said hole, a flexible rod member secured at one end to the underside of the pointer body and having its major portion spaced below the lower edge thereof with its rear extremity revolubly engaged upon said bolt, and a coil spring surrounding the bolt and engaging against said rear extremity of the flexible member and against the underside of the pointer body, whereby to hold the flexible member resiliently in engagement within a selected groove.



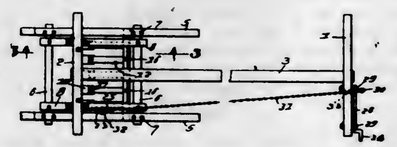
1,388,762. MANUFACTURE OF RUBBER BATHING-CAPS. RALPH E. RILEY, Akron, Ohio, assignor to The Miller Rubber Company, a Corporation of Ohio. Original application filed Sept. 11, 1919, Serial No. 323,096. Divided and this application filed Aug. 9, 1920. Serial No. 402,220. 4 Claims. (Cl. 154—2.)

4. The hereindescribed method of making rubber bathing caps which comprises superposing two imperforate sheets of unvulcanized rubber material, simultaneously cutting the superposed sheets along a circular line and joining the circular cut edges by a single operation, slitting one of said sheets approximately centrally thereof, supporting said last named sheet from its inner surface while spaced from the other sheet, applying to said slitted sheet around the opening the angularly turned edge of a substantially cylindrical band of rubber material, and pressing said angularly turned edge against the sheet to simultaneously join said band to the perforated sheet and sever the material projecting beyond the line of juncture.



1,388,763. FENCEPOST-MOLD. DAVID ROBERTS, Ann Arbor, Mich. Filed Mar. 17, 1920. Serial No. 366,607. 2 Claims. (Cl. 25—118.)

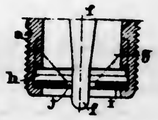
1. A mold of the character described, comprising a blank of sheet metal cut and bent to form plural longitudinally disposed parallel channels, extensions formed at the ends of the blank and bent to provide end walls to the channels, flanges on said blank, tongues on the extensions



and in locking engagement with the flanges, guides longitudinally of the channels and a smoothing board slidably connected with the guides.

1,388,764. TYPOGRAPHICAL MACHINE. EDWIN W. ROGERS and CHARLES C. CHAPEL, Marshfield, Wis. Filed Mar. 8, 1921. Serial No. 450,522. 5 Claims. (Cl. 199—31.)

1. In a linotype machine having a vertically reciprocative matrix assembling elevator; the combination of a raising and lowering mechanism therefor, the same including a foot controlled rock shaft, a rock arm yieldably secured thereto, a link pivoted to the arm and connected to the elevator, the yielding connection between the rock arm and shaft serving to cushion the starting and stopping movement imparted to said elevator by foot power.

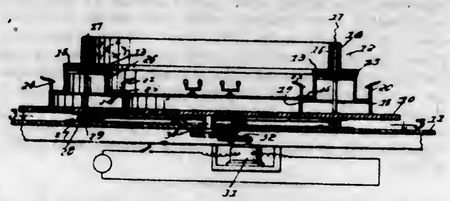


1,388,765. SLED-BRAKE. HARLEY A. ROWE, Brandon, Vt. Filed Nov. 1, 1918. Serial No. 260,691. 3 Claims. (Cl. 37—42.)

1. A combined road leveler and brake including a rockable shaft, road engaging teeth extending from said shaft and composed of curved flat spring steel strips, resilient

means coacting with the shaft for normally holding the teeth in raised inactive position, and means for rocking the shaft against the tension of the resilient means to move the teeth into road engaging position whereby said teeth may operate both as a brake and as a road leveler operating when sufficient pressure is applied to flex so as to bring the flat underfaces of the shoes into engagement with the roadway.

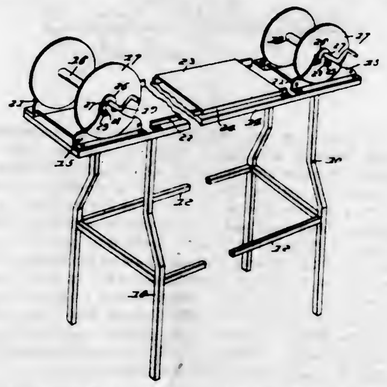
1,388,766. SPARKING PLUG WITH SELF-CLEANING ELECTRODES. BENOIT SCHERER, La Garenne-Colombes, France. Filed Mar. 19, 1921. Serial No. 453,774. 2 Claims. (Cl. 123—169.)



1. A sparking plug for internal combustion engines, comprising a body having an annular internal groove in its lower portion, a metallic disk of less thickness than the width of the groove and loosely mounted therein, said disk being centrally apertured and forming an electrode, and a rod like electrode mounted in the body and having its end extending through the aperture in the disk electrode.

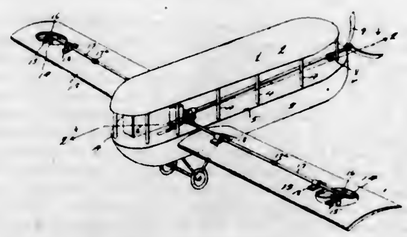
1,388,767. MEANS FOR POLISHING SPACE-BANDS. WILLIAM H. SCHUYLER and GEORGE J. CHILES, Chicago, Ill. Filed Mar. 29, 1918. Serial No. 225,610. Renewed June 8, 1921. Serial No. 476,110. 10 Claims. (Cl. 51—110.)

1. The combination with a rotatably mounted polishing disk of a feed chute for receiving and holding space bands in a vertical stack adjacent the edge of said disk, a feed bar mounted to reciprocate above said disk, a lug secured to said bar intermediate the ends thereof for engaging the lowermost band and carrying it on to said disk, a plunger mounted to reciprocate on the outer end of said bar at right angles to said disk and provided with a friction block for engaging the upper sides of said space bands, a spring for urging said plunger downward, means for raising and locking said plunger at the outer end of its stroke, means for releasing said plunger at the inner end of its stroke, an assembling arm having its free end spaced from and below the upper face of said disk, a guide bar extending above said disk for guiding the space bands above said assembling arm, and means for rotating said disk and reciprocating said feed bar.



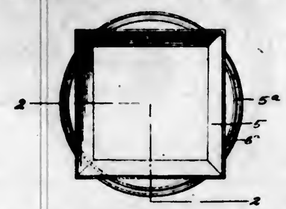
1,388,768. SHOE-SHINING STAND. FRANK S. SCOTT, Heyburn, Idaho. Filed Apr. 7, 1920. Serial No. 372,052. 4 Claims. (Cl. 15—58.)

2. A shoe shining stand having a revoluble table or platform, concentric inwardly and outwardly facing seats supported by the platform, corresponding series of foot rests disposed in operative relation with said series of



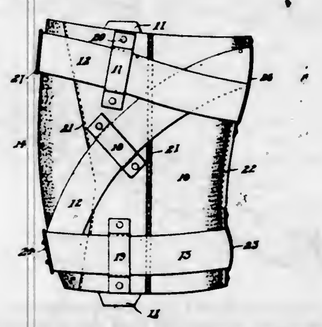
seats, and means for communicating progressive movement to the table or platform.

1,388,769. STENOGRAPHER'S RAPID RECORDER. WILLIAM J. SCULLY, Newport, Ky. Filed June 26, 1920. Serial No. 392,139. 5 Claims. (Cl. 281—7.)



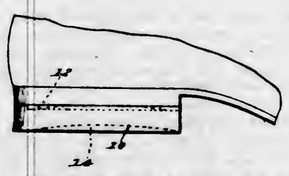
3. A stenographer's recording apparatus having a table, drums mounted on the table at its remote ends and adapted for transfer of a continuous strip of paper from one to the other, means for guiding the exposed portion of the strip or ribbon, means for rotating the drums, and an arm rest disposed above the exposed portion of the ribbon and movable from one drum to the other.

1,388,770. AIRPLANE. MATTHEW C. SHARPNACK, Omaha, Nebr., assignor of one-half to C. I. Hiddleston, Sr., Douglas county, Nebr. Filed Apr. 17, 1920. Serial No. 374,718. 1 Claim. (Cl. 244—5.)



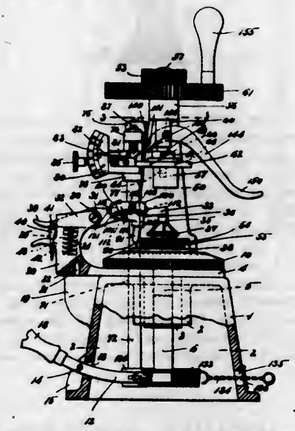
An airplane comprising upper and lower elongated casings semi-circular in cross section, said casings forming gas chambers, the flat surfaces of the casings being inwardly disposed, stanchions connecting the casings together and holding the casings in spaced relation to each other, planes extending outwardly from opposite sides of the lower casing, an engine disposed between the casings and carried by the flat surface of the lower casing, a driving propeller carried by the lower casing and driven by said engine, lifting propellers carried by the planes and means whereby said lifting propellers may be operated independently or simultaneously.

1,388,771. PAPER-CUSPIDOR HOLDER. LEO G. SHARTON, Little Falls, Minn. Filed July 3, 1919. Serial No. 306,444. 2 Claims. (Cl. 4—38.)



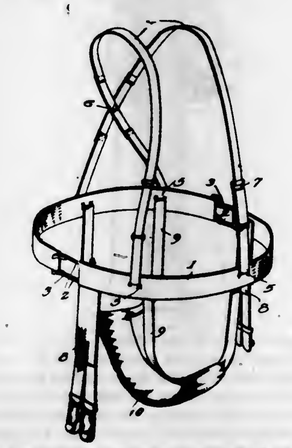
1. A holder for paper cuspidors of rectangular form comprising a circular body member adapted to receive a cuspidor, downwardly and inwardly directed supporting members struck from the top edge of the body member to engage beneath the bottom wall of the cuspidor, the struckout portions of the body forming a plurality of recesses in the top edge thereof adapted to accommodate the corners of the cuspidor to prevent accidental displacement of the latter relative to the holder.

1,388,772. KNEE-SUPPORTER. FRANK T. SHEEHAN, Ithaca, N. Y. Filed Feb. 24, 1921. Serial No. 447,627. 4 Claims. (Cl. 2—130.)



1. A device of the class described comprising an elastic sleeve, longitudinal side stays upon the sleeve, a strap centrally secured adjacent the bottom of the sleeve extending diagonally upwardly overlapping at the rear and adjacent the top of the sleeve with the ends of the strap adapted to be secured together forwardly of the sleeve above said point of attachment between the strap and sleeve.

1,388,773. RUBBER HEEL. DOMENICO SIMONE, Washington, D. C. Filed Sept. 30, 1919. Serial No. 327,516. 1 Claim. (Cl. 36—35.)



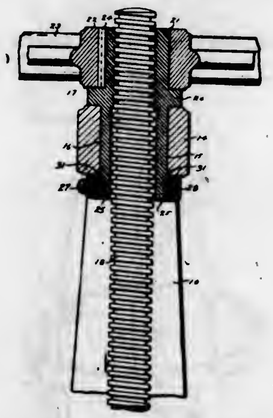
An elastic heel comprising a solid body having a central portion adapted to engage a shoe and provided with a plurality of nail receiving sockets adjacent to the rear and sides of the lower surface of said body, and a relatively wide substantially U-shaped marginal flange surrounding the rear and sides of the upper surface of said body, adapted to engage a shoe and coöperating with the central portion of the upper surface of said body to produce a concavity in the central portion of the lower surface of said body and a flat peripherical portion, said flange being provided with a right angular inner wall and having inwardly directed tapered outer ends.

1,388,774. LENS-CUTTING MACHINE. WALTER W. SLADE, Brookline, Mass., assignor to Globe Optical Company, Boston, Mass., a Corporation of Massachusetts. Filed June 24, 1920. Serial No. 391,416. 3 Claims. (Cl. 33—28.)

1. A lens cutting machine of the kind described, comprising a swinging support for said cutter, adapted to be held under spring tension toward the work to be operated on, and a lever operable to move the work holder out of operative position.

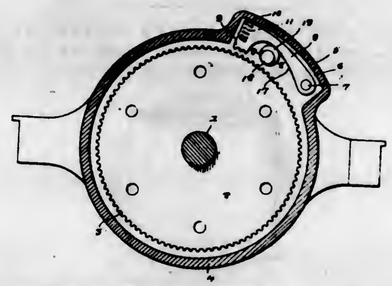
1,388,775. SUPPORTER. ANNA B. SMITH, Ebb, Fla. Filed Apr. 13, 1917. Serial No. 161,778. 1 Claim. (Cl. 128—289.)

A supporter of the character described, comprising a harness for suspension from the shoulders and to embrace the waist of a user, means for adjusting the harness about the waist, front and rear loops depending from



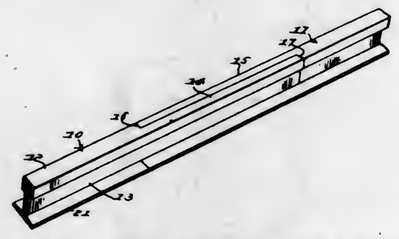
and detachably connected with the harness, and an endless sack having the loops loosely trained therethrough for free movement of said sack when supported by said loops.

1,388,776. SHOE-HEEL. CHARLES D. SMITH, St. Louis, Mo. Filed Dec. 15, 1919. Serial No. 344,895. 1 Claim. (Cl. 36—40.)



A heel of the character described comprising an outer shell, drawn and formed from a single sheet of material, a divided core of non-metallic material supported in the shell, means for securing the same together, a metallic strip placed on the bottom of the lower section of the core, a strip of resilient material placed against the metallic strip and held in position by crimping the bottom edge of the heel shell and a sole strip attached to the resilient material, a metallic strip placed on the top of the upper section of the core, a strip of non-metallic material placed on top of the metal strip and held in position by the crimping of the upper edge of the shell and fastening nails supported to the strip whereby the heel is attached to the shoe, substantially as specified.

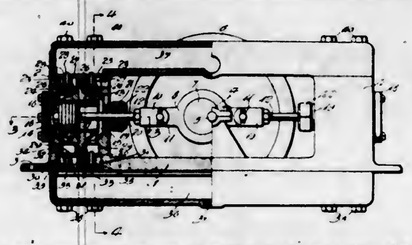
1,388,777. GATE-VALVE. JAMES C. SMITH, Paterson, N. J., assignor to McNab & Harlin Mfg. Co., New York, N. Y., a Corporation of New York. Filed Nov. 3, 1919. Serial No. 335,236. 2 Claims. (Cl. 251—49.)



1. In a gate valve, a yoke having a hub, a yoke sleeve mounted to turn in the said yoke hub and in which moves the valve stem, the said yoke sleeve having an integral collar seated on the outer end of the said yoke hub, and removable retaining means engaging the said yoke sleeve to hold it against axial displacement in the hub, the said retaining means when removed allowing removal of the yoke sleeve from the hub and from the valve stem without disturbing the position of either the yoke, stem or other internal valve parts when the valve is in its closed position.

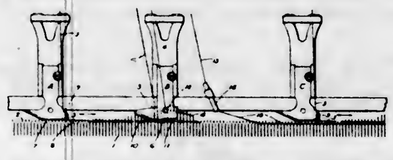
1,388,778. LOCKING DEVICE FOR MOTORS. WILBURN B. SMITH and DAVID N. SWATSELL, Birmingham, Ala. Filed Dec. 14, 1920. Serial No. 430,697. 1 Claim. (Cl. 70—90.)

In combination with the fly wheel of a motor, provided with peripheral teeth, and a fly case in which the wheel is housed, and said motor having an outwardly extended portion providing a pocket therein; of a dog pivotally secured in the pocket having a toothed end for engaging with the teeth of the fly wheel, spring means for influencing the dog to such engagement, a shaft journaled transversely in the housing below the dog, a cam surface thereon in the path of engagement with the inner edge of the dog, a lug on one end of the shaft, and a lock including a rotary barrel which has a notched end in which the lug of the shaft is received.



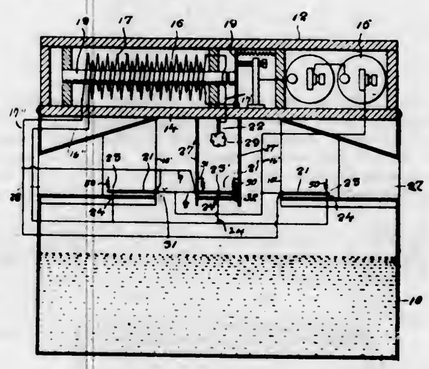
1,388,779. RAIL-JOINT. MILROY G. STACKHOUSE, Tulsa, Okla. Filed Jan. 4, 1921. Serial No. 434,892. 2 Claims. (Cl. 238—231.)

1. A rail joint having rail ends longitudinally halved on a vertical plane through the head and web portions thereof to form tongues at the inner ends of which are provided abrupt shoulders for abutting relation respectively with the extremity of the tongue of the other rail end, one of said tongues carrying a base common to both tongues and having a longitudinal groove for the reception of the lower edge of the other tongue, an interlocking connection being provided between said shoulders and the abutting extremities of the tongues.



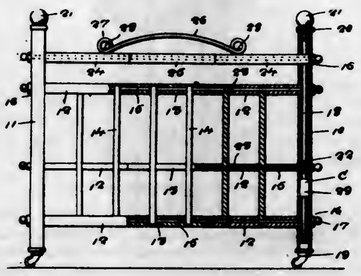
1,388,780. PUMP. ARTHUR E. STANLEY, Elkhart, Ind. Filed Nov. 29, 1920. Serial No. 427,058. 3 Claims. (Cl. 103—78.)

1. A pump comprising a base, opposed pump bodies carried by said base and held in spaced relation thereby, each pump body having a cylinder extending longitudinally through the same and communicating with chambers at the inner and outer ends of the pump body, the chambers extending annularly about the end portions of said cylinder and provided with ports leading through the upper and lower ends of the pump body, a suction chamber removably carried by the base and inclosing the ports at the lower ends of the pump bodies, a discharge manifold removably connected with and bracing the pump bodies and inclosing the ports at the upper ends of the pump bodies, removable heads for the outer ends of said cylinders, valve elements in said ports yieldably held in a closed position and removable when the suction chamber and discharge mani-



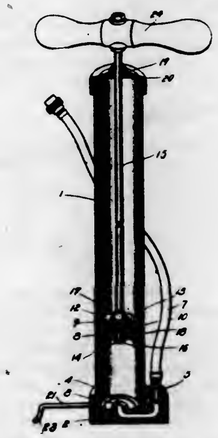
fold are removed, pistons in said cylinders having shafts extending through the inner walls of the pump bodies, and actuating means connected with piston shafts.

1,388,781. DIAL AND CYLINDER KNITTING-MACHINE. GODFREY STIBBE, Leicester, England. Filed Nov. 19, 1919. Serial No. 339,109. 10 Claims. (Cl. 66—22.)



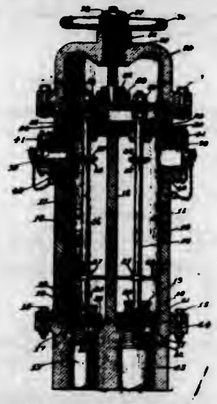
1. A circular knitting machine having two sets of needles, two or more feeders arranged so that at one or more feeders yarn is fed to the needles of one set only and at another feeder or feeders yarn is fed to the needles of the other set only whereby the two sets of needles knit independently of each other and produce individual webs, and means to feed in an additional yarn so that it becomes passed around the bases of the loops of the individual webs wholly below the surfaces of said webs and runs from one web to the other to tie them together.

1,388,782. ELECTRIC ANIMAL-TRAP. JOHNSON TUPPER, River Rouge, Mich. Filed Sept. 20, 1919. Serial No. 325,062. 2 Claims. (Cl. 43—99.)



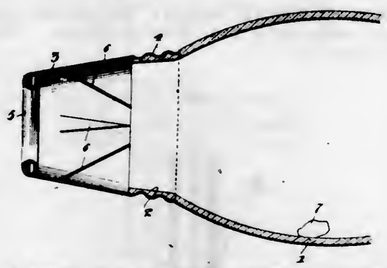
1. In a trap of the class described, a casing including a lower chamber, a contact element for a secondary circuit, an induction coil, and a battery within the casing, a pair of contact making devices adjacent to each opening and between the latter and the contact element first named, an additional pair of contact making devices between the pairs of contacts adjacent to the openings, and conductors connected with the coil, the battery, the secondary contact element and the contacts of the respective pairs, for completing a primary circuit by pressure between the contacts of either pair, and completing a secondary circuit through the coil and through the body of an animal engaging the contact first named while the contacts of either pair are closed.

1,388,783. BED. JOHN YEAGER, Baltimore, Md. Filed Mar. 5, 1920. Serial No. 363,394. 4 Claims. (Cl. 5—8.)



1. In a combined bed and crib, a bed structure comprising head and foot members, each member including end sections and a removable intermediate section, a sectional bed spring, said intermediate sections when removed from the bed structure being adapted to be turned to a position to constitute the end members of the crib and corner posts therefor, and certain sections of the springs being designed for association with the said intermediate sections to form the sides of the crib.

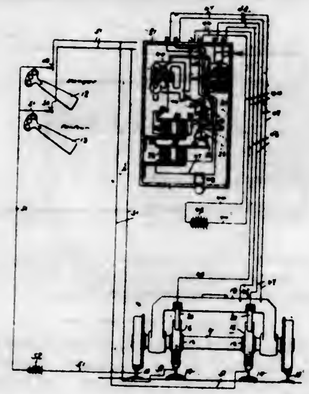
1,388,784. AIR-PUMP. JOSEPH C. YOUNGBLOOD, Denver, Colo. Filed Aug. 5, 1920. Serial No. 401,300. 1 Claim. (Cl. 230—27.)



A pump comprising a cylinder, a piston in the cylinder having an integral, upstanding, threaded collar, said collar comprising a valve seat, ports leading from the valve seat through the piston, a pump leather on the piston surrounding the collar, a nut threaded on the collar to hold the piston leather in place, a pump rod for limiting the reciprocatory movement with respect to the pump piston, and a valve on the pump rod.

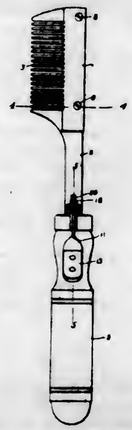
1,388,785. DUPLEX HYDRANT. HAROLD I. ACKER, New York, N. Y., assignor to Foamite Firefoam Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 2, 1920. Serial No. 348,717. 12 Claims. (Cl. 221—96.)

1. In a fire extinguishing system of the multiple solution type, a hydrant including a casing adapted to be mounted in fixed position, a separate passage through the casing for each solution, each passage being adapted to be connected to a suitable source of solution supply, valve means for closing each passage, unitary means for simultaneously opening all of the passages to permit synchronous flow of the solutions therethrough, and means for connecting each passage to a line of a multiple distribution system.



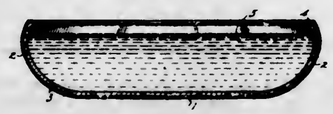
1,388,786. MOUSETRAP. NUNNALLY H. ALBRECHT and WALTER A. BALDWIN, Dawson, Ga. Filed July 13, 1920. Serial No. 395,852. 3 Claims. (Cl. 43—65.)

3. A device of the character specified, comprising a frusto-conical sleeve having at the large end thereof a threaded portion for engaging the neck of a fruit jar, said sleeve having struck-up internal pointed spurs converging toward the large end of the sleeve.



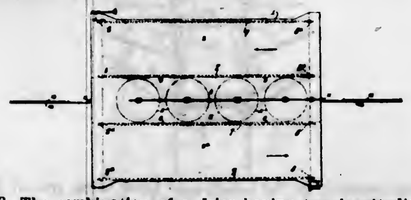
1,388,787. RAILWAY SIGNAL DEVICE. DENNIS J. ALLEN, Binghamton, N. Y. Filed Sept. 7, 1920. Serial No. 408,429. 1 Claim. (Cl. 246—191.)

In a signal apparatus, a semaphore device adjacent a railway line, electrical means for actuating the line semaphore device, a support on a moving train, a miniature semaphore mounted for oscillation within said support and carrying a gear pinion, an arm mounted for oscillation and carrying a gear segment engaging said gear pinion, an electromagnet for said arm, an armature swinging at one end adjacent said magnet, an extension from said armature and connected to said arm, an elongated electrical contact adjacent the railway line and in electrical connection with the line semaphore, an electric contact carried by the moving train in position to engage the elongated contact, and electric connections between said electric contacts and the electromagnet, whereby the miniature semaphores are moved into the



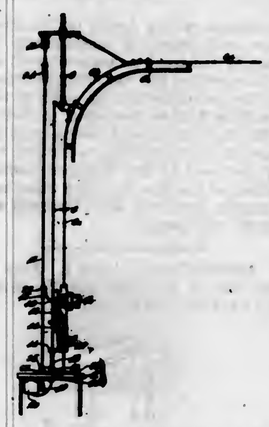
same relative position as the line semaphore when the train contact engages the elongated contacts.

1,388,788. COMB. OSCAR RICHARD ALTWEIN, Asheville, N. C. Filed Apr. 14, 1921. Serial No. 461,176. 3 Claims. (Cl. 132—14.)



1. A comb of the character described, comprising a stationary comb mender, a movable comb member, teeth on said comb members normally in alinement, means for moving the movable member, and cushioning means interposed between said last-mentioned means and the movable member.

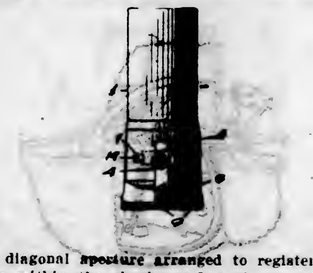
1,388,789. GAZING-BOWL. LEO M. ANDERSON, New York, N. Y. Filed Oct. 22, 1920. Serial No. 418,676. 2 Claims. (Cl. 46—37.)



1. A gazing bowl comprising an open-topped metallic receptacle having curved sides suitably treated to produce any desired color effect thereon, and a lining of transparent material placed against the inner surface of this receptacle to form a highly polished reflective surface, said receptacle adapted to receive a body of transparent liquid.

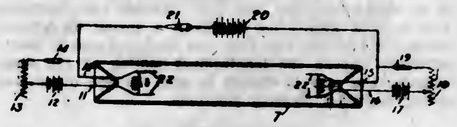
1,388,790. DRIER. ELWOOD B. AYERS, Philadelphia, Pa., assignor to the Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 23, 1919. Serial No. 325,714. 8 Claims. (Cl. 34—12.)

3. The combination of a drier having two longitudinal drying chambers; a heating chamber located between the drying chambers; means for circulating air through the heating chamber and the drying chambers; conveyers in each chamber, one conveyer moving in one direction and the other in the opposite direction; a frame pivoted in a central position at each end of the drier and arranged to swing in front of either drying chamber so as to carry material to the feed end of one chamber and to receive material from the feed end of another chamber.



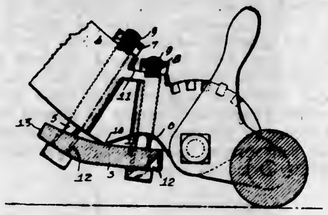
1,388,791. CASH-CARRIER. JAMES L. BALDWIN, Chicago, Ill. Filed Nov. 16, 1920. Serial No. 424,452. 8 Claims. (Cl. 105—22.)

1. In an apparatus of the character described, a carrier, elevating means for the carrier, an endless belt, a driving connection between the belt and the elevating means, an electric motor for driving the belt in a direction to impart a working stroke to the elevating means, a switch mechanism controlling the circut of the motor, and means for automatically operating the switch mechanism to open the motor circuit at the end of the working stroke of the elevating means.



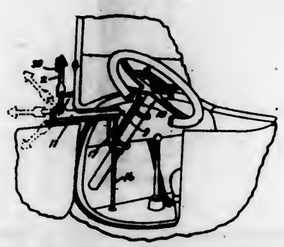
1,388,792. DRILL. HENRI BERNAY, San Francisco, Calif., assignor, by mesne assignments, to Fred W. Thurston, San Francisco, Calif. Filed Mar. 21, 1919. Serial No. 284,181. 3 Claims. (Cl. 255—64.)

1. A drill comprising a chuck having a central aperture and lateral slots arranged at right angles to each other and also having a lateral aperture reduced at one end thereof; a cruciform bit detachably mounted within the slots and having one end wider than the other and cutting edges on said wider end, and likewise provided



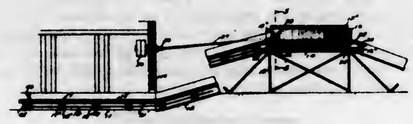
with a diagonal aperture arranged to register with the aperture within the chuck; and a pin mounted within said aperture and having a reduced portion to engage the reduced portion of the aperture whereby said pin may be inserted within said aperture from one end only.

1,388,793. VACUUM-TYPE CONVERTER. WILFRED T. BIRDSALL, Montclair, N. J., assignor, by mesne assignments, to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Jan. 5, 1917. Serial No. 140,740. 3 Claims. (Cl. 250—27.)



1. In an electron tube, the combination with two leading-in wires, of a filamentary cathode mounted therebetween, means for supplying current to said cathode for the production of electron emission thereat, an anode mounted within said tube, said leading-in wires extending beyond said cathode in the general direction of said anode, and means for maintaining an electromotive force between said cathode and said anode, said leading-in wire extensions being mounted in such relation to said cathode and having such conducting properties as to fail to become the seats of active electron emission.

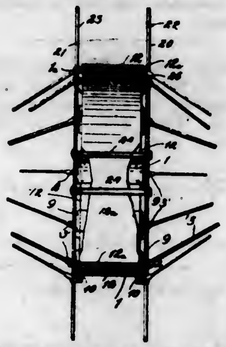
1,388,794. LAWN-MOWER ATTACHMENT. WILLIAM J. BOLL, Platteville, Wis. Filed Sept. 16, 1920. Serial No. 410,763. 1 Claim. (Cl. 56—252.)



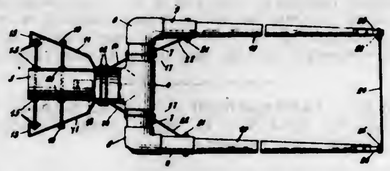
A blade adjusting attachment for lawn mowers comprising a pair of blade carrying frames, an angular shoulder presented downwardly from each frame, a blade, screws passed upwardly through the blade and entirely through the frames and holding the blades against the shoulders, said screws movable longitudinally in the frames, nuts on the upper ends of the screws engaging the upper face of the frame and controlling the position of the blade relative to the frame.

1,388,795. DIRECTION-INDICATOR FOR MOTOR-VEHICLES. Thomas A. Brett, Pittsburg, Calif. Filed Feb. 23, 1921. Serial No. 447,063. 2 Claims. (Cl. 116—52.)

1. A direction indicator for a motor vehicle, comprising a rack rod slidably mounted on and parallel to the steering post with freedom of longitudinal motion, a vertical shaft having a worm gear thereon adapted to be rotated by a longitudinal motion of the rack rod, a second horisontal rack rod mounted parallel to the dash board with freedom of longitudinal motion, an operative connection between the shaft and the second rack rod, an indicating arm pivotally supported over one end of the second rack rod having a toothed segment adapted to be engaged by the rack rod, whereby the indicating arm may be swung on its pivot, a spring operatively connected with the first rack rod being adapted to intermittently impede the longitudinal motion of the same whereby the arm is caused to stop in one of several clearly defined indicating positions.



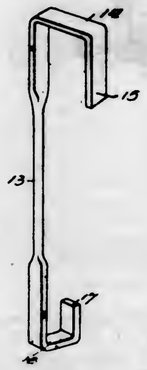
1,388,796. MANURE-REMOVER. Stanley E. Brown, Middlebury, Vt. Filed Dec. 2, 1919. Serial No. 342,008. 3 Claims. (Cl. 193—1.)



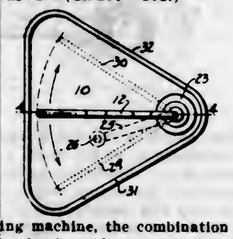
3. An apparatus of the class described including a structure, tracks thereon spaced to permit material to drop therebetween, a runway leading to said tracks, a carrier movable on said runway and adapted to receive material at the top surface thereof, a scraper on the carrier at the underside adjacent the rear end to scrape said runway and drag the scraped material to said tracks to permit the material to drop between the tracks, and scraper means on said structure above the tracks beneath which scraper said carrier is adapted to travel for the scraping of the material from the top surface of the carrier, said scraper being adapted to scrape the material laterally from said structure.

1,388,797. EXPANDING PULLEY. George Buttress, Los Angeles, Calif. Filed Nov. 19, 1919, Serial No. 339,187. Renewed Jan. 24, 1921. Serial No. 439,690. 4 Claims. (Cl. 64—8.)

1. A pulley comprising in combination a series of arcuate sections constructed to grip a band against radial movement in respect thereto and to permit the band to slide circumferentially, a series of drums, radial arms connecting said drums and sections, a convolution of a resilient band fastened at one end to one of said sections and encircling the others of said sections so as to slide circumferentially in the latter, said band being free at the other end and continuing under said sections.

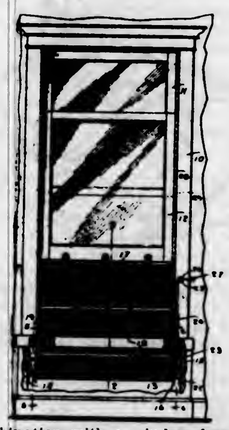


1,388,798. DOUBLE TONGUE. James S. Carter, Roby, Tex. Filed July 1, 1920. Serial No. 393,302. 1 Claim. (Cl. 278—34.)



The combination with a double tongue structure including a hollow stub tongue, a substantially T-shaped coupling carried by the front terminal thereof, angular draft pole sockets carried by the oppositely directed head of the T-coupling, braces connecting the head of the T-coupling with the sockets, hounds connected at their front terminals with the stub tongue and having angular rear terminals arranged in spaced relation to the stub tongue, braces connecting the head of the T-shaped coupling with the front terminals of the hounds, and a brace rod connecting the rear angular terminals of the hounds with the rear terminal of the stub tongue.

1,388,799. IMPLEMENT-SUPPORT. Jens C. Christensen, Penn Yan, N. Y. Filed Aug. 24, 1918. Serial No. 251,286. 1 Claim. (Cl. 97—1.)

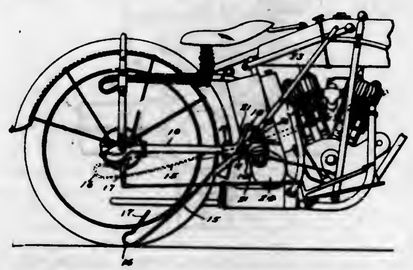


As a new article of manufacture, a double ended hook member formed of a length of stock of circular cross section throughout its intermediate length and of rectangular cross section at its opposite end portions, the rectangular end portions of the strap being bent to form upper and lower hooks, each substantially rectangular in side elevation, the lower of said hooks being disposed at right angles to the upper of said hooks and substantially less in size than the latter, the opening of the bills of said hooks being directly opposed one to the other.

1,388,800. WASHING-MACHINE. Robert F. Clark, Salt Lake City, Utah. Filed Feb. 20, 1920. Serial No. 360,196. 6 Claims. (Cl. 259—101.)

1. In a washing machine, the combination with a horizontal tub portion having sides lying in three intersecting vertical planes, of an agitator pivotally supported near the vertex formed by two of the intersecting planes, the said agitator being adapted to oscillate between the said two planes; and the third plane being tangent to an arc concentric with, and lying somewhat outside of, the arc described by the oscillating extremity of the said agitator, the point of tangency being approximately at the center of the said arc.

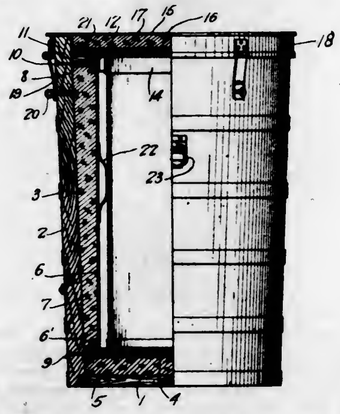
1,388,801. WINDOW, DOOR, OR PORCH SCREEN. Daniel R. Cooley, Smithers, British Columbia, Canada. Filed Apr. 6, 1920. Serial No. 371,762. 2 Claims. (Cl. 156—39.)



1. The combination with a window frame, of a spring actuated drum mounted in bearings located beyond one end of the frame, a screen or curtain wound upon said drum and extending through a slot in the adjacent end of the frame, means for removably securing the free end of the screen or curtain to the window sash, a ratchet wheel secured to the drum, a spring actuated dog pivotally secured to the window frame, and means secured to the dog and extending through the frame for moving the dog out of engagement with the ratchet wheel to regulate the position of the window sash.

1,388,802. GARMENT-WEIGHT. Morris L. Cooper, New York, N. Y. Filed Apr. 10, 1920. Serial No. 372,875. 1 Claim. (Cl. 2—124.)

A garment weight adapted to be connected to the bottom inner facing of a skirt in spaced relation with respect to one another and each comprising a convexed body portion of rectangular form, the material forming the body being reduced in thickness adjacent the edges thereof to provide the same with a pair of beveled longitudinal edges and a pair of transverse edges, each of the said beveled edges of the body portion being cut out to provide the same with oppositely arranged spaced parallel elongated slots adapting the weight to be sewed to the garment along both the longitudinal and transverse edges for the greater portion of the longitudinal and transverse extent of the body.

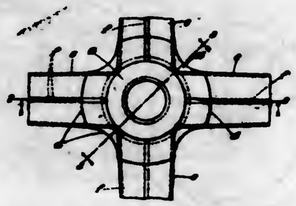


1,388,803. ATTACHMENT FOR MOTORCYCLES. Walter L. Craig, Washington, D. C. Filed July 17, 1920. Serial No. 397,014. 2 Claims. (Cl. 208—78.)

1. An attachment for motorcycles comprising a pair of levers mounted for pivotal movement upon the frame of a motorcycle upon opposite sides of the rear wheel, said levers including curved ground engaging portion and relatively wide extremities, to provide foot rests and means whereby the levers may be adjusted for either use.

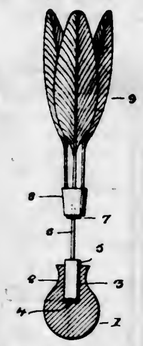
1,388,804. SHIPPING-PACKAGE. Richard J. Decy, Jersey City, N. J. Filed Sept. 18, 1920. Serial No. 411,288. 5 Claims. (Cl. 217—5.)

I. A shipping package for ice cream, etc., comprising a tub having inner and outer walls with insulating material



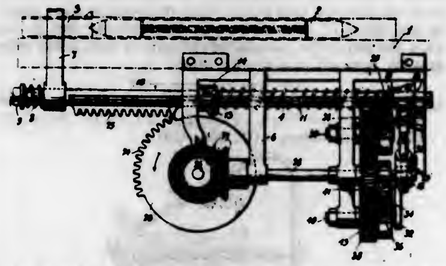
between said walls, an inner cover and gasket for hermetically sealing the inner wall, and an insulating cover fitting the upper edge of the outer wall.

1,388,805. CURLING-IRON. THOMAS L. DENNIS, New York, N. Y., assignor to George F. Parker, New York, N. Y. Filed Aug. 18, 1920. Serial No. 404,456. 4 Claims. (Cl. 219—24.)



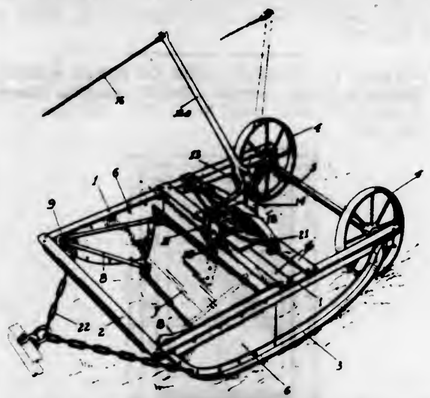
1. A curling iron comprising a heating bar, a handle carrying said heating bar and formed with a notch therein, a hair retaining member pivotally carried by said handle, the pivotal mounting of said retaining member being placed a short distance from one end, and means for depressing one end of the retaining member into said notch for elevating the opposite end.

1,388,806. HAND-WHEEL. HORACE WALTER DOVER, St. James, England. Filed Sept. 30, 1920. Serial No. 413,850. 2 Claims. (Cl. 74—33.)



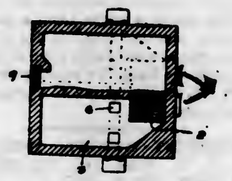
1. A hub for a hand wheel, formed peripherally with a groove adapted to receive the inner ends of the arms or spokes of the wheel said groove being bounded on two of its sides by flanges adapted to be pressed toward one another so as to fit closely around said arms.

1,388,807. EXPLODING TOY BOMB. LOUIS F. DUCK, De Kalb, Ill. Filed Dec. 13, 1919. Serial No. 344,641. 1 Claim. (Cl. 46—46.)



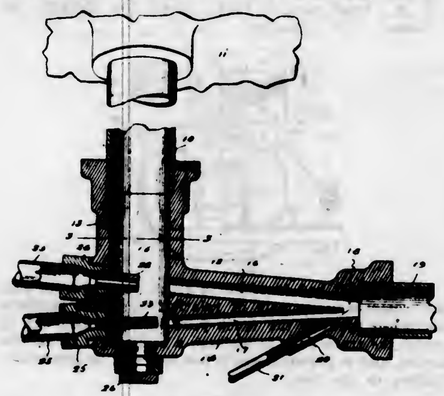
An aerial toy bomb comprising a relatively heavy base formed in it stop with a recess for the reception of caps, a plunger slidably engaged within said recess and carrying at its upper end a shaft formed intermediate its end with a disk, and a projectile member including a base slidably engaged upon the upper end of said shaft in abutting relation to the disk and carrying guide feathers.

1,388,808. LOOM. JACOB E. DUELKS, Boston, Mass. Filed Oct. 22, 1920. Serial No. 418,696. 8 Claims. (Cl. 139—48.)



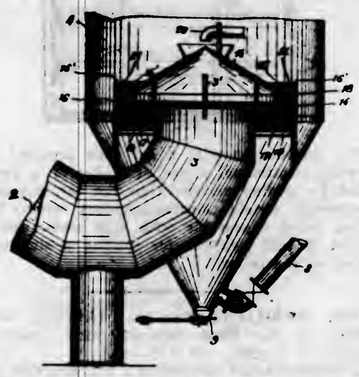
1. In a loom having a lay and a main frame, picker mechanism comprising a picker shaft, a spring for actuating the same on its shuttle-driving stroke, and direct gearing continuously connecting the lay and main frame and driven directly and continuously by the beats of the lay in both directions to retract said shaft against its spring and to release it to be driven forward on its shuttle-driving stroke by said spring.

1,388,809. SCRAPER. THEODORE EDGINTON, Cutler, Calif. Filed Jan. 2, 1920. Serial No. 348,764. 5 Claims. (Cl. 37—42.)



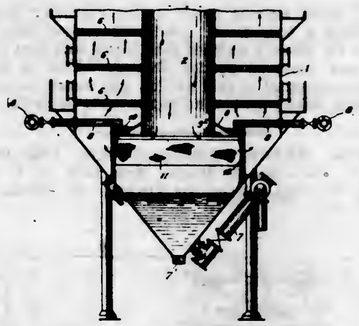
1. A scraper adapted to be drawn by a tractor comprising a frame, a scraping plate transversely mounted therein, a lever means mounted to the frame and connected to the plate for moving the latter downwardly with a pull on the lever, the latter being actuated from the tractor, and means for automatically causing the plate to move upwardly when the pull on the lever is released.

1,388,810. FURNACE. SAMUEL C. EVANS, New Castle, Pa. Filed Nov. 21, 1919. Serial No. 339,689. 1 Claim. (Cl. 263—40.)



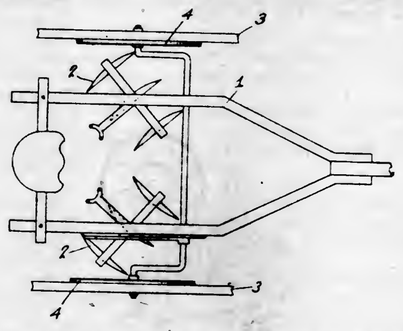
In a furnace a hearth or working chamber having doors at its front and rear ends, a grate at the rear of the furnace, an uptake leading from the hearth or working chamber at a point adjacent to the rear end of the furnace, means below the hearth or working chamber to conduct the products of combustion from the space above the grate to the forward end of the hearth or working chamber, and an air flue arranged transversely below and connected with the said conducting means at a point slightly in front of the grate, all in combination and for the purpose set forth.

1,388,811. LOCOMOTIVE SANDER ATTACHMENT. MACK J. FOWLER, Roanoke, Va. Filed Apr. 23, 1921. Serial No. 464,022. 4 Claims. (Cl. 291—11.)



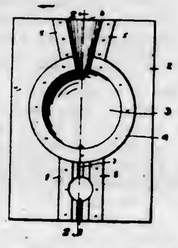
1. The combination with a sanding apparatus, of a discharge nozzle comprising a substantially L-shaped member including a vertical leg and a horizontal leg and adapted for connection with a sand supply, channels provided in the horizontal leg, said channels being spaced apart at their inner ends and having their outer ends communicating with a common outlet and air nozzles extending within the vertical arm of the L-shaped member and arranged to discharge air into the inner ends of each of the channels.

1,388,812. APPARATUS FOR WASHING GAS. WILBUR H. GEESMAN, Youngstown, Ohio, assignor of forty-eight one-hundredths to Arthur G. McKee & Company, Cleveland, Ohio, a Corporation of Delaware, twenty-six one-hundredths to F. E. Kling, Youngstown, Ohio, and twenty-six one-hundredths to L. B. Weidlein, Cleveland, Ohio. Filed Oct. 31, 1917. Serial No. 199,477. 13 Claims. (Cl. 261—111.)



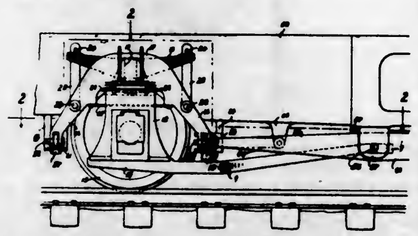
1. In a gas washer, the combination with a gas conduit and means passing gas therethrough; of means arranged to furnish water to said conduit, means arranged to cause the water to fall in a cascade through said conduit, means arranged to divert the gas horisontally through said cascade, and an annular screen disposed a spaced distance exteriorly of the latter for breaking up the water, resulting in an intimate mix of the latter and the gas.

1,388,813. MEANS FOR WASHING GAS. WILBUR H. GEESMAN, Youngstown, Ohio, assignor of forty-eight one-hundredths to Arthur G. McKee & Company, Cleveland, Ohio, a Corporation of Delaware, twenty-six one-hundredths to F. E. Kling, Youngstown, Ohio, and twenty-six one-hundredths to L. B. Weidlein, Cleveland, Ohio. Filed May 28, 1919. Serial No. 300,263. 5 Claims. (Cl. 261—111.)



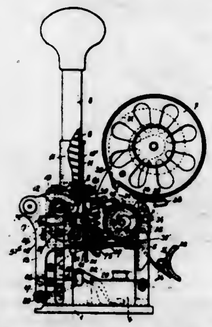
1. In a gas washer, the combination of a shell; a gas entrance thereto and a gas exit therefrom; means forming a gas conduit connecting said entrance and exit; means maintaining a water level in said shell in an area thereof removed from said entrance and contiguously to said gas conduit; means forming a substantially right angle turn in said conduit adjacently said water level; water-breaking means intersecting said right-angular direction of gas travel; and means providing a sheet of water falling forwardly of said breaking means.

1,388,814. WHEEL GUARD FOR WHEELED DISK HARROWS. WILLIAM H. C. HAMANN, Jr., Snyder, Nebr. Filed Sept. 28, 1920. Serial No. 413,381. Renewed July 8, 1921. Serial No. 483,342. 2 Claims. (Cl. 55—73.)



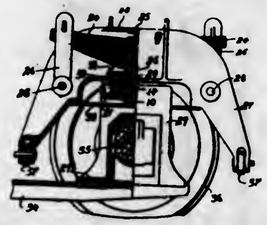
1. The combination with a ground wheel and a disk of a wheeled disk harrow, of an annular guard to protect the spokes of the ground wheel from the disk or disks; the said guard being fixedly connected to some of the spokes of the wheel and being interposed between the spokes and the disk or disks.

1,388,815. REPAIRING DEVICE. PETER HEDIN, Duluth, Minn. Filed Mar. 8, 1921. Serial No. 450,600. 3 Claims. (Cl. 22—116.)



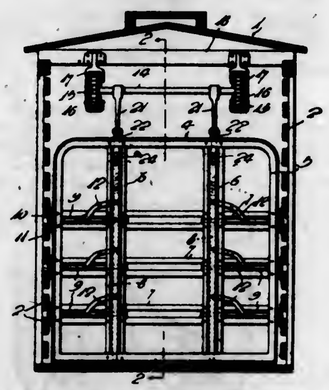
1. A patch forming device of the character described comprising a body block, a concaved portion within one face of the block, a recessed gate within said face leading into said concaved portion through which to deposit soldering material to said portion and means for holding the block tightly against an object being patched.

1,388,816. TRUCK. ERNEST R. HILL, East Orange, N. J., and JOHN W. MARSH, New York, N. Y. Filed Aug. 25, 1919. Serial No. 319,620. 26 Claims. (Cl. 105—82.)



1. A radial truck for locomotives, comprising in combination, a railroad wheel and axle set, axle boxes journaled thereon, a yoke pivoted upon each axle box pivotally connected with a locomotive and capable of rocking motion transversely of the track upon which the truck runs, and a radius bar rigidly joined with the axle boxes.

1,388,817. DEVICE FOR SEVERING AND APPLYING STAMPS OR THE LIKE TO ENVELOPS OR OTHER SURFACES. FRANZ KAŠPAR, Olmutz Hodolein, Czecho-Slovakia. Filed Aug. 24, 1920. Serial No. 405,723. 16 Claims. (Cl. 216—27.)



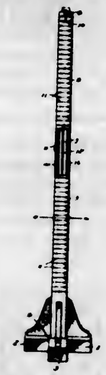
1. An implement for affixing stamps and the like, comprising a frame; a depressible operating element movable therein; mechanism actuated by said operating element during its movement in one direction for feeding a strip of stamps; a rocking lever having a pair of opposed cams; a member on said operating element engageable with one cam during the descent of the operating element for rocking said lever in one direction, and engageable with the other cam during the ascent of the operating element for rocking the lever in the opposite direction; and a moistening device connected to said lever for operation thereby and adapted to be dragged along the gummed face of the stamp to be affixed during the movement of said lever in one direction.

1,388,818. SWING-TRUCK-YOKE SUPPORT FOR RAILROAD ROLLING-STOCK. JOHN W. MARSH, New York, N. Y. Filed Nov. 7, 1919. Serial No. 336,817. 57 Claims. (Cl. 105—222.)

1. A support bed to mount a truck yoke over an axle box, comprising: a pair of relatively movable members interposed between the truck yoke and the axle box to permit the truck yoke to undergo a swingingly transverse motion, and to permit the axle box to travel longitudinally relative to the yoke.

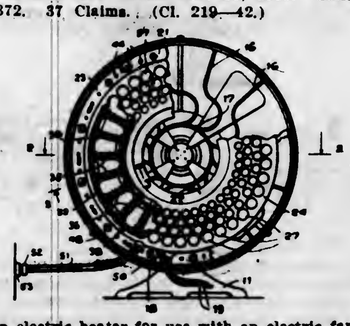
1,388,819. ADJUSTABLE PARTITION FOR STOCK-CARS. JOSEPH RAYMOND MORIARTY, Hudson, Mich. Filed Nov. 22, 1920. Serial No. 425,792. 6 Claims. (Cl. 105—376.)

1. The combination with a car body provided in its sides with longitudinal series of seats; of a partition mounted for sliding movement in the car, horisontally and vertically movable locking members carried by the partition, being engageable with said seats, and links connected to said members for causing a simultaneous operation of the latter.



1,388,820. RESILIENT WHEEL. LEWIS A. NUCERA, Buffalo, N. Y. Filed July 25, 1919. Serial No. 313,277. 2 Claims. (Cl. 152—44.)

1. A resilient wheel comprising a hub structure having side plates, annular webs extending from one of the side plates to the second plate to hold the plates in spaced relation, radiating webs extending between the annular webs, means releasably connecting the second side plate with the annular webs, a spoke carrying rim positioned between the side plates of the hub structure and having

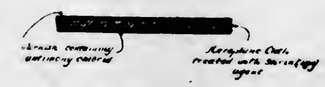


side walls and an annular web connecting said walls, and springs positioned between the annular web of the spoke carrying rim and one of the annular webs of the hub structure and connected therewith.

1,388,821. HURDLE AND VAULTING STANDARD. GEORGE E. PULLIAM, Mount Vernon, Ill. Filed Aug. 3, 1920. Serial No. 401,053. 2 Claims. (Cl. 46—69.)

1. In a standard of the class described two telescopically engaged members, a pulley carried by the fixed member, and a flexible element secured to the inner end of the slidable member and passed over said pulley to effect movement of said sliding member in one direction by a pull exerted on the free end of said element, a pin carried by said flexible element, and a plurality of longitudinally spaced sockets carried by the fixed member said pin being insertible in one of said sockets to hold the sliding member in adjusted position against the force of its weight.

1,388,822. CIRCULATOR-HEATER. HERMAN E. ROYS, New York, N. Y., assignor, by mesne assignments, to Universal Interests, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 15, 1919. Serial No. 338,372. 37 Claims. (Cl. 219—42.)



1. An electric heater for use with an electric fan comprising a heating unit and means for securing said unit to said fan, said means being constructed to coöperate with a fan of any size within a given range.

1,388,823. GRAIN-BAG HOLDER. IRA B. WHITE, Fort Worth, Tex. Filed June 11, 1921. Serial No. 476,662 3 Claims. (Cl. 83—26.)

1. In a device of the class described, the combination with a chute, of a pair of horizontal brackets fastened at their inner ends to the sides of the chute, a rod extending through the outer ends of said brackets, links pivotally mounted on said rod, another rod mounted upon said links, and manually operated means connected to one of said links for moving the links and the rod supported thereby with respect to the chute.

1,388,824. PROTECTIVE TREATMENT OF MATERIALS. ARTHUR ARENT, Des Moines, Iowa. Filed Sept. 20, 1918. Serial No. 254,958. 26 Claims. (Cl. 91—68.)

19. In a process of protectively treating material, the step of applying to the material a fire-retardant hydrolyzable compound of a metal dissolved in a non-aqueous solvent.

25. As a new article of manufacture, cloth for aeroplanes and the like comprising a fabric base carrying a shrinking agent and coated with a mixture of a gum and a hydrolyzable compound of a metal.

1,388,825. ART OF PROTECTIVELY TREATING MATERIALS. ARTHUR ARENT, Des Moines, Iowa. Filed Feb. 5, 1919. Serial No. 275,242. 33 Claims. (Cl. 91—68.)

1. The process of protectively treating material which comprises applying thereto a solution of a fire-retardant hydrolyzable metal compound in a menstruum comprising amyl acetate.

8. The process of preparing a liquid treating composition which comprises dissolving antimony trichlorid in amyl acetate, and mixing the solution with a varnish.

16. As a new composition of matter, a solution of an antimony salt of a mineral acid in amyl acetate, said solution yielding a substantially non-inflammable residue upon drying.

21. As a new composition of matter, a mixture of collodion, amyl acetate, and a water-insoluble antimony compound, said mixture yielding a substantially non-inflammable residue upon drying.

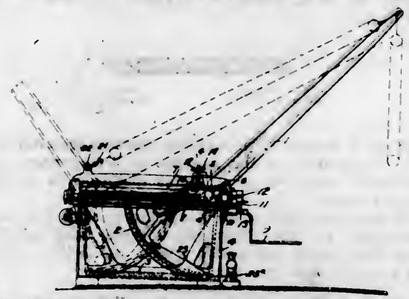
25. As a new fire-retardant composition of matter, a non-aqueous liquid material comprising coloring matter, a vehicle therefor, and a water-insoluble antimony compound dissolved in said vehicle.

1,388,826. TREATMENT OF MATERIALS TO REDUCE THEIR INFLAMMABILITY. ARTHUR ARENT, Des Moines, Iowa. Filed June 26, 1919. Serial No. 306,928. 16 Claims. (Cl. 23—5.)

15. A protective composition comprising creosote having antimony chlorid incorporated therewith.

1,388,827. PROTECTIVE MATERIAL. ARTHUR ARENT, Des Moines, Iowa. Filed Jan. 29, 1921. Serial No. 441,081. 15 Claims. (Cl. 23—5.)

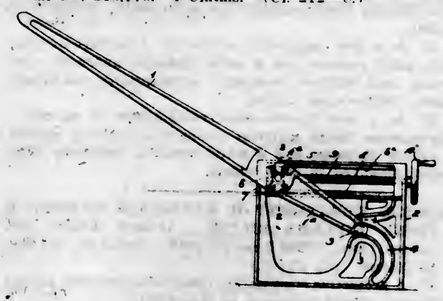
7. As a new composition of matter for fireproofing and like purposes, a varnish containing a fire-retardant antimony salt in proportion sufficient to produce a non-inflammable varnish coating.



1,388,828. ART OF PROTECTIVELY TREATING MATERIALS. Arthur Arent, Des Moines, Iowa. Filed Jan. 29, 1921. Serial No. 441,082. 13 Claims. (Cl. 23—5.)

2. The process of waterproofing and decreasing the combustibility of fibrous material which comprises applying thereto a mixture of a drying oil, a fire-retardant antimony compound, and a volatile solvent.

1,388,829. PROTECTIVE TREATMENT OF MATERIALS. Arthur Arent, Des Moines, Iowa. Original application filed June 26, 1919. Serial No. 306,928. Divided and this application filed Jan. 29, 1921. Serial No. 441,084. 13 Claims. (Cl. 23—5.)

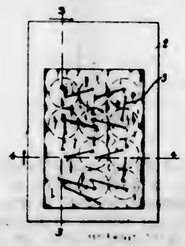


4. The process of protectively treating fibrous materials which comprises applying thereto a tarry substance having a fire-retardant hydrolysable compound of antimony incorporated therewith.

1,388,830. DAVIT AND CRANE. Harry W. Broady, Bayside, N. Y., assignor to American Balsa Company, Inc., a Corporation of New York. Filed Aug. 11, 1919. Serial No. 316,775. 4 Claims. (Cl. 212—8.)

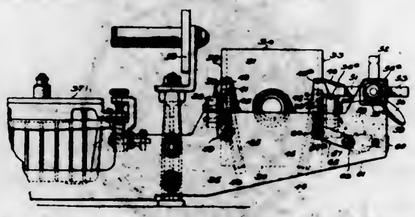
1. In a crane or davit, the combination with a suitably supported and pivoted davit arm and operating mechanism engaging said arm intermediate its ends for swinging the same to its normal extreme positions respectively, of means for connecting said arm and said operating mechanism to permit relative movement therebetween to permit swinging of the arm beyond one of such normal extreme positions.

1,388,831. CRANE OR DAVIT. Harry W. Broady, Bayside, N. Y., assignor to American Balsa Company, Inc., a Corporation of New York. Filed Aug. 11, 1919. Serial No. 316,776. 4 Claims. (Cl. 212—8.)



1. In a crane or davit, the combination with a frame having a rectilinear and substantially horizontal, rigid track at its upper end and a guiding slot below said track, of an arm supported on a pivot located between its ends and movable on the said track, and also having at its heel a guiding connection with the said guiding slot and means for moving said pivot along said horizontal track.

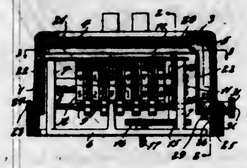
1,388,832. MANUFACTURE OF MEDICINAL OILS AND OTHER VISCOUS DECOLORIZED PRODUCTS OF PETROLEUM. Ernest B. Coss, Jersey City, N. J., assignor to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 7, 1917. Serial No. 173,312. 12 Claims. (Cl. 196—26.)



1. Stock for the manufacture therefrom of decolorised hydrocarbon oil, which stock has as a whole a viscosity above eighty seconds at 100° F. and is compounded of distillates, that belong to different types of petroleum, and are as a whole of different viscosities, and whose respective hydrocarbons have equal gravities over a range of gravities corresponding with the lighter end of the more viscous distillate, mixed together in such manner that between fifty per cent. and ninety five per cent. of said stock is distillate, which as a whole is heavier and more viscous than the stock as a whole, and whose hydrocarbons of equal gravities with hydrocarbons in the remainder of said stock are less viscous than these latter, substantially as described.

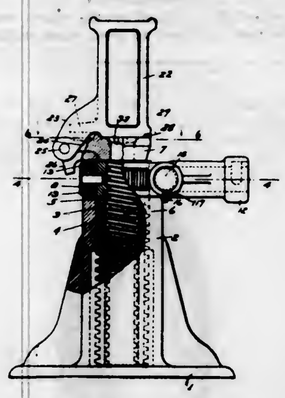
1,388,833. BUTTON-CARD. Lewis W. Harlem, New York, N. Y. Substitute for abandoned application Serial No. 358,274, filed Feb. 12, 1920. This application filed July 21, 1920. Serial No. 397,991. 6 Claims. (Cl. 211—34.)

1. In a button card having a paper body and having buttons sewed thereto by means of a running stitch of thread, the combination of the body of the said card and a thin tenacious film of adhesive which connects the back of the said card to the thread located adjacent thereto, the said film being substantially unaffected by moisture and heat, and being durable and flexible, the said film being absorbed by the said thread to thicken and strengthen it.



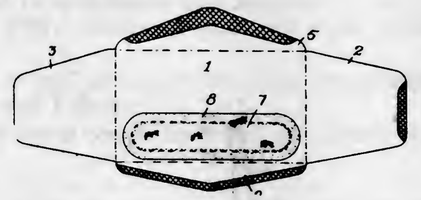
1,388,834. SPARK-GAP APPARATUS. Fritz Lowenstein, Brooklyn, N. Y. Filed Jan. 19, 1918. Serial No. 212,616. 46 Claims. (Cl. 250—38.)

1. A spark gap device comprising a pair of electrode members insulated from one another and having coöperating annular sparking surfaces disposed in parallel closely spaced relation, in combination with means extending between said members centrally of said sparking surfaces and serving to hold said members firmly together in operative relation, said device constituting a removable gap unit adapted for use in series with similar gap units in a complete spark gap.



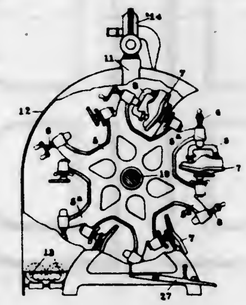
44. Spark gap apparatus, comprising a plurality of independently removable spark gap units connected in series, and means for automatically closing the circuit between adjacent gap units when a gap unit is removed.

1,388,835. METER. John H. Norris, New York, N. Y.; Emma M. Norris executrix of said John H. Norris, deceased. Filed Feb. 9, 1917. Serial No. 147,536. 4 Claims. (Cl. 235—1.)



1. In a meter, indicating mechanism, a casing inclosing the indicating mechanism, and provided with a glass through which said mechanism is visible, a wiper comprising a member contacting with the inner surface of said glass and two arms connected with the ends of said member and pivotally mounted within the casing, and manually operable means for swinging the wiper about its pivots.

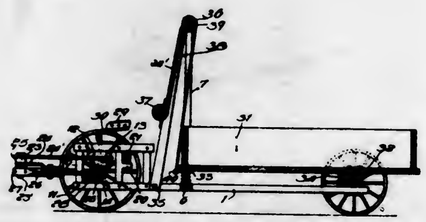
1,388,836. LIFTING-JACK FOR TRUCKS. Charles W. Ripsch, James C. Dawley, and Charles D. Derby, Dayton, Ohio, assignors to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 2, 1920. Serial No. 355,719. 19 Claims. (Cl. 254—100.)



1. In a lifting jack, the combination with a base, a lifting element movably mounted on said base, and a ratchet wheel operatively connected with said lifting element, of a pawl to coöperate with said ratchet wheel, a lever operatively connected with said pawl, and a part rigidly secured to said lever and arranged to move said pawl into an inoperative position when said lever is moved about its longitudinal axis.

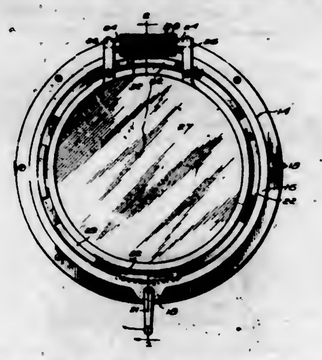
1,388,837. WINDOW-ENVELOP. Willard E. Swift, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Original application filed Mar. 2, 1915, Serial No. 11,574. Divided and this application filed Mar. 28, 1918. Serial No. 225,216. 2 Claims. (Cl. 229—71.)

1. As an article of manufacture, an envelop provided with a window opening in its face and having a margin of adhesive material around said opening, said opening and said margin being covered by a patch of semitransparent material, with a transparent solution applied to the outer surface of said patch but wholly within the limits of said opening.



1,388,838. MULTIPLE PRESS FOR THE MANUFACTURE OF SHOES AND BOOTS. Eugen Gottfried Dihlmann, Leipzig-Reudnitz, Germany. Filed June 23, 1919. Serial No. 306,267. 1 Claim. (Cl. 12—37.)

In a press for manufacturing foot-wear by gluing the upper to the sole, the combination with a number of individual press-devices, arranged upon and around a horizontal shaft, so as to form a plurality of series, of a casing inclosing the said individual press-devices at the rear and the sides of the press, a heating device placed in said casing, an exhaust connected to the casing, and means for revolving the said individual press-devices in unison.



REISSUES.

15,180. DRAFT APPLIANCE FOR WAGONS AND THE LIKE. LAMBERT COPPOCK, Lebanon, Oreg. Filed May 21, 1921. Serial No. 471,497. Original No. 1,342,254, dated June 1, 1920, Serial No. 157,694, filed Mar. 27, 1917. 14 Claims. (Cl. 278—1.)

6. In a vehicle the combination of a draft bar, a load supporting frame swingingly suspended from the draft bar at a plurality of points, means adapted to make contact with the roadway and support the draft bar thereabove, means connecting the loading frame to the draft bar, said means normally tending to hang pendant under the weight of the loading frame and normally oscillating in a vertical plane under the draft bar stresses for the purpose described.

15,181. PORT-LIGHT. ALBERT H. KENNEWEG, Brooklyn, N. Y. Filed Apr. 18, 1921. Serial No. 462,430. Original No. 1,350,507, dated Aug. 24, 1920, Serial No. 374,345, filed Apr. 16, 1920. 8 Claims. (Cl. 144—178.)

1. The combination with a member having an annular opening and a hinged cover closing said opening, of a locking member rotatably mounted in said opening, and means actuated thereby to turn said cover on its hinge.

15,182. DISAZO DYE. WALTER M. RALPH, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed June 29, 1921. Serial No. 481,414. Original No. 1,371,979, dated Mar. 15, 1921, Serial No. 376,277, filed Apr. 24, 1920. 4 Claims. (Cl. 8—1.)

1. The herein described new diazo dye obtainable by diazotizing 1-amino-4-nitro-naphthalene-6 (or -7) monosulfonic acid coupling with m-amino-p-cresol methyl ether, again diazotising and coupling the diazotized intermediate with 2.8.6 amino-naphthol sulfonic acid, and reducing the nitro group, said dye, in the form of its sodium salt being a bluish black powder, soluble in water to give a blue solution from which hydrochloric acid produces a blue precipitate, and soluble in concentrated sulfuric acid to give a greenish blue solution, said dye dyeing cotton, wool, silk, and other fibers, bluish shades which can be developed to give fast blue-black to green-black shades.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 23, 1921.

[PUBLISHED SEPTEMBER 8, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

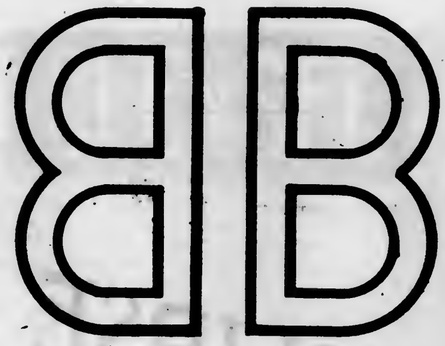
As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 100,827. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) SIGNODE SYSTEM, INC., Chicago, Ill. Filed Jan. 22, 1917.

Particular description of goods.—Metal Strapping for Bails, Wooden Boxes, and the Like and Metallic Fastening Seals for Said Strapping.

Claims use since about Aug. 15, 1916.

Ser. No. 101,064. (CLASS 35. BELTING, HOSE, MACHINERY PACKING AND NON-METALLIC TIRES.) THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio. Filed Jan. 31, 1917.



No claim being made to the pictorial representation of a tire apart from the mark as shown in the drawing.

The trade-mark consists in a black or substantially black central or peripheral band upon the outer surface of the tire body, black or substantially black side walls, and an arbitrarily-placed band of blue between the two black surfaces at one or both sides of the tire. The blue band or bands are usually narrower than either of the black bands, although the width of the blue bands may vary considerably.

Particular description of goods.—Elastic Vehicle-Tires.

Claims use since October, 1916.

Ser. No. 108,137. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) BAYNE MANUFACTURING COMPANY, Bushnell, Ill. Filed Dec. 26, 1917.

Consists of the letters "B B" one being in normal and the other in reversed position.

Particular description of goods.—Shock-Absorbers, Shock and Rebound Absorbers, Tire and Wheel Carrying Attachments for Automobiles, Radius-Rods, Radius-Rod Supports, Fenders, Fender-Braces, Number-Plate Brackets, Windshields, Windshield Hinges and Frames, End-Gates for Wagons, and Shoveling-Boards for Wagons.

Claims use since on or about Nov. 1, 1917.

Ser. No. 111,984. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) Babbitt Steam Specialty Co., New Bedford, Mass. Filed July 8, 1918.

B-Square

Particular description of goods.—Sheet-Packing of Cured Rubber Composition, Compressed Asbestos Fiber, and/or Fabric and Rubber Adapted to Pack the Joints of Pipes, Engine-Cylinder Heads, and Any Other Joints Between Flat Surfaces to Resist Pressure of Gases, Vapors, or Liquids.

Claims use since May 10, 1918.

Ser. No. 116,739. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Carson, Pirie, Scott & Co., Chicago, Ill., assignor to Carson Pirie Scott & Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1919.

CLIPPER

Particular description of goods.—Percale Dress Goods in the Piece.

Claims use since about 1908.

Ser. No. 117,621. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) Morgan Spring Company, Worcester, Mass., Filed Apr. 19, 1919.

ECLIPSE

Particular description of goods.—Wire Articles—Namely, Wire Hooks, Wire Chains, Wire Springs, Wire Towel-Racks, Wire Racks for Glasses, Jars, and Dishes, Wire Soap-Holders, Wire Trays, and Wire Dish-Drainers.

Claims use since January, 1900.

Ser. No. 117,783. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) William H. Rutland, Altus, Okla. Filed Apr. 23, 1919.

SURE SR RELIEF REMEDIES

No claim is made to the words "Sure Relief Remedies" apart from the trade-mark shown in the drawing.

Particular description of goods.—Medicinal Preparations for the Treatment of Affections of the Eye.

Claims use since Jan. 10, 1919.

Ser. No. 117,913. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) The Alvey-Ferguson Company, Cincinnati, Ohio. Filed Apr. 28, 1919.

A-F TRADE MARK

No claim is made to the words "Conveying" and "Machinery" or for the words "Trade Mark" apart from the mark shown in the drawing.

Particular description of goods.—Conveyers and Conveying Machinery—Namely, Gravity-Conveyers, Belt Conveyers, Spiral Chutes, Vertical Elevators, Scraper Conveyers, Screw Conveyers, Apron Conveyers, Inclined Automatic Elevators, Lowering-Machines, Live-Roller Conveyers, Piling-Machines, Tiering-Machines, Wagon-Loaders, Coal-Handling Conveyers, Ash-Conveyers, Beaded-Apron Conveyers, Roller-Spirals, Slides, and Conveyer-Supports—and Parts Thereof.

Claims use since Jan. 10, 1919.

Ser. No. 118,734. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) Edmond Jaeger, Paris, France. Filed May 20, 1919.

JAEGER PARIS

No claim is made to the word "Paris" apart from the mark shown in the drawing.

Particular description of goods.—Indicators of Revolution, Speed-Indicators, Altitude-Registering Anemometers.

Claims use since Feb. 11, 1919.

Ser. No. 122,095. (CLASS 2. RECEPTACLES.) United States Envelope Company, Springfield, Mass. Filed Aug. 28, 1919.

VICTOR DRINKING CUPS

No claim is made for the words "Drinking Cups," "Pat. Pend'g," or for the surrounding double panel, the trade-mark being confined to the word symbol "Victor."

Particular description of goods.—Paper Drinking-Cups.

Claims use since July 1, 1919.

Ser. No. 122,963. (CLASS 32. FURNITURE AND UPHOLSTERY.) Bessire & Company, Indianapolis, Ind., and Louisville, Ky. Filed Sept. 22, 1919.

BESCO

Particular description of goods.—Tables, Chairs, and Stools in Which the Legs of the Tables, Chairs, and Stools and the Backs of the Chairs Are Composed of Wire Bent in Various Designs and Scrolls for Ornamentation Purposes, Which Tables, Chairs, and Stools are Those Commonly in Use Around Confectionery-Stores, Ice-Cream Parlors, and Like Places.

Claims use since Mar. 21, 1913.

Ser. No. 122,964. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Bessire & Company, Indianapolis, Ind., and Louisville, Ky. Filed Sept. 22, 1919.

BESCO

Particular description of goods.—Ice-Picks, Ice-Tongs, Milk-Can Carriers, Ice-Crushers, Ice-Scrapers, Ice-Shavers, Ice-Scoops, Ice-Cream-Can Carriers, Lemon-Squeezers, Ice-Cream-Soda and Sherbet Spoons of Base Metal, Tumbler-Washers, Drink-Mixers.

Claims use since Mar. 21, 1913.

Ser. No. 125,163. (CLASS 39. CLOTHING.) Penn Shoe & Overgaiter Co., Philadelphia, Pa. Filed Nov. 21, 1919.

GLOV-FIT

Particular description of goods.—Spats and Overgaiters.

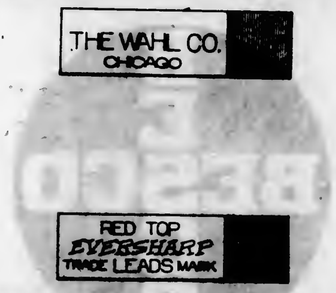
Claims use since Apr. 1, 1919.

Ser. No. 126,332. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) John Paterson & Co., Ltd., Glasgow, Scotland. Filed Dec. 22, 1919.

CLENSEL

Particular description of goods.—A Liquid Compound for Toilet Use in Connection with Hot or Cold Water for Bathing the Person, Washing the Hair, Removing Grease from the Hands, and for Bathing the Feet.

Claims use since January, 1898.



Ser. No. 126,333. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) John Paterson & Co., Ltd., Glasgow, Scotland. Filed Dec. 22, 1919.

CLENSEL

Particular description of goods.—Liquid Insecticides.

Claims use since January, 1898.

Ser. No. 128,122. (CLASS 37. PAPER AND STATIONERY.) THE WAHL COMPANY, Chicago, Ill. Filed Feb. 7, 1920.

The mark consists of the box having the top or cover thereof colored red and having inscribed on one of the wider sides "Red Top Eversharp Trade Leads Mark" and on the opposite side "The Wahl Co. Chicago," no claim being made herein to the words "The Wahl Co.," "Chicago," "Trade Mark," or "Leads" except in association with the other features shown, and no claim is made broadly to the representation of a container. The cover or top portion of the container, as heretofore stated, is to be painted red, and the parallel lines in Figures 1 and 2, illustrate the colored portion of said container.

Particular description of goods.—Leads Suitable for Use in Mechanical Pencils.

Claims use since Feb. 2, 1920.

Ser. No. 128,498. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE B. F. GOODRICH COMPANY, New York, N. Y. Filed Feb. 17, 1920.

TITANIC

Particular description of goods.—Belting Made of Fabric Combined with Rubber.

Claims use since about 1900.

Ser. No. 129,586. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COOPER & COOPER, INC., New York, N. Y. Filed Mar. 12, 1920.

C&C
CHEMICALS

No claim is made to the exclusive use of the word "Chemicals" apart from the mark as shown on the drawing.

Particular description of goods.—Acetaldehyde, Acetanilid, Acetic Anhydrid, Acetone, Acetophenone, Acetphenetidin, Acetyl Chlorid, Acetylene, Acetylene Tetrachlorid, Acetylsalicylic Acids—Namely, Acetic, Arsenic, Arsenious, Benzoic, Beta-Naphthol-Sulfonic, Boracic, Bromic, Butyric, Camphoric, Carbolic, Chlorosulfonic, Chromic, Cinnamic, Citric, Cresotinic, Cresylic, Electrolyte, Formic, Gallic, Glycerophosphoric, Hydriodic, Hydrobromic, Hydrochloric, Hydrocyanic, Hydrofluoric, Hydrofluosilic, Hypophosphorous, Iodic, Lactic, Metaphosphoric, Molybdic, Monochloracetic, Monosulfonic, Muriatic, Naphthalene Sulfonic, Naphthionic, Naphthylamin Sulfonic, Nitrating, Nitric, Oleic, Oxalic, Para-Amido-Salicylic, Perchloric, Phosphoric, Phosphotungstic, Phthalic, Picramic, Picric, Pyroacetic, Pyroligneous, Rosolic, Salicylic, Stearic, Sulfanilic, Sulfuric, Sulfurous, Tannic, Tartaric, Toluol-Sulfuric, Tungstic, Valeric, Vanadic; Amyl Alcohol, Butyl Alcohol, Denatured Alcohol, Alpha-Naphthylamin, Ammonium Alum, Burnt Alum, Chrome-Ammonium Alum, Chrome-Potassium Alum, Chrome-Sodium Alum, Ferric Alum, Potassium Alum, Alumina, Aluminum Acetate, Aluminum Ammonium Sulfate, Aluminum Fluorid, Aluminum Chlorid, Aluminum Hydroxid, Aluminum Nitrate, Aluminum Oleate, Aluminum Oxid, Aluminum Phosphate, Aluminum Stearate, Sulfate of Alumina, Amido-Azo-Benzol, Amidonaphthol, Ammonium Acetate, Anhydrous Ammonium, Aqua Ammonium, Ammonium Benzoate, Ammonium Bicarbonate, Ammonium Bifluorid, Ammonium Binoxalate, Ammonium Borate, Ammonium Bromid, Ammonium Carbonate, Ammonium Chlorid, Ammonium Chromate, Ammonium Fluorid, Ammonium Iodid, Ammonium Molybdate, Ammonium Nitrate, Ammonium Oxalate, Ammonium Perchlorate, Ammonium Persulfate, Ammonium Phosphate, Ammonium Picrate, Ammonium Salicylate, Ammonium Stearate, Ammonium Sulfate, Ammonium Sulfid, Ammonium Sulfocyanate, Ammonium Tartrate, Ammonium Tungstate, Ammonium Vanadate, Amyl Acetate, Amyl Butyrate, Amyl Formate, Amyl Valerate, Amyl Valerianate, Anilin Dyes, Anilin Hydrochlorid, Anilin Oil, Anilin Salts, Antimony Chlorid, Crimson Sulfid, Antimony Lactate, Antimony Oxalate, Antimony Oxid, Antimony Potassium Tartrate, Antimony Salts, Sulfuret of Antimony, Antimony Sulfite, Antimony Tartrate, Antimony Tribromid, Antipyrine, Argols, Arsenate Lead, Arsenate Soda, Arsenic, Arsenic Bromid, Red Arsenic, Arsenic Salts, Arsenic Sulfid, Arsenic Trioxid, White Arsenic, Arsenious Iodid, Soda-Ash, Atropin Alkaloid, Atropin Sulfate, Aurantine, Barium Acetate, Barium Bromid, Barium Carbonate, Barium Chlorate, Barium Chlorid, Barium Cyanid, Barium Fluorid, Barium Hydrate, Barium Hydroxid, Barium Monoxid, Barium Nitrate, Barium Oxid, Barium Peroxid, Barium Sulfate, Barium Sulfid, Barium Sulfocyanid, Beechwood Creosote, Benzaldehyde, Benzidin, Benzol, Benzoyl, Benzyl Acetate, Benzyl Alcohol, Benzyl Benzoate, Benzyl Chlorid, Beryllium, Beryllium Nitrate, Beryllium Oxid, Beryllium Silicate, Beta-Naphthol, Beta-Naphthyl, Betanaphthylamin, Betanaphthyl Salicylate, Bicarbonate Ammonium, Bicarbonate Potash, Bicarbonate Soda, Bismuth, Bismuth Acetate, Bismuth Beta-Naphtholate, Bismuth Carbonate, Bismuth Chlorid, Bismuth Nitrate, Bismuth Subnitrate, Bismuth Sulfid, Bismuth Tribromphenolate, Chlorid of Lime, Bluestone, Borax, Brimstone, Bromin, Cadmium, Cadmium Bromid, Cadmium Carbonate, Cadmium Chlorid, Cadmium Iodid, Cadmium Potassium Iodid, Cadmium Sulfate, Cadmium Sulfid, Cæsium Alum, Cæsium Chlorid, Cæsium Nitrate, Cæsium Silicate, Caffein, Caffein Alkaloid, Caffein Benzoate, Caffein Bromid, Caffein Citrated, Caffein Hydrobromate, Caffein Sodium Benzoate, Caffein Sodium Salicylate, Caffein Sulfate, Calcium, Calcium Acetate, Calcium Acid Phosphate, Calcium Arsenate, Calcium Bisulfid, Calcium Bisulfite, Calcium Bromid, Calcium Carbid, Calcium Carbonate, Calcium Chlorid, Calcium Ferrocyanid, Calcium Fluorid, Calcium Glycerophosphate, Calcium Hypochlorite, Calcium Hypophosphite, Calcium Lactophosphate, Calcium Linoleate, Calcium Magnesium Chlorid, Calcium Molybdate, Calcium Nitrate, Calcium Oxalate, Calcium Oxid, Calcium Perborate, Calcium Permanganate, Calcium Peroxid, Calcium Phosphate, Calcium Phosphate Monobasic, Calcium Phosphid, Calcium Resinate, Calcium Stearate, Calcium Sulfate, Calcium Sulfid, Calcium Sulfite, Calcium Sulfo-Carbolate, Calcium Superphosphate, Calcium Tungstate, Calomel, Camphor, Camphor Gum, Camphor Monobromate, Carbon, Carbon Bisulfid, Carbon Dioxid, Carbon Tetrachlorid, Caustic Soda, Cellulose Acetate, Chloral Hydrate,

Chlorin, Chromium Acetate, Chromium Alum, Chromium Bisulfate, Chromium Chlorid, Chromium Fluorid, Chromium Hydroxid, Chromium Oxid, Chromium Sulfate, Chromic Acid, Chrysarobin Cobalt Acetate, Cobalt Ammonium Sulfate, Cobalt Carbonate, Cobalt Chlorid, Cobalt Hydrate, Cobalt Linoleate, Cobalt Nitrate, Cobalt Oleate, Cobalt Oxid, Cobalt Resinate, Cobalt Sulfate, Cobalt Tungstate, Copper Acetate, Copper Carbonate, Copper Chlorid, Copper Cyanid, Copper Fluorid, Copper Nitrate, Copper Oxid, Copper Resinate, Copperas, Corrosive Sublimate, Cream-Tartar, Creosote, Creosote Carbonate, Creosote Cresol, Creosote Oil, Cresol, Crimson Antimony, Cyanid, Cyanid Chlorid, Cyanid Potassium, Cyanid Soda, Dinitranilin, Dinitrobenzol, Dinitrochlorbenzol, Dinitronaphthalene, Dinitrophenol, Dinitrotoluol, Diphenylamin, Divi-Divi, Dyestuffs, Dyewood Extract, Epsom Salts, Ether Sulfuric, Ethyl Acetate, Ethyl Bromid, Ethyl Chlorid, Ethyl Formate, Ethyl Iodid, Eucalyptol, Feldspar, Ferric Ammonium Sulfate, Ferric Chlorid, Ferric Nitrate, Ferric Oxid, Ferric Sulfate, Ferrous Chlorid, Fluorid Salts, Formaldehyde, Formic Acid, Formin, Fuchsin, Fustic Extract, Chestnut-Oak Extract, Cutch Extract, Divi-Divi Extract, Gall Extract, Gambier Extract, Hematin Extract, Hemlock Extract, Hypernic Extract, Indigo Extract, Larch Extract, Logwood Extract, Mangrove Extract, Myrobalans Extract, Oak Extract, Osage-Orange Extract, Quebracho Extract, Quercitron Extract, Spruce Extract, Sumac Extract, Tannin Extract, Valonia Extract, Wattle-Bark Extract, Gelatin, Glauber Salts, Glycerin, Glycerophosphates, Guaiacol, Hematin, Hexachlorethane, Hexamethylene Tetramin, Hydrogen Peroxid, Hydroquinon, Hyposulfite Soda, Ichthyol, Indigo, Indigotin, Iodin, Iodin Salts, Iodin Tribromid, Iodoform, Iron Chlorid, Iron Chromate, Iron Cyanid, Iron Iodid, Iron Oxid, Iron Perchlorid, Iron Perhydrogen, Iron Phosphate, Iron Pyrites, Iron Sulfid, Lactic Acid, Lactose, Sugar of Lead, Lead Arsenate, Lead Hyposulfite, Lead Linoleate, Lead Molybdate, Lead Nitrate, Lead Resinate, Lead Sulfate, Lithium Benzoate, Lithium Bromid, Lithium Carbonate, Lithium Citrate, Lithium Fluophosphate, Lithium Fluorid, Lithium Iodid, Lithium Salicylate, Lye, Magnesium Bromid, Magnesium Carbonate, Magnesium Chlorid, Magnesium Citrate, Magnesium Fluorid, Magnesium Nitrate, Magnesium Oxid, Mercuric Bromid, Mercuric Chlorid, Mercuric Nitrate, Mercuric Oxid, Mercuric Sulfid, Mercurous Chlorid, Mercury Cyanid, Mercury Iodid, Mercury Bichlorid, Methyl Salicylate, Meta Nitranilin, Meta Nitroparatoluidin, Meta Phenylenediamin, Meta Toluylenediamin, Manganese Acetate, Manganese Borate, Manganese Carbonate, Manganese Chlorid, Manganese Copper, Manganese Dioxid, Manganese Hydroxid, Manganese Linoleate, Manganese Oleate, Manganese Oxid, Manganese Resinate, Manganese Sulfate, Menthol, Methyl Acetate, Methyl Acetone, Methyl Bromid, Methyl Chlorid, Methyl Iodid, Methyl Orange, Methyl Red, Methyl Salicylate, Molybdic Acid, Monobrombenzol, Monochlorbenzol, Monoethylanilin, Mordants, Myrbane Oil, Naphthalene, Naphthol, Naphthol Alpha, Naphthol Beta, Naphthylamin, Nickel Ammonium Sulfate, Nickel Carbonate, Nickel Chlorid, Nickel Hydroxid, Nickel Nitrate, Nickel Oxid, Nickel Sulfate, Nigrosin, Nitrobenzol, Nitrophenol, Nitrotoluol, Anilin Oils, Banana-Oils, Castor-Oil, Cocoanut-Oil, Cod-Liver Oil, Creosote-Oil, Eucalyptus-Oil, Fusel-Oil, Turkey-Red Oil, Paracresol, Paraformaldehyde, Paraldehyde, Paramidophenol, Paranitranilin, Paraphenylenediamin, Paris Green, Hydrogen Peroxid, Soda Peroxid, Phenol, Phenolphthalein, Phosphate of Lime, Phosphoric Anhydrid, Phosphorus, Phosphorus Amorphous, Phosphorus Yellow, Potassium, Potassium Acetate, Potassium Bicarbonate, Potassium Bichromate, Potassium Binoxalate, Potassium Bisulfate, Potassium Bitartrate, Potassium Bromate, Potassium Bromid, Potassium Carbonate, Potassium Caustic, Potassium Chlorate, Potassium Chlorid, Potassium Chromate, Potassium Creosote Sulfonate, Potassium Cyanid, Potassium Hydroxid, Potassium Hypophosphite, Potassium Iodid, Potassium Magnesium Sulfate, Potassium Meta Bisulfite, Potassium Muriate, Potassium Nitrate, Potassium Oxalate, Potassium Perchlorate, Potassium Permanganate, Potassium Persulfate, Potassium Prussiate, Potassium Pyrosulfite, Potassium Silicate, Potassium Sodium Tartrate, Potassium Sulfate, Potassium Sulfid, Potassium Sulfocyanid, Prussiate of Soda, Pyrogalol, Pyridin, Quinidin, Quinidin Alkaloid, Quinidin Sulfate, Quinin, Quinin Hydrobromid, Quinin Hydrochlorid-Chlorhydrate, Quinin Sulfate, Resorcin, Resorcinol, Rochelle Salts, Anilin Salt, Cake-Salt, Tartar Salt, Silicon Tetrachlorid, Silver Salts, Starch, Soluble Starch, Strontium Bromid, Strontium Carbonate, Strontium Iodid, Strontium Nitrate, Strontium Sulfate, Sulfur Black, Sulfur Chlorid, Sulfur Roll, Sublimed Sulfur; Soda—Namely, Acetate, Aluminate, Arseniate, Benzoate, Bichromate, Bin Arseniate, Bisulfate, Bitartrate, Bromid, Borate, Carbonate, Chlorate, Chlorid, Chromate, Citrate, Cresolate, Crystals, Cyanid, Ferricyanid, Fluorid, Hydroxid, Hyposulfite, Iodid, Monohydrate, Nitrate, Nitrite, Nitroprussid, Oxalate, Perborates, Peroxid, Phosphate, Phosphate Tribasic, Prussiate, Resinate, Silicate, Salicylate, Silico Fluorid, Stannate, Sulfate, Sulfid, Sulfite; Tanala; Cream-Tartar, Emetic Tartar, Tartar Salts, Tartrates, Tetrachlorid, Thymol, Tin Bichlorid, Tin Chlorid, Muriate of Tin, Tin Hydrate, Tin Oxid, Tin Tetrachlorid, Titanium Oxid, Titanium Oxalate, Titanium Potassium Oxalate, Titanium Tetrachlorid, Toluidin, Toluol, Trinitrotoluol, Ultramarine, Uranium Acetate, Uranium Nitrate, Uranium Oxids, Uranium Oxylate, Vitriol Oil, Beeswax, Zinc Chlorid, Zinc Cyanid, Zinc Nitrate, Zinc Oxid, Zinc Peroxid, Zinc Stearate, Zinc Sulfate, Zinc Sulfid, Zirconium Silicate; Marble Floor, (pulverized Calcium Carbonate;) Acid Colors—Namely, Black, Blue, Navy Blue, Violet 4B, Orange II, Ponceau 2G, Yellow, Azo Yellow, Tartrazin, Red A, Amaranth, Crocein, Scarlet 3BX, Carmosin, Brilliant Scarlet, Brilliant Red NR, Magenta BR, Red, Brilliant Scarlet 3RS, Green M, Green G, Green 2G, Yellow, (Tartrazin Concentrated,) Blue 2R, Navy Blue B, Violet 10B, Orange 11, Brilliant Scarlet 3RS; Basic Colors—Namely, Nigrosin W. S. Blue, Nigrosin W. S. Ser. No. 140,688. (CLASS 32. FURNITURE AND UPHOLSTERY.) TUSKELOID COMPANY, INC., New York, N. Y. Filed Dec. 6, 1920.

TUSCULOR

Particular description of goods.—Hand and Wall Mirrors and Picture-Frames.
Claims use since July 1, 1916.

Ser. No. 140,695. (CLASS 32. FURNITURE AND UPHOLSTERY.) TUSKELOID COMPANY, INC., New York, N. Y. Filed Dec. 6, 1920.

TUSKELOID

Particular description of goods.—Hand and Wall Mirrors and Picture-Frames.
Claims use since July 1, 1916.

Ser. No. 140,739. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NEWPORT CHEMICAL WORKS, INCORPORATED, Passaic, N. J. Filed Dec. 7, 1920.

ANTHRENE

Particular description of goods.—Dyes.
Claims use since Sept. 10, 1920.

Ser. No. 140,886. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) THE HARDRIGHT COMPANY, Belleville, N. J. Filed Dec. 10, 1920.

STERILLO

Particular description of goods.—Lather-Brushes.
Claims use since Feb. 9, 1920.

Ser. No. 140,888. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) THE HARDRIGHT COMPANY, Belleville, N. J. Filed Dec. 10, 1920.

HARDRIGHT

Particular description of goods.—Lather-Brushes.
Claims use since June 24, 1913.

Ser. No. 140,889. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) THE HARDRIGHT COMPANY, Belleville, N. J. Filed Dec. 10, 1920.

YELLOW JACKET

Particular description of goods.—Lather-Brushes.
Claims use since Feb. 2, 1920.

Ser. No. 140,891. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) THE HARDRIGHT COMPANY, Belleville, N. J. Filed Dec. 10, 1920.

BLUEBEARD

Particular description of goods.—Lather-Brushes.
Claims use since Jan. 31, 1920.

Ser. No. 140,943. (CLASS 5. ADHESIVES.) L. HEMMERDINGER & CO., New York, N. Y. Filed Dec. 11, 1920. Under ten-year proviso.

NEVERBREAK

Particular description of goods.—Mending-Cement.
Claims use since 1888.

Ser. No. 140,974. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) ALBERT WIELICH, New York, N. Y. Filed Dec. 11, 1920.

LIGHT HOUSE
MALT EXTRACT

No claim is made to the exclusive use of the words "Malt Extract" apart from the mark shown on the drawing.
Particular description of goods.—Malt Extracts.
Claims use since Nov. 15, 1920.

Ser. No. 141,146. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) UNION TWIST DRILL COMPANY, Athol and Mansfield, Mass. Filed Dec. 15, 1920.

FAVORITE

Particular description of goods.—Collets, Thread-Cutting Dies and Guides Therefor, Die-Holders, Screw-Plates, and Screw-Plate Stocks.
Claims use since 1892.

Ser. No. 141,242. (CLASS 10. FERTILIZERS.) SECURITY CEMENT & LIME CO., Hagerstown, Md. Filed Dec. 17, 1920.

HYDRA-CALCITE

Particular description of goods.—Calcareous Composition for Soil Improvement.
Claims use since the fall of 1916.

Ser. No. 141,542. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) UNITED SHOE MACHINERY CORPORATION, Paterson, N. J., and Boston, Mass. Filed Dec. 27, 1920. Under ten-year proviso.

GOODYEAR

Consists of the word "Goodyear."
Particular description of goods.—Machines, Their Parts and Accessories, and Tools Used in the Manufacture of Boots and Shoes, Comprising, Outsole-Lock-Stitch Machines, Inseam-Stitching Machines, Outsole-Stitch-Rubbing Machines, Bobbin-Winding Machines, Welt-Edge-Turning Machines, Welt Butting and Tacking Machines, Welt-Splitting Machines, Welt Grooving and Beveling Machines, Welt Beating and Slashing Machines, Welt Indenting and Burnishing Machines, Tack-Pulling Machines, Tack Pulling and Resetting Machines, Outsole-Channel-Shank-Reducing Machines, Inseam-Trimming Machines, Turn-Shoe-Trimming Machines, Insole-Heel-Seat-Trimming Machines, Insole-Toe-Snipping Machines, Channeling-Machines, Welt-Beating Machines, Skiving-Machines, Insole-Channeling and Lip-Turning Machines, Rounding and Channeling Machines, Channel-Opening Machines, Channel-Laying Machines, Jointing-Machines, Lip Turning and Slashing Machines, Insole-Toe-Lip-Forming Machines, Power Molding-Machines, Sole-Laying Machines, Sole Tacking and Laying Machines, Sole-Leveling Machines, Presses, Pounding-Machines, Sole-Flexing Machines, Grinding-Machines, Stapling-Machines, Edge Setting and Wheeling Machines, Pattern-Generating Machines, Forepart-Turning Machines, Heel-Turning Machines, Tack-Pullers, Needles, and Awls.
Claims use since prior to 1891.

Ser. No. 141,694. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARIANTHI F. STAMOS, Canajoharie, N. Y. Filed Dec. 30, 1920.

SEVEN BEAUTY CREAM

The portrait being that of Mary Kratas, and no claim being made to the exclusive use of the words "Beauty Cream" apart from the mark as shown in the drawing.
Particular description of goods.—A Cream for Beautifying the Skin.
Claims use since Nov. 1, 1920.

Ser. No. 141,765. (CLASS 15. OILS AND GREASES.) JOHN DUNN, SON & CO., New York, N. Y. Filed Jan. 3, 1921.

GUANACO

Particular description of goods.—Lubricating Oils and Greases.
Claims use since 1901.

Ser. No. 141,813. (CLASS 32. FURNITURE AND UPHOLSTERY.) TONK MANUFACTURING CO., Chicago, Ill. Filed Jan. 3, 1921.

Tonkbench

Particular description of goods.—Piano-Benches.
Claims use since June 2, 1920.

Ser. No. 141,851. (CLASS 39. CLOTHING.) ABRAHAM CHANOVITZ, New York, N. Y. Filed Jan. 5, 1921.

Aetna

Particular description of goods.—Men's Silk Dress-Shirts.
Claims use since Nov. 6, 1919.

Ser. No. 142,075. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FLORIDA JENNETH HART, Fort Wayne, Ind. Filed Jan. 11, 1921.

LACO

Particular description of goods.—A Preparation for Treatment of Diseases Peculiar to Females.
Claims use since November, 1917.

Ser. No. 142,098. (CLASS 39. CLOTHING.) THE PITTSBURGH DRY GOODS COMPANY, Pittsburgh, Pa. Filed Jan. 11, 1921.

Particular description of goods.—Wool Underwear and Cotton Underwear for Men, Women, and Children, Made of Knitted and Textile Fabrics, Also Knit Corset-Covers for Women.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Second Circuit.

FICKLEN *et al. v.* HARDING.

Decided April 13, 1921.

(273 Fed. Rep., 179.)

PATENTS—No. 1,098,792, FOR STREET-PAVEMENT, VOID FOR PRIOR USE.

The Ficklen patent, No. 1,098,792, for street-pavement *Held* void for prior public use of a pavement having all essential elements of that of the patent.

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity by William E. Ficklen and Fred J. Klein against J. Horace Harding. Decree for defendant, and complainants appeal. Affirmed.

STATEMENT OF THE CASE.

Suit is upon patent to Ficklen (application filed August 21, 1909, issued June 2, 1914), No. 1,098,792, for a "street pavement." Plaintiffs rely on claims 1, 2, 3, 6, and 7, of which the third claim describes the subject-matter with great particularity and is as follows:

3. A pavement comprising an earth roadbed, a crust supported directly on said roadbed and comprising a plurality of concrete sections of relatively large area, separated from each other by expansion joints extending from the top of the pavement to the roadbed, and reinforcing means imbedded in and carried by and continuing along the concrete section at the joints which require reinforcement; said reinforcing means consisting of metal strips set into the upper surfaces of the concrete sections along the expansion joints.

After seeing and hearing numerous witnesses the trial court dismissed the bill; the final decree declaring merely that the Letters Patent in suit "are void." The opinion of Mayer, district judge, found a prior use on the part of one Baker, such use consisting in the construction (for Wayne county, Mich.) of about a mile of concrete road on Woodward avenue, near Detroit, in April–June, 1919. He therefore did not consider any other defense, although several were urged below and are presented on this appeal.

Mr. W. H. C. Clarke and *Mr. George H. Gilman* for the appellants.

Mr. W. F. Guthrie for the appellee.

Before WARD, HOUGH, and MANTON, circuit judges.

HOUGH, *Cir. J.*, (after stating the facts as above:)

Counsel for Ficklen present in argument the following description of the subject-matter of the patent in suit:

A loose-foundation, expansion-jointed, creeping-section, single-course untopped concrete road having self-setting, substantially-component, soft-wearing reinforcements out of contact with the roadbed at the upper edges of those joints which require reinforcement.

For purposes of discussion only we accept this collection of laudatory phrases as the best that can be said for Ficklen's patent, as it issued, after a very stormy career in the Office. We may, however, state our opinion that Ficklen's disclosure, as filed in 1909, could not have merited from even the most friendly critic such a description as we have just quoted. If the patent has ever taken a form which justifies the claims now made for it, the transformation occurred only when the present claims were advanced; *i. e.*, after 1912.

As for the disclosures and proposed claims as filed, we agree with the summary disposition of them made by the Primary Examiner who rejected them as showing no invention over Colgnet, 98,033. It may be true that Mr. Ficklen, or his solicitors, did not watch the rapidly-advancing art, and amend claims and specification so as to capture some portion of it; but it is plainly true that he did not describe in specification or define in claims that for which he now demands protection until long after his filing date.

We have mentioned this only because the public use found by the court below occurred so soon before Ficklen filed his application. With the findings of fact made by the lower court we entirely agree, and it would serve no good purpose to rehearse the evidence. The result is that, several months before Ficklen filed any application, and several years before he described substantially that which is now said to infringe, the commissioners of Wayne county had and the public used a road substantially as described in the claim first above quoted.

It is said that this road, or so much of it as embodied what is said to be Ficklen's idea, was either an abandoned experiment or an experimental use. As to the law on these points, we need add nothing to our decision in *Eastman* v. *Mayor*, (134 Fed., 844; 69 C. C. A., 628.)

But it is always true that the question whether a given use is experimental or not is one of fact, and we are of opinion that Baker's or Wayne county's use of the road in question had ceased to be an experiment before Ficklen's filing date. Whatever value there was in it was apparent, and favorably apparent, before that time; that it has not proved important is of no moment, and that it may have been superseded by later and better devices does not render the original use experimental, nor make out of it an abandoned experiment.

Appellant much relies upon the case of *Warren* v. *Owosso*, (166 Fed., 309; 92 C. C. A., 227.) That case is to be read in conjunction with the subsequent decision of the same court in *Young* v. *Burley*, (200 Fed., 258; 118 C. C. A., 368.) So read, they do hold that a use of paving for foot passengers was a distinct use from that of the same paving for vehicular traffic. We express no opinion on the foregoing doctrine, other than to point out that the Wayne county use of 1909 was in kind as well as in degree exactly that for which Ficklen's pavement was and is intended.

The decree appealed from is affirmed, with costs.

Supreme Court of the United States.

STARK BROTHERS NURSERIES & ORCHARDS COMPANY *v.* WILLIAM P. STARK AND WILLIAM H. STARK, TRUSTEES, DOING BUSINESS UNDER THE NAME AND STYLE OF WILLIAM P. STARK NURSERIES.

Decided January 31, 1921.

TRADE-MARK—REGISTRATION—INFRINGEMENT—ACCOUNTING—DAMAGES—LIMITATION TO DATE OF NOTICE.

Both the account of profits and the damages in a suit for the infringement of a registered trade-mark, brought in a Federal district court without diversity of citizenship, are limited to the date when notice was given of the registered mark, by the Trade-Mark Act of February 20, 1905, section 28, which makes it the duty of the registrant to give notice to the public by attaching certain specified words or abbreviations to the trade-mark, or to the receptacle wherein the article is inclosed, and provides that "in any suit for infringement by a party failing so to give notice of registration no damages shall be recovered except on proof that the defendant was duly notified of infringement and continued the same after such notice," notwithstanding an earlier notice calling on the defendants "to discontinue the unfair competition and infringement on our rights," and the wilful character of defendants' wrongdoing.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Eighth Circuit to review a decree which modified, and affirmed as modified, a decree of the District Court for the Western District of Missouri in favor of plaintiff in a trade-mark infringement suit. Affirmed.

Mr. Andrew B. Remick for petitioner.

Mr. Xenophon P. Wilfley for respondents.

Mr. Justice HOLMES delivered the opinion of the Court.

This is a suit brought September 11, 1916, in the district court of the United States by the petitioner, a Missouri corporation, against citizens of Missouri, for an infringement of a trade-mark, "Stark Trees," registered under the act of Congress of February 20, 1905, (chap. 592, 33 Stat. at L., 724; Comp. Stat., sec. 9485; 9 Fed. Stat. Anno. 2d ed., p. 747,) and amendments. The district court found infringement and unfair competition, granted an injunction, and made a decree for an account of profits from March 11, 1914, when the infringement began, limiting the damages, however, to those suffered after August 26, 1916, that being the date when the plaintiff gave the defendant notice of the registration of the mark. The circuit court of appeals concurred with the district court as to the facts, but limited the account as well as the damages to the date when notice was given of the registered mark, a few days before the bringing of this suit. (248 Fed., 154; 168 C. C. A., 221; 257 Fed., 9.) This limitation is the only question here.

By section 28 of the Trade-Mark Act it is made the duty of the registrant to give notice to the public by attaching certain specified words or abbreviations to the trade-mark, or to the receptacle wherein the article is inclosed;

and in any suit for infringement by a party failing so to give notice of registration no damages shall be recovered, except on proof that the defendant was duly notified of infringement, and continued the same after such notice. (33 Stat. at L., 730; chap. 592, Comp. Stat., sec. 9514; 9 Fed. Stat. Anno. 2d ed., p. 789.)

The infringement that is sued for is infringement of a registered trade-mark, not infringement of a trade-mark. That is the plain meaning of the above words and the necessary scope of this suit, since that is the scope of the jurisdiction of the district court. (*A. Leschen & Sons Rope Co.* v. *Broderick & B. Rope Co.*, 201 U. S., 166, 172; 50 L. Ed., 710, 712; 26 Sup. Ct. Rep., 425.) It seems very plain that the plaintiff had a cause of action outside the statute, but that would have to be asserted elsewhere, as the suit was between citizens of the same State. The statute alone gave the right to come into this Court of the United States. Coming in to assert its statutory rights, we will assume in the plaintiff's favor that it could recover for unfair competition that was inseparable from the statutory wrong, but it could not reach back and recover for earlier injuries to rights derived from a different source.

The plaintiff argues that a notice of March 11, 1914, calling on the defendants "to discontinue the unfair competition and infringement on our rights," coupled with the wilful character of the defendants' wrongdoing, ought to lead to a different result, and the district judge seems to have had a similar notion. But that is to forget the origin and necessary limit of the jurisdiction in this case.

Decree affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Ill.) The Monette patents, Nos. 878,147 and 971,300, for counter-protecting devices, *Held* void for lack of invention. *J. B. Monette Co.* v. *Kurtzon*, 272 F. R., 687.

(U. S. C. C. A. Ohio.) The Conrad patents, Nos. 1,167,742, claims 3, 7, 8, and 14, and 1,167,743, claim 3, for noiseless gears, *Held* invalid for want of invention. *Westinghouse Electric & Mfg. Co.* v. *Formica Insulation Co.*, 272 F. R., 667.

(U. S. D. C. N. Y.) The McLeod patent for cord tire, No. 1,029,307, *Held* void for lack of invention. *McLeod Tire Corporation* v. *B. F. Goodrich Co.*, 272 F. R., 901.

(U. S. C. C. A. Ohio.) The Eccard and Smith patent, No. 1,117,944, claims 1, 2, and 11, for trailer-trucks, *Held* not infringed. *Troy Wagon Works Co.* v. *Ohio Trailer Co.*, 272 F. R., 850.

(U. S. C. C. A. Wis.) The Simpson patent, No. 1,216,175, for improvements in presses, *Held* void for anticipation. *Hummel & Downing Co.* v. *Hinde & Dauch Paper Co.*, 272 F. R., 812.

(U. S. C. C. A. Wis.) The Simpson patent, No. 1,228,978, for platen connections, *Held* void for lack of invention. *Hummel & Downing Co.* v. *Hinde & Dauch Paper Co.*, 272 F. R., 812.

(U. S. C. C. A. Wis.) The Morton reissue patent, No. 14,267, for package-sealing machine, *Held* invalid as unauthorized. *Hummel & Downing Co.* v. *Hinde & Dauch Paper Co.*, 272 F. R., 812.

(U. S. C. C. A. N. Y.) The Ficklen patent, No. 1,098,792, for street-pavement, *Held* void for prior use. *Ficklen* v. *Harding*, 273 F. R., 179.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 19, 1921.

The Cachoid Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Bryant, French & Company, 305 South Fifth street, Minneapolis, Minn., for registration of a trade-mark and trade-mark registered December 11, 1906, No. 58,392, to The Cachoid Company, 170 West Seventy-eighth street, New York, N. Y., and a notice of such declaration sent by registered mail to The Cachoid Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The Cachoid Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Disclaimer.

1,371,364.—*Sylvester Leo Gookin*, Boston, Mass. FASTENER-SETTING MACHINE. Patent dated March 15, 1921. Disclaimer filed August 20, 1921, by the assignee, *United Shoe Machinery Corporation*.

Hereby presents this disclaimer to said claim 20 of said patent, which is in the following words, to wit:

"In a fastener setting machine, two raceways arranged to deliver the complemental annular parts of a two-part annular fastener at opposite sides of the plane of the work, respectively, and two coöperative setting tools movable toward and from each other and having central parts arranged to pass through the two parts of such fastener in their respective raceways so as to detach them from the raceways, said tools being arranged to apply the detached fastener parts to the work."

Changes in Classification.

(ORDER No. 2,684.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 3, 1921.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 193, Conveyers, (Division IV,) abolish subclasses—

- **Combined types.**
- 52. Endless or rotary and roller-way,
- 51. Endless or rotary and screw,
- 48. Endless or rotary carrier and reciprocating carrier—
- 49. Loading-machine type,
- 50. Reciprocating carrier and roller-way.
- 1. **Conveyers—**
- 64. Leer.
- 2. **Endless—**
- 3. Adjustable leg,
- **Endless—**
- 4. Belt—
- 26. Belt structure,
- 24. Feeders,
- 23. Guides,
- 25. Trippers,
- 27. Troughing-rollers,
- 5. Boot,
- 6. Bucket—
- 28. Bucket structure,
- 7. Bucket, with traction rollers,
- 8. Flight,
- 9. Hook,
- 63. Stairway type.
- 47. **Magnetic.**
- 62. **Reciprocating bar.**
- 12. **Retransfer and weighing.**
- 13. **Screw.**
- 22. **Spouts.**
- 57. **Step by step—**
- 58. Reciprocating bar—
- 59. Coacting catch,
- 60. Interfingered sections,
- 61. Vibrating trough.
- 20. **Storehouse.**
- 14. **Thresher attachments—**
- 15. Foldable,
- 16. Laterally and vertically adjustable,
- 17. Oscillatory,
- 18. Vertically adjustable.
- 19. **Trimmers.**

The patents formerly contained in these subclasses have been placed for the most part in class 198, Conveyers—Power-Driven, hereinafter established.

Establish, in Division IV, class 198, Conveyers—Power-Driven, with the following subclasses and definitions, the patents contained in this class having been taken for the most part from the subclasses hereinbefore abolished in class 193, Conveyers:

198.—CONVEYERS—POWER-DRIVEN.

- 1. **Miscellaneous.**
- 2. **Box-car-loader type—**
- 3. Longitudinally adjustable,
- 4. Centrally supported,
- 5. Single-end supported,
- 6. Blower or thrower.
- 7. **Loading-machine type—**
- Endless conveyer with coacting gatherer—
- 8. Endless gatherer,
- 9. Rotary gatherer,
- 10. Reciprocating gatherer,
- 11. Endless conveyer—
- 12. Bucket,
- 13. Tine,
- 14. Reciprocating conveyer.
- 15. **Locomotive-stoker type.**
- 16. **Escalator type—**
- 17. Endless lateral bend and step-forming conveyer.
- 18. Endless horizontal and step-forming section.
- 19. **Work-station type.**

198.—CONVEYERS—POWER-DRIVEN—Continued.

- 20. **Article-transfer—**
- 21. Article-controlled,
- 22. Circular articles,
- 23. Endless pusher-bar and article-registering,
- 24. Reciprocating pusher,
- 25. Rotary member,
- 26. Intermediate chute and regulator,
- 27. Vertically-swinging member,
- 28. Coacting stationary member.
- 29. **Arranging articles on conveyers—**
- 30. In row or rows,
- 31. Single to multiple rows,
- 32. Multiple to single row,
- 33. Orienting articles,
- 34. Spacing,
- 35. Piling or unpiling.
- 36. **Piling or unpiling bulk material,**
- 37. **Material-controlled drive.**

198.—CONVEYERS—POWER-DRIVEN—Continued.

- 38. **Carrier-controlled selective delivery,**
- 39. **Weighing and measuring.**
- 40. **Signaling, indicating, etc.**
- 41. **Magnetic.**
- 42. **Distributing type.**
- 43. **Conveyer and chute type—**
- 44. Hoppers between conveyers,
- 45. Chutes between conveyers,
- 46. Feeding and discharging—
- 47. Receiving and discharge hoppers,
- 48. Hopper and discharging-chute—
- 49. Adjustable discharging-chute,
- 50. Receiving and discharging chute—
- 51. Adjustable chute,

198.—CONVEYERS—POWER-DRIVEN—Continued.
Conveyer and chute type—
52. Conveyer-feeder—
53. Hopper—
54. Fixed conveyer under storage-bin,
55. For vertical-bucket-type conveyer,
56. For horizontal conveyer—
57. Hopper-bottom endless conveyer—
58. Separate conveyer,
59. Reciprocating feeder—
60. Horizontal load-support,
61. Vertically-vibrating chute,
62. Rotary regulating means,
63. Endless or rotary guiding-chute,
64. Screw feeder,
65. Conveyer discharge—
66. Plural-discharge conveyer—
67. Chute at each end of conveyer,
68. Plural-discharge chute,
69. Hopper—
70. Leg-supported,
71. Rotatable conveyer-leg,
72. Adjustable chute—
73. Vertically swinging,
74. Horizontally swinging.
75. Plural—
76. Variable and differential speeds,
77. Traveling bridge and elevator,
78. Main and tributary—
79. Collecting—
80. Wing-feeders.
81. Distributing,
82. Single line—
83. Plural discharge,
84. Superposed,
85. Closed path,
86. Automatic oscillating,
87. Foldable,
88. Adjustable—
89. Longitudinally slidable,
90. Horizontally swinging delivering to dependent vertically swinging,
91. Vertically swinging delivering to vertically swinging,
92. Series carriers,
93. Adjustable delivering to stationary—
94. Vertically swinging,
95. Horisontally swinging,
96. Bodily adjustable,
97. Stationary delivering to adjustable—
98. Receiving hopper type,
99. Vertically swinging,
100. Horisontally swinging,
101. Bodily adjustable.
102. Both endless,
103. Endless and rotary,

198.—CONVEYERS—POWER-DRIVEN—Continued.
Plural—
Single line—
104. Endless or rotary and screw,
105. Endless or rotary and live rolls,
106. Endless and reciprocating,
107. Rotary and reciprocating.
108. Single—
109. Flexible frame,
110. Variable velocity and reversible,
111. Automatic shifting—
112. Oscillating,
113. Folding—
114. Swinging—
115. Vertically, pivoted,
116. Suspended loop,
117. Adjustable—
118. Bodily and swinging,
119. Swinging—
120. Bodily,
121. Vertically—
122. Pivoted at receiving end,
123. Pivoted at discharge end,
124. Horizontally—
125. Pivoted at receiving end,
126. Bodily,
Conveying-element structure—
127. Live rolls,
128. Thrower,
129. Endless—
130. Single cable,
131. Special-article engaging—
132. Hod-elevator type,
133. Signatures,
134. Sheet on edge,
135. Step by step,
136. Spiral,
137. With guides—
138. Off-bearing,
139. Extensible,
140. Bucket—
141. Discharging—
142. Hollow-head drum,
143. Bucket-door,
144. Ejector,
145. Pivoted bucket—
146. With drawable trip,
147. Inclined-track trip,
148. Pivoted—
149. Gap-closing,
150. Strand attachment,
151. Strand attachment,
152. Bucket structure,
153. Flexible pocket,
154. Shelf—
155. Tilting discharge,
156. Interfingering—
157. Pivoted,
158. Pivoted,
159. Superposed runs, all runs active,
160. Coacting member—
161. Oppositely moving,
162. Endless—
163. Shelf type,
164. Push-plate,
165. Belt,
166. Reciprocating,
167. Rotary,

198.—CONVEYERS—POWER-DRIVEN—Continued.
Single—
Conveying-element structure—
Endless—
168. Pusher—

233. Special vehicle-mounts and auxiliary supports.

THOMAS E. ROBERTSON, *Commissioner.*

Patents Nos. 1,388,839 to 1,389,569.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 289—No. 5. TUESDAY, AUGUST 30, 1921. Price—$5 per year.
[PUBLISHED SEPTEMBER 14, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 2, 1921.

Beginning with the fiscal year July 1, 1922, the OFFICIAL GAZETTE will be published with weekly and annual indexes only, the monthly indexes being omitted.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 19, 1921.

The Cachoid Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Bryant, French & Company, 305 South Fifth street, Minneapolis, Minn., for registration of a trade-mark and trade-mark registered December 11, 1906, No. 58,892, to The Cachoid Company, 170 West Seventy-eighth street, New York, N. Y., and a notice of such declaration sent by registered mail to The Cachoid Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless The Cachoid Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 31, 1921.

The Premier Cabinet Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Polyphonwerke Aktiengesellschaft, 76 Markgrafenstrasse, Berlin, Germany, and The Premier Grand Piano Corporation, 510–532 West Twenty-third street, New York, N. Y., for registrations of trade-marks and trade-mark registered December 19, 1916, No. 114,546, to The Premier Cabinet Company, 495–497 Hepburn street, Williamsport, Pa., and a notice of such declaration sent by registered mail to The Premier Cabinet Company at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said The Premier Cabinet Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Changes in the Directory of the Patent Office.

The following changes in the Directory of the Patent Office published in the GAZETTE of July 26, 1921, are announced.

The list of Law Examiners is changed to read:

I. P. Disney, T. A. Hostetler, Chas. H. Lane, M. J. Moore, and Geo. P. Tucker.

The list of Examiners, as to the following divisions, is changed to read:

Div.	Examiners.
40	J. J. Oberlin.
43	F. M. Hopkins.
48	O. B. Roepke.

The list of Chiefs of Divisions is changed to read:

Div.	
C	D. W. Edelin.

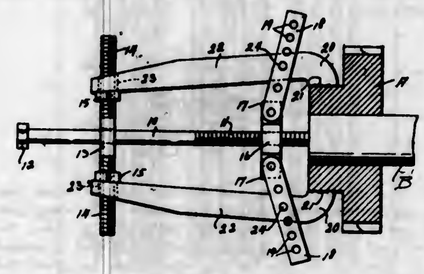
TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Mark section will include: Trade-Marks published under the act of 1905; Trade-Marks registered under the act of 1905 and under the act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

Condition of Applications Under Examination at Close of Business August 20, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Sept. 3; oldest amended, Nov. 5.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. S., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders.	Mar. 3	Mar. 21	686
128	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Dec. 2	Jan. 17	1,562
175	3. RICH, WM. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 18	Nov. 5	716
234	4. MERRITT, A. D., Conveyers; Conveyers, Fluid-Current; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Sept. 20	Mar. 16	1,642
167	5. MACNAB, J. F., Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Oct. 19	Jan. 3	862
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Mar. 2	May 10	1,001
312	7. JARBOE, C. G., Games and Toys; Optics; Photography; Velocipedes	Feb. 23	Apr. 6	1,731
131	8. CLIFT, J. W., Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	May 2	June 24	743
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Nov. 3	July 9	850
235	10. MITCHELL, T. H., Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Feb. 4	June 9	1,180
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	May 9	May 20	445
222	12. PIERCE, P. F., Machine Elements	Jan. 20	May 16	1,071
329	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Oct. 29	May 11	1,600
323	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Nov. 15	June 18	882
308	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Sept. 3	Jan. 27	1,657
111	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony	Oct. 6	Jan. 29	1,499
307	17. RAFTER, G. S., Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Jan. 11	Apr. 30	903
229	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Oct. 7	Jan. 24	1,644
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 19	Feb. 25	950
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Mar. 29	Apr. 14	1,282
212	21. THURBER, W. L., Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Dec. 29	May 18	613
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive Charge Making.	Apr. 26	May 26	474
217	23. GROESBECK, W. D., Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Dec. 31	May 24	814
144	24. DARBY, J. J., Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Jan. 10	May 28	928
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	June 16	June 14	272
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Jan. 12	Mar. 30	778
214	27. ANDERSON, L. S., Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Mar. 1	May 5	1,257
225	28. BENSON, A. R., Internal-Combustion Engines	Jan. 7	Mar. 24	1,206
147	29. MORRIS, B., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Jan. 17	June 4	727
152	30. SULLIVAN, M. B., Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines.	Feb. 7	June 11	1,225
172	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Oct. 11	Nov. 8	2,081
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange	Oct. 14	June 3	1,103
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Feb. 16	Mar. 31	765
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	June 11	July 1	362
57	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	June 8	July 19	606
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	Mar. 19	Mar. 16	1,564
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers; Electricity, General Applications	Jan. 17	Feb. 2	2,172
378	38. IDE, G. R., Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Apr. 2	Mar. 30	1,155
220	39. COWLES, A. W., Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Oct. 4	Dec. 23	1,796
273	40. HOPKINS, F. M., Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Jan. 10	Mar. 10	2,130
125	41. BROWN, J. I., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Jan. 24	Mar. 26	862
114	42. CUTTING, H. G., Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling; Electric Lamps.	Nov. 29	Nov. 12	2,253
382	43. LANE, C. H., Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Liquid Separation or Purification.	Nov. 26	Jan. 3	1,455
253	44. SHAFFER, C. H., Air-Guns, Catapults, and Targets; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Refrigeration Ships.	Nov. 29	June 2	527
379	45. GILES, A. H., Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Feb. 5	Mar. 24	1,154
332	46. WOLCOTT, C. L., Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Feb. 2	Mar. 2	1,010
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid Pressure Brake and Analogous Systems.	Dec. 4	Mar. 29	1,115
163	TRADE-MARKS, DESIGNS, LABELS AND PRINTS: T. L. MEAD, Jr.			
	Trade-Marks	Nov. 9	June 15	4,505
	Designs	Dec. 1	Mar. 1	2,101
	Labels and Prints	July 1	Aug. 18	273

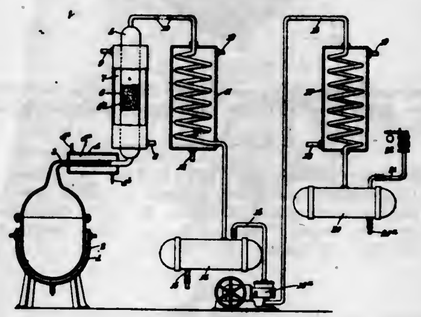
Total number of applications awaiting action, excluding Trade-Mark division, 53,350; Trade-Mark division, 6,879.

PATENTS

GRANTED AUGUST 20, 1921.

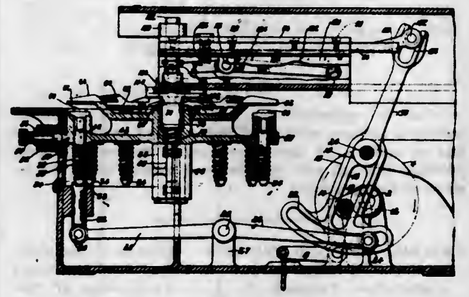
1,388,839. GEAR AND KEY PULLER. THOMAS W. ALLEN, Hoquiam, Wash. Filed Feb. 18, 1920, Serial No. 359,748. Renewed May 28, 1921. Serial No. 473,322. 3 Claims. (Cl. 29—85.)

1. A device of the character described comprising a centrally disposed screw, a collar through which the screw loosely passes and having oppositely projecting, screw-threaded arms, a nut engaged by the threads of the screw and having arms pivoted thereto, jaws having shanks pivoted to said arms, said shanks at the ends remote from the jaws being provided with perforations through which the arms of the collar loosely pass, and nuts carried upon said arms and engaging against the adjacent ends of the shanks whereby the adjacent ends of the shanks may be forced outward and the jaws forced against the work.



1,388,840. PREPARING TIRES FOR SHIPMENT OR STORAGE. EDWARD H. ANGIER, Framingham, Mass. Filed Jan. 11, 1918. Serial No. 211,414. 7 Claims. (Cl. 206—46.)

1. As a unit for shipment or storage, in combination, a tire shoe and a protective strip of wrapping material encircling the inner circumference of the same, covering solely the inner portion of the tire and closing the space between the beads.

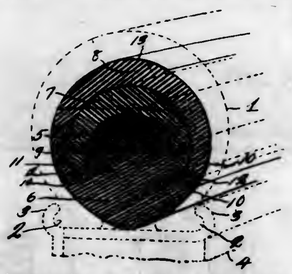


1,388,841. PROCESS OF MAKING ALDEHYDES. ARTHUR A. BACKHAUS, Baltimore, and FRED B. ARENTZ, Curtis Bay, Md., assignors to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 24, 1918. Serial No. 241,649. 4 Claims. (Cl. 23—24.)

1. The process which comprises preheating an alcohol vapor to a temperature lying between 250 and 350 degrees C., and passing it through a catalytic agent comprising finely divided metallic particles maintained at

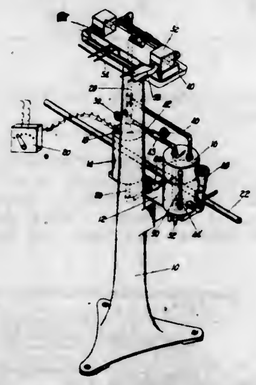
about the above temperature, and separating out the aldehyde formed.

1,388,842. ARCTIC-UPPER-STAMPING MACHINE. LEWIS J. BAZZONI, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 29, 1920. Serial No. 369,736. 36 Claims. (Cl. 91—18.)



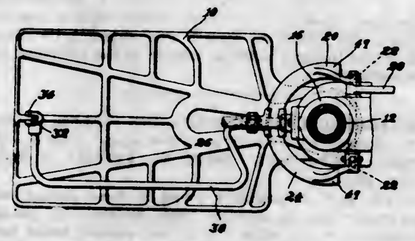
1. In a marking machine, a stencil, a corresponding impression member for forcing rough fibrous material through the stencil to stretch and compact the fibers, and means to apply coloring matter to the stretched and compacted fibers.

1,388,843. RESILIENT-TIRE-CASING FILLER. LORENZ F. BIESMEYER and OTTO STOCKSICK, Chamois, Mo. Filed Apr. 5, 1921. Serial No. 458,649. 1 Claim. (Cl. 152—5.)



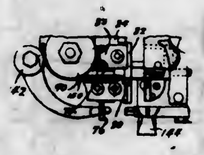
A tire core substantially round in cross section, said core comprising an annular inner member, an annular rib carried by the outer side of the annular inner member and centrally thereof, thereby forming outwardly extending annular flanges, annular sections disposed on the annular rib of the inner member and having their

marginal edges in abutting engagement with the faces of the flanges of the annular inner member, said annular



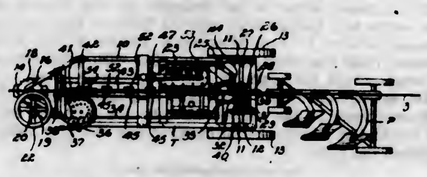
sections interengaging each other and having the curvature of the inner and outer sides thereof eccentric to each other.

1,388,844. SOFTENING APPARATUS. CHARLES M. BRADFORD, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 4, 1918. Serial No. 215,319. 24 Claims. (Cl. 12—1.)



1. In an apparatus for treating shoes, a humidifier having a pressure-sustaining chamber and having an inlet and an outlet, and means arranged to conduct air under pressure through said chamber and thence to a shoe positioned for treatment.

1,388,845. CUTTING-MACHINE. WILLIAM J. BRENNAN, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 21, 1919. Serial No. 284,150. 13 Claims. (Cl. 164—23.)



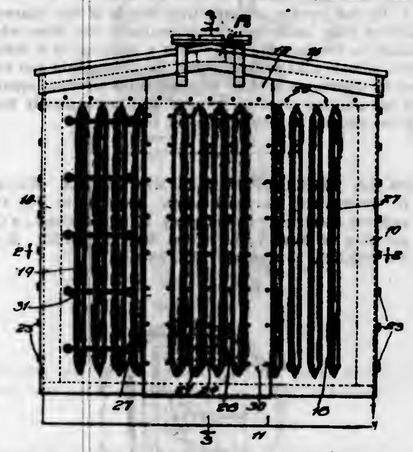
1. In a cutting machine, a cutting bed, a presser member movable into and out of operative position over said bed and toward and from said bed, in pressure-applying operations, and means for controlling the movements of the presser member comprising a lever consisting of relatively movable portions, one of said portions being provided with a plate of semi-circular shape and the other portion having a part designed, slidably to embrace the semi-circular plate for movement therealong.

1,388,846. STAPLE MAKING AND DRIVING MACHINE. MATTHIAS BROCK, deceased, Boston, Mass., by Edward L. Brock, administrator, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Mar. 26, 1915, Serial No. 17,182. Patent No. 1,327,196, dated Jan. 6, 1920. Divided and this application filed Jan. 27, 1919. Serial No. 273,452. 10 Claims. (Cl. 140—129.)

2. In a staple forming and driving machine, wire feeding mechanism, wire cutting mechanism, said wire feeding mechanism comprising feed rolls, and a lever for supporting one of said rolls constructed and arranged to be operated by the cutting mechanism to cause the separation of the feed rolls in a lateral direction.

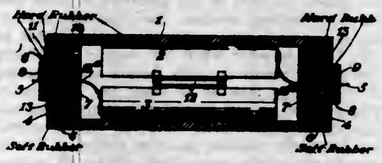
1,388,847. FARM IMPLEMENT. ANTON BRUNNERT, Old Monroe, Mo. Filed May 31, 1921. Serial No. 473,658. 8 Claims. (Cl. 104—169.)

1. A farm implement comprising a frame provided with a running gear, an endless chain mounted thereon, gripping devices on said chain and a tractional element disposed above said gripping devices.



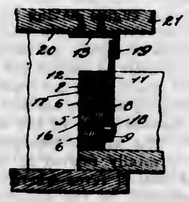
1,388,848. TIRE-DISPLAY SUPPORT. WILLIS M. CARTER, Jersey City, N. J., assignor to The W. F. Powers Company, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1920. Serial No. 406,744. 2 Claims. (Cl. 211—24.)

2. A tire display support comprising a sheet of suitable material fashioned to the desired form and provided with



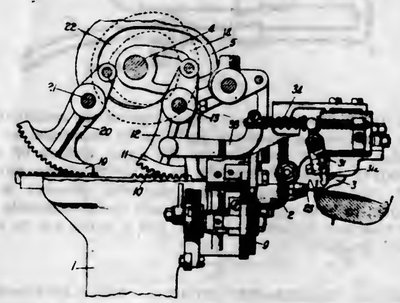
an upwardly directed arc-shaped portion at the opposite sides of which the side edge portions of the sheet are beveled, and display members detachably connected with said sheet.

1,388,849. METAL END STRUCTURE FOR RAILWAY-CARS. SAMUEL H. CONWELL, Chicago, Ill., assignor to Walter P. Murphy, New York, N. Y. Filed Nov. 29, 1919. Serial No. 341,455. 36 Claims. (Cl. 105—410.)



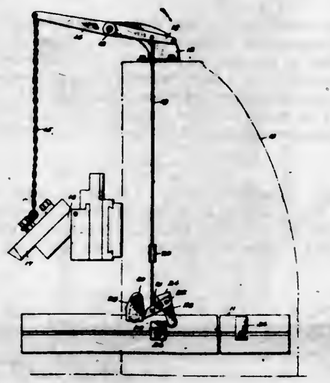
12. A sheet metal end structure for a railway car, the side portions of which are composed, in each case, of a single thickness of sheet metal and the middle portion of which is composed of two sheets arranged face to face.

1,388,850. STORAGE BATTERY. THOMAS R. COOK, Pittsburgh, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 21, 1920. Serial No. 397,859. 11 Claims. (Cl. 204—28.)



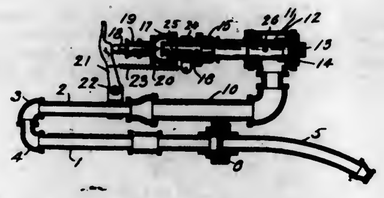
1. A storage battery comprising a tubular container, and two semi-cylindrical plates located in said container.

1,388,851. STOP FOR DRAWERS. HERMAN J. CORDES, San Francisco, Calif. Filed Feb. 16, 1920. Serial No. 358,835. 1 Claim. (Cl. 45—7.)



A drawer stop comprising a base plate attached to the wall of a drawer, a stop plate pivotally mounted on the base plate, a recessed portion formed in one of said plates and a projecting portion formed in the opposing plate and adapted to engage with said recessed portion in the opposite plate when the stop plate is swung to one of its pivotal positions.

1,388,852. LASTING-MACHINE. JOHN W. COSGROVE, Medford, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 15, 1918. Serial No. 222,601. 56 Claims. (Cl. 12—2.)



1. In a machine of the class described, an abutment against which shoe parts on a last may be pressed, a fastening inserting mechanism having a fastening guiding nose, means for clamping a portion of the shoe upper against the nose, and means for moving the clamping means and nose toward the abutment to press the shoe thereagainst to tension the upper about the last, the construction and arrangement being such that the clamping pressure on the upper increases with the tensioning of the upper.

1,388,853. ATTACHMENT FOR PLANER OR SIMILAR MACHINES. RICHARD H. DAVIS, Davenport, Iowa. Filed Dec. 23, 1920. Serial No. 432,880. 4 Claims. (Cl. 90—55.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

4. The combination with a planer including a bed plate and a clapper block, of a latching bar pivoted to the planer, a connection between the latching bar and the clapper block, a dog pivoted to the planer to engage the latching bar, means carried by the planer to trip the latching bar to be engaged by the dog and lift the clapper block at the end of the cutting stroke and means carried by the planer to trip the dog and release the latching bar to lower the clapper block at the end of the return stroke.

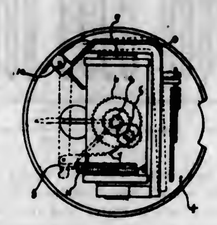
1,388,854. MEANS FOR CLEARING SERVICE-PIPES OR EJECTING LIQUIDS. RICHARD L. DEENDORF, Richmond Hill, N. Y. Filed Jan. 26, 1920. Serial No. 354,301. 8 Claims. (Cl. 137—70.)

3. In an apparatus for ejecting liquids, the combination of a container, a discharge pipe leading therefrom, an explosion chamber connected to the upper portion of said container, means for igniting an explosive charge within said explosion chamber, said explosion chamber being adapted to hold a cartridge, a breech block removable for the insertion of said cartridge, and a firing pin in said breech block.

1,388,855. LUMINOUS ARTICLE. RUFUS G. FORDYCE, Pittsburgh, Pa., assignor to Radium Dial Company, Pittsburgh, Pa. Filed Feb. 9, 1918. Serial No. 216,21?. 1 Claim. (Cl. 240—1.)

A dial comprising a thin disk of transparent celluloid having depressions forming characters closed at the front of the dial by material of which the dial is composed, said dial provided with a material rendering it opaque except where the character depressions occur, and luminous material in said character depressions and protected by the transparent portions of the dial forming the characters.

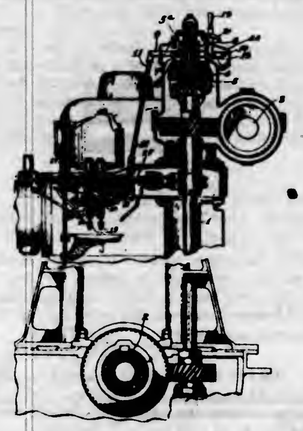
1,388,856. MACHINE-GUN. ANSLEY H. FOX, Philadelphia, Pa., assignor to Ansley H. Fox Company, Philadelphia, Pa., a Corporation of Delaware. Filed July 30, 1917. Serial No. 183,401. 15 Claims. (Cl. 89—2.)



1. In a machine gun, the combination with a receiver having a guide way in the top thereof and a guide way beneath the same, of a barrel fixed to said receiver with its bore in line with said guide way second named, action slide mechanism adapted to reciprocate in said guide way first named, said mechanism having a depending block adapted to reciprocate in said guide way second named, and a sear fulcrumed in said receiver and adapted to engage said block.

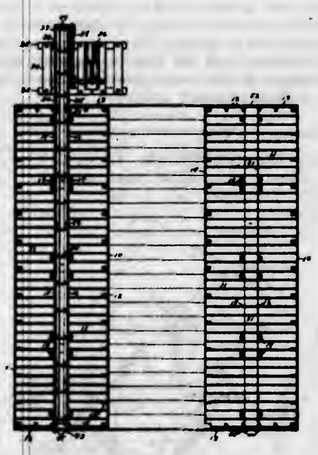
1,388,857. PROCESS OF EXTRACTING TUNGSTEN AND SIMILAR METALS FROM THEIR ORES. DAVID JOHN GILBS and JAMES EARL GILBS, McKeesport, Pa. Filed Sept. 30, 1918. Serial No. 256,214. 6 Claims. (Cl. 75—18.)

1. In the process of extracting metals of the character specified from their ores or concentrates, the steps which consist in treating the same with a solution of a readily water soluble alkaline compound, under pressure and heat, thereby forming a soluble alkaline-metal-solution, separating the solution from the gangue, and mechanically treating the gangue to recover the ore residue.



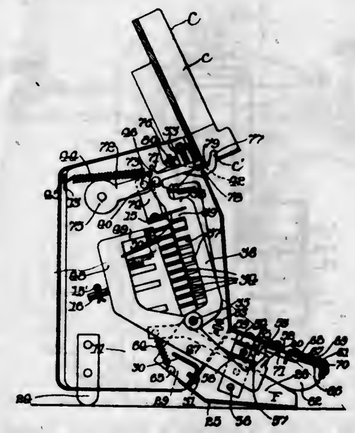
1,388,858. TIME-CONTROLLED MECHANISM. WILLIAM H. GREENLEAF, Hartford, Conn., assignor to The Connecticut Electric Clock Company, Hartford, Conn., a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,575. 5 Claims. (Cl. 58—41.)

1. The combination of time controlled mechanism involving an arbor, a ratchet wheel associated with said arbor, a magnet, an armature for the magnet, the latter when energized acting to attract its armature, means for operating the armature in an opposite direction, when the magnet is deenergized, a pawl for actuating said ratchet wheel, operated by the armature, a catch member, a circuit controlling member, the armature having controlling means to engage under the catch member and to free the catch member when the magnet is deenergized, the controlling means on such motion also engaging the circuit controlling member to move the same to circuit breaking position, means acting against the catch member to cause it to momentarily hold the circuit controlling member in circuit breaking position, a contact, and means for causing the circuit controlling member to engage said contact, after the catch member has been tripped by said controlling means.



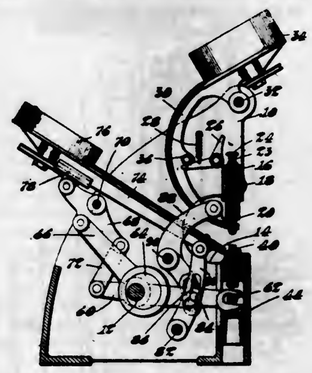
1,388,859. EMERGENCY ENGINE CONTROL. PAUL HENTSCHKE, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 14, 1917. Serial No. 148,664. 2 Claims. (Cl. 264—3.)

1. In a combustion engine having an emergency governor remaining inoperative within the range of normal engine speed and operating on an increase of speed to some predetermined limit to cut off the fuel supply, and having also a fuel pump, said governor comprising pivoted weights, a slidable member controlled thereby and a spring opposing the movement of the weights, the combination therewith of a manual emergency control lever, a governor lever pivotally related to both said slidable member and said control lever whereby when the governor lever is operated by the governor it utilizes its pivotal connection with control lever as its fulcrum and when it is operated by the control lever the governor lever utilizes its pivotal connection with the sliding member as its fulcrum, and a connection between said governor lever and said fuel pump whereby operation of the



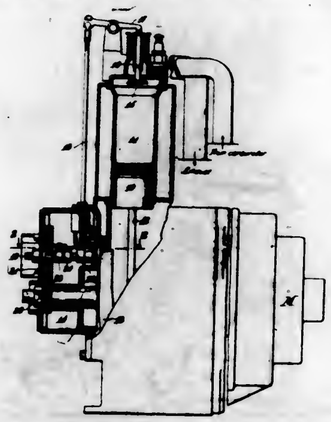
governor lever either by said governor or by said control lever cuts out the delivery of fuel from said pump.

1,388,860. DRAG CONVEYER AND ELEVATOR. ANDY HIGDON, Nevada, Iowa. Filed Dec. 7, 1918. Serial No. 265,677. 1 Claim. (Cl. 193—14.)



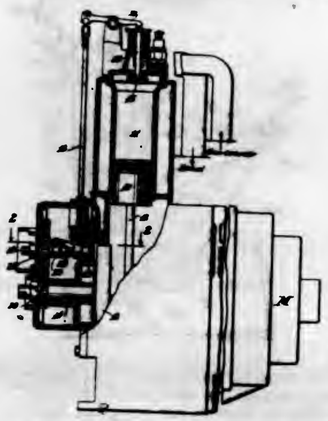
A device of the class described, comprising a horizontally arranged conveyer frame having spaced side frame boards, an elevator frame having side boards spaced to correspond to the side boards of the conveyer, means for supporting the outer end portion of the elevator frame, said elevator frame being formed with an apron projecting from its inner end portion and adapted to extend between the side frame boards of the conveyer frame, said apron being formed with a downturned flange at its free end, said conveyer frame being formed with a transverse rod adapted to be engaged by said flange, and a flexible conveyer adapted for travel in and longitudinally of said conveyer and elevator frames.

1,388,861. COIN-DELIVERING MACHINE. BENJAMIN C. HOEFER, Kansas City, Mo., assignor to Hoefer Change-Maker Company, Kansas City, Mo., a Corporation. Filed Jan. 18, 1918. Serial No. 212,387. 26 Claims. (Cl. 133—4.)



1. In a coin delivering mechanism, a plurality of coin magazines, an ejector for each magazine, a plurality of arms for operating the ejectors, a longitudinally slidable scale, and means set by the scale to actuate said arms for performing an ejecting operation.

1,388,862. FASTENER-SETTING MACHINE. PATRICK J. HORGAN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 11, 1918. Serial No. 233,870. 34 Claims. (Cl. 218—15.)



28. A machine of the class described comprising setting mechanism including a fixed setting tool and a movable setting tool, a raceway for supplying fasteners to the fixed tool, the delivery end of the raceway being movable to and from registration with the fixed tool, a spring-projected spindle arranged in the fixed tool so as to be pushed back by the movable tool, and means arranged to restrain the spindle when the latter is pushed back, said means being controlled by the raceway so as to release the spindle when the end of the raceway is in registration with the fixed tool, the spindle being thereupon movable under the influence of its projecting spring to thread the fastener at the end of the raceway.

1,388,863. METHOD OF STARTING INTERNAL-COMBUSTION ENGINES. JOHN W. JEPSON, Buffalo, N. Y., assignor to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 25, 1919. Serial No. 319,621. 5 Claims. (Cl. 123—179.)

1. The method of starting a liquid fuel internal combustion engine having a piston and an inlet valve for admission of combustible charges from the carbureter, said method consisting in keeping the inlet valve closed until the piston has traveled a substantial portion of its inlet stroke, and then opening the valve to draw air in through the carbureter at a relatively high velocity and attain a better vaporization of fuel than with normal valve openings whereby the engine may be started.

1,388,864. APPARATUS FOR STARTING INTERNAL COMBUSTION ENGINES. JOHN W. JEPSON, Buffalo, N. Y., assignor to The Prest-O-Lite Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 25, 1919. Serial No. 319,622. 7 Claims. (Cl. 123—179.)

1. In an internal combustion engine, the combination with a piston, of an intake valve of a starting cam associated with the valve and adapted to permit the said valve to be kept closed until the piston has traveled a substantial distance on the intake stroke, said cam thereafter opening the said valve and permitting the entrance of mixture, means operable at will to bring said starting cam into operative relation with the valve, said means and said cam being so arranged as to be ineffective in changing the time of the point of closure of said valve.

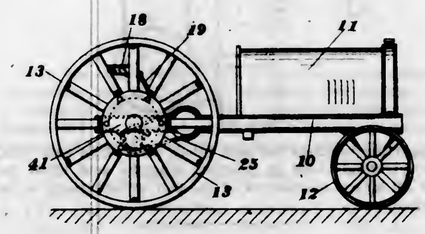
1,388,865. VENTILATED PULLEY. AUSTIN KIMBLE, Wausau, Wis., assignor to Marathon Electric Mfg. Co., Wausau, Wis., a Corporation of Wisconsin. Filed Apr. 25,1921. Serial No. 464,124. 6 Claims. (Cl. 64—43.)

1. A pulley having a radially disposed centrifugal fan part at one end arranged to admit air centrally and formed at its outer edge to deflect and discharge the air diagonally backward against the outer face of the pulley.

1,388,866. WRENCH. FRANK LAMBERT, Brooklyn, N. Y., assignor to Thomson Meter Company, a Corporation of New Jersey. Filed Oct. 22, 1920. Serial No. 418,744. 5 Claims. (Cl. 81—53.)

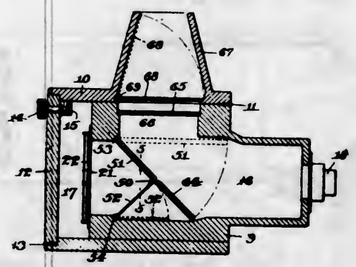
2. In a wrench, a handle, a jaw rigidly mounted on said handle, a second jaw movably mounted on said handle, a spring for urging the movable jaw toward the fixed jaw, and means for limiting said movement of the second jaw to provide a normal working opening between the jaws, the tension of said spring being such that the second jaw is movable away from the fixed jaw against the action of said spring when the turning power applied by the wrench exceeds a predetermined amount.

1,388,867. INFANT-BINDER. EMMA L. LABRABEE, West Palm Beach, Fla. Filed Sept. 1, 1920. Serial No. 407,355. 2 Claims. (Cl. 2—98.)



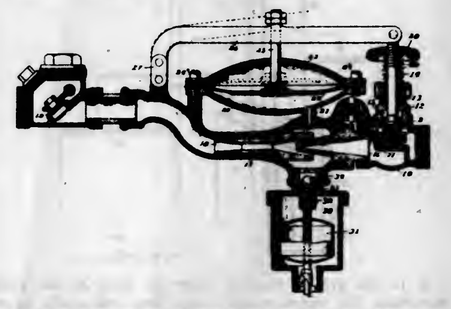
1. An infant binder formed of a single piece of unstiffened material comprising a body portion with a transverse slit and a flap at each end forming extensions of the body portion at the bottom, one of said flaps adapted to pass through the slit when the binder is applied, the upper edge of the body portion being formed with extensions in pairs adapted to overlap over the shoulder of the infant, said flaps being adapted to pass around the body of an infant one over the other.

1,388,868. PROCESS OF PURIFYING LIQUORS BY FROTH FLOTATION. FRANK BUTLER JONES, London, and ERNEST BURY, Yorkshire, England, assignors to Minerals Separation North American Corporation, New York, N. Y. Filed Feb. 26, 1921. Serial No. 447,941. 11 Claims. (Cl. 83—85.)



1. The process of treating a liquid which consists in agitating and aerating a liquor containing organic matter derived from the scrubbing of gas obtained from coal and containing finely divided carbonaceous matter and thereby producing a froth containing said organic matter and carbonaceous matter, and separating said froth.

1,388,869. DRIVE MECHANISM FOR VEHICLES. WILLIAM B. LEFLER, Springfield, Nebr. Filed Aug. 23, 1920. Serial No. 405,403. 3 Claims. (Cl. 180—10.)



1. In combination with a vehicle having a self-contained power plant, a differential on the vehicle in connection with the power plant, jack shafts journaled in the vehicle and connecting individually with said differential, drive shafts directly supporting the weight at the rear of the vehicle and connected to be individually driven from said jack shafts, pinions on the ends of said drive shafts, traction wheels for the vehicles, internal gears fixed to said traction wheels and engaging with said pinions, sleeves rotatably fitting said drive shafts, arms extending from said sleeves, a rod turning in said arms, and axles extending from said rod on which the traction wheels are fitted to rotate.

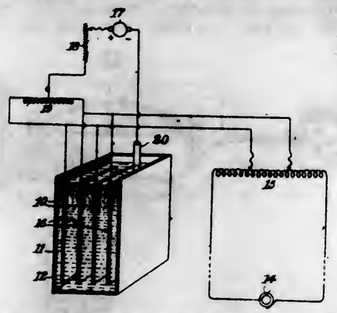
1,388,870. CAMERA. ALBERT E. LIPP, Philadelphia, Pa. Filed Dec. 29, 1917. Serial No. 209,387. 11 Claims. (Cl. 88—18.)

1. In a camera, the combination of a casing having an exposure chamber therein, a focusing mirror movable to and from a focusing position, a part coöperating with said mirror and thereby forming an exposure shutter, a movable operating part, and means operated by said part when moved to open said shutter and move said mirror from its focusing position.

1,388,871. VACUUM-GENERATOR FOR STEAM-HEATING SYSTEMS. BRYCE W. MCCLYMONT, Detroit, Mich., assignor to Penberthy Injector Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 27, 1918. Serial No. 264,409. 4 Claims. (Cl. 230—24.)

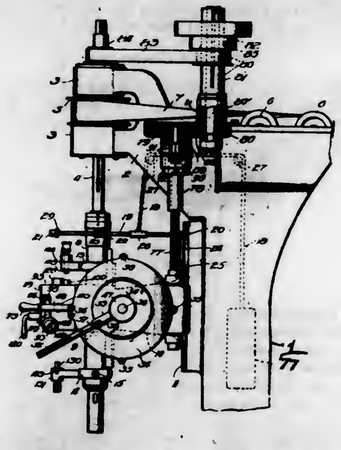
1. In a device of the character described, an ejector casing having inlet and outlet openings and a vacuum chamber and ejector members arranged to produce a vacuum in said chamber, a diaphragm casing mounted on said ejector casing and a diaphragm arranged therein, one side of said diaphragm being subject to the pressure in said vacuum chamber and the other side exposed to atmospheric pressure, a valve casing and an admission valve therein arranged adjacent the inlet of said ejector casing, said valve having a valve stem, a lever pivotally connected with said valve stem and also flexibly connected with said ejector casing, a link connecting said diaphragm and said lever, a spring tending to open said valve, and a check valve at the outlet opening of said ejector casing.

1,388,872. PICK. LEWIS O. MCELHANEY, Glasford, Ill. Filed June 4, 1920. Serial No. 386,594. 4 Claims. (Cl. 306—42.)



1. A pick including a one-piece head having a longitudinal bore terminating at one end of the head in an outwardly flared angular recess, a pick-point having a tapered shank corresponding to and adapted to fit into the recess, said shank including a hook to extend into the said bore inward from the recess, said hook lying nearest one of the walls of the bore, a locking bar lying in and having a diameter less than that of the said bore and having a hook to lie opposite and engage the said hook of the shank, means at one side of the bar to positively move its hook into engagement with the shank-hook, and a device placed under tension by the bar in the movement thereof to engage the hook, the same adapted to separate the two said hooks when said means is actuated to release the bar.

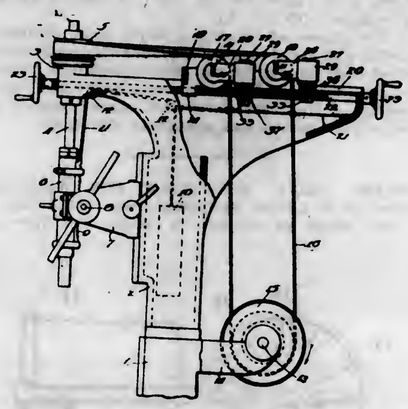
1,388,873. MANUFACTURE OF CEREAL FOOD. EUGENE HENRY MCKAY, Battle Creek, Mich., assignor to Kellogg Toasted Corn Flake Co., Battle Creek, Mich., a Corporation of Michigan. Filed June 28, 1919. Serial No. 307,447. 6 Claims. (Cl. 99—10.)



1. The improvement in the process of producing cooked cereal foods by cooking, drying and forming the cereal particles which consists in impregnating the cereal particles with steam after cooking and drying and before forming.

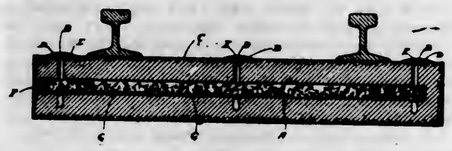
1,388,874. FORMING DIELECTRIC FILMS. RALPH D. MERSHON, New York, N. Y. Filed Feb. 18, 1920. Serial No. 359,573. 11 Claims. (Cl. 175—315.)

1. In the art of forming dielectric films of the kind described, the improvement comprising impressing upon the electrodes immersed in a suitable electrolyte both direct and alternating voltages of such relative values as to prevent reversal of the film stress.



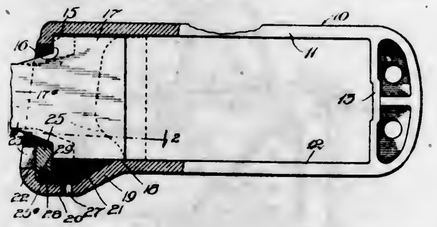
1,388,875. FEED MECHANISM FOR DRILLING-MACHINES. JAMES F. MERRIELEES, Cincinnati, Ohio, assignor, by mesne assignments, to The Avey Drilling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 6, 1919. Serial No. 302,166. 24 Claims. (Cl. 77—33.)

1. In a drilling machine, the combination with the drill spindle and guiding head therefor, of power actuated feed mechanism for effecting the working stroke of said spindle, a controlling clutch for said feed mechanism, a shifter actuated by a spring to engage said clutch, latches for respectively holding said clutch engaged and said shifter retracted, and trips connected to said spindle for retracting said shifter independently of said clutch and for tripping said latches.



1,388,876. BELT-DRIVE MECHANISM FOR DRILLING-MACHINES AND THE LIKE. JAMES F. MERRIELEES, Cincinnati, Ohio, assignor, by mesne assignments, to The Avey Drilling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 2, 1919. Serial No. 321,095. 12 Claims. (Cl. 64—5.)

1. A belt driving mechanism for drilling machines, comprising a longitudinal driving shaft, a vertical spindle shaft, pulleys on said shafts, a flat quarter-turn belt connecting said pulleys, a horizontally adjustable carriage, vertical studs fixed thereto, delivery and return idlers having flanges for engaging the edges of the belt and

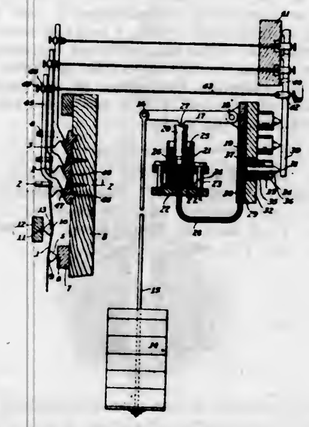


supporting brackets for said idlers pivoted on said studs and yieldingly held in position, whereby said idlers follow all lateral movements of the belt, substantially as described.

1,388,877. PROCESS OF PRESERVING WOOD. STUART B. MOORE, Houston, Tex. Filed July 6, 1920. Serial No. 394,164. 4 Claims. (Cl. 99—12.)

1. The process of treating wood, which consists of forming a central reservoir therein, penetrating the fibers of the wood with a fungicide, sealing the entrance to said reservoir, and then impregnating the wood with a cementing mixture.

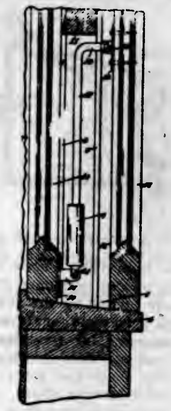
1,388,878. DRAFT-GEAR YOKE. GEORGE C. MURRAY, Chicago, Ill. Filed Dec. 11, 1919. Serial No. 344,004. 7 Claims. (Cl. 213—42.)



1. The combination with a yoke having upper and lower arms and a hooded forward end, of a drawbar having a shouldered butt adapted to be received within said hooded end, means carried by one of said arms to engage one shoulder of said butt, a movable block mounted adjacent the other arm and adapted to be tilted upwardly and forwardly about its lower edge into a position to engage the other shoulder of said butt, and means passing through said block and through the walls of said hooded ends to prevent a reverse tilting movement of said block.

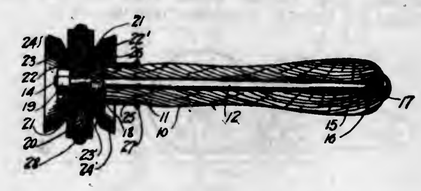
1,388,879. GAS-OPERATED FIREARM. CHARLES A. NELSON, Utica, N. Y., assignor to Savage Arms Corporation, a Corporation of Delaware. Filed Sept. 21, 1918. Serial No. 255,058. 6 Claims. (Cl. 42—3.)

1. In gas operated fire arms, a gas connection between the mussle and gas cylinder including two fittings one of which is connected to the cylinder and encircles the mussle and the other of which in itself forms a gas-tight connection between the first fitting and the mussle.



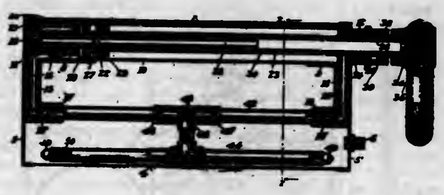
1,388,880. STRINGED MUSICAL INSTRUMENT. ALEXANDER J. OSTRANDER, Lyons, N. Y. Filed Jan. 26, 1918, Serial No. 213,992. Renewed Feb. 17, 1921. Serial No. 445,851. 8 Claims. (Cl. 84—67.)

1. A stringed musical instrument comprising a plurality of differently tensioned strings and interrelated connections between the strings for maintaining them under tension, said connections having provision for changing the tension of all of the strings simultaneously a like per cent.



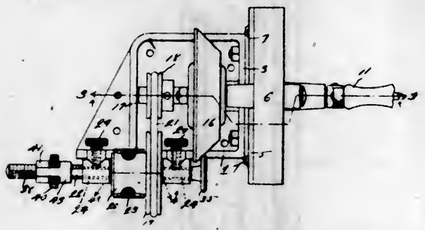
1,388,881. STORM-SASH HOLDER. ARTHUR W. PALM, Minneapolis, Minn. Filed Feb. 11, 1921. Serial No. 444,271. 2 Claims. (Cl. 20—55.)

1. In combination with a vertically slidable window sash and a storm sash adapted to be swung outwardly therefrom, a cylinder pivotally connected to one of the sashes, a piston slidably mounted in the cylinder, two springs in said cylinder, one on each side of the piston,



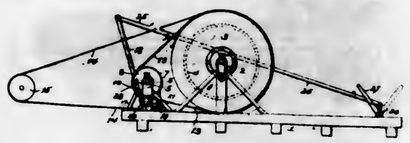
and a connecting rod having said piston at one end and pivotally secured at the other end to the other sash.

1,388,882. BLADE-SHARPENER. ADOLF PAUL, Brooklyn, N. Y. Filed Sept. 29, 1920. Serial No. 413,572. 7 Claims. (Cl. 51—210.)



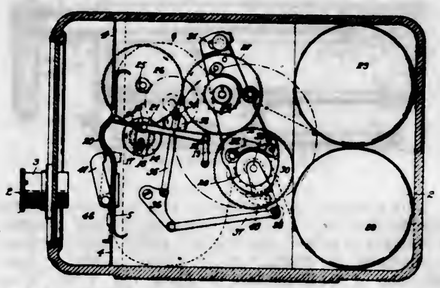
1. A blade sharpener comprising a manually operable handle, a rod rotatably journaled therein, an abrading disk fixed on said rod and conical guides clamped on each side of said disk, said rod, disk and guides being rotated by frictional contact with a surface over which the sharpener is passed.

1,388,883. FIRE-EXTINGUISHER. GEORGE T. PEARSONS, New York, N. Y. Filed Sept. 27, 1916. Serial No. 122,324. 19 Claims. (Cl. 299—98.)



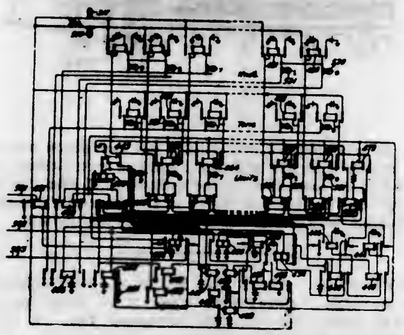
1. In a syringe the combination of a reservoir; a piston cylinder therein; a piston to reciprocate in said cylinder; a hollow piston rod, said rod and piston being arranged to discharge the liquid from the piston cylinder at opposite sides of the piston into the piston rod; a tube in the piston rod through which to discharge the liquid from the piston rod; and a chamber to which the tube is connected having an outlet to the exterior of the reservoir for the purpose specified.

1,388,884. VALVE-GRINDING MACHINE. HARRY E. PECK, Waverly, N. Y. Filed Sept. 30, 1920. Serial No. 413,813. 2 Claims. (Cl. 51—105.)



1. A valve grinder comprising a main drive shaft having an operating handle and an auxiliary drive shaft, a beveled grinding element carried by the auxiliary shaft, gear connections between the main shaft and the auxiliary shaft, adjustable bearings for receiving and supporting rotatably a valve and its stem, a chuck adapted to be received by the valve shaft and rotate with said valve shaft, a pulley carried by the chuck, said pulley being belted to a pulley carried by the main shaft und spring means for imparting a longitudinal movement on the valve and its valve stem during a grinding operation for maintaining the valve in grinding engagement with the grinding element.

1,388,885. DRIVING AND CONTROLLING THE OPERATION OF REELS. LEWIS PIERDUN and JOSEPH P. BURKE, Sand Springs, Okla. Filed Nov. 24, 1920. Serial No. 426,151. 3 Claims. (Cl. 192—17.)



1. The combination with a reel, a pulley for rotating the same, a belt wheel, and means for driving the latter, of a belt passing over said belt wheel and pulley, a belt tightener for said belt, a clutch for operatively connecting said pulley with the reel and disconnecting it therefrom, and a brake for said reel, of manually operable controlling means common to said belt-tightener, clutch and brake.

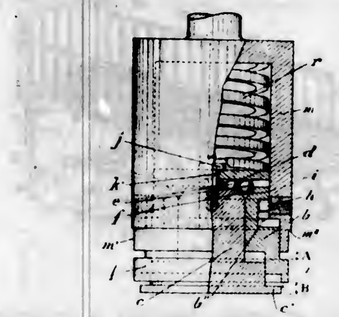
1,388,886. MOTION-PICTURE-FILM-FEEDING DEVICE. REINHART W. PITTMAN, New York, N. Y. Filed Sept. 3, 1920. Serial No. 407,889. 11 Claims. (Cl. 88—18.4.)

8. In a motion picture film camera, a film guide arranged to provide a cylindrically shaped passage for the film, a movable feed member, and means arranged to guide and move the feed member to engage the apertured film margins at said cylindrical passage in a direction substantially perpendicular to the film when it enters the film apertures, and to have a movement at the film-engaging portion that substantially coincides with the film path of movement, whereby the film-engaging portion of the member is not moved relatively to the film during such advance feed movement.

1,388,887. INDICATING SYSTEM. LIPA POLINKOWSKY, Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1919. Serial No. 334,922. 9 Claims. (Cl. 179—27.)

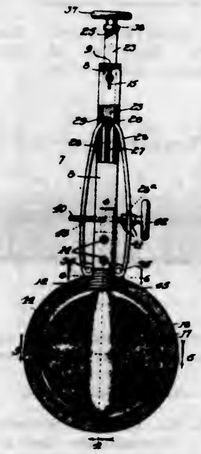
1. In a telephone system, selective switches for extending telephone connections, a controlling mechanism comprising a plurality of registers, means for positioning said registers, means for operating certain of said positioned registers for controlling the operation of said switches, a plurality of indicating devices, a series of relays, means for operating the remaining positioned registers of said mechanism, means controlled by the operation of such registers for operating the relays of said series, and means under the control of said relays for variable selecting said indicating devices.

1,388,888. MANUFACTURE OF PASTEBOARD CASES AND MEANS THEREFOR. PIERRE POMÉON, JOSEPH POMÉON, and ANTOINE LÉON POMÉON, St. Chamond, France. Filed Mar. 4, 1919. Serial No. 280,578. 6 Claims. (Cl. 113—49.)



1. In an apparatus for the purpose described, the combination of a mold having an annular groove in its inner face, a mandrel or plunger comprising a tubular member, adapted to enter the mouth of the mold, a piston like member adjustably connected with the tubular member and arranged to extend through the end thereof that cooperates with the mold, and means acting to maintain the piston in projected relation to the tubular member and to permit the piston to be forced into said tubular member during the pressing operation, for the purpose specified.

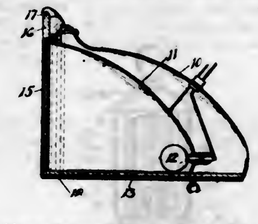
1,388,889. MOLDING-PRESS. PIERRE POMÉON, JOSEPH POMÉON, and ANTOINE LÉON POMÉON, St. Chamond, France. Filed Dec. 26, 1919. Serial No. 347,416. 2 Claims. (Cl. 113—49.)



1. In a molding or swaging press the combination of a matrix, and a plunger adapted to enter said matrix, the

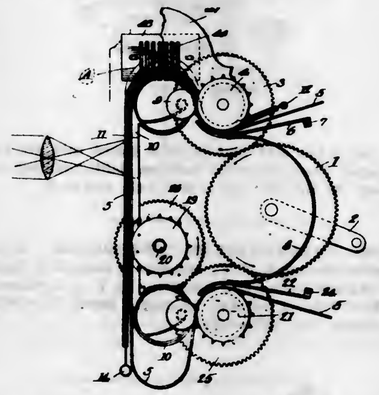
said plunger comprising a shell having an orifice, a piston-like member which is guided in said shell and has an enlargement outside said orifice, and elastic means in said shell acting to maintain said piston in projected relation

to said shell with a gap between said enlargement and the rim of said orifice, and permitting said enlargement to be forced toward said rim during the pressing operation, for the purpose specified.



1,388,890. STOPPER. MICHAEL PROVICH, Chicago, Ill. Filed Dec. 20, 1919. Serial No. 346,260. 40 Claims. (Cl. 137—76.)

1. A device for the purpose set forth, comprising, in combination, a bag-diaphragm containing an opening and equipped at its open end with a hollow member adapted to be secured in the tap-hole of a pipe, and means for causing said bag to be forced into tight-joint-forming condition relative to the inner wall of the pipe.

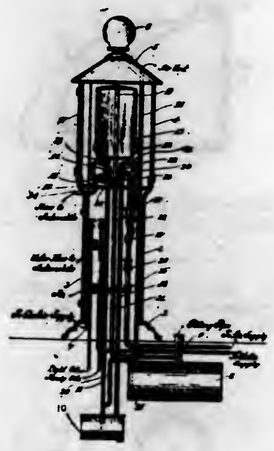


1,388,891. HEADLIGHT FOR VEHICLES. VITO A. QUAGLIANO, East Boston, Mass. Filed June 16, 1920. Serial No. 389,296. 3 Claims. (Cl. 40—132.)

1. A headlight for automobiles or the like comprising a housing having its front and lower sides open, a reflector within said housing and also having its front and lower sides open, a lamp within said reflector, a sheet of material arranged simultaneously to close the lower sides of said housing and reflector, a sheet of light transmitting material for closing the front of the housing, said sheet

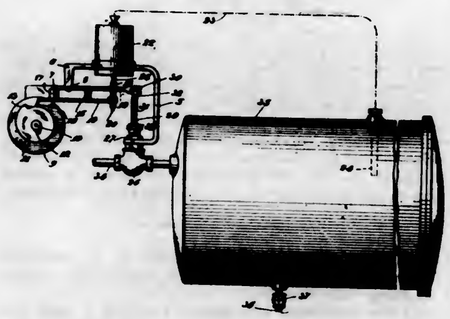
having a cruciform figure of distinctive color thereon, and means for hingedly supporting said latter sheet upon the housing.

1,388,892. MOVING-PICTURE CAMERA. GEORGE RAMSEY, Washington, D. C. Filed July 7, 1917. Serial No. 179,189. 34 Claims. (Cl. 88—18.)



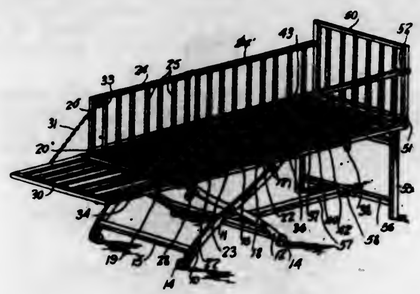
1. In a moving picture instrument, an intermittent feed comprising in combination, means to hold a portion of film stationary, devices for feeding another portion of film to form a loop to store up energy capable of pushing forward the stationary portion of the film, mechanism for storing up energy capable of pulling forward the stationary portion of the film, and means for releasing the stationary portion of the film and permitting the stored up energy to move the portion of the film that was held stationary.

1,388,893. SERVICE STATION. SAMUEL W. RAYMOND, Adrian, Mich. Filed July 9, 1917. Serial No. 179,351. 1 Claim. (Cl. 221—99.)



In a fuel dispensing apparatus, a reservoir, a main fuel tank provided with an air vent pipe, an overflow pipe for said reservoir and having a side opening communicating with said reservoir, said overflow pipe having its upper end extending out of the reservoir and open to the atmosphere and its lower end communicating with said main fuel tank, an auxiliary fuel tank at a level below said main fuel tank and separate therefrom, a pipe extending from the bottom of said auxiliary fuel tank to the bottom of said reservoir, a fuel valve carried by said pipe, a siphonic connection between said main fuel tank and said pipe so that the fuel may be siphoned from said main tank into said auxiliary fuel tank, an air supply pipe adapted to communicate with said aux...ary fuel tank, an air valve carried by said air supply pipe adapted to either admit air to said auxiliary fuel tank or place said tank in communication with the atmosphere, and a connection between said air valve and said fuel valve so that said valves

may be operated in synchronism, said valves being arranged so that when air pressure is in said auxiliary fuel tank said reservoir communicates with said auxiliary fuel

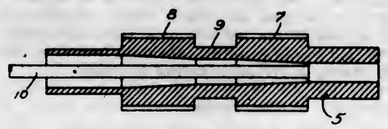


tank, and when said fuel valve is closed said air valve establishes communication between said auxiliary fuel tank and the air vent pipe of said main fuel tank.

1,388,894. TEMPERATURE-CONTROLLER. ALFRED ROESCH, Brooklyn, N. Y., assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 28, 1920. Serial No. 406,738. 3 Claims. (Cl. 236—46.)

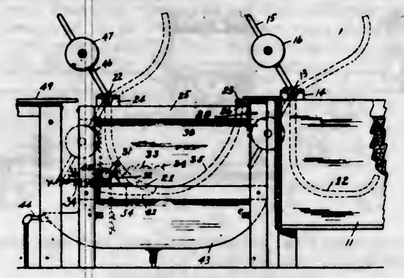
1. The combination of a valve casing, a valve therein, a bracket carried by said casing, a main lever pivotally mounted on said bracket and connected directly with said valve, a clock work carried by said main lever, a cam mounted on said clock work and operated thereby, a secondary lever pivotally mounted on said main lever and engaging said cam, a spring located between and engaging said levers for moving said secondary lever relatively to said main lever, an adjusting screw carried by said secondary lever, a series of connected bellows mounted upon said bracket, a rod projecting from said bellows in alinement with said adjusting screw, a temperature sensitive bulb connected with said bellows and a spring tending to move said valve toward its open position and to pivotally swing said levers, clock work and cam as a unit.

1,388,895. CONVERTIBLE ARTICLE OF FURNITURE. Rocco Russo, New York, N. Y. Filed Jan. 25, 1921. Serial No. 439,715. 2 Claims. (Cl. 155—44.)



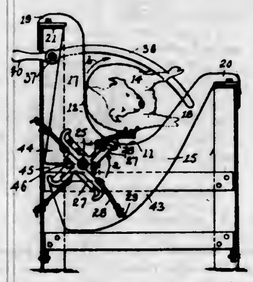
1. An article of furniture comprising in combination two pairs of crossed legs pivoted at their intersection, a platform having one set of said legs pivotally engaged thereto, the other set of legs being in slidable contact with said platform and means to prevent further movement when extended, side elements hinged at the side of said platform, elements comprising an extensible back hingd at the rear of said platform, means for holding said elements wuen in either a horizontal or vertical position, a front element hinged to said platform and means for supporting said front element in vertical or horizontal position.

1,388,896. CAR CONSTRUCTION. RALPH V. SAGE, Philadelphia, Pa. Filed Dec. 18, 1919. Serial No. 345,716. 10 Claims. (Cl. 10—406.)



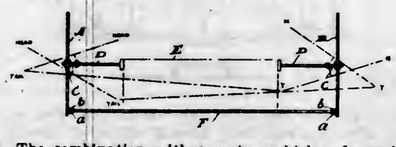
1. A car underframe, a transversely corrugated plate supported thereby, and a flat plate extending over the corrugated plate.

1,388,897. GEARING. HENRY F. SCHMIDT, Wilkinsburg, Pa., assignor to Westinghouse Gear & Dynamometer Company, a Corporation of Pennsylvania. Filed Apr. 24, 1918. Serial No. 230,450. 10 Claims. (Cl. 74—7.)



1. A tubular gear having a power connection portion and another portion adapted to be free of the driving connection and the mass of said last portion being so disposed that the moment of inertia decreases gradually outwardly from the connection portion whereby the gear may deflect uniformly per unit of length.

1,388,898. CARCASS DEHAIRING AND CLEANING MACHINE. CHARLES G. SCHMIDT and OSCAR C. SCHMIDT, Cincinnati, Ohio, assignors to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Continuation of application Serial No. 100,839, filed May 31, 1916. This application filed Dec. 17, 1917. Serial No. 207,581. 32 Claims. (Cl. 17—11.)

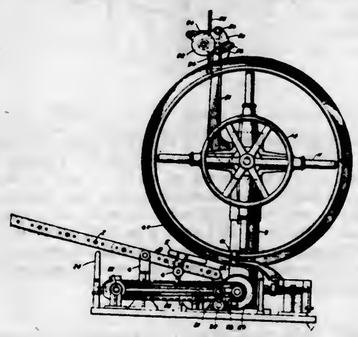


1. In a hog-scraper, a rigid pocket-shaped grate adapted to receive and to hold a carcass, hair-removing devices operating in said grate, and means to support this grate in a manner permitting it to be bodily canted in its entirety to effect discharge of the carcass.

1,388,899. CARCASS DEHAIRING AND CLEANING MACHINE. OSCAR C. SCHMIDT, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Continuation of application Serial No. 121,671, filed Sept. 22, 1916. This application filed Dec. 17, 1917. Serial No. 207,582. 56 Claims. (Cl. 17—11.)

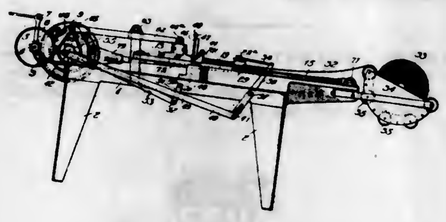
1. In a hog-scraper, the combination of hair-removing means, and stationary means to support a carcass while these hair-removing means act upon the carcass so as to remove the hair therefrom, said stationary means being so constructed that contact with them by the carcass as produced by the impact with the same of the hair removing means imparts also an endwise movement to the carcass past said hair-removing means.

1,388,900. TRAFFIC-SIGNAL FOR AUTOMOBILES. LOUIS CORNELIOUS SCHRAG, Kitchener, Ontario, Canada. Filed May 13, 1921. Serial No. 469,165. 2 Claims. (Cl. 116—51.)



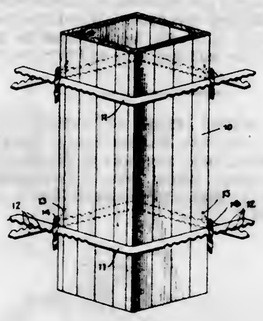
1. The combination with a motor vehicle, of a pair of pointers located one at each side of said vehicle; an arm for each of said pointers on which the same has vertical movement; a bracket for each of the said arms to permit the same to have horizontal movement, said brackets adapted to be carried by said vehicle, and means having hinged-connection with each of the said pointers near the tail ends thereof, whereby the same are substantially simultaneously moved.

1,388,901. RAILWAY-CAR CONSTRUCTION. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Filed Nov. 21, 1917. Serial No. 203,132. 15 Claims. (Cl. 105—410.)



9. A railway car wall structure comprising a sheet metal panel having vertical corrugations extending to the upper edge thereof and an angular end plate having a flat portion overlapping the upper edge of the panel on the outside thereof, said edge being seated in the angular space provided by said end plate and being secured to said plate.

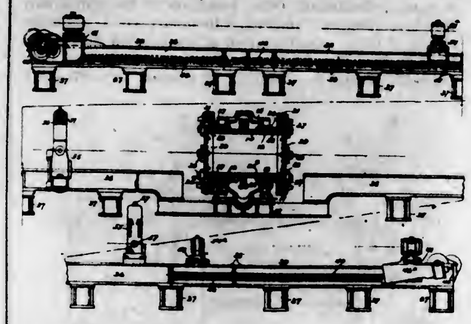
1,388,902. MOTOR-TIRE-APPLYING APPARATUS. WILLIAM C. STEVENS, Summit county, and CHARLES W. STEELE, Akron, Ohio, assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 5, 1917. Serial No. 178,837. 22 Claims. (Cl. 18—11.)



1. A machine for applying cushion tires to rims comprising a holder for supporting and revolving a rim, a guide way for the cushion tire, a roller adjacent the end of the guideway and the rim and means for moving the roller toward said rim to raise the tire and apply pressure thereon.

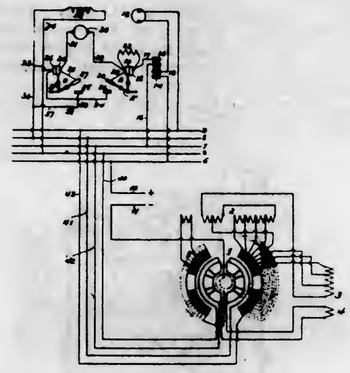
1,388,903. TUBE-MAKING MACHINE. FRANK H. STOLP, Geneva, N. Y., assignor to Stolp Co., Inc., Geneva, N. Y., a Corporation of New York. Filed Dec. 18, 1919. Serial No. 345,795. 5 Claims. (Cl. 113—33.)

1. In a tube forming machine, the combination with a bed, a guideway provided with tube forming dies and a mandrel operating in the guideway and provided with a shoulder to engage the end of the blank and thrust it through the dies, of a work guide extending longitudinally of the die guide and communicating therewith, means for feeding the blank therethrough and means for thrusting a blank from the work guide into the die guide between the dies and the mandrel.



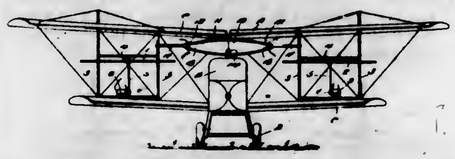
1,388,904. CONCRETE-MOLD CONSTRUCTION. GUSTAV SWENSON, New York, N. Y., assignor to George Peterson, New York, N. Y. Filed Mar. 16, 1921. Serial No. 452,680. 7 Claims. (Cl. 144—291.)

1. In a construction of the class described, in combination, a plurality of mold forming members, a plurality of retaining members, a series of seats on each of said retaining members, a tie member having one end adapted to engage a seat on one of said members and having the other end in the form of a seat, a tapered key coöperating with said seat on said tie member and a seat on one of said retaining members to hold the two of said retaining members together.



1,388,905. BORING-LATHE. CLARENCE L. TAYLOR, Alliance, Ohio, assignor to The Morgan Engineering Company, Alliance, Ohio. Filed May 29, 1919. Serial No. 300,599. 7 Claims. (Cl. 77—3.)

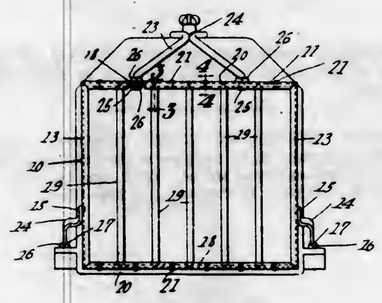
1. In a lathe, the combination of a headstock, a cylinder therein and carrying clamping mechanism to engage the work, a motor and gearing for rotating the cylinder, carriage ways at opposite sides of the headstock, a carriage on each of said ways, a rack on each side member of the ways, a motor on each carriage, gearing actuated by said



carriage motors and meshing with said rack bars and a tool holder on each carriage.

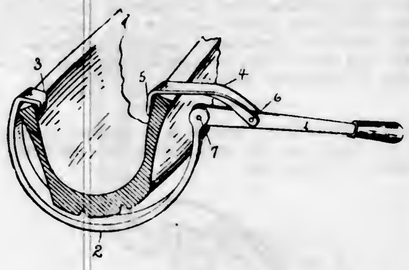
1,388,906. ELECTRIC-MOTOR-CONTROL SYSTEM. HARRY A. WACKERLY, Alliance, Ohio, assignor to The Morgan Engineering Company, Alliance, Ohio. Filed July 21, 1920. Serial No. 397,820. 4 Claims. (Cl. 172—152.)

1. In a motor control system, the combination with an electric motor, circuits therefor, and controlling means for said circuits, of a limit switch, motor operated means for shifting said switch to short circuit the motor armature, and electrically controlled means for resetting said switch when the controlling means are operated to reverse the current in the armature circuit.



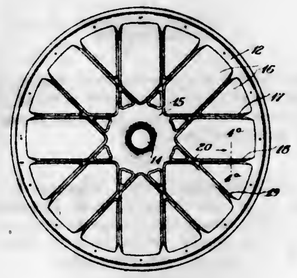
1,388,907. AIRPLANE-STABILIZER. THURLOW E. WEIBLE, Chicago, Ill. Filed Apr. 26, 1918. Serial No. 230,969. 1 Claim. (Cl. 244—29.)

In an airplane stabilizer, the combination, with a plurality of planes and their bracing struts, of an aileron hingedly connected to the struts upon each side of the fuselage of an airplane, and intermediate the planes



thereof, a substantially oval-shaped housing carried by the airplane intermediate the tips of the plane, spaced contacts carried at each end of said oval housing, electrically operated means connected to said contact for operating said ailerons upon the bridging of any pair of the contacts, and means within said housing movable toward the low side of the airplane when it tilts to bridge the contacts at the low end of the housing for operating the ailerons connected thereto, and springs connected to the ailerons and to the airplane, for returning the ailerons to their normal position upon the breaking of an electric circuit through the aileron operated means.

1,388,908. RADIATOR-GUARD. ROBERT H. WILSON, Indianapolis, Ind. Filed Mar. 8, 1920. Serial No. 363,960. 4 Claims. (Cl. 180—68.)

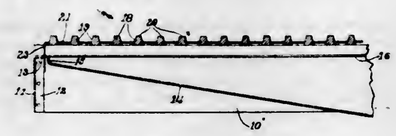


1. A guard for radiators comprising a frame having longitudinal flanges upon the top and bottom portions thereof, strips detachably secured to the top and bottom portions of the frame and bearing against the flanges, bars interposed between the strips, fastening means extending through the strips and into the bars, said fastening means being held against detachment by the top and bottom portions of the frame, means for securing the side portions of the frame to the chassis of a vehicle, and means fixedly connected to the top portion of the frame for attaching it to the neck of the radiator.

1,388,909. TIRE-OPENER. DONALD C. WOODWORTH, Auburn, Me. Filed Apr. 5, 1918. Serial No. 226,953. 5 Claims. (Cl. 152—27.)

5. In a tire spreader, a bow-shaped member having a jaw at one end and a handle pivotally attached to the other end, a second member terminating in a jaw pivotally secured to the handle, the bow-shaped member being adapted to pass around the tread of the tire, with the jaw at one end thereof engaging one edge of the tire, the second jaw engaging the other edge of the tire in a manner whereby neither member obstructs the opening in the tire.

1,388,910. METAL WHEEL. GEORGE E. WORTH, Rochester, N. Y. Filed Mar. 5, 1920. Serial No. 363,368. 6 Claims. (Cl. 301—64.)

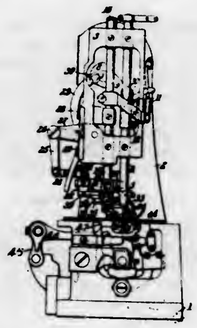


1. A metal wheel comprising a pair of sheet metal disks each stamped to form a plurality of integral spokes adjacent ones of which are integrally connected with each other at a point spaced from the extremities thereof and extend tangentially of the wheel hub on opposite sides thereof to increase the torsional strength, said disks being connected with each other adjacent their peripheries, tread supporting means on the peripheries of said disks, and a connection between said disks adjacent their hubs.

1,388,911. WINDSHIELD-WIPER. JOHN T. ALLMAND, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 20, 1919. Serial No. 331,875. 3 Claims. (Cl. 287—53.)

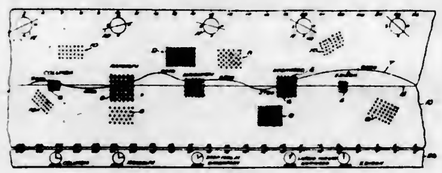
2. An assembly for the purpose specified, comprising a rod having a bearing portion, means rotatably supporting the last-mentioned portion of the rod, the end of the rod being polygonal and having its extreme end screw-threaded, a lever arm having at one end a permanently attached clamp in the form of a pair of half tubes each secured permanently to the lever arm, means for drawing the free end of the clamp portions toward each other upon the polygonal portion of the rod, and a nut engaging the threads on the end of the rod for holding the clamp in position.

1,388,912. STRAW-RACK. EMIL F. ANDERSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 25, 1919. Serial No. 306,578. 7 Claims. (Cl. 130—26.)



1. In a straw walker, a casing, a plurality of cross slats carried thereby, and a plurality of longitudinally removable members carried by said cross slats, and said members having angularly disposed portions to prevent their longitudinal displacement.

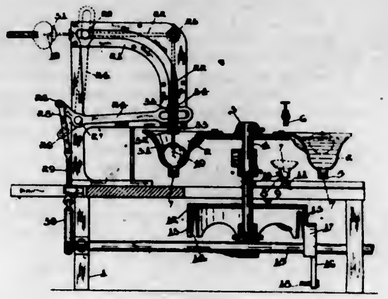
1,388,913. SPRING. HOLLIS B. BAGG, Watertown, Conn., assignor to Scovill Manufacturing Co., Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 26, 1919. Serial No. 319,918. 4 Claims. (Cl. 267—1.)



1. A spiral spring of the motor type formed of a long, narrow, coiled band slightly concaved in cross section on at least one face, said concavity extending across at least the greater portion of the face.

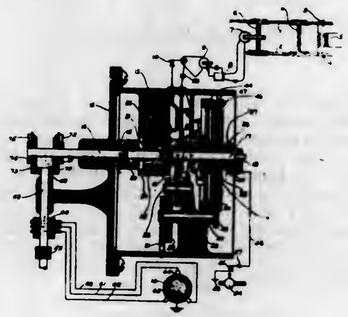
1,388,914. SEWING-MACHINE. WILLIAM L. BARRON, New York, N. Y., and FRITZ E. OSOL, Elizabeth, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Nov. 23, 1915. Serial No. 62,951. 13 Claims. (Cl. 112—100.)

1. In stitch-forming mechanism, the combination with a needle and means for reciprocating the same, of a presser-bar, a reciprocating member adapted for movement upon said presser-bar, a thread-carrying implement and a spreader, one of which is mounted on the presser-bar and the other upon the reciprocating member, means including said reciprocating member for imparting movements to said thread-carrying implement, and a connection between said reciprocating member and said spreader for actuating the latter.



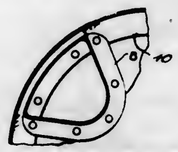
1,388,915. AERIAL-PHOTOGRAPH MAP. DAVID L. BEHNCKE, Chicago, Ill. Filed Apr. 19, 1919. Serial No. 291,262. 5 Claims. (Cl. 35—6.)

1. An aerial route map comprising a scroll having thereon photographic reproductions of portions of the earth's surface along a predetermined route, a flight line extending longitudinally of the scroll and along the photographic reproductions thereon, and an altitude line in coöperative relation with the flight line.



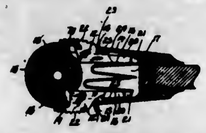
1,388,916. APPLE-FEEDING DEVICE. CHARLES A. RIGGS, Regina, Saskatchewan, Canada. Filed Mar. 9, 1921. Serial No. 451,024. 8 Claims. (Cl. 146—8.)

1. In an apple feeding machine, the combination of a positioning cup adapted to contain a single apple; and means for temporarily floating the apple in liquid in said cup to cause it to assume a position with its core axis



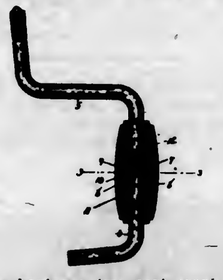
substantially vertical and thereafter lowering the liquid level in the cup to cause the apple to be supported by the cup.

1,388,917. SYSTEM OF SPEED CONTROL. ELI J. BLAKE, Buffalo, N. Y., assignor to Hall Switch & Signal Co., a Corporation of Maine. Filed June 14, 1919. Serial No. 304,293. 17 Claims. (Cl. 246—182.)



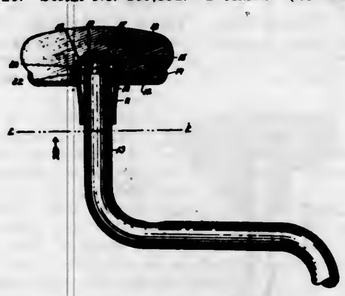
17. In a speed controlling device for railway vehicles a revolving member driven at a speed proportional to the speed of the vehicle from an axle of the vehicle, a mechanism driven thereby to determine when brakes should be applied in accordance with the speed of the revolving member and a brake system controlled by a closed electric circuit comprising synchronous commutating devices on the axle and the revolving members whereby their relative rotation is constantly checked.

1,388,918. TORPEDO. EDMUND S. R. BRANDT, Newport, R. I. Filed Apr. 16, 1921. Serial No. 462,046. 4 Claims. (Cl. 114—20.)



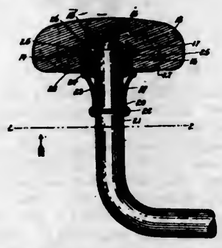
1. In a torpedo, in combination, exhaust trunks in which the outer shell of the torpedo forms one of the walls thereof.

1,388,919. RATCHET MECHANISM. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Aug. 13, 1920. Serial No. 403,197. 4 Claims. (Cl. 74—54.)



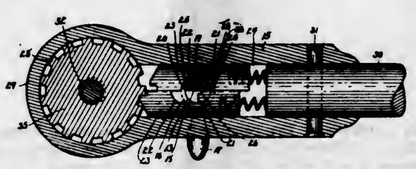
1. A ratchet-mechanism having a housing formed with complementary assembling-openings, a ratchet located in the said housing, and two complementary spring-actuated floating pawls entering the respective assembling-openings and each having rocking and longitudinal movement with respect to the ratchet with which they co-act.

1,388,920. BIT-BRACE. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,850. 2 Claims. (Cl. 145—66.)



1. A bit-brace having a two part crank, the parts of which have their adjacent ends beveled and each formed with a semi-circumferential groove, a sleeve receiving at its opposite ends the beveled ends of the crank-parts and formed with an internal circumferential groove, and a resilient split ring adapted to lie partly in the groove of the sleeve and partly in the grooves of the beveled ends of the crank-parts, whereby the said parts and the sleeve are coupled together.

1,388,921. BRACE-HEAD. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,851. 1 Claim. (Cl. 145—66.)

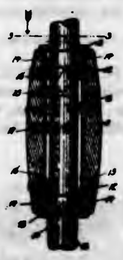


In a brace head, the combination with a one-piece, sheet-metal assembling-cup comprising a sleeve and an annular flange concentric therewith and offsetting therefrom at substantially a right angle thereto, of a body fastened to said flange and formed in its inner face with a concentric chamber, an inverted ball-cup located within the said chamber and resting upon the said flange by which it is held in place in the said chamber, a crank having its upper end entered into the said ball-cup and formed with a raceway antifriction balls interposed between the said ball-cup and raceway, and a race-ring formed independently of the assembling-cup and ball-cup and inserted within the open end of the latter for co-action with the said balls and for holding the crank in place within the ball-cup, the outer edge of the said race-ring resting upon the flange of the assembling-cup at the juncture of the said flange with the sleeve of the said cup.

1,388,922. BRACE-HEAD. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,853. 1 Claim. (Cl. 145—66.)

A brace head having a chambered body, a bearing-cup located in the chamber thereof and formed with a cone-bearing and a flaring assembling flange, a crank having a cone-shaped upper end which enters the said cone-bearing, a bushing located within the open end of the chamber in the body, an assembling-sleeve encircling the crank, entering the said bushing and formed at its upper end with a series of locking-fingers turned outwardly upon the flange of the cone-bearing for locking the parts together, and means for coupling the said sleeve with the crank with freedom for rotation thereupon.

1,388,923. RATCHET MECHANISM. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,854. 1 Claim. (Cl. 145—73.)



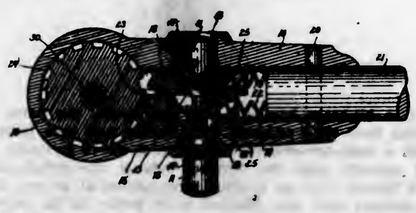
In a ratchet-mechanism, the combination with a ratchet-housing having a ratchet-chamber and a cylindrical pawl-chamber located at a right angle to the said ratchet-chamber, of a ratchet located in the ratchet-chamber, a pair of complementary semi-cylindrical pawls sliding one upon the other, having their flat contacting faces located in the plane of the axis of the ratchet and formed with opposed complementary cuts providing operating-shoulders, a shank having a bearing at its ends in the said housing and passing between the pawls in the plane of their contacting surfaces in position to co-act with the shoulders of their said cuts for the independent operation of the pawls, a grip applied to the lower end of the said shank for the rotation thereof, and springs located within the housing for the operation of the respective pawls, whereby the noses of the pawls substantially correspond in length to their diameter, and whereby any torsional strain upon the pawls is prevented.

1,388,924. BIT-BRACE HANDLE. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,856. 1 Claim. (Cl. 145—66.)

In a bit-brace, the combination with a crank, of a handle applied thereto, two complementary combined, one-piece, sheet-metal bushings and flaring ferrules applied to the respective ends of the handle and each shaped to produce at the juncture of its bushing and ferrule an integral raceway angularly disposed between them, two retaining-collars fastened to the crank at the opposite ends of the handle in position for the coaction of their inner faces with the said raceways of the combined bushings and ferrules, means for securing the said collars in place, and antifriction balls located in the channels formed by the said raceways, retaining-collars and crank.

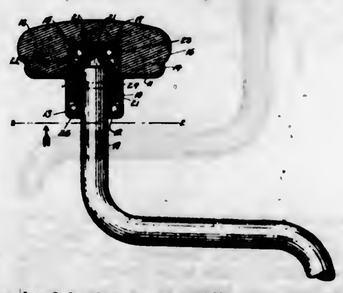
1,388,925. BIT-BRACE HANDLE. EDWIN W. BULLARD Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,857. 1 Claim. (Cl. 145—66.)

In a bit-brace, the combination with a crank formed with circumferential combined raceways and positioning-grooves spaced apart, of a handle, a sheet-metal ferrule at each end thereof, a combined raceway and bushing inserted within each end of the handle, and having its outer end flared to engage with the adjacent ferrule, whereby the same is held in place, anti-friction rollers interposed between the said raceways and bushings, and a single sheet-metal positioning-sleeve located within the handle and turned inward at its respective ends to engage with the inner ends of the said rollers, whereby the sleeve co-acts with the said rollers to hold the said handle against longitudinal displacement.



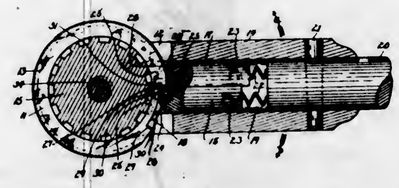
1,388,926. RATCHET MECHANISM. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,858. 6 Claims. (Cl. 145—73.)

2. A ratchet-mechanism having a ratchet, a housing therefor, a pair of semi-cylindrical, matched, longitudinally slidable, contacting, spring-actuated pawls, the flat inner faces of which are formed with primary shoulders notched to produce auxiliary shoulder, a rotary stem cut transversely to form two operating-corners respectively co-acting with the said primary shoulders of the pawls for the independent operation thereof, and the said operating-corners being flanked with grooves respectively co-acting with the said auxiliary shoulders of the pawls.



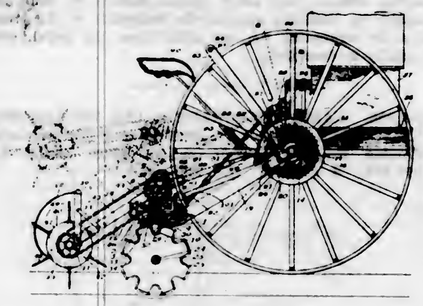
4. A ratchet-mechanism comprising a ratchet-housing, a ratchet, a pair of longitudinally slidable contacting pawls co-acting with the said ratchet, a semi-circular rack mounted in the said housing, a pinion engaged by the said rack, a stem turning with the pinion and co-acting directly with the said pawls for retracting the same independently of each other, and means mounted upon the said housing and connected with the said rack for operating the same to independently retract the pawls.

1,388,927. RATCHET MECHANISM. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Sept. 13, 1920. Serial No. 409,859. 6 Claims. (Cl. 145—73.)



2. A ratchet-mechanism having a housing, a ratchet, a pair of complementary, longitudinally-slidable contacting pawls located in the said housing, and cam-slide mounted in the housing at a right angle to the axis thereof, passing through the said pawls and provided with complementary-cam surfaces for the operation thereof, and with complementary means for holding the same in their retracted positions.

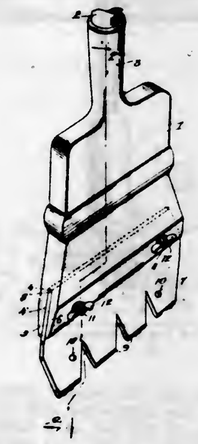
1,388,928. BRACE-HEAD. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Oct. 4, 1920. Serial No. 414,540. 1 Claim. (Cl. 145—66.)



A brace head having an assembling-cup comprising a sleeve and a mounting-flange, a chambered head fastened to the said flange, a ball-cup inserted into the said head, from which it projects and which fits within the said sleeve, a brace crank, a ball cone fastened upon the upper end of the crank and formed at its ends with bearing faces, and antifriction balls located between the bottom of the ball-cup and the upper end of the cone and between the lower end of the cone and the bottom of the sleeve of the assembling-cup.

1,388,929. RATCHET MECHANISM. EDWIN W. BULLARD, Whitneyville, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed Oct. 5, 1920. Serial No. 414,899. 5 Claims. (Cl. 74—54.)

1. A ratchet mechanism having a housing provided with a ratchet-sleeve having a transverse slot, a ratchet located in the said sleeve, two longitudinally-slidable contacting pawls located in the said housing and coacting with the said ratchet, and a pawl-operating ring located in the slot in the ratchet-sleeve and coacting with the nose ends of the pawls for disengaging one or the other of the same from the ratchet.

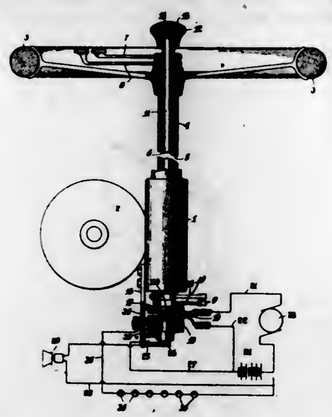


1,388,930. TILLAGE IMPLEMENT. EDWARD W. BUSSMAN, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed May 8, 1916. Serial No. 96,074. 9 Claims. (Cl. 97—89.)

1. In a tillage implement, in combination, a frame, tillage elements carried by said frame, draft members secured to said frame, a source of draft power including a rotatable axle having said draft members pivotally connected with opposite ends thereof, clutch elements mounted upon opposite ends of said axle and rotatable therewith, and coöperating clutch elements carried by said draft members and adapted to engage with said first clutch elements in a manner to turn said draft members about the axis of said axle.

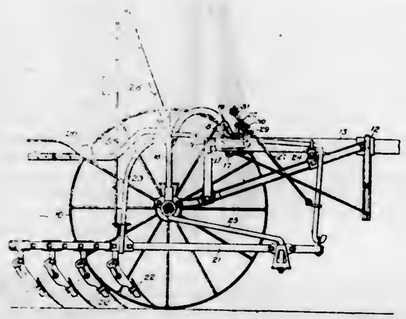
1,388,931. COMBINED SCRAPER AND CHOPPER. ARTHUR CELLER, Brooklyn, N. Y., assignor of one-half to Thomas B. Oneill, Brooklyn, N. Y. Filed Mar. 13, 1920. Serial No. 365,524. 1 Claim. (Cl. 145—47.)

In a combined scraping and chopping tool, a heavy flat-headed member provided with a socket at one end for securing a handle thereto in alinement with the horizontal axis of said member, said member having shoulders formed at the juncture of the socket and head thereof, extension lips forming a blade receiving groove at the other end of said head, a double edged blade one edge being of the continual edge type to form a scraper and the other edge being notched or of the interrupted edge



type to form a chopper either of said edges being formed to fit between said lips in alinement with said member and handle, means for clamping said blade between said lips said means comprising coöperating bolt holes provided in said lips and said blade edges, and removable bolts in said coöperating bolt holes whereby either edge of the blade may be secured to said lips.

1,388,932. AERIAL TORPEDO. HUGO CENTERVALL, Brooklyn, N. Y. Filed July 27, 1916. Serial No. 111,592. 6 Claims. (Cl. 244—1.)

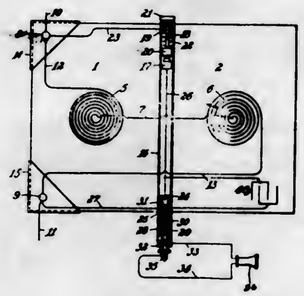


1. In an aerial torpedo the combination of a guiding device, an image-forming directing device adapted to be trained on the object to be attacked, and means controlled by said directing device for operating said guiding device to cause said guiding device to guide said torpedo back to the line of movement toward said object when deflected therefrom.

1,388,933. STARTER, LIGHTS, AND ALARM CONTROL DEVICE FOR AUTOMOBILES, &c. WILLIAM H. COLLIER, Sandusky, Ohio. Filed Apr. 23, 1917. Serial No. 163,801. 8 Claims. (Cl. 171—97.)

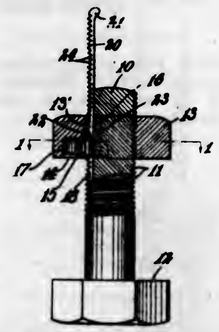
8. In a starter, and light-control device for automobiles and the like, the combination with the steering post of an automobile, or the like, of a control rod within that post adapted for both axial and rotary motion, two conductive disks, one mounted to be moved axially by and also to be rotated by said control rod, the other disk independently supported, said disks arranged to be brought into contact, one with the other, by axial motion of the rod, and to contact, one with the other, in various rotative positions of said rod, a starter motor and source of current supply therefor connected to said disks, that disk which is connected to move with the rod being provided also with a contact segment, a contact member adapted to make contact with such segment in one position of such disk, and a lighting-circuit connected to such last mentioned contact member, and, also, to the corresponding contact segment.

1,388,934. STRADDLE-ROW CULTIVATOR. SAMUEL K. DENNIS, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Apr. 30, 1915. Serial No. 24,946. 5 Claims. (Cl. 97—35.)



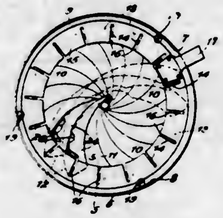
1. In a wheeled cultivator, a frame, cultivator means connected to the frame by laterally shiftable means including pendent members, a guiding member pivotally supported between its ends for lateral swinging movement on the frame, a pivot member on the forward end of the guiding member, and a yoke supported on said pivot member and having its branches slidably connected to said pendent members.

1,388,935. PEDAL-CAP. EDWARD S. DE TAMBLE, Chicago, Ill., assignor to Racine Accessories Manufacturing Co., Racine, Wis., a Corporation of Wisconsin. Filed Feb. 18, 1920. Serial No. 359,623. 4 Claims. (Cl. 74—81.)



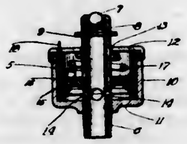
1. In combination with a pedal having an elongated tread plate arched from end to end, an attachment therefor comprising a cap plate shaped to closely overlie the tread plate and provided with a depending marginal flange adapted to surround the edges of the tread plate, the marginal flange being extended from the cap plate for a greater distance in the region of its side centers whereby the panel formed on the under side of the cap plate is relatively deep in the center and relatively shallow at its ends, a lug depending from near the center of each side of the cap plate, an inturned lip carried by each lug adapted to underlie the tread plate in spaced relation thereto, and screw means carried by said lips adapted for clamping against the underside of the tread plate for tightening the cap plate upon the pedal, substantially as described.

1,388,936. RADIO TELEGRAPHIC AND TELEPHONIC APPARATUS. HORACE ST. JOHN DE AULA DONISTHORPE, London, England. Filed Apr. 28, 1920. Serial No. 377,274. 4 Claims. (Cl. 250—14.)



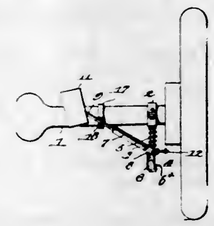
1. A wireless telephonic and telegraphic receiving set comprising in combination two book parts and a hollow hinge part with inductances, a detector, a condenser, telephone terminals, aerial and earth terminals and electrical connections contained therein, telephones and means for connecting the telephones in operative relationship to the receiving circuit.

1,388,937. NUT-LOCK. JÓZEF DZIKOSKI, Warrior Run, Pa. Filed Jan. 22, 1921. Serial No. 439,078. 3 Claims. (Cl. 151—12.)



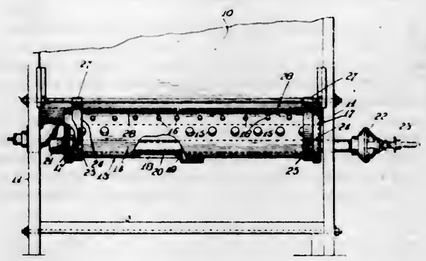
1. A releasing means for a nut-lock having a pawl carried by the nut and engaging in a groove in the bolt, consisting of a key adapted to fit into said groove and lift said pawl, said key having serrations on its outer face complementary to the threads of the bolt.

1,388,938. DISSOLVING SHUTTER FOR CAMERAS. HUGO ENDEAS, Lehighton, Pa. Filed May 19, 1920. Serial No. 382,498. 7 Claims. (Cl. 95—64.)



1. A dissolving shutter for cameras comprising a shutter frame, a plurality of vanes mounted in said frame, a shiftable actuating member to which said vanes are operatively connected, said vanes lapping upon each other and each having a part assuming a superposed relation to the corresponding part of an adjacent vane in the closing movement of said vanes to thereby effect a complete closure of the shutter opening.

1,388,939. LUBRICATING DEVICE. DOUGLAS F. FESLER, Evanston, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Original application filed Nov. 18, 1918, Serial No. 262,930. Divided and this application filed Aug. 25, 1920. Serial No. 405,979. 5 Claims. (Cl. 184—45.)

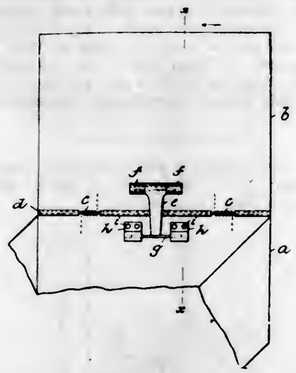


2. A lubricating device comprising a container, the opposite ends of which are provided with registering openings, a tube extending through said container and said openings, one end of said tube being provided with means for making a detachable connection with a lubricant compressor, the other end of said tube being provided with means for connecting said device with a bearing to be lubricated, the wall of said tube being provided with an opening adjacent the inner side of one end wall of said container, a plunger mounted in said container and means for urging said plunger toward said last-mentioned end wall.

1,388,940. AUTOMOBILE ATTACHMENT. JODA FINCH, Great Neck, N. Y. Filed Apr. 9, 1920. Serial No. 372,467. 1 Claim. (Cl. 188—4.)

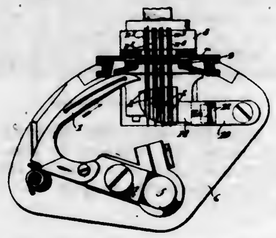
In a device of the character described, the combination of a rod adapted to be secured to the axle of a vehicle, a collar thereon, a spring for moving said collar in one direction, an extensible arm pivoted to said collar, a block supported by said arm, guiding means for said arm, means for holding said arm in normal position, and means for moving said arm from normal position.

1,388,941. WASHING-MACHINE HEATER. ALVA J. FISHER, Evanston, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1919. Serial No. 304,573. 10 Claims. (Cl. 126—350.)



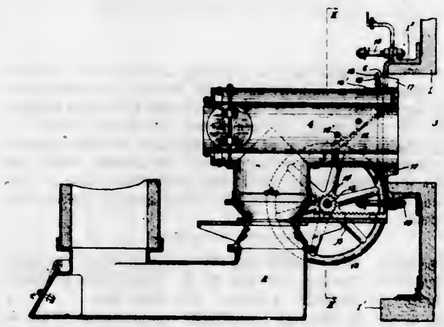
1. The combination of a washing machine frame having a casing and a supporting frame including end-members and parts inwardly projecting therefrom above the bottom level of the casing; a burner-shell having an orifice to conform to the bottom of the casing, and variable-tension hangers extending upwardly from engagement with the shell into engagement with said projecting parts of the frame to press the shell-orifice snugly against the casing-bottom.

1,388,942. DIP-TANK WITH AUTOMATIC COVER. FRANZ A. FULLER, Newark, N. J. Filed Mar. 6, 1919. Serial No. 280,981. 1 Claim. (Cl. 220—89.)



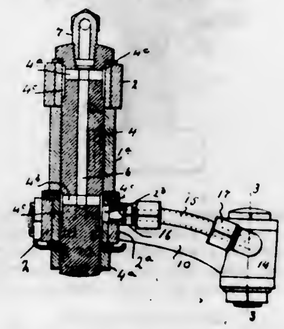
A device of the class described, comprising a tank, a spring actuated cover secured to said tank, a pivoted holding catch located on the inside of the cover, supporting means located on the inner rear wall of the tank, and a

fusible member loosely supported on said means and in engagement with the free end of said holding catch, said



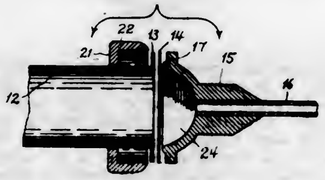
fusible member rendered inoperative by heat to release the catch and close the tank.

1,388,943. NEEDLE-GUARD FOR SEWING-MACHINES. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 27, 1919. Serial No. 326,872. 9 Claims. (Cl. 112—227.)



1. A needle-guard for sewing machines comprising, a guard-body formed with a needle-loop clearance groove and having spaced needle contacting surfaces at the mouth of said groove, said surfaces being spaced apart a distance less than the diameter of the needle.

1,388,944. METHOD OF AND MEANS FOR BURNING AIR AND GAS. WILBUR H. GEESMAN, Youngstown, and ARTHUR G. MCKEE, Cleveland, Ohio. Filed Oct. 31, 1917. Serial No. 199,504. 5 Claims. (Cl. 158—109.)

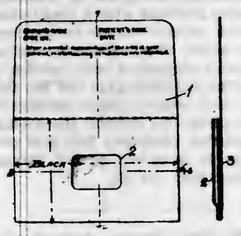


1. In means for burning gas and air, the combination of a stove; a gas nozzle adapted to discharge into the same; an air inlet to said stove surrounding the discharge end of said nozzle; means for imparting a whirling motion to the air; and means for imparting an opposite whirling motion to the gas, both of said whirling means terminating substantially in the plane at which the air and gas enter the stove.

1,388,945. MEANS FOR LUBRICATING STEERING-KNUCKLES OF VEHICLES. FREDERICK H. GLEASON, New York, N. Y. Filed Jan. 18, 1921. Serial No. 438,064. 6 Claims. (Cl. 64—27.)

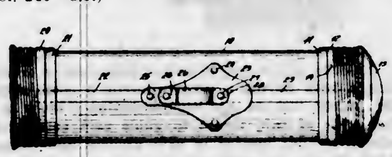
2. The combination of an axle, a steering knuckle, a bolt pivotally connecting the same, an arm extending from the knuckle, a tie-rod, a bolt pivotally connecting the tie-rod and arm, said bolt having a bore and passages to supply lubricant to the bearings thereof, and a conduit communicating with said bore and with the bearings of the bolt of the tie-rod.

1,388,946. HYPODERMIC SYRINGE. LUELLA L. GOOLD, Arlington, Mass., assignor to Semi-Unit Corporation, Arlington, Mass., a Corporation of Massachusetts. Filed May 18, 1920. Serial No. 382,445. 5 Claims. (Cl. 128—216.)



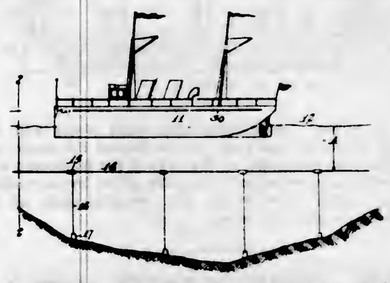
1. A hypodermic syringe comprising a collapsible tube, open at one end and having an annular outwardly projecting flange surrounding the open end, the opposite end of the tube being hermetically closed, a flexible and easily rupturable diaphragm seated at its marginal portion on said flange, and forming a closure for said open end, a rigid needle hub having an annular clamping face, seated on the marginal portion of said diaphragm, a hypodermic needle secured to said hub, and a coupling member having means exerting clamping pressure on the tube flange, and on the hub, to clamp the marginal portion of the diaphragm between said flange and the annular face of the hub.

1,388,947. COMBINATION DENTAL FILM-MOUNT AND DIAGNOSIS-SHEET. LOUIS N. HALPERN and LOUIS GOLDSTEIN, New York, N. Y. Filed Sept. 24, 1920. Serial No. 412,611. 4 Claims. (Cl. 40—159.)



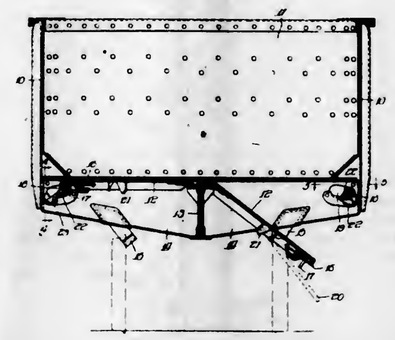
1. A container for a radiograph mount comprising a paper envelop constructed of opposed sheets united along their edges and having one edge open to provide a pocket

adapted to receive the said mount, registering apertures in the said sheets through which the radiograph may be



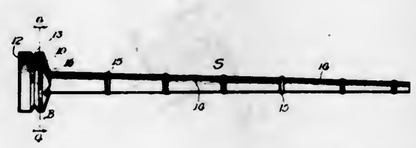
viewed, a flap for closing the said pocket and foldable along a line adjacent the entrance to the said pocket and of sufficient area to cover the said apertures.

1,388,948. HAND-LAMP. CARL HAMBUECHEN, Belleville, Ill., assignor, by mesne assignments, to National Carbon Company, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 27, 1917. Serial No. 164,833. 4 Claims. (Cl. 240—8.5.)



1. In a hand lamp, a tubular insulating casing having a battery chamber, a battery fitting closely within said chamber, a metallic cap on one end of the casing for retaining the battery in place thereon, said cap being electrically connected with on terminal of the battery, a metallic reflector at the other end of the casing, a lamp mounted in the reflector, and connected to the other terminal of the battery, and means for controlling the circuit through said lamp, said means comprising a conducting element movable into and out of engagement with the reflector, an actuating member for said conducting element, and a second conducting element mounted upon the exterior of said casing between said cap and said actuating member.

1,388,949. AUDIOFREQUENCY WIRELESS FOG-SIGNAL SYSTEM. EARL C. HANSON, Los Angeles, Calif., assignor to Title Insurance and Trust Company, a Corporation of California. Filed June 4, 1918. Serial No. 238,111. 6 Claims. (Cl. 178—43.)

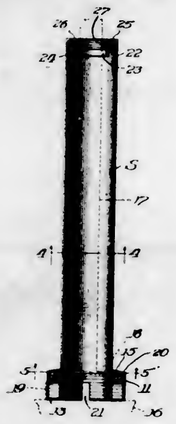


1. In a system of navigation, the combination of a submerged cable energized from an audio-frequency source and apparatus on shipboard comprising a collector of the field of force emanating from the cable, a vacuum tube amplifier associated with said collector, and means for observing the received energy.

1,388,950. DOOR-OPERATING MECHANISM. WILLIAM J. HOSCEIT, Chicago, Ill., assignor to National Dump Car Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 26, 1919. Serial No. 347,372. 7 Claims. (Cl. 105—293.)

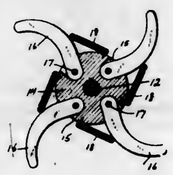
1. In a general service car having a plurality of doors, means for directly raising said doors individually, and means including a door control shaft having a supporting and a non-supporting position with respect to an associated door and a pivotally mounted link for locking one of said doors in raised position.

1,388,951. BOBBIN. EBER J. HUBBARD, Berwyn, Ill. Filed Feb. 21, 1919. Serial No. 278,534. 1 Claim. (Cl. 242—121.)



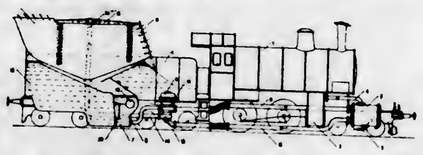
A bobbin comprising a cylindrical base part stamped integral from sheet metal and having a large opening in its base and a smaller opening in its top wall, a shank formed of a single piece of metal bent into conical form with its edges intimately abutting along their entire length, tongues extending from one of said edges and the other edge having depressions for receiving said tongues, said tongues being spot-welded to the metal at said depressions whereby said shank becomes a rigid structure, said shank at its lower end abutting on said base part around said upper opening, grooves in the edges of said opening, and tongues extending from the end of said shank through said grooves and deflected outwardly against the under side of the base top and spot-welded thereto.

1,388,952. BOBBIN. EBER J. HUBBARD, Berwyn, Ill. Filed May 12, 1919. Serial No. 296,598. 3 Claims. (Cl. 242—121.)



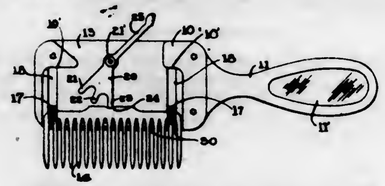
1. A bobbin of the class described, comprising a cylindrical base of sheet metal, having a central opening in its top wall, a cylindrical shank of sheet metal seated on said base and having tongues spot welded to the base top, an alining bushing of comparatively soft material inserted in said base, the lower edge of said base being flanged inwardly to secure the alining bushing, said bushing and base side walls having tooth receiving slots, a

strengthening sheet metal ring secured in the upper end of said shank, a bushing of comparatively soft material



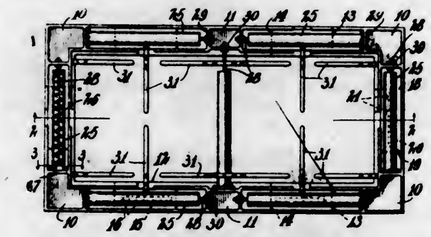
seated on said ring, the upper edge of said shank being flanged inwardly to secure said bushing to the ring, said bushing having a central opening for receiving a spindle.

1,388,953. SOIL-PULVERIZING DEVICE. JOHN H. KNIGHT, West Palm Beach, Fla.; Lura Daisy Knight administratrix of said John H. Knight, deceased. Filed Sept. 28, 1918. Serial No. 256,113. 1 Claim. (Cl. 97—62.)



A soil pulverizer comprising a disk supported for rotary movement and provided in its periphery with a plurality of circumferentially spaced sockets, each of said sockets gradually increasing in width from its inner end to the periphery of the disk, a plurality of pulverizing fingers, each of said fingers having an end portion extending within a socket and pivotally mounted therein, and a contractile spring coacting with each of the fingers and the disk for constantly urging said finger in one direction and at its limit of movement supported by an end wall of the coacting socket.

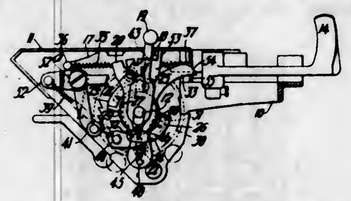
1,388,954. SURFACE CONDENSING PLANT FOR STEAM-LOCOMOTIVES. CONRAD KOHLER, Zurich, Switzerland. Filed Aug. 1, 1919. Serial No. 314,692. 7 Claims. (Cl. 261—118.)



1. In a condensing plant for locomotives a surface condenser arranged at the front part of the locomotive in the immediate neighborhood of the steam power engine, a re-cooling contrivance arranged on a tender coupled to the locomotive and provided with a longitudinal air channel through which channel the air induced upon the running of the locomotive flows once in a longitudinal direction, which channel occupies a large portion of the space available inside the clearance gage and has throughout its entire length a large cross-sectional passage area for the cooling air and means for forcing the cooling water required for the surface condenser into said re-cooling contrivance wherein it is caused to fall through said air channel in contact with the air.

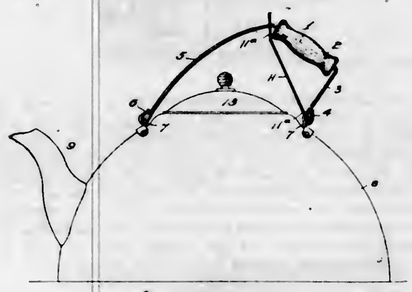
1,388,955. COMBINED BRUSH AND COMB. THEODOR KOZLOWSKY and WOJCIECH ROGOSKY, Toledo, Ohio. Filed Mar. 24, 1921. Serial No. 455,055. 6 Claims. (Cl. 132—87.)

6. A device of the class described comprising a brush including a back having a recess therein, a comb slidable in said recess, lugs on said comb engaging grooves in the bottom wall of said recess to guide said comb, coiled expansion springs located in said grooves and engaging said lugs to urge the comb into the said recess, and means locking said comb in position with its teeth projected from said recess, said means comprising an abutment arm pivoted to said back, a series of circumferentially spaced abutment fingers of different radial lengths on said arm, and a handle extension on said arm projecting edgewise of the brush back from the said recess.



1,388,956. TELESCOPIC PICTURE-FRAME. THEODOR KOZLOWSKY and WOJCIECH ROGOSKY, Toledo, Ohio. Filed Mar. 24, 1921. Serial No. 455,056. 6 Claims. (Cl. 40—155.)

2. A picture frame comprising angle pieces and side frame members, said angle pieces having telescopic connection with each other at the ends of the frame and with said side frame members at the sides of the frame, resilient means acting transversely and longitudinally of the frame to contract the same.

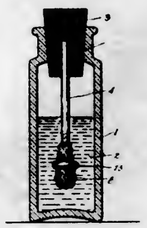


1,388,957. TYPEWRITING-MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 8, 1919. Serial No. 329,250. 27 Claims. (Cl. 197—114.)

1. In a typewriting machine, the combination with a revoluble platen and a line-space lever, of an axle for the platen, a pawl-carrier journaled on the axle, pawls, a hub on the axle, and a camming device adapted to be

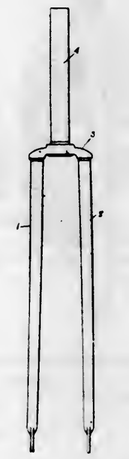
driven by the lever to cause the pawls to seize the hub and turn the platen upon further actuation of the lever.

1,388,958. HANDLE AND PROTECTOR FOR TEA-KETTLES. JOSEPH V. LAFOND, Chicago, Ill. Filed Feb. 17, 1920. Serial No. 359,454. 3 Claims. (Cl. 53—9.)



2. In combination with a kettle having a filling opening provided with a lid, and ears in front and rear of the filling opening, a bail having its ends formed with eyes connected with said ears, said bail consisting of a long arm, a short arm, and a handle-bearing portion, the long arm being connected to the front ear and the short arm to the rear ear of the kettle, a handle mounted on said handle-bearing portion, the disposition of said arms causing the handle to assume an inclined position partly in rear of the filling opening of the kettle, and a shield connected with the two arms of the bail and arranged in an inclined position in advance of the handle.

1,388,959. GAS-MASK. JOSEPH F. LAMB and FREDERICK E. CARLSON, New Britain, Conn., assignors to Landers, Frary and Clark, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 27, 1918. Serial No. 251,600. 14 Claims. (Cl. 2—149.)

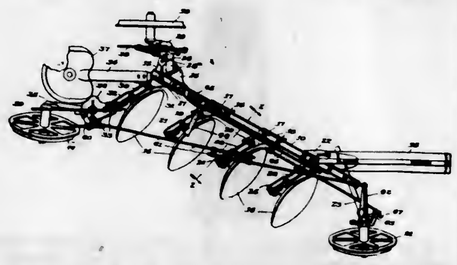


1. The herein described method of producing gas masks and the like which consists in forming an eye opening in the fabric, forming an eye-piece frame, inserting the eye-piece frame in the eye opening, securing the fabric to the eye-piece frame, forming a separate lens holder, placing the lens in the holder, and securing the holder to the eye piece frame by means of a force applied outside the periphery of the lens.

1,388,960. SWAB. WILLIAM F. LERCH, Hartford, Conn. Filed Apr. 22, 1920. Serial No. 375,776. 2 Claims. (Cl. 128—269.)

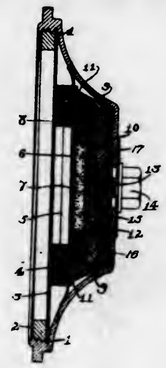
1. A swab, comprising a rod having an enlarged end adapted to receive absorbent cotton, and a ring movable on the rod and adapted to clamp said cotton on the rod, the internal diameter of the ring being greater than the external diameter of the rod but less than the external diameter of said enlargement.

1,388,961. BICYCLE CONSTRUCTION. ELMER M. LEWIS, Dayton, Ohio, assignor to The Davis Sewing Machine Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 2, 1919. Serial No. 321,175. 1 Claim. (Cl. 208—96.)



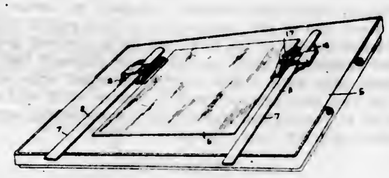
As an article of manufacture, a bicycle front fork composed of assembled parts butt-weldedly unfited into a complete integral structure, said parts before butt-welding comprising a separate and unreinforced fork stem, a fork head formed of one piece provided with a central aperture having a raised edge around it adapted to contact with the lower end of the stem and to be butt-welded thereto, the lower portion of the fork head being provided near its outer extremities with two oppositely disposed fork arm orifices each with a downwardly extending edge around it and two fork arms adapted to contact with said edges and to be butt-welded thereto, the corresponding opposite contact surfaces being substantially equal.

1,388,962. DISK PLOW. ALEXUS C. LINDGREN, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed July 2, 1914. Serial No. 848,537. 13 Claims. (Cl. 97—40.)



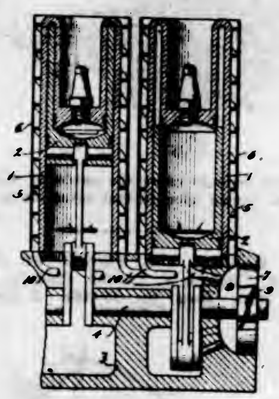
1. In a disk plow, a main frame bar, supporting wheels associated therewith, angle plates detachably mounted at

intervals beneath said bar, disk carrying arms connected to said angle plates, and a triangular rear plate member detachably secured beneath said frame bar and having a



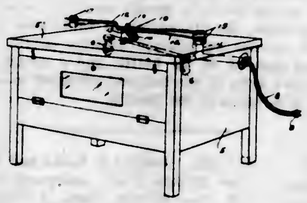
connection with each rear supporting wheel, and securing means for said plates which permit substitution of the rear plate for an angle plate.

1,388,963. SOUND-TRANSMITTING INSTRUMENT. ALEXANDER MARR, Biggin Hill, England. Filed May 27, 1919. Serial No. 300,172. 9 Claims. (Cl. 179—122.)



6. A microphone comprising a carbon resistance cell, a casing, means to insulate one part of said cell from said casing, a sheet of metallic foil, and means to elastically hold said foil in contact with the other part of said cell and said casing, and a vibrating diaphragm spaced from said cell.

1,388,964. PAPER-GRIPPER. EDWARD L. MEGILL, New York, N. Y. Filed Mar. 31, 1919, Serial No. 286,476. Renewed Feb. 8, 1921. Serial No. 443,494. 6 Claims. (Cl. 101—408.)

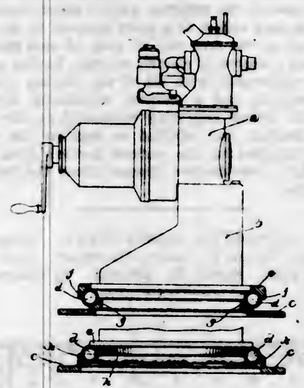


1. A device of the kind described comprising a sleeve member having a paper-engaging portion, a member embraced by the sleeve and along which the sleeve is slidable, and a bowed spring secured to the sleeve and having one end formed as a detent and the other end formed as a shoe.

1,388,965. COOLING MEANS FOR INTERNAL-COMBUSTION ENGINES. ROBERT ALEXANDER MOORE, New York, N. Y. Filed May 5, 1920. Serial No. 379,122. 6 Claims. (Cl. 123—171.)

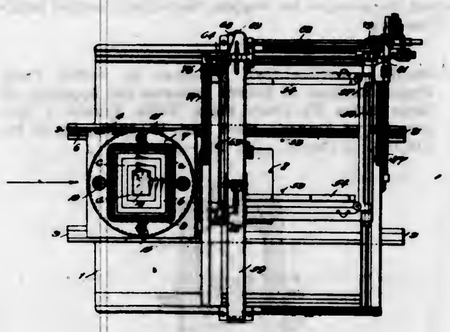
2. In an internal combustion engine of the class described, a cylinder, spiral fins extending about the wall thereof, an open ended jacket surrounding the fins and forming therewith a series of passages, a crank case, a tube connecting with the jacketed space, and passing through the crank case in position for the lubricant therein to be thrown upon its surface to thereby cool said lubricant, and engine operated means in the end of the crank case for inducing a circulation of the cooling medium from the top of the cylinder through the tubular passages.

1,388,966. ELECTRIC HEATING AND REGULATING DEVICE FOR INCUBATORS. WILLIAM G. NELSON, Racine, Wis. Filed Jan. 15, 1920. Serial No. 351,520. 5 Claims. (Cl. 219—19.)



1. A heating unit comprising a heating element, an electrical circuit connected with the heating element and having a break therein, and means for automatically opening and closing the break in said circuit including a pivoted lever, a circuit closing plate carried thereby and movable to close the break in said circuit, and a thermostatic expansion chamber adjustably connected with the lever to impart a movement thereto upon the temperature changes.

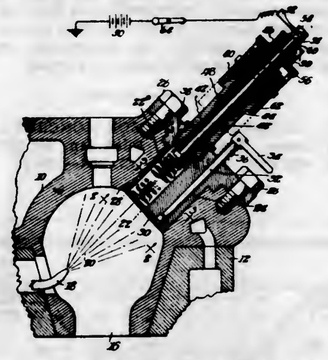
1,388,967. VIBRATION-QUENCHING MOUNT FOR INTERNAL-COMBUSTION MOTORS. WARREN NOBLE, Providence, R. I., assignor to N. C. L. Engineering Corporation, Providence, R. I., a Corporation of New York. Filed June 3, 1919. Serial No. 301,528. 3 Claims. (Cl. 248—30.)



1. The combination of an internal combustion motor having a base with an outstanding flange, and an annular cushion consisting of a jacket having a confined body of

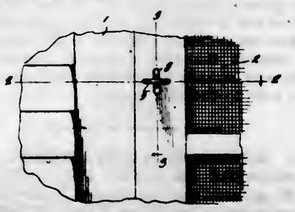
air underlying said flange, the flange having centering means engaging the cushion laterally and arranged to pre-

vent relative lateral displacement of either with respect to the other.



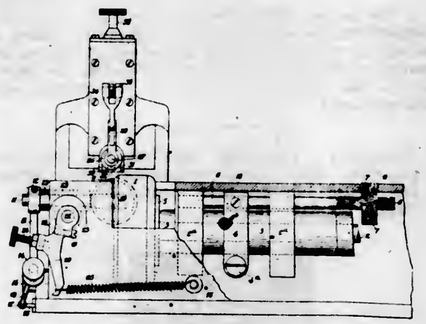
1,388,968. PRINTING-MACHINE. ASHLEY GUY OGDEN, Baltimore, Md., assignor to Multiple Offset Machine Co., Baltimore, Md., a Corporation of Maryland. Filed Mar. 1, 1917. Serial No. 151,748. 34 Claims. (Cl. 95—73.)

1. In a device for printing on sensitized surfaces, the combination with a negative holder, of a sensitizing surface holder, a support for the surface holder, a device for shielding the sensitized surface from light coming through the negative, means for relatively moving the holders to printing position, connections for making the shielding device ineffective by actuation of the moving means to bring the holders to printing position, and a device connected to the support and made effective by the relative approach of the holders to exclude side light from between the holders.



1,388,969. PROTECTED FIRING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ALFRED PETER, Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed June 1, 1920. Serial No. 385,594. 6 Claims. (Cl. 123—145.)

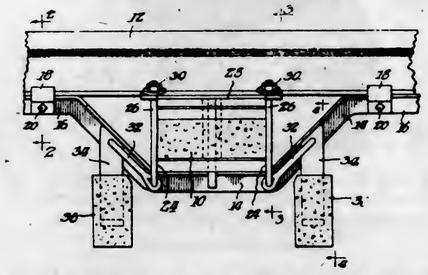
1. In an engine of the class described having a combustion chamber and a fuel inlet nozzle directed to a predetermined point therein, an oil firing mechanism in a recess in the wall of the combustion chamber, adjacent to said predetermined point in the chamber, means for moving said firing mechanism within its recess, toward



and from the fuel nozzle, and means independently operatable from outside the combustion chamber, closing access to said recess from the combustion chamber.

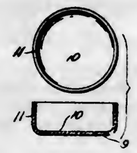
1,388,970. DOOR-HOOK. LILLIAN RANDAZZO, Ranger, Tex. Filed Aug. 8, 1920. Serial No. 400,945. 2 Claims. (Cl. 292—102.)

1. A door hook including a strand of metal one end of which is formed to provide a hasp and the opposite end formed to provide a handle, an intermediate portion of said strand being convoluted for engagement with the door.



1,388,971. SKIVING-MACHINE. JOHN ROBINSON, Kingswood, near Bristol, England, assignor of one-half to Hodge, Jacques & Company, Limited, Bristol, England. Filed Dec. 10, 1919. Serial No. 343,892. 3 Claims. (Cl. 69—16.)

2. In a skiving machine, a frame, a pair of feed rollers mounted on spindles disposed transversely of said frame, a sleeve and a screwed spindle disposed longitudinally of and slidably mounted on said frame, a collar clamped to said sleeve and connected to said screwed spindle, a shaft

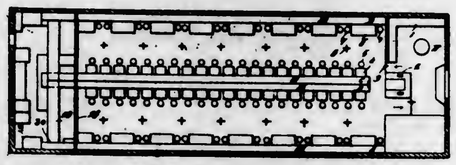


mounted in said sleeve, a flange on said shaft, a cylindrical knife mounted on said flange, said sleeve being adapted to be pressed to bear on said flange, and means for moving the screwed spindle longitudinally of the said frame to move the said shaft forward to the feed rollers as the knife wears and to facilitate the detachment and withdrawal of the knife for substitution of another.

1,388,972. RAIL-FASTENING FOR CONCRETE TIES. EDWIN ROGERS, Aurora, Ill. Filed Jan. 24, 1921. Serial No. 439,425. 2 Claims. (Cl. 238—106.)

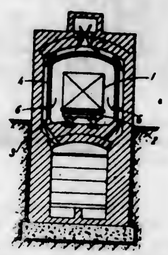
1. In combination with a railroad rail and a tie therefor, a securing member attached to the rail at some distance on opposite sides of the tie, thence extending angularly downward to and below the tie, U-shaped sustaining rods located immediately adjacent to the sides of the tie passing through the first mentioned securing member, thence directly upward to the rail and means for securing these rods to the rail flanges.

1,388,973. METHOD OF MANUFACTURING CONNECTING MEMBERS OR LINKS FOR CUFF-BUTTONS. JOHN W. SCHOELLNER and JOSEPH P. ROWLEY, Newark, N. J., assignors to Schoellner & Horbach Mfg. Co., Newark, N. J., a Corporation of New Jersey. Filed Oct. 29, 1917. Serial No. 199,026. 3 Claims. (Cl. 79—3.)



2. The method which consists in providing a flat blank, manipulating the same to give it a cup shape, turning in the edge of the cup, removing the bottom of the cup and turning up the edge of the blank surrounding the cut-out portion and lapping the same over the inturned edge first mentioned.

1,388,974. ELECTRIC HEATER FOR POULTRY PLANTS. JOHN PHILIP SCHREIBER, Mount Vernon, Ind. Filed July 10, 1920. Serial No. 395,236. 1 Claim. (Cl. 219—45.)

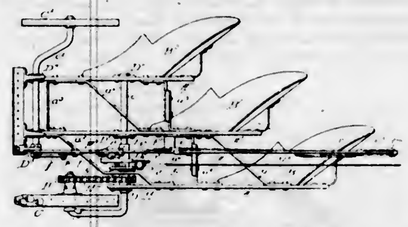


In an electric heater heating means for poultry plants, the combination of a plurality of individual heaters disposed at separate positions, and each comprising a metal casing containing non-heat-conducting material, a parabolic reflector open at the top mounted in each of said casings, a socket mounted in each reflector, an incandescent bulb detachably mounted in each of said sockets and positioned close to the reflector wall, a short electric connection from each socket to a point exterior to the casing, a screw plug on the free end of each of said short connections, and a source of electric current, having a circuit detachably connectible with all of the various individual heating elements, and a current regulating device included in the circuit supplying electricity to the various individual heaters, and adapted to regulate the amount of current supplied to the various heaters from a central point at a considerable distance from the individual heating units.

1,388,975. AUTOMATIC RESTAURANT. CHARLES H. SPINK and VICTOR D. GAANS, Davenport, Iowa. Filed July 26, 1920. Serial No. 398,900. 12 Claims. (Cl. 186—1.)

1. A system comprising a reception room, an eating room, a kitchen, a conveyer leading from the kitchen to the end of the eating room and adjacent the reception room and slanting downward from the kitchen, trays adapted to travel on said conveyer, and means disposed along the conveyer for stopping the trays at desired points therealong.

1,388,976. ANNEALING. CHARLES M. STEIN, Paris, France, assignor to Societe Anonyme Des Appareils De Manutention Et Fours Stein, Paris, France, a Corporation of France. Filed Aug. 18, 1919. Serial No. 318,169. 2 Claims. (Cl. 266—5.)



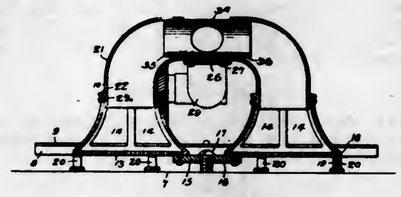
1. An annealing furnace comprising a muffle adapted to receive the articles to be annealed, a combustion chamber immediately surrounding said muffle, means for admitting a non-oxidizing gas directly into said muffle, openings in the wall of said muffle for allowing said gas to pass through the muffle into the surrounding chamber and means for admitting air into said surrounding chamber to mix with said non-oxidising gas forming a combustible mixture to be burnt in said chamber for heating said muffle.

1,388,977. COMBINATION SHIPPING, PACKING, AND DISPENSING DEVICE. JAY QUINCY STEPHENS, Kansas City, Mo. Filed Nov. 28, 1919. Serial No. 340,988. 7 Claims. (Cl. 206—56.)

1. A device of the character described consisting of a tubular container for holding articles to be dispensed, retaining elements associated with said container to yieldably engage and support the articles in position for dispensation, a clamp to embrace and support said container in active position, and pins secured to the container and adapted to overlap said clamp, for the purpose described.

1,388,978. DEVICE FOR RAISING A GANG OF PLOWS. JOHN F. STEWARD, Chicago, Ill., assignor, by mesne assignments, to Fred Gerlach and Arnold B. Keller, trustees, Chicago, Ill. Filed Feb. 13, 1914, Serial No. 818,458. Renewed Apr. 14, 1919. Serial No. 290,089. 20 Claims. (Cl. 97—55.)

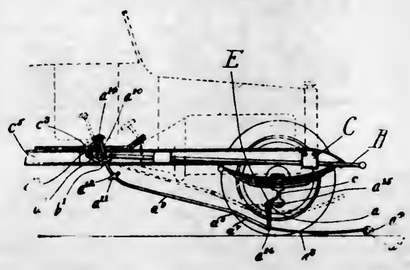
1. In a plow, the combination of a plow supporting frame, carrying wheels, crank axles connecting the frame and wheels, a lever for rocking said axles, coöperating clutch members, a link between one of said clutch members and lever, and means for throwing said member of the clutch out of engagement with the coöperating clutch member when the line through the pivots of the connecting link has passed the axis of movement of the clutch.



8. The combination of an implement frame, axles journaled on the frame and having cranked ends, supporting wheels on the cranks, means operated by one of the wheels for simultaneously swinging the cranks and retaining them at their limit of movement in one direction, including an upwardly directed link pivotally connected to one of the axles and to the frame, said link being curved to permit its connection with the axle to pass under it in one position of the cranks.

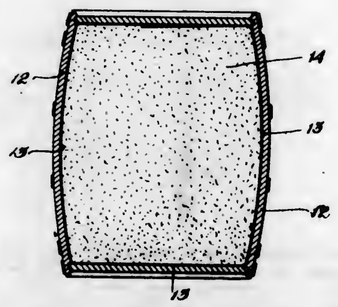
1,388,979. SOCKET-WRENCH. ORA E. STEWART and MACKLIN K. COMBINE, Columbus, Ohio. Filed Mar. 3, 1921. Serial No. 449,280. 5 Claims. (Cl. 81—121.)

1. In a wrench of the character described, a shank terminating in a multiple sided extremity, a sleeve slidably mounted upon said extremity, the lower end of said sleeve being normally spaced from the lower end of said extremity to provide a nut receiving socket, means normally operating to maintain the lower ends of the shank and sleeve in spaced relation, and means for permitting of the convenient reciprocation of said sleeve upon said shank independently of movement on the part of the latter.



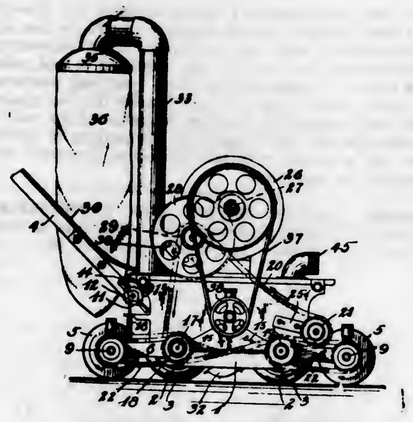
1,388,980. TALKING-MACHINE. FRANK TALARICO, Philadelphia, Pa. Filed Apr. 10, 1920. Serial No. 372,955. 3 Claims. (Cl. 274—23.)

1. The combination in a talking machine of a plurality of hollow pedestals having apertures therein; a tone arm communicating with said pedestals; sound reproducing means on said tone arm; means connected to said pedestals and to a supporting structure; and legs positioned at points remote from said latter means for engagement with said supporting structure whereby tension can be placed upon said latter means for the purpose of holding said legs in contact with said supporting structure; substantially as described.



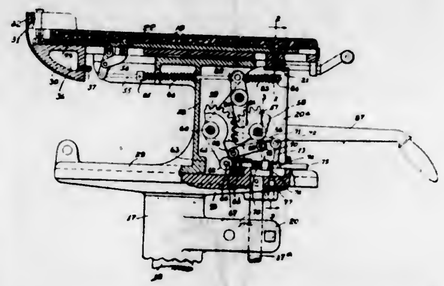
1,388,981. SAFETY DEVICE FOR AUTOMOBILES. MICHAEL THIERY, Cincinnati, Ohio. Filed Apr. 22, 1921. Serial No. 463,690. 14 Claims. (Cl. 293—37.)

1. The combination with an automobile of a fender, means pivotally mounting the fender below the front axle



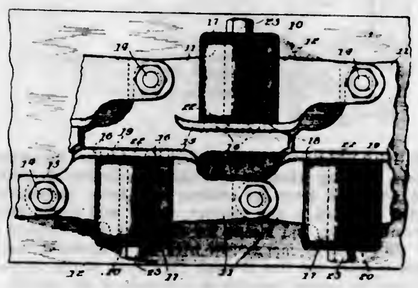
and intermediate the front wheels thereof and being adapted to be moved about its pivotal mounting to a position spaced from the roadway and to a position in immediate proximity to the roadway, and means operable from the driver's seat adapted to move the fender to either of its positions.

1,388,982. RED CAVIAR AND THE METHOD OF MAKING AND PRESERVING THE SAME. MICHEL P. VUCASSOVICH, Wellesley, Mass. Filed Oct. 8, 1919. Serial No. 329,228. 2 Claims. (Cl. 99—11.)



1. The method of making and preserving caviar from normally substantially flavorless spawn comprising thoroughly incorporating with the fresh spawn powdered salt and salt-peter and aging or ripening the product to the development of the desired flavor.

1,388,983. FLOOR-WORKING MACHINE. FRANK WAGNER, New York, N. Y. Filed Nov. 24, 1917. Serial No. 203,654. 4 Claims. (Cl. 51—176.)

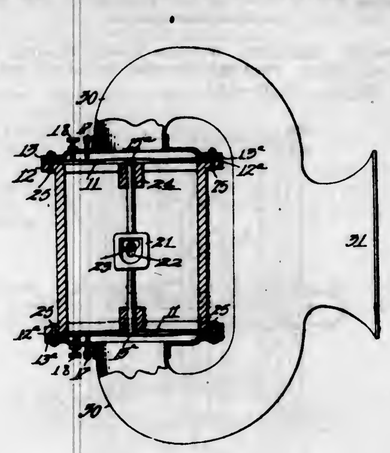


1. In a floor polishing machine, the combination of a frame mounted on wheels, a pair of supporting arms pivotally carried thereby, a rotatable drum supported between said arms, means for adjusting said arms upwardly to withdraw said drum from the floor, yielding means tending to force the drum toward the floor, and means for driving said drum through the pivotal supports of said arms.

1,388,984. IRONING-MACHINE. CHARLES E. WARRAM, Cincinnati, and DANA H. BENJAMIN, Cleveland Heights, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 2, 1917. Serial No. 178,286. 11 Claims. (Cl. 68—9.)

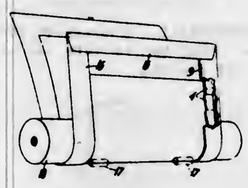
1. An ironing machine, comprising an ironing chest having a neckband recess, a coöperating ironing board carrying an adjustable neckband former, said chest and board being movable into ironing relation with the neckband former registering with said recess, means for adjusting said neckband former without disturbing its registering relation with said recess, and means operatively connected with said adjusting means for clamping the front portions of the neckband to said former.

1,388,985. TRACTION-WHEEL ATTACHMENT. WILLIAM WEBBER, La Grange, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Mar. 18, 1918. Serial No. 223,210. 16 Claims. (Cl. 301—44.)



16. In combination, a traction wheel having traction lugs projecting radially from its periphery and provided with openings outside the periphery of the wheel, auxiliary lugs fitting over and engaging the traction lugs and having openings registering with the openings in the traction lugs and securing means engaging in the registering openings to secure the auxiliary lugs to the traction lugs.

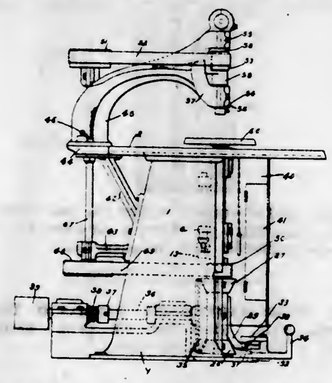
1,388,986. SOUND-PRODUCING DEVICE. JOHN H. WHEELOCK, Worcester, Mass., assignor to Klaxon Company, Newark, N. J., a Corporation of Delaware. Filed Dec. 31, 1917. Serial No. 209,770. 7 Claims. (Cl. 116—142.)



1. In a horn, the combination of two parallel diaphragms, a thrust member arranged perpendicularly to the two diaphragms and located between them, and always

in contact with both, whereby when moved in one direction the plunger will distort one of the diaphragms and both diaphragms will move with it in both directions, and two

abutments having rigid surfaces adapted to engage one diaphragm, one of said abutments tending to prevent vibration of one part and the other to limit the amplitude of swing of another part of said diaphragm.



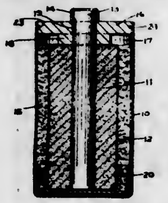
1,388,987. TYPEWRITING-MACHINE. JOHN A. WHEARY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 26, 1918. Serial No. 255,781. 14 Claims. (Cl. 282—28.)

1. A collating sheet adapted to be curved around a typewriter platen having a face on which work-sheets are adapted to lie, and having a series of recesses into which the ends of the work-sheets are adapted to be inserted, so that the ends of the recesses engage the ends of the work-sheets to collate them, each recess having one wall adapted to be lifted clear of the face, and a wing on the collating sheet adapted to be folded down over the recess wall to grip the work-sheets when curved around the platen.

1,388,988. WOODWORKING-MACHINE. GEORGE FRANKLIN WELIVAR, Williamsport, Pa. Filed Oct. 5, 1920. Serial No. 414,755. 5 Claims. (Cl. 144—134.)

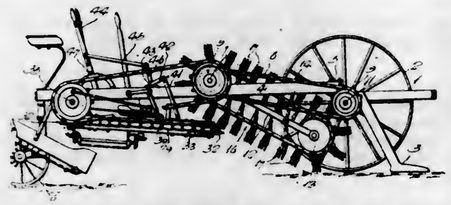
1. In a wood working machine the combination with a pedestal and a table thereon, of a vertically movable headstock, means for shifting said headstock vertically, a friction drive gear, a slidable cross head below the headstock, opposed friction gears thereon, a spindle journaled within the headstock and slidable within but revoluble with the opposed friction gears, said spindle being adjustable vertically with the head stock and within the opposed friction gears, and foot operated means for shifting the cross head to position either of the opposed friction gears in contact with the drive gear.

1,388,989. PNEUMATO-ELECTRIC SWITCH FOR MUSICAL INSTRUMENTS AND THE LIKE. ARTHUR HOWARD WILLIAMS, Minneapolis, Minn. Filed Oct. 9, 1917. Serial No. 195,591. 1 Claim. (Cl. 200—83.)



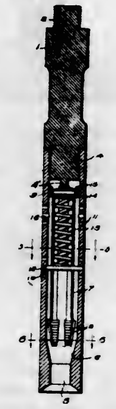
A pneumato-electric switch comprising a dielectric body having a depressed portion with an air passage and an air chamber and a threaded boss for screwing into a support, a metallic tubulure in the air passage protruding therefrom, a fixed contact carried by the dielectric body and disposed in the depression, and a movable contact secured to said body in electrical connection with the tubulure and having a portion arranged to vibrate against the fixed contact by the vibration of the diaphragm therebeneath under pneumatic impulses.

1,388,990. DRY CELL. HAROLD DE OLANETA, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Original application filed Sept. 2, 1919, Serial No. 321,068. Divided and this application filed May 7, 1920. Serial No. 379,516. 24 Claims. (Cl. 204—34.)



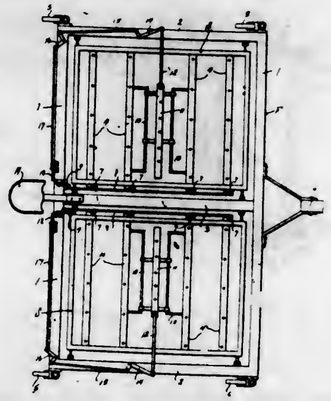
1. In a dry cell, a metallic cup, a cartridge therein of less height than the cup, having an upwardly projecting

electrode, a paste interposed between the cartridge and the side wall of the cup, and a preformed plug inserted



in the upper end of the cup around the end of the electrode and presenting a gas chamber cut away at the bottom for communication with the paste space.

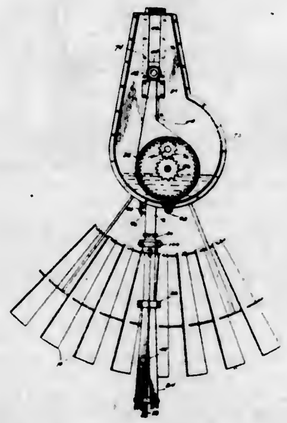
1,388,991. BEET-HARVESTER. THOMAS H. DOLLING, La Junta, Colo. Filed Dec. 23, 1919. Serial No. 346,882. 4 Claims. (Cl. 55—108.)



1. In a machine of the class described, an endless driven chain, wheels around which said chain is trained, opposed spring-closed beet grippers mounted on said chain, toggle links connecting the opposed grippers, actuating links connected at one end with said toggle links, and operating levers fulcrumed on said chain for swinging longitudinally thereof, said levers being connected with said actuating links and normally extending inwardly from the chain to strike one of said wheels, whereby to actuate said links to spread said grippers.

1,388,992. FISHING-TOOL. OSCAR B. DUTTON, Baxter Springs, Kans. Filed Dec. 28, 1920. Serial No. 433,646. 4 Claims. (Cl. 294—102.)

1. A fishing tool, comprising a shell or casing, gripping members slidably mounted therein, a spring engaging said gripping members and adapted to move them upwardly to an inoperative position, a pin extending across said casing to prevent upward movement of said gripping members, and means for severing said pin to permit said spring to move the gripping members to inoperative position.



1,388,993. HARROW. WILLIAM YANCEY ELLIOTT, Deer Lodge, Mont. Filed Apr. 14, 1920. Serial No. 373,785. 3 Claims. (Cl. 55—19.)

1. In combination with a harrow section, including a frame and teeth carrying bars, guide ways carried by adjacent bars, and a supplemental tooth carrying bar slidably engaged with the guide ways.

2. In combination with a harrow section, including a frame and teeth carrying bars, guide ways carried by adjacent bars, and a supplemental tooth carrying bar slidably engaged with the guide ways, said supplemental tooth carrying bar being of a length to extend beyond a side of the frame upon movement of said supplemental bar in one direction.

1,388,994. WINDMILL. CHARLES F. ERICKSON, Wetmore, Kans. Filed Apr. 18, 1919. Serial No. 290,991. 3 Claims. (Cl. 74—27.)

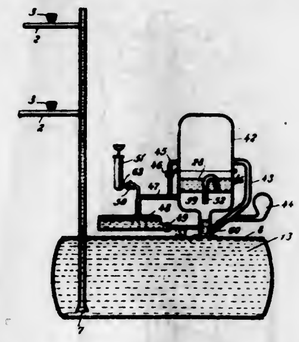
1. A wind mill construction comprising a wind wheel, a shaft driven by said wheel and provided with a pinion secured to said shaft, a reciprocating plunger rod, a pitman connected with said plunger rod and formed with an internal gear meshing with said pinion, an idle gear wheel carried by said pinion coaxially with said internal gear and acting to maintain the latter in mesh with said pinion, and a stationary housing inclosing said pitman and carrying an oil bath entered by said gear and its idle wheel at each stroke of said pitman.

1,388,995. PROCESS OF SYNTHESIZING AMMONIA IN THE PRESENCE OF A CATALYTIC ALLOY. FRANK A. FAHRENWALD, Cleveland, Ohio. Filed Feb. 25, 1918. Serial No. 218,932. 1 Claim. (Cl. 23—21.)

The process of producing ammonia synthetically which consists in subjecting hydrogen and nitrogen, to heat and pressure in the presence of a catalytic screen containing palladium and nickel.

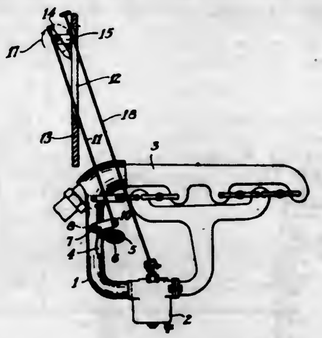
1,388,996. ATTACHMENT FOR AUTOMOBILES. JAMES F. FAIR, Doby Springs, Okla. Filed Sept. 21, 1920. Serial No. 411,694. 3 Claims. (Cl. 267—45.)

2. In an automobile spring support, the combination with a main spring, an axle to which the main spring is operatively connected, an auxiliary spring having eyes in its ends, plates on opposite sides of the spring at the said ends, bolts extending through the plates and through the eyes of the auxiliary spring, the said plates extending downwardly on opposite sides of the axle, the said plates having apertures near their upper ends and bolts extending through the apertures of each pair of plates above the main spring whereby the main spring is held between said bolts and said auxiliary spring.



1,388,997. DEVICE FOR HEATING SWITCHES AND THE LIKE. JAMES GREER, Hoboken, N. J. Filed May 3, 1921. Serial No. 466,541. 16 Claims. (Cl. 246—428.)

1. In a device for heating switches, the combination of a pipe arranged in proximity to a rail forming a part of the switch, and a plurality of nozzles in said pipe adapted to project an inflammable liquid upon said rail, said liquid being ignited after the same is discharged from said nozzles.

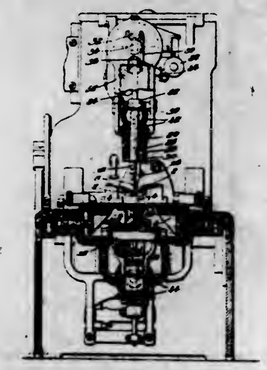


1,388,998. CHEMICAL FIRE-EXTINGUISHING APPARATUS. JOHN R. HAMILTON, Yonkers, N. Y. Filed Nov. 16, 1916. Serial No. 131,629. 18 Claims. (Cl. 169—8.)

1. In chemical fire extinguishing apparatus, a wet pipe distributing system comprising distributing devices including automatic sprinkler heads, a connected gaseous pressure liquid supply tank charged with carbonate extinguishing liquid and coöperating chemical mixing devices comprising a chamber containing a charge of acid pressure producing chemical, a discharge siphon communicating with said chamber to discharge said chemical into said tank, an air chamber communicating with said acid chamber, a neck normally containing liquid and constituting a passage between said tank and the discharge end of said siphon, a small volume discharge chamber formed in said neck around the discharge end of said siphon, an equalising air connection between said air chamber and said neck below the normal liquid level therein and formed with an upwardly extending chamber above said liquid level to constitute a liquid sealed

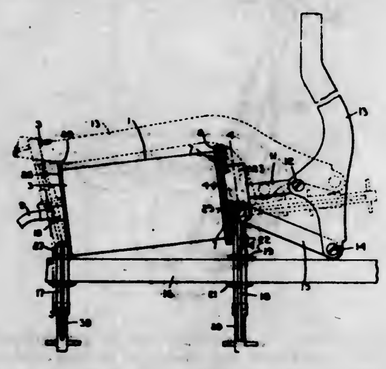
equalizing air connection, a large area priming tank communicating with said neck and a small area equalizing passage normally open between said air chamber and the upper part of said neck.

1,388,999. AIR-REGULATOR FOR AUTOMOBILES. ALEXANDER HANGO, Portland, Oreg. Filed Sept. 16, 1920. Serial No. 410,665. 3 Claims. (Cl. 137—139.)



1. A carbureter, an air intake pipe for the carbureter, a damper in the intake pipe capable of opening or closing the passage through said intake pipe, a hole in the side of the intake pipe between the damper and carbureter, a cover on the outside of the intake pipe to close the hole, said cover being connected with the damper and operating in unison therewith, and means to actuate the damper and cover from the dash board of an automobile.

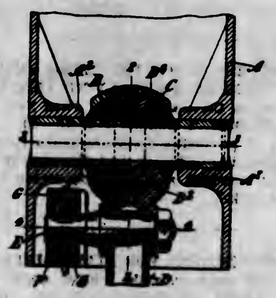
1,389,000. SEWING-MACHINE. GEORGE S. HILL, Strafford, N. H., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed June 19, 1916, Serial No. 104,449. Divided and this application filed May 11, 1917. Serial No. 167,933. 3 Claims. (Cl. 112—241.)



1. A sewing machine having, in combination, a vertically reciprocating upper needle bar, complemental under mechanism comprising looper and loop spreader points coöperating with the needle to form overseam stitches, a thread guide on the upper part of the needle bar, a thread guide at one side of the needle bar against which the thread is drawn by the needle bar during the latter

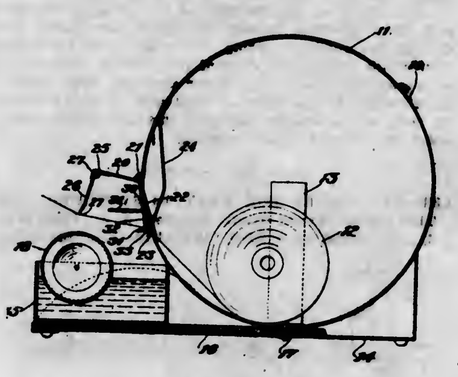
part only of the upward stroke of the bar, and a stationary thread retainer arranged between the guides and constructed to frictionally hold the thread until with-

drawn therefrom by the action of the needle eye on the thread, as the eye carries a loop of thread through the work.



1,389,091. PUMP. ROLAND C. HILTON, Troy, N. Y., assignor to Reece-Hilton, Inc., Troy, N. Y., a Corporation of New York. Filed Apr. 27, 1920. Serial No. 376,938. 4 Claims. (Cl. 230—27.)

1. In a pump, the combination with a cylinder element comprising a one-piece cup-shaped member which constitutes the side walls and one end of the cylinder, of a cylinder head secured to said member, a piston in the cylinder, a piston rod connected to said piston and extending through said cylinder head, an actuating lever pivoted intermediate of its ends to the end of the piston rod, a link pivotally connecting said cylinder head with the end of the actuating lever, and a clamping member pivoted to the cylinder head co-axially with said link and by which the cylinder is clamped to a running-board.

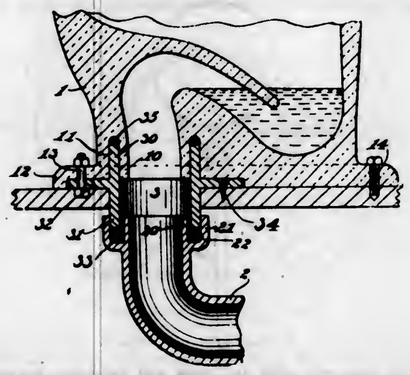


1,389,002. INTERNAL-COMBUSTION ENGINE. PERCIVAL TOANNE HOUSTON, London, England, assignor to Alphaero Engines (Foreign Patents) Limited, London, England. Filed Sept. 3, 1919. Serial No. 321,570. 3 Claims. (Cl. 74—108.)

1. In an internal combustion engine, the combination of a piston having alined gudgeon pin bosses, a gudgeon pin removably mounted in said bosses, a parti-spherical surface on said gudgeon pin, a connecting rod bearing upon said parti-spherical surface, and a projection upon

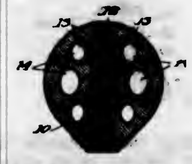
said connecting rod engaging the wall of said piston, substantially as set forth.

1,389,003. SEALING-STRIP APPARATUS. ELBRIDGE HUEY, Somerville, Mass. Filed Sept. 21, 1920. Serial No. 411,758. 4 Claims. (Cl. 211—39.)



1. A sealing strip machine comprising a strip container, a clamping member hinged upon the container and having a portion adapted to clamp the strip against the wall of the container, and a severing device hinged upon the clamping member and adapted to cause an increased clamping pressure when the strip is pressed thereagainst.

1,389,004. TOILET-FIXTURE CONNECTION. JAMES A. JOHNSTON, Seattle, Wash., assignor of twenty per cent. to Thomas J. Claffey and five per cent. to Nicholas Ambrose, Chicago, Ill. Filed Jan. 21, 1920. Serial No. 352,919. 3 Claims. (Cl. 285—34.)



2. A water closet drain connection comprising a water closet having a deep annular groove in its base extending about and separate from its outlet, a drain pipe, a pipe section having a radial flange adapted to be secured to the floor and to the water closet bowl, the upper end of said pipe section fitting closely within said groove in the closet base, a gasket supported only upon the upper end of the pipe section and compressed between the upper end of the pipe section and the bottom of said groove to form a gas-tight joint therebetween, a collar formed upon the outside of the end of the drain pipe and forming therewith an upwardly facing annular groove, the lower

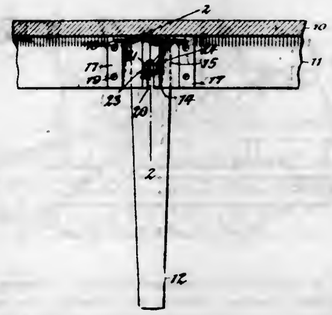
end of the pipe section fitting closely within the inside of said collar to form a tight joint therewith, and a

poured metal seal filling the annular groove beneath the lower end of the pipe section and between it and the upper end of the drain pipe.

1,389,005. TIRE-CASING FILLER. WILLARD M. MCEWEN, Chicago, Ill. Filed Mar. 11, 1920. Serial No. 364,883. 5 Claims. (Cl. 152—5.)

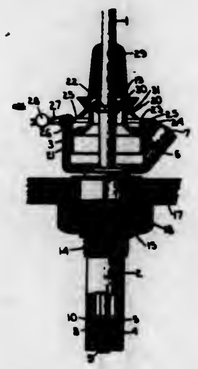
4. A tire-casing filler conforming substantially to the interior shape of the tire-casing, and comprising a main resilient solid rubber portion extending longitudinally of the filler and arranged centrally and vertically of the filler and having a total cross-sectional area sufficient and being stiff enough to support the normal load on the tire, said main solid rubber portion having a substantially uniform thickness throughout its height and having substantially straight, smooth side faces, and more resilient solid rubber portions on opposite sides of the main solid rubber portion and being in direct contact with the sides thereof and vulcanized thereto for supporting said main solid rubber portion in proper load-supporting position, said filler being inclosed in a retaining casing and inserted into the tire-casing under pressure.

1,389,006. NUT-LOCK. JOHN P. NOAH, Galena, Ill. Filed Jan. 14, 1921. Serial No. 437,232. 1 Claim. (Cl. 151—63.)



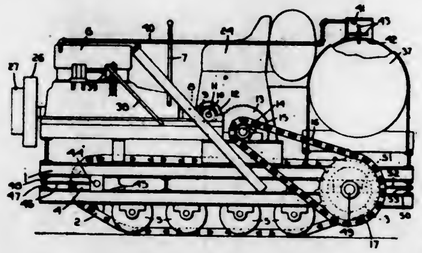
In a rail joint, the combination with track rails, bolts inserted therethrough, washers on the bolts, and nuts fitted on the bolts against the washers, of a locking bar having depending lugs to span the washers and provided with flat-sided notches at the outer sides of said lugs to engage the nuts.

1,389,007. OIL-WELL APPARATUS. JULIUS NOBBYS, Minneapolis, Minn. Filed June 24, 1919. Serial No. 306,507. 3 Claims. (Cl. 166—5.)



1. An oil well apparatus comprising a well-casing made up of imperforate and perforated sections, said perforated sections being located at different sand-levels and each having a length substantially the same as the thickness of the adjacent level, movable members adjacent said perforated sections for covering and uncovering the perforations therein, and means mounted at the top of the well for independently operating said movable members.

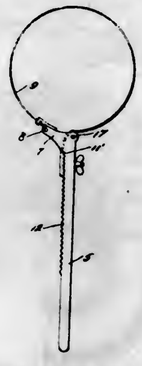
1,389,008. LEG-FASTENING FOR FURNITURE. FREDERICK W. POHLE, Jr., Buffalo, N. Y., assignor to Steul and Thuman Company, Buffalo, N. Y., a Corporation of New York. Filed Dec. 8, 1919. Serial No. 343,263. 1 Claim. (Cl. 45—48.)



The combination with an article of furniture having a top consisting of a horizontal plate and a vertical flange depending from said plate and a leg having its upper end arranged in the inner corner between said plate and flange, of means for detachably connecting said top and leg comprising a bracket of sheet metal which is bowed horizontally and forms between its concave side and the inner side of said flange a complete socket which receives the upper end of said leg, said bracket being provided with a vertical slot extending upwardly from the lower edge thereof, and a horizontal clamping screw mounted on the upper end of said leg and entering said slot and provided with a screw nut bearing against the exterior of said bracket.

1,389,009. BALL-BEARING SPINDLE. THEODORE M. P'RUDDEN, Newton, Mass. Filed Aug. 29, 1919. Serial No. 320,674. 15 Claims. (Cl. 64—72.)

7. A spindle bearing comprising a bolster having a hollow cylindrical upper portion, a separate metal ball race having a flange seated in said cylindrical portion, the ball race being located at a distance above the top of said cylindrical portion, a spindle in said bolster having a cone adapted in coöperation with said ball race to provide an upper ball bearing for said spindle, a lower step bearing for said spindle and means for adjustably securing said upper ball bearing in the cylindrical upper portion of said bolster whereby the proper adjustment of the spindle in its ball bearings may be secured, and a whirl on said spindle having a central recess inclosing said upper ball bearing whereby the central plane of the groove of said whirl will be substantially in the same plane as the ball bearing.

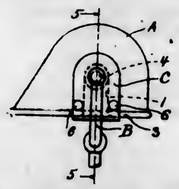


1,389,010. TRACTOR. FRED A. PUTNAM, Keene, N. H. Filed Jan. 12, 1920. Serial No. 350,832. 7 Claims. (Cl. 180—9.2.)

1. In a tractor, the combination with a frame, of two independent traction chains, one situated on each side of the frame, two independent motors at the forward end of the frame, one motor being situated directly over each chain and each motor having a longitudinally extending driving shaft, a cross shaft geared to each driving shaft, and a separate driving connection between each cross shaft and one of the traction chains.

1,389,011. JAR-OPENER. CORNELIUS QUINN, Denver, Colo. Filed Nov. 19, 1920. Serial No. 425,122. 3 Claims. (Cl. 81—3.1.)

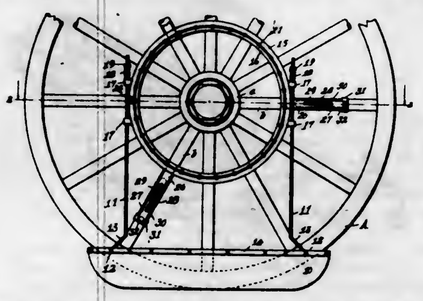
1. A tool of the character described, comprising a handle provided upon one side with teeth and having a longitudinal slot and a pair of spaced ears at its forward end, a flexible element connected with the outer ends of the ears, a block connected with the opposite end of the flexible element and having teeth to engage the first named teeth,



a bolt connected with the block and extending through the longitudinal slot and carrying a clamp nut, and a roller pivoted between the ears and engaging the flexible element.

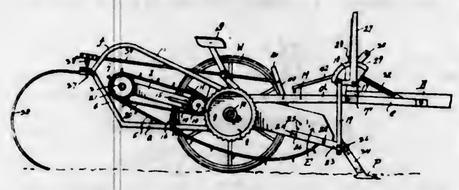
1,389,012. PIPE-COUPLING FOR RAILWAY ROLLING-STOCK. JOHN W. ROBERTS, Sarnia, Ontario, Canada. Filed July 10, 1920. Serial No. 395,361. 3 Claims. (Cl. 285—24.)

1. In a pipe coupling, the combination of a supporting frame provided with inwardly facing alined vertical pivots; a coupling member carrying frame comprising top and bottom members having longitudinal slots formed therein engaging said pivots, vertical side members integral with one of the aforesaid members, tenons on the ends of the side members adapted to fit in mortises formed in the other of said first mentioned memoers; and a detachable bail holding the top and bottom members together.



1,389,013. MOUNTING LAMP-SHADES. SAMUEL ROBERT SCHWARTZ, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,148. 8 Claims. (Cl. 240—4.)

2. In a lamp, a shade provided with a slotted opening, a supporting member adapted to pivotally and slidably engage said opening, and means on said member adapted to provide a seat for the shade.

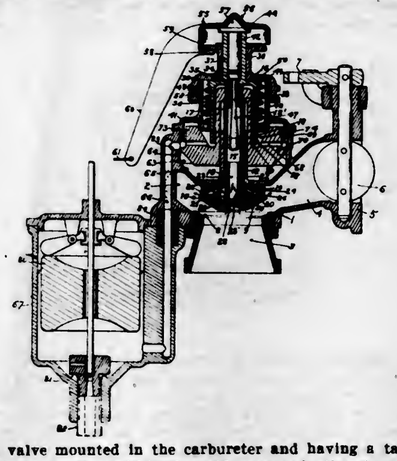


1,389,014. MUD-GUARD. FREDERICK WILLIAM SIMONS, Jr., New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,818. 3 Claims. (Cl. 280—156.)

1. A device of the class described including a mud guard, means to support the same, a ring element to sustain said supporting means and adapted to revolve relatively thereto, and means to secure said ring element to the spokes of a wheel, said last-mentioned means including arms rigid

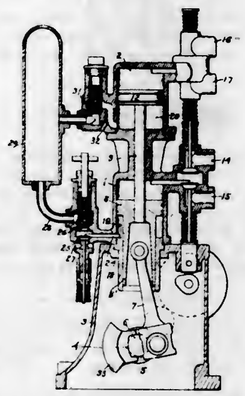
with the ring element, an extension pivotally connected with said arms, and clamps having a swivel connection with said extension and adapted to embrace spokes.

1,389,015. PEANUT-DIGGER. MORMAN J. SMITH and BENJAMIN F. BROWDER, Weatherford, Tex. Filed July 23, 1919. Serial No. 312,702. 2 Claims. (Cl. 55—51.)



1. A peanut digger comprising a portably supported axle, transversely spaced members supported by said axle for vertical swinging movement, means for imparting movement to said members, an arm pivotally engaged substantially midway its length with each of said side members and extending in advance of the forward end thereof, means for holding each of said arms against pivotal movement, and a ground digging implement secured to the forward portion of each of the arms.

2. A peanut digger comprising a portably supported axle, side members supported by said axle and extending forwardly and rearwardly thereof, the rear end portions of said members being upwardly directed, a draft pole secured to the forward end portions of said side members, brace members secured to the rear extremities of the side members and to the central portion thereof, a ground digging member supported by the axle for vertical movement, and means supported by the forward end portions of the side members and operatively engaged with the plow for imparting vertical movement thereto.

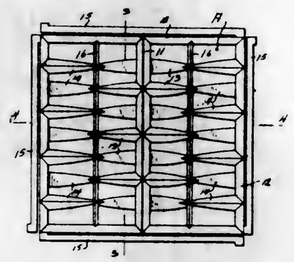


1,389,016. CARBURETER. ALFRED C. STEWART, Los Angeles, Calif. Filed Aug. 9, 1918. Serial No. 249,052. 3 Claims. (Cl. 261—50.)

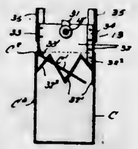
3. A carbureter comprising a mixing chamber having an inlet valve seat in its bottom and a lateral outlet, an air valve coöperating with said valve seat and adapted to be opened by pressure of the air on its lower face and provided with fuel passage means opening into the mixing chamber peripherally of the valve, guide means extending upwardly from the mixing chamber, a stem for the air valve mounted to slide vertically in said guide means, said stem being provided with fuel passage means communicating with the fuel passage means in the said valve, a dash pot cylinder surrounding the said stem and guide means, means for supplying liquid fuel to said dash pot cylinder, tubular means surrounding said valve stem and extending down into the liquid fuel in the dash pot cylinder so as to conduct fuel from the dash pot cylinder to the passages in the air valve stem, a dash pot piston connected to said air valve and working in said dash pot cylinder and a

fuel valve mounted in the carbureter and having a taper portion extending within the said passage in the air valve stem, said stem being provided with a shoulder for coöperating with said taper portion to control the fuel supply.

1,389,017. RECIPROCATING ENGINE. ALFRED C. STEWART, Los Angeles, Calif. Filed Oct. 21, 1918. Serial No. 258,976. 6 Claims. (Cl. 123—192.)



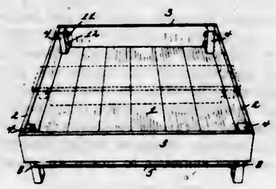
1. A reciprocating internal combustion engine comprising two combustion cylinder chambers and means for effecting alternate operation thereof on a four stroke cycle, a cushioning chamber and a pumping cylinder chamber, and piston means operating in the respective cylinder chambers aforesaid and operating to compress air in both the pumping and cushioning cylinder chambers during the expansion strokes in the combustion cylinder chambers, said pumping cylinder chamber being connected to said cushioning cylinder chamber to pump air thereinto.



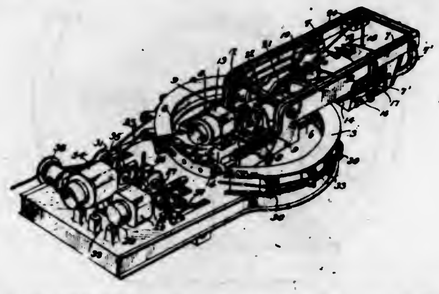
1,389,018. GRID FOR STORAGE BATTERIES. JOHN CLARENCE SUNDBY, Enderlin, N. D., assignor to Sundby Battery & Manufacturing Company, Enderlin, N. D., a Corporation of North Dakota. Filed Sept. 7, 1920. Serial No. 408,707. 2 Claims. (Cl. 204—29.)

2. A battery element or grid comprising a metallic, substantially polygonal frame, a plurality of separate and

independent, polygonal paste supporting units disposed within said frame, and connecting members extending approximately parallel to the sides of adjacent units, the connecting members of those units adjacent the outer frame being connected thereto at one end and at their other ends being connected each to one unit, the connecting members of those units not adjacent the frame being connected each at one end to the edge of one of said units and at its opposite end being connected to an adjacent unit, the body of each connecting member between said points of connection being entirely spaced from the adjacent unit or frame.

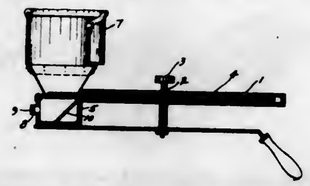


1,389,019. CAN-CUTTER. ERNEST B. TRACY, Seattle, Wash. Filed Oct. 16, 1919. Serial No. 331,145. 2 Claims. (Cl. 164—10.6.)



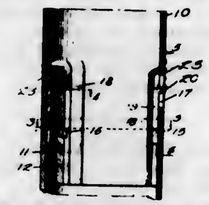
2. In a machine for cutting heads from cans, a reciprocatory cutter having three cutting blades and a head bending blade, said blades being arranged in rectangular relations, said cutting blades serving to cut the head along three of its sides, and said bending blade serving to force the head thus cut by said cutter blades into the can and against one of the side walls thereof.

1,389,020. CHILD'S SAND-BOX FOR PLAY PURPOSES. HENRY D. TUCKER, Avenel, N. J. Filed Dec. 3, 1919. Serial No. 342,060. 2 Claims. (Cl. 217—12.)



1. A knock-down sand box for play purposes having a bottom provided with end cleats and recessed corners, side and end walls, posts provided with grooves to fit into the recessed corners, the bottom and cleats to be received by said grooves and means passing through the posts and walls for binding the parts together.

1,389,021. LOADING APPARATUS. JAMES M. VEST, Dehue, W. Va. Filed Nov. 3, 1919. Serial No. 335,531. 23 Claims. (Cl. 37—39.)

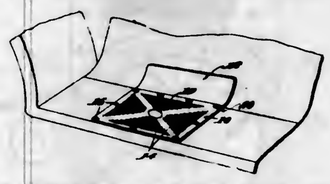


1. In loading apparatus of the class described, the combination of a horizontally swinging boom, a transversely arranged loading device connected thereto, and means connected to the loading device for shifting the same from loading to dumping position and vice versa.

1,389,022. TOOTH-FORM FINDER. FRANK M. WADSWORTH, Minneapolis, Minn. Filed Apr. 17, 1919. Serial No. 290,802. 6 Claims. (Cl. 88—14.)

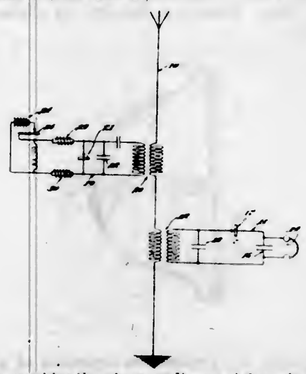
1. A tooth form finder comprising a member provided with a multiplicity of independent and different outlines of various tooth forms, means associated with said member of producing a reduced outline image of a patient's face and reflecting it upon the member, and means for moving the first-named means and member relatively to bring any of said tooth form outlines and said facial outline into superposed position.

1,389,023. DETACHABLE-END BAILER. FRANCIS B. ALLDREDGE, Des Moines, Iowa. Filed Oct. 18, 1920. Serial No. 417,791. 3 Claims. (Cl. 166—19.)



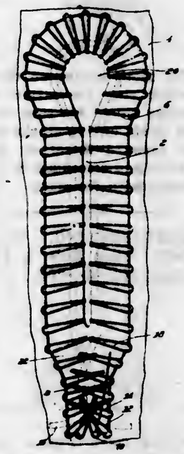
1. A detachable end bailer, comprising a bailer body, a bailer bottom member having an open end and a valve controlled end, a reduced member on said body adapted to be inserted within the open end of the bottom member, having open-ended channels formed therein, the walls of said channels and the walls of said reduced portion having inclined slots, inclined lugs on the interior of said bottom member adapted to slidably enter said channels and to enter said slots when the bottom member is rotated with relation to said body, and beveled keys slidably received within said channels, said lugs having beveled edges for co-acting with said keys.

1,389,024. PNEUMATIC TIRE. NATHANIEL BALDWIN, East Mill Creek, Utah. Filed Oct. 22, 1919. Serial No. 332,378. 4 Claims. (Cl. 152—20.)



1. A pneumatic tire comprising an endless tube divided on its inner circumference and separated leaving a gap between its edges and a sealing device within said endless tube and bridging said gap, said sealing device comprising a band of pliable material reinforced by stiff material to prevent said sealing device being pressed into said gap.

1,389,025. TREAD. WILLIAM BERNSTEIN, Jamaica Plain, Mass., assignor to Panther Rubber Manufacturing Company, Stoughton, Mass., a Corporation of Massachusetts. Filed July 10, 1920. Serial No. 395,405. 1 Claim. (Cl. 280—169.)

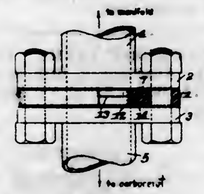


A tread member for motor vehicles or the like comprising a single integral molded member having a tread portion provided with scraper projections, fastener receiving openings disposed about the margin of the tread portion, a flexible guard member extending from one side of the tread portion of substantially uniform thickness throughout, and of lesser thickness than the thickness of the tread portion, and a reinforcing layer of fabric molded on to the under side of the guard member and extending across and beneath the tread member and certain of the fastener receiving openings to assist in causing the guard member to permanently conform to the curvature of that portion of the motor vehicle with which it contacts and to reinforce those fastener receiving openings beneath which it extends.

1,389,026. RADIO RECEIVING SYSTEM. VANNEVAR BUSH, Chelsea, Mass., assignor to American Radio & Research Corporation, Medford, Mass., a Corporation of Delaware. Filed May 19, 1920. Serial No. 382,672. 7 Claims. (Cl. 250—8.)

1. The combination in a radio receiving circuit having a detector of a resistance which is periodically rendered conducting and non-conducting, and circuit connections for causing the received oscillations to be periodically absorbed without passing through the detector.

1,389,027. STITCHED BUTTONHOLE. JOHN COFFEY, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 27, 1918. Serial No. 264,321. 3 Claims. (Cl. 112—264.)

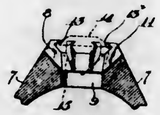


1. A fabric having an eye-ended stitched buttonhole comprising an overseam which turns through substantially 180° at the eye and through substantially 90° at its initial end and substantially 90° at its final end and has said ends superposed in line with and beyond the end of the buttonhole slit.

1,389,028. DIRECT-READING MICROMETER-CALIPER. ALBERT L. COLBURN, New Haven, Conn. Filed Mar. 4, 1920. Serial No. 365,238. 13 Claims. (Cl. 33—166.)

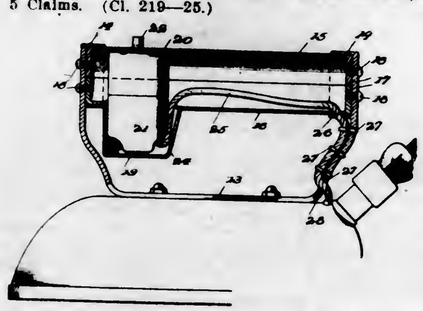
1. A micrometer caliper having a frame, an anvil, an externally threaded spindle mounted in the said frame so as to be normally non-rotatable, but adapted to be turned by unusual force for taking up wear between it and the anvil, and a rotary sleeve held against endwise movement and provided substantially throughout its length with internal threads with which the threads of the spindle directly co-act.

1,389,029. FUEL-HEATER FOR INTERNAL-COMBUSTION ENGINES. LOYAL A. COUCH, New York, N. Y. Filed Jan. 14, 1920. Serial No. 351,396. 2 Claims. (Cl. 219—38.)



1. A fuel heater, comprising a mounting and an insulating collar fitting in an opening in the mounting, with carried resistance means, said opening being arranged to avoid contact with exposed portions of said means.

1,389,030. ARTIFICIAL TOOTH. HIRAM O. COWDRICK, Philadelphia, Pa. Filed Nov. 29, 1920. Serial No. 427,172. 3 Claims. (Cl. 32—9.)

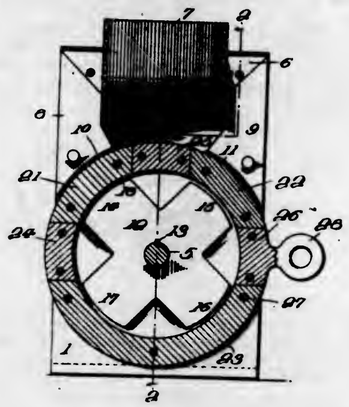


2. In an artificial tooth having on the back thereof, a rearwardly projecting rim, the latter having its sides undercut, a protecting shield for said rib adapted to incase the same, said shield having on the side walls thereof tongues projecting forward therefrom and staggered on the opposite side walls and embedded in the tooth adapted to connect said sheath with the tooth.

1,389,031. JEWELRY-SETTING. THOMAS CUMMING, Los Angeles, Calif. Filed June 7, 1920. Serial No. 387,043. 2 Claims. (Cl. 63—26.)

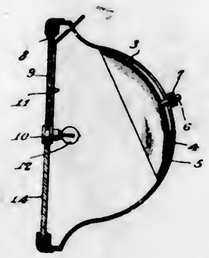
1. A jewelry setting comprising a member having a conical recess formed therein, a series of plates of platinum secured to the face of said recess, spaced apart from each other to form slots therebetween, a platinum prong in each slot having a lower edge resting on the face of said recess and having an upper edge substantially parallel to the lower face arranged to support the gem and a gripping point on each prong arranged to engage the gem.

1,389,032. ELECTRIC IRON. RALPH C. CURTH, Columbus, Ohio. Filed Feb. 10, 1920. Serial No. 357,649. 5 Claims. (Cl. 219—25.)



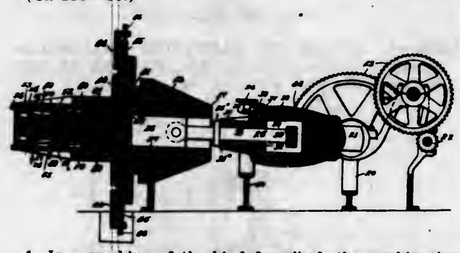
1. In an electric iron, a handle bracket, a hollow grip supported by the bracket and formed of mating sections, and a switch housed between the sections of the grip, the switch being operable for controlling flow of current to the heating coil of the iron.

1,389,033. AUTO-WINDOW FRAME. HENRY P. DAVIS, New York, N. Y. Filed Aug. 3, 1918, Serial No. 248,119. Renewed Oct. 25, 1919. Serial No. 333,376. 1 Claim. (Cl. 296—145.)



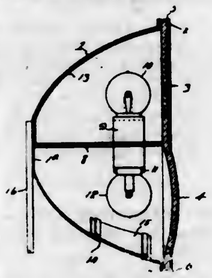
In a device of the class described, the combination of a frame section having inwardly extending flanges at each edge, a plurality of clips having bendable ends adapted to co-act with one of said flanges to secure a panel thereto, and a second frame section having a flange at one edge only and adapted to co-act with one of the flanges of the first said frame sections for securing the device to a curtain, and having a plurality of spring fingers extending completely around its flange for securing the sections together.

1,389,034. IGNITION-GENERATOR. WILLIAM WARREN DEAN, Stamford, Conn., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 22, 1916. Serial No. 116,359. 6 Claims. (Cl. 171—252.)



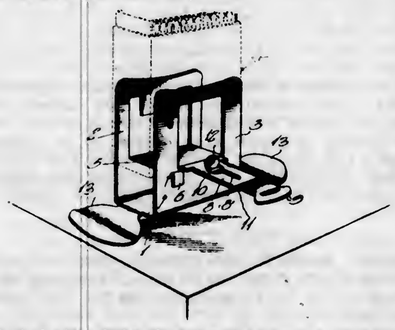
1. An ignition magneto comprising a stationary current generating coil, a core therefor, fixed pole pieces for said core, a rotating permanent magnet having a plurality of like poles, said pole pieces being so disposed relative to the magnet as to receive flux from adjacent poles of said magnet and shiftable pole pieces between the fixed poles and the poles of the magnet furnishing flux thereto, and a magnetic section so disposed relative to the rotating magnet as to short circuit the other poles of said magnet.

1,389,035. HEADLIGHT FOR AUTOMOBILES. LEON LAURENCE DORAY, Hamilton, Ontario, Canada. Filed July 3, 1920. Serial No. 394,012. 3 Claims. (Cl. 240—41.)



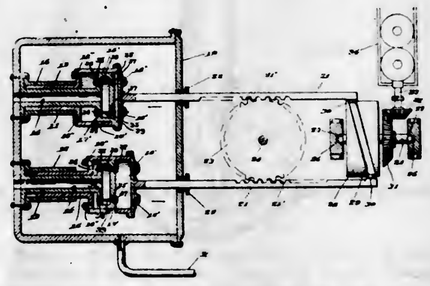
1. A headlight for automobiles consisting of a casing, an upright slot in said casing, a reflector changeably held in said slot, the upper half of the front of said casing having a semi-annular plate, the lower half of said front being provided with a transparent closure and a bulb suitably socketed in said plate.

1,389,036. SIZING-MACHINE. WILLIAM R. EDWARDS, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 30, 1919. Serial No. 307,531. 12 Claims. (Cl. 153—35.)



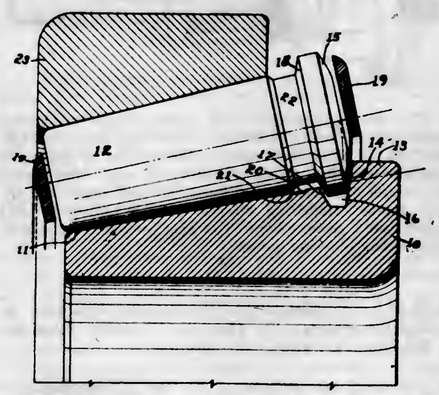
1. In a machine of the kind described, the combination with an expanding member, of a plurality of chuck segments and longitudinally movable antifriction devices interposed between said expanding member and the chuck segments.

1,389,037. LAMP FOR VEHICLES. NORMAN ELLIOTT, Cleveland, Ohio. Filed Apr. 28, 1921. Serial No. 465,262. 1 Claim. (Cl. 177—329.)



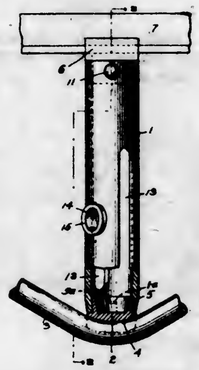
A lamp comprising a casing having an open round end, a partition extending from the closed end of the casing to the open end thereof and dividing the same into a pair of compartments, a pane covering the open end of the casing, said pane having a flat or plane portion covering one of said compartments and abutting against said partition and having on such flat or plane portion a warning signal on one side of the partition and on the opposite side a lens for a tail light, and a bulb for each compartment.

1,389,038. SMOKING-STAND. PAUL HENRY ESCH, Manitowoc, Wis. Filed Mar. 24, 1919. Serial No. 284,567. 5 Claims. (Cl. 131—51.)



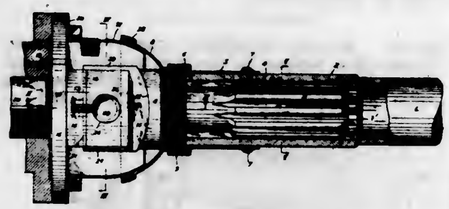
2. A device of the class described comprising an elongated plate whose two end portions are bent upwardly to form two parallel side plates adapted to grip a match box, the intermediate portions of said plates being stamped laterally in the same direction to horizontal positions, one of said portions being secured to the opposed vertical plate, and a cigar cutter mounted on the other of said portions.

1,389,039. AIR-COMPRESSOR. MARSHALL A. ESTES, Estes, Va. Filed Oct. 22, 1920. Serial No. 418,695. 2 Claims. (Cl. 230—27.)



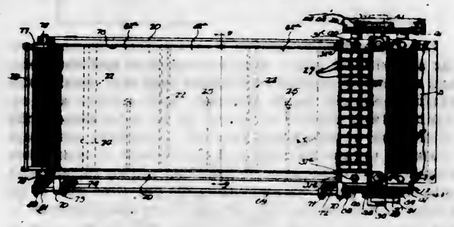
1. An air compressor comprising a tank, a tube rising from the bottom of the tank and having its inner end open, a cylindrical member rising concentrically within the tube, a pump cylinder having a hollow stem slidable between the cylindrical member and the tube, said cylindrical member having a valved piston head within the pump cylinder and a longitudinal bore therethrough, the pump cylinder having check valves, and means for reciprocating the pump cylinder.

1,389,040. ROLLER-BEARING. JOHN F. FLAHERTY, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 19, 1919. Serial No. 324,976. 1 Claim. (Cl. 64—39.)



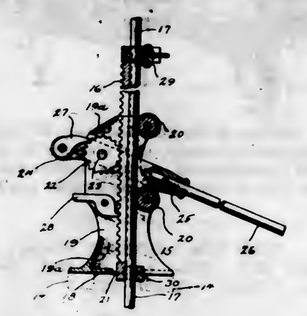
In a tapered roller bearing, a conical inner member having an abutment and a groove adjacent to said abutment, and a plurality of rollers assembled with said member and having enlarged heads entering said groove and restrained from endwise movement by the sides thereof, the outer sides of said heads normally contacting with said abutment to take the roller end thrust, each of said rollers having a groove between its head and rolling surface, and said member being cut away from the projected cone of its rolling surface so that the distance from said abutment to the larger end of said rolling surface will be the same as the distance from the outer side of the heads of the rollers to their rolling surfaces, as measured on the projected cones of said rolling surfaces.

1,389,041. BRAKE-BEAM FULCRUM. WILLIAM E. FOWLER, Jr., Pittsburgh, Pa., assignor to Liberty Steel Products Company, Inc., a Corporation of New York. Filed July 23, 1919. Serial No. 312,815. 13 Claims. (Cl. 188—231.)



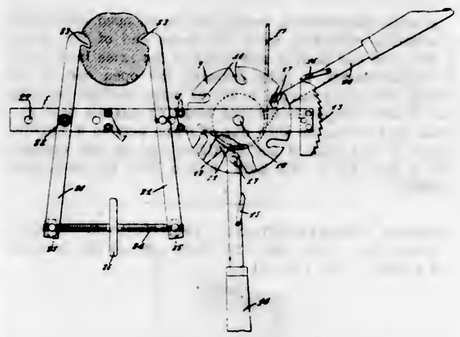
1. A strut for a trussed brake beam, formed substantially of wrought metal tubing and provided with a lever fulcrum between its ends.

1,389,042. DRIVING MECHANISM. HARRY B. GARMAN, Detroit, Mich., assignor to Charles E. Thompson, Cleveland, Ohio. Filed June 7, 1919. Serial No. 302,379. 2 Claims. (Cl. 64—91.)



2. In driving mechanism, the combination with a hollow propeller shaft and transmission means such as the change-gear set; of a sleeve forming a continuation of said shaft and butt-welded to the inner end of said shaft; and centering means disposed intermediately of said shaft and set, said means comprising internal splines formed in said sleeve and a member secured to said set and formed with coöperating external splines.

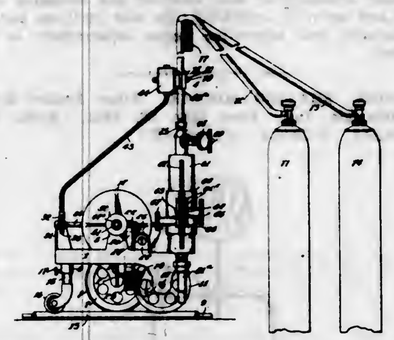
1,389,043. INTERLACING-MACHINE. RUDOLPH W. GLASNER, Chicago, Ill. Filed Apr. 28, 1919. Serial No. 293,346. 11 Claims. (Cl. 38—8.)



5. A needle bar for interlacing machines embodying a body portion provided with a recess opening through one end and arranged to one side of the diametric center of said end, a needle proper adapted to be seated in said recess, and coöperating means on the needle bar and needle for properly positioning the needle with respect to the needle bar when the needle is seated in said recess.

1,389,044. DEVICE FOR ELEVATING WALL-MOLDS. FRANK O. GOODMAN, Chicago, Ill. Filed July 10, 1920. Serial No. 395,228. 4 Claims. (Cl. 25—131.)

1. The combination with a vertically movable wall mold form, and an upright rod stationary relative to said form; of a stand fastened to a top portion of the form, a pinion carried by the stand, operating means for the pinion, a vertical rack in mesh with the pinion, and means for detachably coupling the rack to the aforesaid rod.



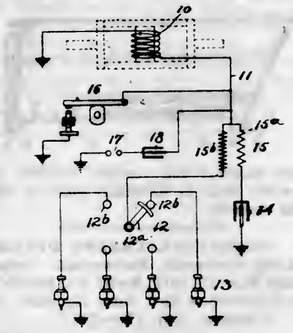
1,389,045. WIRE-STRETCHER. BENJAMIN J. GREER, Poyner, Tex. Filed Nov. 26, 1920. Serial No. 426,479. 6 Claims. (Cl. 254—82.)

1. In a device of the character described, a frame including a pair of spaced arms, pivoted arms carried by the frame and having hooked members formed on the inner ends thereof, the latter arms adapted to be clamped around a post, means for securing the latter arms against movement, a stretching drum, and operating arms adapted to be connected with the stretching drum for clamping a wire thereto.

1,389,046. MACHINE FOR CUTTING AND WELDING WITH FLUID FUEL. JOHN HARRIS, Lakewood, Ohio. Filed Oct. 15, 1917. Serial No. 196,703. 15 Claims. (Cl. 266—23.)

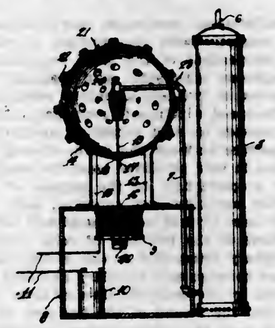
1. In a machine of the character described, the combination, with a carriage, of a torch or blow pipe supported thereby, tubing conducting a gas or gases to said blow pipe, a motor supported independently of said carriage, and a

flexible driving connection between said motor and said carriage for propelling the latter.



1,389,047. RUPTURE APPLIANCE. ALEXANDER LEON HATZAN, Niagara Falls, Ontario, Canada. Filed Aug. 9, 1920. Serial No. 402,249. 1 Claim. (Cl. 128—101.)

An appliance of the character described, comprising a rubber pad having its inner wall convex, and its outer face flat, an elastic band extended from end to end of said pad on the flat face thereof with one end extended beyond the pad, a leg band attached to said extended end, and formed of non-elastic material, said leg band having a looped portion with a terminal with fasteners, and a waist band formed of non-elastic material with one end attached to said elastic band and the other end looped and provided with a terminal with fasteners, and a clamping member securing the elastic band intermediate its ends to said pad.

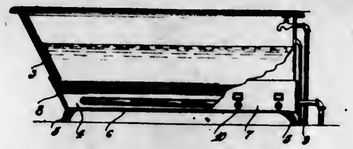


1,389,048. IGNITION SYSTEM. DOW B. HUGHES, New York, N. Y., assignor, by mesne assignments, to Motor Ignition & Devices Company, a Corporation of West Virginia. Filed Nov. 17, 1911. Serial No. 660,783. 7 Claims. (Cl. 123—148.)

1. In an ignition system, a spark plug, a source of current, a condenser, a disruptive discharge coil having its primary connected to the condenser, and its secondary connected to the spark plug, means for causing periodic charging of the condenser from the source of current and the discharge thereof through said primary comprising a circuit breaker having connection with the source and with the condenser, said system having means for preventing the condenser discharging across the terminals

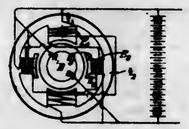
of the circuit breaker, and including a spark gap device for the condenser.

1,389,049. FIRE-EXTINGUISHER. PATTON JACOBS, Montreal, Quebec, Canada. Filed July 3, 1920. Serial No. 393,966. 2 Claims. (Cl. 169—10.)



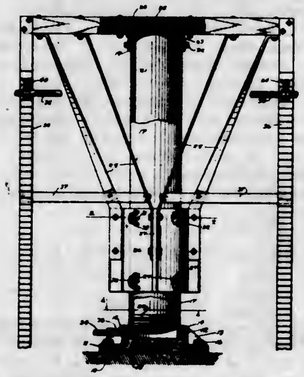
1. A fire extinguisher consisting of a pressure tank, a water inlet means to said tank, a water outlet means from said tank, a casing, magnetic means in said casing, batteries in said casing, thermostats suitably positioned around a room, wire connections between said thermostats and said battery and magnetic means, a globular member mounted on said casing, said globular member having radial spaced openings, nozzles threaded into the said openings, said outlet pipe extending into said globular member and threadedly engaged to a valve, said valve having a longitudinal opening and a transverse set of openings, a plunger in said longitudinal opening having a longitudinal opening therein and a transverse opening, which transverse opening registers opposite said transverse openings when said plunger is in uppermost position, an operating rod attached at its upper end to the lower end of said plunger and extending through said globular member, and a head in the lower end of said rod so positioned as to be operated by said magnetic means.

1,389,050. HEATER FOR BATHTUBS, LAUNDRY-TUBS, OR THE LIKE. WALTER OLIVER JARRETT, Toronto, Ontario, Canada. Filed June 9, 1920. Serial No. 387,685. 1 Claim. (Cl. 126—350.)



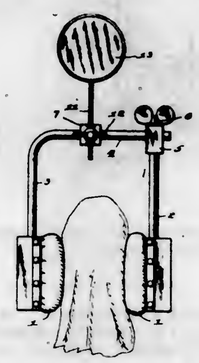
An elongated heating chamber, means for supporting the same, heating elements within said heating chamber with a plurality of controlling means therefor, and a bath-tub independent thereof and frictionally retained therein and provided with inlet and outlet pipes, said bath-tub being detachably fitted within the heating cham-

ber and the said heating chamber having one end extended upwardly at an inclination, the other end being substantially vertical, and the ends of the bath-tub being cor-



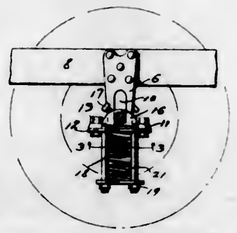
respondingly inclined and vertical, whereby the weight of the bath-tub tends to wedgingly hold the same within the heating chamber.

1,389,051. CONTINUOUS-CURRENT DYNAMO. FRITZ KESSELRING, Neuhausen, Switzerland. Original application filed July 17, 1916, Serial No. 109,800. Divided and this application filed June 12, 1920. Serial No. 388,699. 2 Claims. (Cl. 171—223.)



1. A variable-speed continuous current dynamo having two main magnetic poles the strength of which is substantially independent of the speed variations, in alternate arrangement with said main magnetic poles, two auxiliary poles, a two-pole armature relatively movable at a variable speed within said main and auxiliary poles, two main brushes on said armature, an auxiliary brush on said armature between the main brushes, and means for producing in said auxiliary poles two magneto-motive forces, one proportionate to the number of revolutions and the other approximately constant, said means comprising two sets of field coils energising said auxiliary poles, the first of the two sets of coils being connected to said auxiliary brush and to one of the main brushes, the armature between said auxiliary and said main brush being affected by the magnetic lines of force of the main poles only and the second of the two sets of coils being connected to said two main brushes in such a manner that the magnetising effect of said second set of coils is opposed to the magnetizing effect of said first set of coils.

1,389,052. VEHICLE-TILTING DUMPING-PLATFORM. AUGUST P. KRZEMA, Denver, Colo. Filed July 28, 1920. Serial No. 399,604. 10 Claims. (Cl. 187—9.5.)

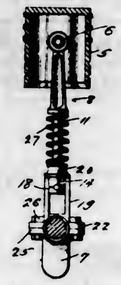


1. In dumping apparatus of the character set forth, the combination of a fixed standard, an elongated support longitudinally slidable therealong, a platform section mounted upon the upper end of said elongated support, elevating means therefor, and unitary means for centering and guiding said platform section, comprising a hollow member encompassing said standard and elongated support and centrally suspended from said platform section by suitable rigid supporting means, substantially as described.

1,389,053. SHAVING-MIRROR. HARRY JOSEPH KING, Oaklandon, Ind. Filed Mar. 22, 1921. Serial No. 454,455. 3 Claims. (Cl. 45—97.)

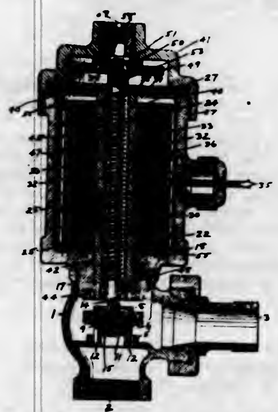
1. A device of the class described including a pair of pads, means slidably connecting said pads whereby they may be moved relatively, a set screw for locking said pads in adjusted position, and a mirror supported on said connecting means.

1,389,054. SHOCK-ABSORBER. CHARLES H. KUGLER, Lexington, Nebr. Filed Apr. 14, 1919. Serial No. 290,069. 3 Claims. (Cl. 267—60.)



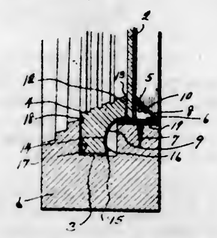
1. The combination with a vehicle and axle therefor, of a supporting member secursed to the vehicle and having a slot therein for the reception of said axle, a member carried by said axle on each side of said slotted member, means for joining said members, and spring means interposed between said joining means and said slotted member.

1,389,055. YIELDABLE CONNECTING-ROD. CHARLES H. KUGLER, Lexington, Nebr. Filed Apr. 14, 1919. Serial No. 290,070. 1 Claim. (Cl. 74—48.)



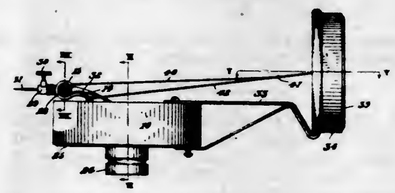
A yieldable connecting element comprising a rod having one free end screwthreaded, an abutment on the rod spaced from the ends thereof, a guide head threaded upon the threaded end of said rod and having flat sides, a guide cage having an axially extended opening in its inner end to receive one end of said rod, and provided with a slot for the reception of the guide head, the flat

side of said head being adapted to engage opposite sides of the slot, whereby the head may be removed from the



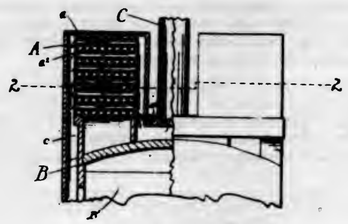
rod by turning the cage, and a coiled spring on the rod between the abutment thereon and the inner end of the cage.

1,389,056. ELECTROMAGNET AND VALVE. EDWIN B. LANE, West Hoboken, N. J. Filed Oct. 6, 1916. Serial No. 124,048. 2 Claims. (Cl. 137—139.)



1. An electromagnetic device, combining a magnet, a core within the magnet, a disk, a non-magnetic annulus between core and disk and flush with the disk, a casing provided at one end with a seat, means for securing the core within the casing at the other end of the casing, to bring the disk against said seat to protect the magnet windings from extraneous fluid, and a disk parallel to the first disk and movable toward and away therefrom.

1,389,057. MOLDING AND METAL FASTENER FOR SASHES AND WINDOW-PANES. MOSES LAVIGUE, Holyoke, Mass. Filed Feb. 2, 1921. Serial No. 441,952. 8 Claims. (Cl. 20—56.4.)



1. In a window pane fastener, the combination with a sash rail having a channel, of a metal fastening strip secured to said rail and having its outer portion bent inwardly to form a flange provided with weather proof material to engage the outer face of the pane of glass, which glass is mounted upon the surface of the strip, a molding seated in the channel and having a beveled outer face adjacent the inner face of the pane of glass, whereby the outer edge of the molding may bear against the pane of glass immediately opposite the weather proof strip, said metal strip having means extending into the channel, to hold the molding in position.

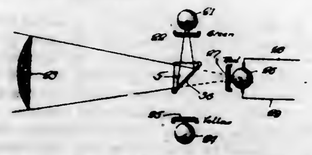
1,389,058. PHONOGRAPH. JAMES T. LEITCH, Allentown, Pa., assignor of two-fifths to Tilghman A. Freed, Allentown, Pa. Filed Aug. 12, 1920. Serial No. 403,115. 4 Claims. (Cl. 274—35.)

1. In a device of the kind described, a sound box having a diaphragm, needle arm brackets at one side of the diaphragm, a needle arm connected to the diaphragm and having a fulcrum arranged transversely thereof and supported in the brackets, a second sound box diametrically opposite the needle arm brackets and likewise provided with a diaphragm, and an elastic connector extending transversely across the first sound box and connected to the needle arm at one end and to the diaphragm of the second sound box at the other.

1,389,059. AIR-PREHEATING MECHANISM FOR MILL-FURNACES. WILLIAM W. LESTER, Cincinnati, Ohio. Filed May 8, 1920. Serial No. 379,736. 3 Claims. (Cl. 263—20.)

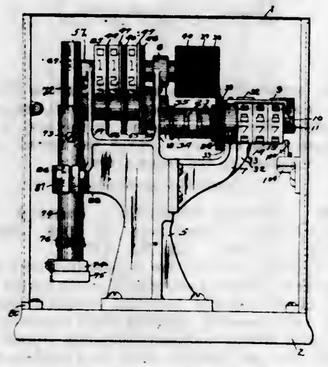
1. The combination with a metal heating furnace, of means adapted to create a forced air draft, means adapted to subject the forced air draft to the heat of the exhaust gases, and means to convey the forced air draft, after it is heated, to the furnace fires.

1,389,060. POTATO-PLANTER. WILHELM LIPPITZ, Jauer, Germany. Filed Sept. 18, 1919. Serial No. 324,721. 7 Claims. (Cl. 221—127.)



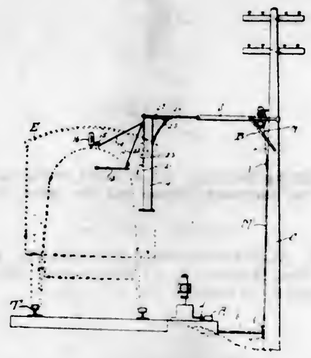
1. In a potato planter, the combination with a rotary dropping drum closed at one side face and having an axial opening in its opposite face and equipped around the opening with carrying members and internally of the opening with picking out members, and a storage member projecting into the dropping drum and through the axial opening thereof and forming with the carrying members sectional chambers in the drum and formed with a dis-

charge opening located in position for delivering the potatoes picked out by the picking out members to the



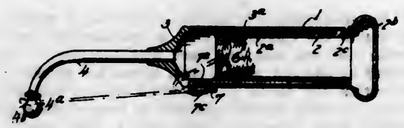
dropping drum, each of said sectional chambers being provided with a discharge opening.

1,389,061. **SIGNAL SYSTEM.** Daniel J. McCarthy, Elgin, Ill., assignor to Chicago Railway Signal and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1920. Serial No. 392,354. 2 Claims. (Cl. 177—337.)



1. A signal system having a plurality of lamps angularly related with respect to a common center, one of said lamps arranged to project its light directly to an objective point; a reflector, located at said center, to reflect the light of the other lamps, alternatively, to said point, normally below the field of illumination of the first mentioned lamp; electric means to raise the reflector into the field of illumination of said lamps and electric means to properly rotate the reflector, to obscure the light from the first mentioned lamp and to provide means whereby to direct the light from one of the other lamps to said objective point, said other lamp and the electric raising and rotating means being in series circuit.

1,389,062. **POSTAGE-MARKING MACHINE.** Edward M. McGowan, Toledo, Ohio. Filed Jan. 17, 1921. Serial No. 437,689. 6 Claims. (Cl. 101—91.)

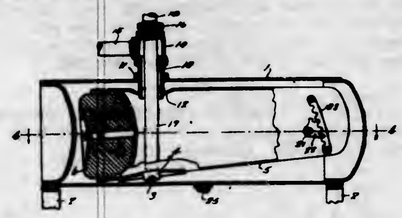


1. In a postage marking mechanism a plurality of independent operable stops, a marking mechanism, means operating according to the position of the stops for limiting the operations of the stamping mechanism to a predetermined number.

1,389,063. **TRAIN-CONTROLLING MECHANISM.** William J. McKibben, Steubenville, Ohio. Filed June 6, 1921. Serial No. 475,346. 5 Claims. (Cl. 246—186.)

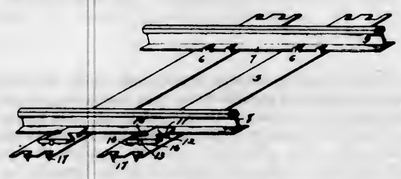
1. A train controlling apparatus comprising in combination, an upstanding hollow standard carried by the locomotive, a trap door therein, means for holding the trap door in a raised position, a weighted member adapted to rest upon the trap door and to drop downwardly of the hollow standard when the trap door is released, a locomotive including a lever for controlling the motive force therefor, said weighted member being operatively connected with the lever, said weighted member when dropped moving the lever to a position to cut off the motive force, and means positioned adjacent the path of travel of the locomotive for releasing the holding means for the trap door.

1,389,064. **DENTAL-FLOSS HOLDER.** Oliver O. Martin, Chicago, Ill. Filed May 22, 1920. Serial No. 383,490. 5 Claims. (Cl. 132—92.)



1. In a dental floss holder three tubular members telescoping within each other and capable of holding a bobbin of dental floss, the outer member having a fixed floss fastening clip, one of the inner members made with a fixed bow projecting in one direction, the second inner member capable of moving the first inner member longitudinally and provided with an operating knob projecting in the opposite direction.

1,389,065. **TILTING OR GRAVITY TRAP.** Henry J. Mastenbrook, Lakewood, and Charles C. Lauritsen, Cleveland, Ohio, assignors to The Ohio Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 30, 1919. Serial No. 320,941. 10 Claims. (Cl. 137—103.)

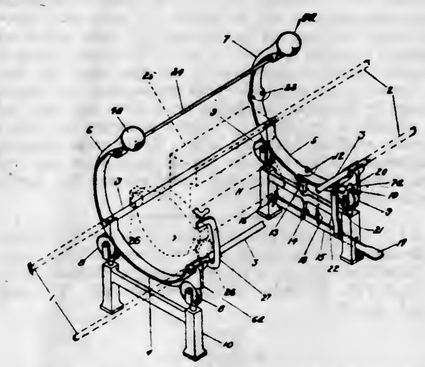


1. In a trap of the character set forth, the combination of a casing, a vessel pivotally supported within the casing, the vessel being weighted to repose normally in a given position, means for conducting water of condensation directly into the vessel to the exclusion of the casing, the vessel being designed to tilt from normal position

under the weight of an accumulation of water therein, a discharge conduit leading from the interior of the vessel,

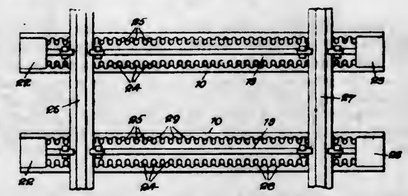
a valve in said conduit, operative connections between the vessel and valve, and means for admitting pressure fluid to the casing.

1,389,066. **STEEL MINE-RAIL TIE.** Patrick J. Murphy, Dubois, Pa. Filed Dec. 27, 1920. Serial No. 433,193. 5 Claims. (Cl. 238—10.)



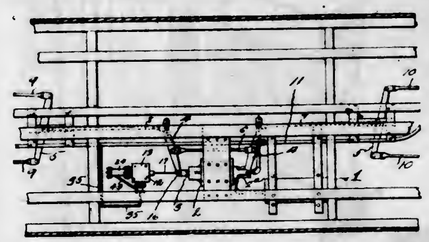
1. A metallic tie of the character described comprising as an integral structure a body portion, abutments carried thereby adapted to engage over the inner edges of the base flanges of the rails, hooks struck from the upper face of the tie outwardly of the rail which project toward each other and are spaced above the upper face of the tie, in combination with substantially flat clamping plates adapted to slide beneath said elements and engage over the outer base flange of the rail and means for preventing outward movement of said clamping plates.

1,389,067. **UNDERGARMENT FOR WOMEN.** Mary D. Neilson, Minneapolis, Minn. Filed Aug. 21, 1920. Serial No. 405,139. 5 Claims. (Cl. 2—144.)



1. A woman's undergarment comprising a back member having the central portion of the bottom edge concavely curved throughout its length, a front member having its center cut along a straight line a predetermined distance, and an insert sewed along one edge to the edges of said central cut and along another edge to the curved edge of the back member.

1,389,068. **ASSEMBLING-CRADLE.** Charles W. Olson, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Feb. 16, 1920. Serial No. 358,987. 9 Claims. (Cl. 29—89.)



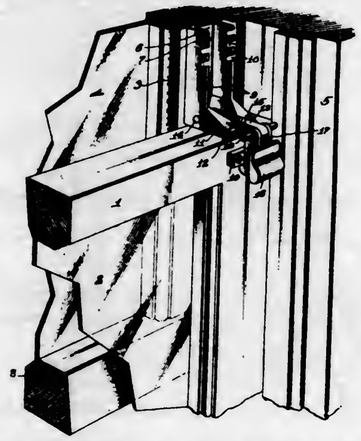
1. In a device of the class described, the combination of circular frame members, tracks secured to said frame members and extending between them, rollers supporting said members, and locking devices for holding said members in desired position on said rollers, said members having outwardly projecting flanges and said rollers having grooves engaging said flanges.

1,389,069. **METALLIC TIE.** Charles Paff, New York, N. Y. Filed Dec. 20, 1920. Serial No. 431,946. 3 Claims. (Cl. 238—60.)

1. In a metallic tie formed of sheet metal to provide an elongated body of substantially the shape of an inverted U in cross section, transverse corrugations extending from the base of each vertical wall of the body to and including the adjacent lengthwise marginal edge parts of the bridging wall of the body and the curvilinear dimensions of the corrugations being deeper at the junctures of the walls of the body than the other parts of the corrugation.

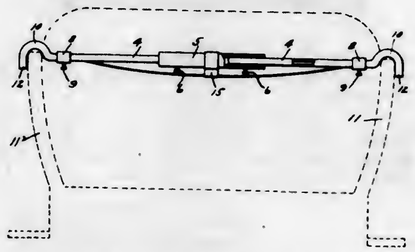
1,389,070. **AIR-BRAKE LOCK.** Anton Wilhelm Paulson, Omaha, Nebr. Filed Nov. 17, 1919. Serial No. 338,576. 3 Claims. (Cl. 303—89.)

3. An air brake lock comprising a shaft axially movable in a casing, said shaft having one of its ends connected to



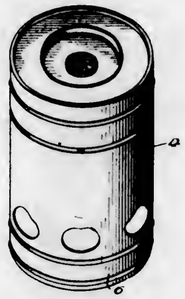
the brake operating mechanism of a car, said shaft being axially movable in bearings and having a spiral groove, a ratchet wheel disposed on the shaft and having a corresponding spiral rib disposed in the spiral groove of the shaft, one end of the shaft being provided with a piston movable in a cylinder and being normally held against axial movement by the air within the train line, means for axially moving the shaft when the train line is uncoupled, a detent coöperating with the ratchet wheel to prevent retrograde movement of the same when the same is rotated by the axial movement of the shaft, air tripping means for releasing the detent lever when the train line is coupled to another car thereby allowing the axially movable shaft to be forced axially to its brake releasing position and means whereby the air utilized for said tripping means will be allowed to exert pressure for moving the axially movable shaft.

1,389,071. LIQUID-DAUBER. WALTER C. PESSELS, Brookline, Mass., assignor to Whittemore Bros. Corp., Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 21, 1921. Serial No. 446,833. 2 Claims. (Cl. 91—67.2.)



1. In a dauber, a shank formed of wire having end portions located in spaced relation, and a twisted central portion and means for securing an absorbent material at one end of the twisted portion, the ends of the wire extending diagonally upward from the center of the bottom of the cork toward points located in diametrically opposed positions in the upper corner of the cork and reinforcing the cork.

1,389,072. WINDOW-LOCKING DEVICE. EPHEEM A. ROSENBERG, Detroit, Mich. Filed June 24, 1920. Serial No. 391,267. 5 Claims. (Cl. 292—114.)

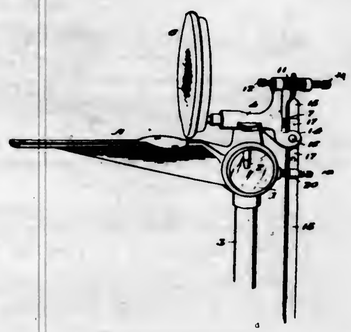


1. The combination of an upper sash, a lower sash, a keeper on the inner face of said lower sash, and an arm carried by a side rail of said upper sash above the meeting rail thereof and adapted to be shifted by the meeting rail of said lower sash engaging the lower end of said arm when said lower sash is raised to cause said arm to engage said keeper and connect said sashes so that the upper sash may be lowered with the lower sash.

1,389,073. VEHICLE ATTACHMENT. ARTHUR R. SCHLÖSSER, Plankinton, S. D. Filed Dec. 3, 1920. Serial No. 427,935. 4 Claims. (Cl. 5—72.)

1. A bed for a vehicle having side closures, including two substantially parallel bars, each consisting of two end sections and an intermediate section, at least one of the end sections being in telescopic relation to the intermediate section and adjustably secured thereto, the remote end portions of the end sections being adapted to rest upon the closures and having depending parts to prevent displacement of the bars, cross members interconnecting the corresponding end sections of the bars, and a body-supporting element carried by the cross-members.

1,389,074. FORMALDEHYDE-FUMIGATOR. WILLIAM H. SHARP, Chicago, Ill., assignor to Bauer & Black, Chicago, Ill., a Corporation of Illinois. Filed Oct. 29, 1919. Serial No. 334,207. 5 Claims. (Cl. 167—3.)

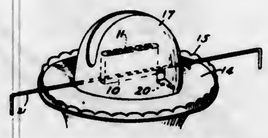


1. A fumigator comprising a body, a receptacle containing a charge of disinfecting material mounted in the body and having an opening at the top thereof, and a seal normally closing said opening and adapted when heated to permit the escape therethrough of gas generated in the receptacle.

4. A fumigator comprising a body, a disinfectant receptacle mounted in said body and having an opening therein, and a seal normally closing said opening and consisting of blotting paper saturated with paraffin.

1,389,075. OIL-CONTROL VALVE. HENRY M. SHEER, Quincy, Ill. Filed July 10, 1920. Serial No. 395,421. 7 Claims. (Cl. 158—36.)

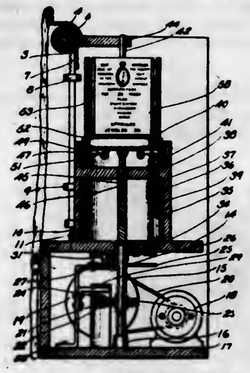
1. The combination of an oil pipe, means for discharging oil therinto, a valve for controlling the flow of oil, two levers in position to control the valve, said levers constructed and adapted to move independently of each other



in one direction, and in position to actuate the valve, and adjustment screws for each of said levers.

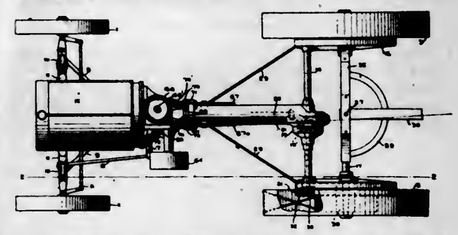
1,389,076. MINING-LOCOMOTIVE. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 25, 1918. Serial No. 263,997. 8 Claims. (Cl. 105—50.)

1. An articulated locomotive comprising a central section, two end sections, four wheels for each of said end sections, two at each side thereof, a pivotal connection between each end section and the central section, each of said pivotal connections comprising a projecting part, a receiving part for receiving said projecting part, means for maintaining angular rigidity between the projecting part and receiving part in all vertical planes, a support for said receiving part and a rocking connection between said receiving part and said support.



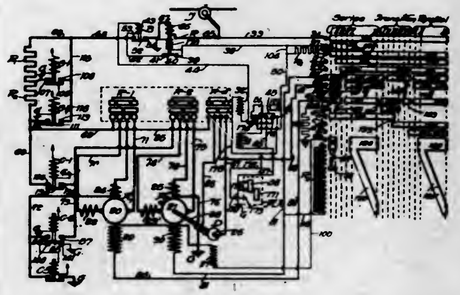
1,389,077. LAMP. EDWARD WARREN SMEETON, Long Island City, N. Y. Filed Jan. 29, 1919. Serial No. 273,827. 4 Claims. (Cl. 67—68.)

1. In an oil burning lamp, the combination of a burner, having a wick therein, an inclosure for the upper portion of the burner, a flat tapered wick trimmer having both edges arranged to trim the wick, and an operating rod therefor extending through and supported by the inclosure.



1,389,078. DISPLAY DEVICE. MATHEW SPINELLO, Kansas City, Mo. Filed Dec. 8, 1920. Serial No. 429,270. 8 Claims. (Cl. 40—76.)

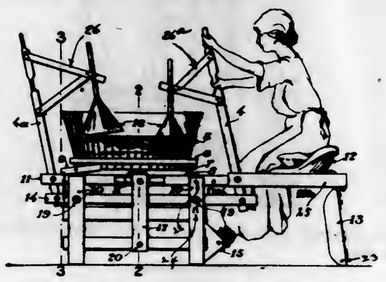
1. A display device comprising a casing, a rotatable table within the casing, a rotatable disk above the rotatable table having movement independent thereof, and means



on the rotatable table for intermittently rotating the rotatable disk.

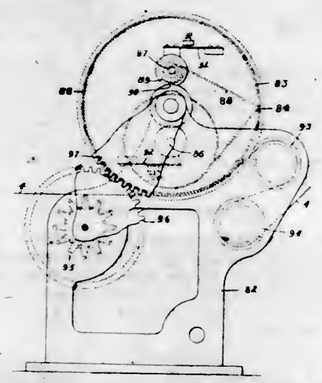
1,389,079. TRACTOR. EDWIN GUSTAVE STAUDE, Minneapolis, Minn. Filed July 10, 1917. Serial No. 179,651. 5 Claims. (Cl. 180—14.)

1. The combination, with a rear axle and power driven traction wheels therefor, supports mounted on said axle, a bolster supporter hinged on said supports, and extending substantially parallel to said axle, for receiving a bolster, a king-bolt for pivotally securing said bolster to said bolster supporter and providing a draft connection for the reach or pole of a trailer.



1,389,080. SYSTEM OF MOTOR CONTROL. LEIGH J. STEPHENSON, Chicago, Ill., assignor to William T. Fenton, Benjamin V. Becker, Lynn A. Williams, George B. Burrage, and Leigh J. Stephenson, trustees, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,243. 10 Claims. (Cl. 172—179.)

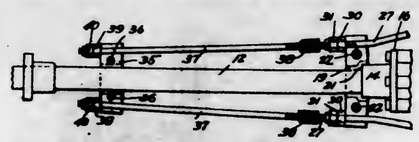
10. The combination with a plurality of motors having field windings of a regulating dynamo connected in series with said field windings in such a manner as to oppose



the voltage impressed on said field windings, a reversing switch for each of said motors and for said regulating dynamo, remote control means for controlling the operation of said motors, and remote control means for causing all of said reversing switches to operate simultaneously.

1,389,081. WASHING-MACHINE. CLIFFORD GARL SWEET, San Diego, Calif. Filed Oct. 12, 1920. Serial No. 416,518. 6 Claims. (Cl. 259—86.)

1. In a washing machine, a tub support and means for simultaneously rotating and reciprocating said tub support.

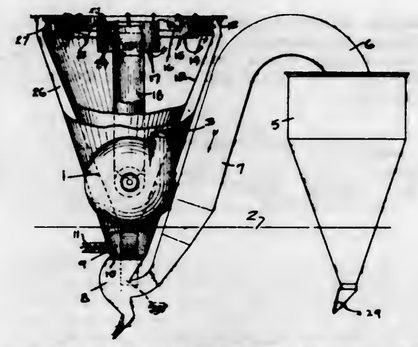


1,389,082. FILM-CLEANING APPARATUS. ALBERT TEITEL, New York, N. Y., assignor to Cinema Patents Company, Chicago, Ill., a Partnership composed of Albert Teitel, Abe Teitel, and John Leeffel. Filed Sept. 27, 1919. Serial No. 326,829. 8 Claims. (Cl. 15—8.)

1. In a film cleaning machine, a rotatable drum arranged to support a cleaning web on its periphery, and means arranged to move the web around the periphery of the drum for renewed engagement with the film, and which web movement is automatically effected by the rotation of the drum.

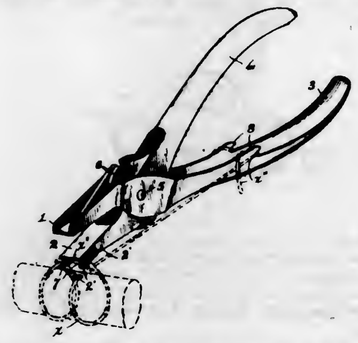
1,389,083. BRACE FOR AXLE-HOUSINGS IN AUTOMOTIVE CARS. JAMES J. WALLEY, Anoka, Minn., assignor of one-half to Charles R. Porter, Anoka, Minn. Filed Mar. 17, 1919. Serial No. 283,024. 1 Claim. (Cl. 74—56.)

The combination, with a rear axle, a differential gearing housing and drive shaft housing secured thereto, of a strap embracing and seated on said differential gearing housing, a clamp mounted on said drive shaft housing and having sockets to receive the ends of said strap, a second clamp



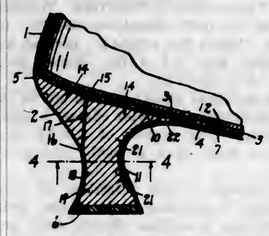
mounted on said drive shaft housing and means connecting said second clamp with the ends of said strap.

1,389,084. NON-CONDUCTING PLASTIC COMPOSITION OR CEMENT KNOWN AS PLASTIC ENAMEL. LAWSON B. WILSON, Washington, D. C. Filed May 7, 1920. Serial No. 379,548. 2 Claims. (Cl. 87—17.)



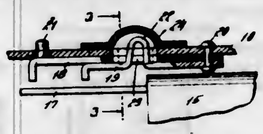
1. A nitrocellulose composition containing celluloid, four parts; acetone, five parts; phenol, three parts, all by volume.

1,389,085. SEPARATOR. GEORGE L. YAGER, Oakland, Calif. Filed Mar. 11, 1920. Serial No. 365,114. 9 Claims. (Cl. 83—40.)



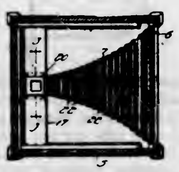
1. In combination with a pneumatic separator, a series of substantially vertical baffle plates adjustably suspended from the upper end thereof and arranged at different levels between the inlet and the outlet from said separator.

1,389,086. HOSE-REPAIRING TOOL. JOSEPH F. YODGES, Depew, N. Y. Filed Mar. 23, 1921. Serial No. 454,611. 2 Claims. (Cl. 81—9.3.)



1. A device of the class described comprising a pair of pliers, the end of one jaw of the pliers being provided with a notch and rearwardly extending wire engaging projections on the handle of the opposite jaw, substantially as described.

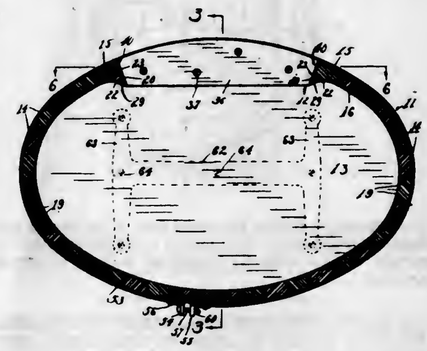
1,389,087. SHOE-HEEL. JOSEPH A. ZAHN, Cincinnati, Ohio. Filed Feb. 13, 1920. Serial No. 358,459. 5 Claims. (Cl. 36—34.)



5. A shoe heel of the character described, a heel therefor, and metal bands extending from the inside of the shoe at said heel, down to and over the face of the heel, at the back part and breast thereof, to bind the same against breakage.

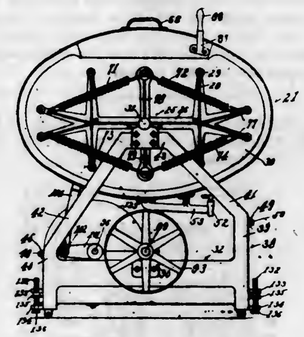
1,389,088. SWITCH. ERNST ALSCHULER, St. Louis, Mo., assignor, by mesne assignments, to National Carbon Company Inc., Cleveland, Ohio, a Corporation of New York. Filed June 9, 1917, Serial No. 173,689. Renewed Jan. 22, 1921. Serial No. 439,319. 7 Claims. (Cl. 200—60.)

3. A switch for battery hand lamps comprising, in combination, a pair of spring-contact elements, means associated with one of said elements whereby both of said elements may be actuated simultaneously, and means associated with the other of said elements whereby it may be actuated independently of said first-named element.



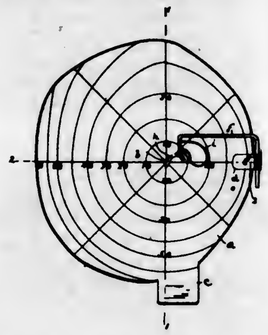
1,389,089. PHONOGRAPH. JOHN N. ANDERSON, Chicago, Ill. Filed Apr. 28, 1919. Serial No. 293,220. 2 Claims. (Cl. 181—27.)

1. In a phonograph a horn angular in cross section having a plurality of tapering walls of relatively thin material and spaced apart cleats secured to the outer surfaces of said walls at frequent intervals.



1,389,090. WASHING-MACHINE TUB. ROBERT J. ANDERSON, Sidney, Ohio. Filed Aug. 16, 1917. Serial No. 186,622. 1 Claim. (Cl. 68—21.)

In a washing machine tub having an opening, the combination of an end wall at each end of said tub, staves received about said end walls and comprising an end-stave provided with an inward extension at each side of said opening, said end-staves forming the side walls of said opening, each of said end-walls provided with an extension at said opening between said end-staves, each of said end-staves at each end thereof provided with a groove at its inner face presented toward the inner part of said tub and with a groove at the side thereof presented toward said opening, the peripheral edge of said end-wall and the lateral edge of said extension received in said respective grooves at each corner of said opening, a reinforcing strip at each side of each of said extensions, the end of each of said reinforcing strips at each of said corners abutting against the side of said end-stave at each of the corners of said opening, said reinforcing strips and said edge of said extension at each of said corners forming a lapping tongue

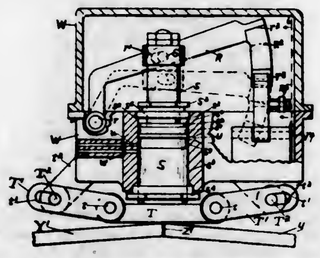


and groove joint with the side of said end-stave at each of said corners, and a tension band received about each end of said tub in the plane of said end wall for forcing said ends of said extensions into said grooves coacting therewith and forcing said abutting ends of said reinforcing strips and said sides of said end staves toward one another, for the purpose described.

1,389,091. WASHING-MACHINE. ROBERT J. ANDERSON, Sidney, Ohio. Filed Aug. 16, 1917. Serial No. 186,623. 22 Claims. (Cl. 259—75.)

1. A washing machine comprising a rocking tub having an opening in its top and an inner surface which slopes inwardly of the tub adjacent to said opening at each end of said opening, and bottom and end walls described on a substantial ellipse, said tub having a pivotal axis adjacent to and below the center of said substantial ellipse, and means for rocking said tub on said pivotal axis, the bottom of said tub curving downwardly toward its middle under said pivotal axis, whereby the lower middle portion of said bottom of said tub bulges outwardly to locate the greatest portion of the weight in said tub in the vertical plane of said pivotal axis when said tub is in normal position.

1,389,092. OPTICAL INSTRUMENT. SYLVESTER JUDD BEACH, Portland, Me. Filed Feb. 21, 1921. Serial No. 446,796. 5 Claims. (Cl. 88—20.)



1. A device for testing the visual field of the human eye, consisting of a concave chart having at its lower portion a spherical section with a cylindrical section connected therewith.

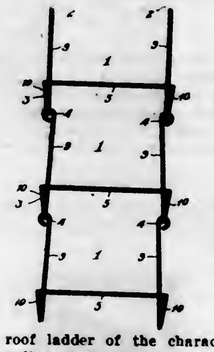
1,389,093. METHOD OF MAKING TIRE-FILLERS. EDWARD F. BRANEN, Sr., Elgin, Ill. Filed Aug. 9, 1920. Serial No. 402,076. 3 Claims. (Cl. 152—5.)

2. A tire filler comprising a core member having a portion for supporting the rim and an enlarged portion following the general contour of the inner wall of a tire casing, but spaced therefrom, except adjacent the rim, by different amounts gradually tapering from the greatest space opposite the tire tread to points near the rim portion of the casing, where the space wholly disappears, and a more resilient member having a normal cross section of substantially the same shape as the space between the core and the inner wall of the casing, said member being crowded into the space between the core and the casing under pressure when the tire is filled for use.

1,389,094. TRAIN-CONTROL APPARATUS. ANDREW J. BROOKINS, Chicago, Ill. Filed June 10, 1920. Serial No. 387,847. 16 Claims. (Cl. 246—49.)

12. A cab carried mechanism comprising a member adapted to be advanced by air under pressure, a lever connected to said member and provided with a plurality of engageable elements, a plurality of members adapted to be advanced into engageable position with a corresponding one of said elements, in combination with an electroresponsive member arranged to selectively advance said last members into said engageable position.

1,389,095. SWISS CHEESE AND METHOD FOR STERILIZING THE SAME. LINN EUGENE CARPENTER, East Orange, N. J., and ELMER ELLSWORTH ELDERDGE, Sidney, N. Y., assignors to Phenix Cheese Company, New York, N. Y., a Corporation of New York. Original application filed June 21, 1915, Serial No. 35,477. Renewed Mar. 14, 1918. Serial No. 222,514. Divided and this application filed Mar. 14, 1918. Serial No. 222,312. 7 Claims. (Cl. 99—11.)



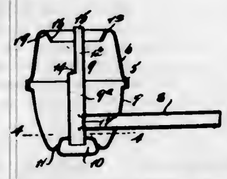
1. As an article of manufacture a sterile cheese containing a preponderance of Swiss cheese, a small percentage of some other cheese capable of mixing therewith into a homogeneous mass, and a small percentage of sodium citrate.

2. The method, herein described, of treating cheese, which consists in grinding Swiss cheese, adding thereto a small percentage of sodium citrate, water and Neufchâtel cheese, heating the mass to approximately 165 degrees Fahrenheit for about thirty minutes, and stirring the mass constantly while thus heated.

3. As an article of manufacture, a cheese of the Swiss genus, sterilized sufficiently to enable it to keep indefinitely under ordinary climatic temperatures, said cheese having a homogeneous texture.

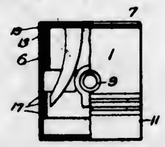
7. The method herein described of treating a cheese mass containing a preponderance of cheese of the Swiss genus, which consists in heating the cheese actively stirring it while thus heated, the temperature being maintained sufficiently high and the heating and stirring being continued for a sufficient length of time to render the cheese mass permanently keeping, and inclosing the cheese mass in a container.

1,389,096. ROOF-LADDER FIRE-ESCAPE. FRANK L. CHAPPELL, Cleveland, Ohio. Filed June 24, 1920. Serial No. 391,435. 1 Claim. (Cl. 228—44.)



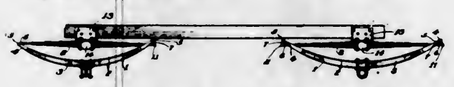
A collapsible roof ladder of the character described, comprising a plurality of U-shaped integral metal members, each being formed with outwardly turned eyes at its upper ends and each side portion being inclined downwardly and outwardly from its top to the bottom thereof, each of said side portions extending rearwardly from its bottom and then inclined outwardly, upwardly and forwardly of the respective side portion to form a loop of materially greater diameter than that of said eyes, the loops of each member being connected by a horizontally disposed portion to provide a rung, the loops of each member passing through the outwardly turned eyes of the member adjacently below, and a U-shaped topmost member having its ends formed with hooks for engagement with the ridge boards of a building.

1,389,097. ALLOY. ALVAH W. CLEMENT, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Aug. 15, 1917, Serial No. 186,867. Divided and this application filed Aug. 15, 1918. Serial No. 249,952. 5 Claims. (Cl. 75—1.)



1. An alloy containing an appreciable quantity but not more than 80% of iron, an appreciable quantity but not more than 25% of titanium, an appreciable quantity but not more than 30% of chromium and an appreciable quantity but not more than 10% of a metal having the properties of aluminum which render the alloy substantially non-oxidizable at high temperatures.

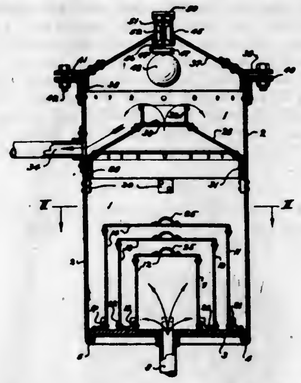
1,389,098. SOAP-BUBBLE PIPE. IRWIN COHN, Stroudsburg, Pa., assignor to Exeloid Company of Pennsylvania, East Stroudsburg, Pa., a Corporation of Pennsylvania. Filed Jan. 15, 1921. Serial No. 437,386. 7 Claims. (Cl. 46—81.)



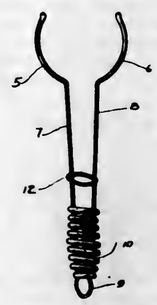
1. In a bubble pipe, a bowl member, a supplemental air chamber within the bowl, a Venturi-tube extending from the air chamber, a stem connected with said tube, and an annular inwardly directed baffle wall carried by the bowl at its open end.

1,389,099. PISTON. EUGENE F. COOK, Richmond Heights, Mo. Filed Mar. 27, 1919. Serial No. 285,423. 10 Claims. (Cl. 74—108.)

1. In apparatus of the class described, in combination, a piston, having a body, a head integral therewith, a ring on the body, and a groove extending from a point adjacent the central portion of the length of the piston to a point adjacent the head above the ring, said groove having heat insulating material therein.



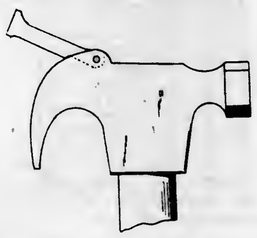
1,389,100. SPRING SUSPENSION OF SELF-PROPELLED VEHICLES. HERBERT H. NEALE, New York, N. Y. Filed Oct. 6, 1916. Serial No. 124,036. 3 Claims. (Cl. 267—42.)



1. On a self-propelled vehicle, a spring suspension comprising a relatively rigid cradle supported by the vehicle axle at right angles thereto and a double-ended laminated spring connected at its thin ends to the ends of the cradle and rigidly connected at its thick intermediate portion to the frame of the vehicle.

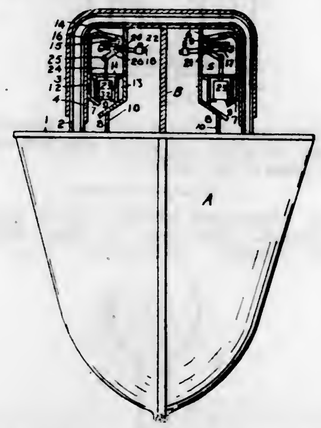
1,389,101. FOAM OR FROTH DISSIPATOR. OSCAR OHAVALL, New York, N. Y. Filed Aug. 5, 1918. Serial No. 248,333. 7 Claims. (Cl. 183—3.)

1. A device of the character described comprising a container having inlet and outlet openings, and an intercepter intermediate of said openings composed of a series of dome-shaped elements of different sizes nesting one within the other in spaced relation to their respective sides and heads, said elements being provided with sharp-edged apertures through which a liquid may be passed to relieve it of foam or froth, the outlet from the container being higher than the dome-shaped elements and controlling the flow out of the same, the arrangement being such that the weight of the liquid above the elements opposes its flow through the series thereof whereby the bubbles are forced into contact with both the outer and inner edges of said apertures.



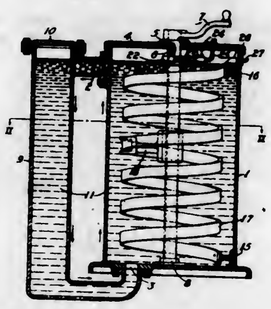
1,389,102. HOT-PLATE LIFTER. FRANK ROMO, Jr., Hilo, Hawaii. Filed June 12, 1920. Serial No. 388,498. 2 Claims. (Cl. 294—33.)

1. A plate lifter comprising spaced jaws, convergent handle members and a loop connecting the handle members, and a grip consisting of a wire helix closely embracing the handle members adjacent the loop, the opposite end of the helix being elliptical in cross section with its major axes in the plane of the handle sides which latter diverge from the grip in the direction of the jaws.



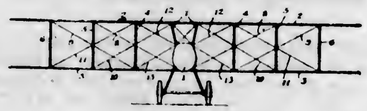
1,389,103. HAMMER. JOHN RYAN, Dubuc, Saskatchewan, Canada. Filed Sept. 4, 1920. Serial No. 408,399. 1 Claim. (Cl. 254—26.)

A hammer consisting of a head, a handle having one end positioned in said head, a slot in the upper end of



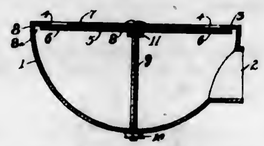
said head and extending outwardly from the handle opening on the claw side of said head, a leg having one end hingedly mounted in said slot, said leg adapted to act as a fulcrum in drawing nails and having a notch bearing against the walls of said slot when the leg is in operative position and a spring having one end fitted between said handle and the side of said handle opening, the other end of said spring having its free end extended beyond the opposite edge of the handle and beneath the fulcrum of the leg and tensioning on the hinged end of said leg to keep it fixedly positioned in either closed or open position.

1,389,104. VALVE MECHANISM. CHARLES ESHEL SAYER, Pittsburgh, Pa. Filed Feb. 21, 1920. Serial No. 360,471. 8 Claims. (Cl. 9—4.)



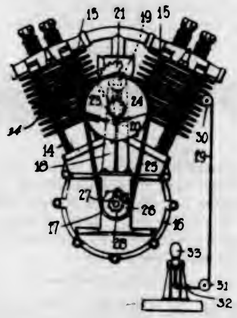
1. A valve mechanism for the purpose set forth comprising the combination with means to provide an inlet and a valvular member for closing said inlet, of a rock shaft, a valve lever connecting said member with the shaft, a shaft rocking element fixed to the shaft, and a float operated operating lever loosely attached to the shaft and adapted when actuated to engage said element thereby rocking the shaft and shifting the valvular member to close the inlet.

1,389,105. CONTROL APPARATUS. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1919. Serial No. 344,745. 9 Claims. (Cl. 219—57.)



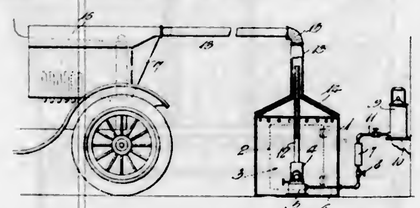
1. Control apparatus comprising a spirally-arranged self-supporting resistor and means for varying the active portion thereof.

1,389,106. AIRPLANE. BENJAMIN DOUGLAS THOMAS, Ithaca, N. Y. Filed Dec. 4, 1919. Serial No. 342,316. 4 Claims. (Cl. 244—14.)



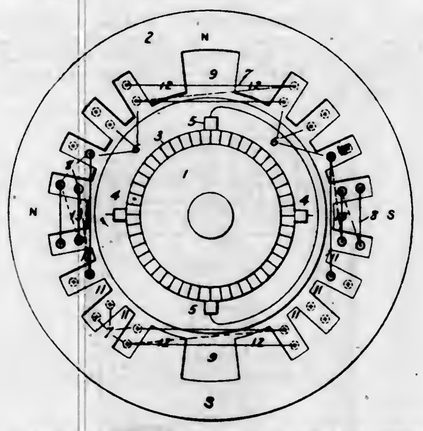
1. In an airplane, the combination with a fuselage, upper and lower wing spars, and struts joining the upper and lower spars and forming the panels of the truss, of diagonal tension members connecting the upper portion of the fuselage with the top of the first panel strut, and the lower portion of the fuselage with the top of the second panel strut.

1,389,107. BURNER-HEAD. CHARLES L. TORREY, San Jose, Calif., assignor of seventy per cent. to Charles A. Sawyer and twenty-five per cent. to William T. Alexander, San Jose, Calif. Filed Nov. 10, 1920. Serial No. 423,087. 2 Claims. (Cl. 158—116.)



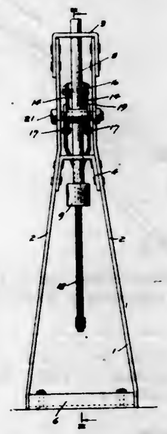
1. A burner head comprising a bowl shaped member, a gas inlet thereto, a perforated plate arranged to cover the bowl shaped member, a second perforated plate spaced a distance from said first named plate and depending therefrom within said bowl shaped member, and means engaging both of said plates and said bowl shaped member for securing the same in fixed relation to each other.

1,389,108. MECHANICAL STARTER FOR INTERNAL-COMBUSTION ENGINES. FREDERICK D. WARNER, Middletown, N. Y. Filed Mar. 29, 1920. Serial No. 369,725. 2 Claims. (Cl. 74—54.)



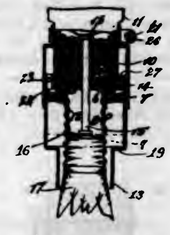
1. In a mechanical starter for internal combustion engines, the combination with a V type motor having a crank case projection at one end and a crank shaft extended into the crank case projection, of an upright bearing mounted upon the crank case projection, a shaft journaled in said bearing, the relative arrangement of the shaft to the engine cylinders being such that the axis of the shaft if continued would extend into the space defined by the inner walls of the motor cylinders, a lever arm mounted on said shaft, a gear segment mounted on said shaft, a second shaft journaled in said bearing below and in parallelism with the first mentioned shaft; a gear mounted on this second shaft, said last mentioned gear and the gear segment being at all times in mesh, a connection between said last mentioned gear and the crank shaft for rotating the latter by movement of the lever arm, operating means connected with the lever arm, and a spring for returning the lever arm to its original position subsequent to each operation.

1,389,109. ENGINE AND RADIATOR HEATER. JOHN ROBERT WESTON, Dubuque, Iowa. Filed Dec. 16, 1920. Serial No. 431,223. 4 Claims. (Cl. 126—350.)



1. A heating device comprising a housing having a roof of heat conducting material, an auxiliary roof for said housing supported above the roof of the housing to provide an air passage between the housing roof and auxiliary roof, a heater in the housing having a discharge pipe extending through the roof of the housing in air-tight engagement with the housing roof and through an enlarged opening in the auxiliary roof, and an air conducting pipe extending from the opening in the auxiliary roof with the discharge pipe of said stove extending partially through the air pipe, in spaced relation to the same.

1,389,110. DYNAMO-ELECTRIC MACHINE. CHARLES E. WILSON, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 9, 1917. Serial No. 153,538. 6 Claims. (Cl. 171—223.)

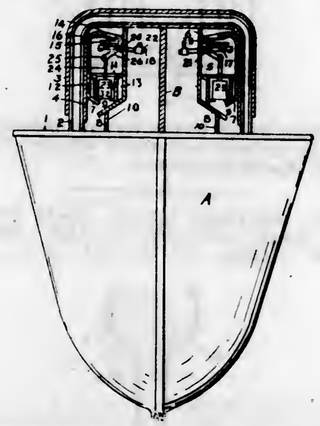


1. A direct-current dynamo-electric machine comprising a stator provided with main and compensating field pole pieces each provided with windings, an armature provided with windings certain of which are substantially short-circuited by means of current-collecting devices and certain others of which are connected externally by similar means, said short-circuited windings being adapted to produce a flux aiding said main field flux under light-load conditions and opposing said main field flux under heavy-load conditions.

1,389,111. BOTTLE-CAPPING MACHINE. GEORGE C. ADAMS and WILLIAM F. ADAMS, San Francisco, Calif. Filed Mar. 2, 1921. Serial No. 449,042. 2 Claims. (Cl. 226—84.)

1. A bottle capping device comprising a vertical standard having two horizontal members, one being above the other, a plunger guided vertically in said horizontal members, two registering links pivotally engaging said plunger on opposite sides and a forked lever having its forked end pivotally supported in said standard and its prongs operatively engaging said links for imparting vertical motion to said plunger.

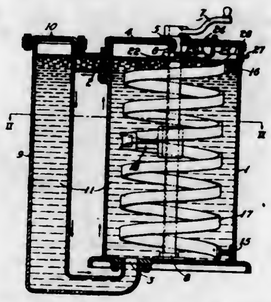
1,389,112. INCANDESCENT-LAMP LOCK. SAMUEL L. ADELSON, New York, N. Y. Filed Mar. 25, 1920. Serial No. 368,721. 4 Claims. (Cl. 173—356.)



1. In combination with a standard socket for electric light bulbs, a plug to engage the threaded bushing of said socket, a threaded sleeve carried by the plug, a rotatable bulb support consisting of a threaded socket member engaging said threaded sleeve, a head carried by the socket member, and provided with a plurality of notches, a rotatable sleeve surrounding the plug and bulb-support, a pin carried by the sleeve to engage said notches to prevent the rotation of the bulb-support, and releasable means to secure said sleeve against rotation when said sleeve is not in use to prevent rotation of said bulb-support.

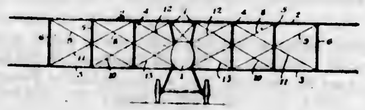
1,389,113. AGRICULTURAL IMPLEMENT. CHARLES J. ALLEN, Moorestown, N. J. Filed Mar. 26, 1917. Serial No. 157,386. 3 Claims. (Cl. 97—42.)

3. An implement of the class described, comprising a frame having spaced wheel bearings, supporting wheels for said frame, a handle connected with said frame, and a tool-carrying arm pivoted to said frame on an axis disposed above the horizontal plane of the wheel bearing axis; said tool-carrying arm being substantially V-shaped and having one leg disposed substantially parallel with



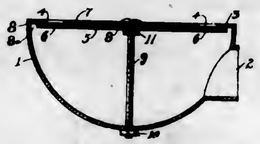
said head and extending outwardly from the handle opening on the claw side of said head, a leg having one end hingedly mounted in said slot, said leg adapted to act as a fulcrum in drawing nails and having a notch bearing against the walls of said slot when the leg is in operative position and a spring having one end fitted between said handle and the side of said handle opening, the other end of said spring having its free end extended beyond the opposite edge of the handle and beneath the fulcrum of the leg and tensioning on the hinged end of said leg to keep it fixedly positioned in either closed or open position.

1,389,104. VALVE MECHANISM. CHARLES ESHEL SAYER, Pittsburgh, Pa. Filed Feb. 21, 1920. Serial No. 360,471. 8 Claims. (Cl. 9—4.)



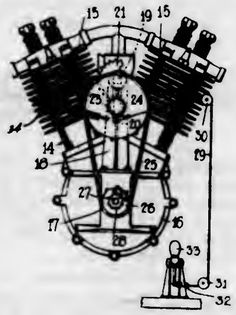
1. A valve mechanism for the purpose set forth comprising the combination with means to provide an inlet and a valvular member for closing said inlet, of a rock shaft, a valve lever connecting said member with the shaft, a shaft rocking element fixed to the shaft, and a float operated operating lever loosely attached to the shaft and adapted when actuated to engage said element thereby rocking the shaft and shifting the valvular member to close the inlet.

1,389,105. CONTROL APPARATUS. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1919. Serial No. 344,745. 9 Claims. (Cl. 219—67.)



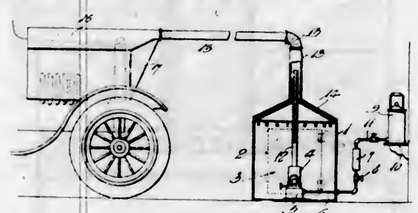
1. Control apparatus comprising a spirally-arranged self-supporting resistor and means for varying the active portion thereof.

1,389,106. AIRPLANE. BENJAMIN DOUGLAS THOMAS, Ithaca, N. Y. Filed Dec. 4, 1919. Serial No. 342,316. 4 Claims. (Cl. 244—14.)



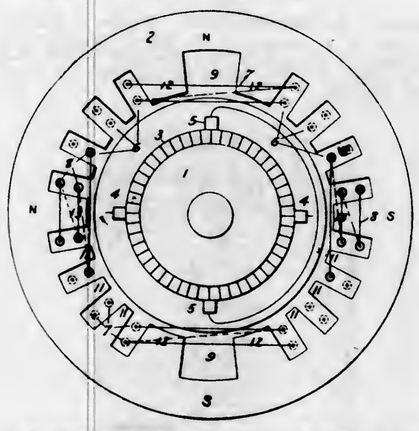
1. In an airplane, the combination with a fuselage, upper and lower wing spars, and struts joining the upper and lower spars and forming the panels of the truss, of diagonal tension members connecting the upper portion of the fuselage with the top of the first panel strut, and the lower portion of the fuselage with the top of the second panel strut.

1,389,107. BURNER-HEAD. CHARLES L. TORREY, San Jose, Calif., assignor of seventy per cent. to Charles A. Sawyer and twenty-five per cent. to William T. Alexander, San Jose, Calif. Filed Nov. 10, 1920. Serial No. 423,087. 2 Claims. (Cl. 158—116.)



1. A burner head comprising a bowl shaped member, a gas inlet thereto, a perforated plate arranged to cover the bowl shaped member, a second perforated plate spaced a distance from said first named plate and depending therefrom within said bowl shaped member, and means engaging both of said plates and said bowl shaped member for securing the same in fixed relation to each other.

1,389,108. MECHANICAL STARTER FOR INTERNAL-COMBUSTION ENGINES. FREDERICK D. WARNER, Middletown, N. Y. Filed Mar. 29, 1920. Serial No. 369,725. 2 Claims. (Cl. 74—54.)

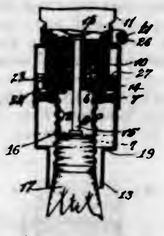


1. In a mechanical starter for internal combustion engines, the combination with a V type motor having a crank case projection at one end and a crank shaft extended into the crank case projection, of an upright bearing mounted upon the crank case projection, a shaft journaled in said bearing, the relative arrangement of the shaft to the engine cylinders being such that the axis of the shaft if continued would extend into the space defined by the inner walls of the motor cylinders, a lever arm mounted on said shaft, a gear segment mounted on said shaft, a second shaft journaled in said bearing below and in parallelism with the first mentioned shaft; a gear mounted on this second shaft, said last mentioned gear and the gear segment being at all times in mesh, a connection between said last mentioned gear and the crank shaft for rotating the latter by movement of the lever arm, operating means connected with the lever arm, and a spring for returning the lever arm to its original position subsequent to each operation.

1,389,109. ENGINE AND RADIATOR HEATER. JOHN ROBERT WESTON, Dubuque, Iowa. Filed Dec. 16, 1920. Serial No. 431,223. 4 Claims. (Cl. 126—350.)

1. A heating device comprising a housing having a roof of heat conducting material, an auxiliary roof for said housing supported above the roof of the housing to provide an air passage between the housing roof and auxiliary roof, a heater in the housing having a discharge pipe extending through the roof of the housing in air-tight engagement with the housing roof and through an enlarged opening in the auxiliary roof, and an air conducting pipe extending from the opening in the auxiliary roof with the discharge pipe of said stove extending partially through the air pipe, in spaced relation to the same.

1,389,110. DYNAMO-ELECTRIC MACHINE. CHARLES E. WILSON, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 9, 1917. Serial No. 153,538. 6 Claims. (Cl. 171—223.)

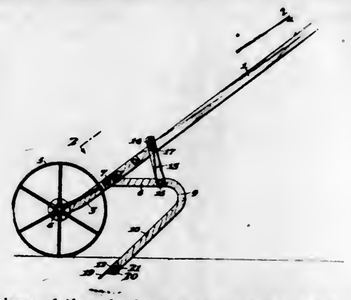


1. A direct-current dynamo-electric machine comprising a stator provided with main and compensating field pole pieces each provided with windings, an armature provided with windings certain of which are substantially short-circuited by means of current-collecting devices and certain others of which are connected externally by similar means, said short-circuited windings being adapted to produce a flux aiding said main field flux under light-load conditions and opposing said main field flux under heavy-load conditions.

1,389,111. BOTTLE-CAPPING MACHINE. GEORGE C. ADAMS and WILLIAM F. ADAMS, San Francisco, Calif. Filed Mar. 2, 1921. Serial No. 449,042. 2 Claims. (Cl. 226—84.)

1. A bottle capping device comprising a vertical standard having two horizontal members, one being above the other, a plunger guided vertically in said horizontal members, two registering links pivotally engaging said plunger on opposite sides and a forked lever having its forked end pivotally supported in said standard and its prongs operatively engaging said links for imparting vertical motion to said plunger.

1,389,112. INCANDESCENT-LAMP LOCK. SAMUEL L. ADELSON, New York, N. Y. Filed Mar. 25, 1920. Serial No. 368,721. 4 Claims. (Cl. 173—356.)



1. In combination with a standard socket for electric light bulbs, a plug to engage the threaded bushing of said socket, a threaded sleeve carried by the plug, a rotatable bulb support consisting of a threaded socket member engaging said threaded sleeve, a head carried by the socket member, and provided with a plurality of notches, a rotatable sleeve surrounding the plug and bulb-support, a pin carried by the sleeve to engage said notches to prevent the rotation of the bulb-support, and releasable means to secure said sleeve against rotation when said sleeve is not in use to prevent rotation of said bulb-support.

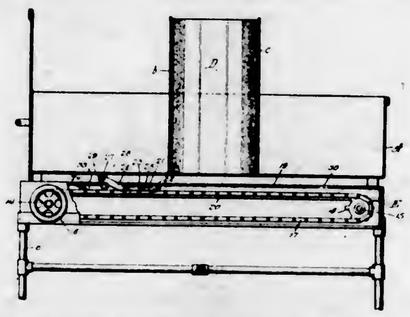
1,389,113. AGRICULTURAL IMPLEMENT. CHARLES J. ALLEN, Moorestown, N. J. Filed Mar. 26, 1917. Serial No. 157,386. 3 Claims. (Cl. 97—42.)

3. An implement of the class described, comprising a frame having spaced wheel bearings, supporting wheels for said frame, a handle connected with said frame, and a tool-carrying arm pivoted to said frame on an axis disposed above the horizontal plane of the wheel bearing axis; said tool-carrying arm being substantially V-shaped and having one leg disposed substantially parallel with

the surface of the ground, and the other inclined forwardly and providing a straight edge extending well above

the plane of the wheel bearing axis at an angle that will permit the tops of vegetation to readily slip and be thereby untangled.

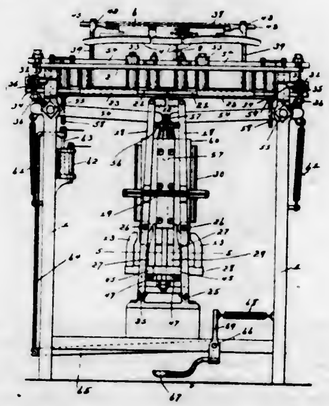
1,389,114. TIRE-TOOL. WILLIAM F. ATKINSON, Bakersfield, Calif. Filed Nov. 17, 1920. Serial No. 424,782. 4 Claims. (Cl. 152—27.)



1. A device of the class described comprising a shank portion having a tapered point, and a handle including an offset portion and a straight portion, the latter extending in approximate alinement with the shank.

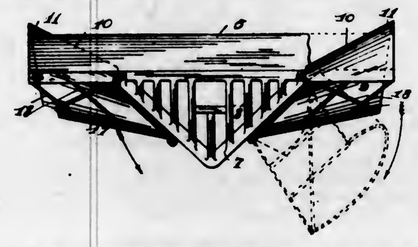
1,389,115. AUTOMATIC HAND-EMBROIDERING MACHINE. MICHAEL BASSISTY, New York, N. Y. Filed June 18, 1920. Serial No. 389,813. 10 Claims. (Cl. 112—80.)

1. In a hand embroidering machine, a hollow frame, a needle bar pivotally mounted in said frame, a needle carried by said bar, a presser foot bar inserted in said frame, and means interposed between the upper end of said presser foot bar and the upper end of said frame for automatically raising said frame to its uppermost position after said frame has been manually depressed.



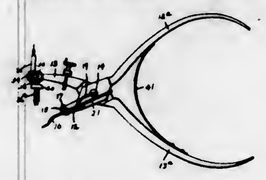
1,389,116. LOOSE-LEAF FILING SYSTEM OR POSTING-TRAY. HARRY C. BAXTER, Benton Harbor, Mich. Filed Nov. 28, 1917. Serial No. 204,334. 21 Claims. (Cl. 129—16.)

13. The combination of a receptacle for holding leaves or sheets or cards in a more or less upright position, with their upper edges substantially even or flush, means to engage the lower edges of said leaves or sheets or cards, and instrumentalities whereby said means is movable into position to raise any of said leaves or sheets or cards to bring the upper edges thereof above the others, said instrumentalities including sprocket chains and parallel tracks for controlling the back and forth movements of said means.



19. In a device of the class described, means for supporting a filing drawer thereon, and means associated with said means for upsetting leaves in said drawer when the drawer is supported on the first named means.

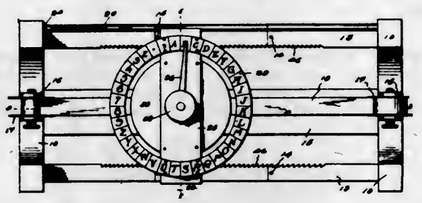
1,389,117. FOLDING-MACHINE. WALTER J. BEATTIE, Cohoes, N. Y., assignor to The Beattie Manufacturing Company, Cohoes, N. Y., a Corporation of New York. Filed Sept. 6, 1918. Serial No. 252,871. 14 Claims. (Cl. 223—55.)



1. In a folding-machine and in combination, an infolder; an eccentric connected with said infolder to impart inward longitudinal movement to the whole infolder and transverse movement to one end thereof; and means engageable with said infolder at one side of said eccentric for imparting to the neighboring end of said infolder a transverse inward movement greater than the transverse inward movement of the other end of said infolder as the infolder is moved longitudinally inward, said means permitting unrestricted longitudinal movement of the infolder by said eccentric.

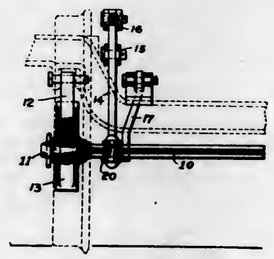
1,389,118. SNOWPLOW. JOSEPH DONAT BERGERON, Iberville, Quebec, Canada. Filed Sept. 9, 1920. Serial No. 409,268. 3 Claims. (Cl. 37—57.)

1. In a device such as described, the combination with a cow-catcher, a pair of wings hinged to the opposite sides thereof, said wings being concaved and extended at an angle rearwardly toward the outer ends thereof, and bars connecting the upper and lower portions of the wings.



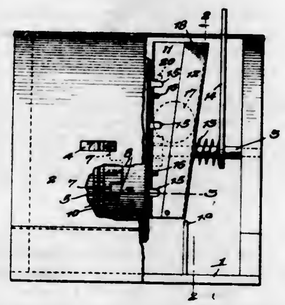
1,389,119. COMPOUND TOOL FOR WATCHMAKERS. ABRAHAM BRILLIANT, Boston, Mass. Filed May 6, 1921. Serial No. 467,334. 5 Claims. (Cl. 81—6.)

1. A watch-maker's tool comprising a pair of crossed levers; a transverse pivot connecting said levers, each lever having an operating arm and a longer handle arm, one of said operating arms being shorter than the other, a pair of spring-closed jaws connected with the shorter operating arm by pivots at right angles with the lever-connecting pivot, and provided with means whereby they may be manually opened, the jaws having thin notched meeting portions collectively forming a seat, adapted to bear on either a watch balance roller, a watch hand, a jewel holder, or a hair spring stud holder, the longer arm being provided with a post-receiving socket, and with means for detachably securing a post therein, and two interchangeable posts, each adapted to be secured in said socket, and to coöperate as described, with said jaws, one post being formed to act in removing a roller, hands, and a hair spring stud, and the other post being formed to act in removing a jewel, the tool being provided with means for holding either post in an inoperative position.



1,389,120. TYPEWRITER. JOHN W. BUCHANAN, Boston, Mass., assignor of one-half to George E. Sanford, Boston, Mass. Filed July 16, 1919. Serial No. 311,282. 3 Claims. (Cl. 197—46.)

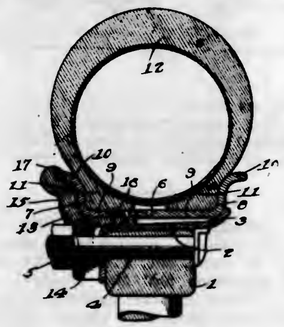
1. A typewriter comprising an elongated platen bar, parallel guide rails, a traveling type basket carried thereby, a plurality of type printing units mounted in the basket each including an upwardly disposed operating member adapted to be depressed to operate its respective type printing element, said type printing elements being each adapted to print a character centrally beneath the basket with a downward stroke, an operating knob centrally mounted with respect to the type printing element and revoluble in the basket having an arm movable to selectively engage



alternatively the operating members of the type printing units, and being vertically reciprocable for operation; and means associated therewith to move the basket longitudinally upon each vertical reciprocation of the operating knob.

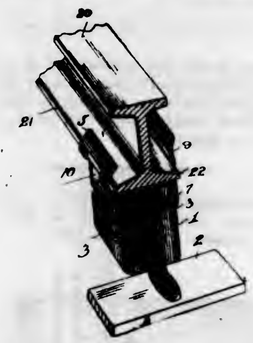
1,389,121. BRAKE-BEAM SUSPENSION. THOMAS L. BURTON, St. Louis, Mo., assignor to The American Brake Company, St. Louis, Mo., a Corporation of Missouri. Original application filed May 18, 1917, Serial No. 169,408. Divided and this application filed May 15, 1920. Serial No. 381,542. 5 Claims. (Cl. 188—213.)

1. In a brake device, the combination of a brake beam having jaws near its opposite ends, hangers for said beam, truck brake levers pivotally attached to said jaws, and additional hangers pivotally supported on the truck frame and connected to said jaws.



1,389,122. COIN-ADDING MACHINE. JOHN A. CANFIELD, Danbury, Conn. Filed June 24, 1920. Serial No. 391,295. 6 Claims. (Cl. 235—100.)

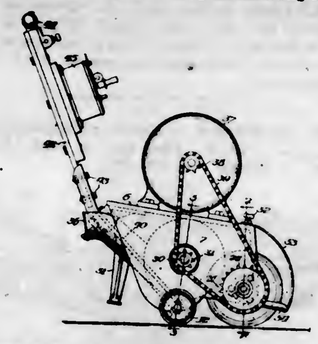
1. A coin register comprising a shaft, an inner drum loose thereon, an outer drum also loose thereon and frictionally receiving the first drum whereby the two drums



will rotate as a unit, said drums bearing monetary values on their peripheries and the outer drum having peripheral series of recesses, a pawl coöperating with the recesses to hold the outer drum against retrograde action, and means on the inner drum for selective engagement to rotate the same.

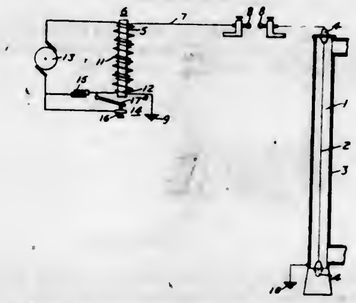
1,389,123. DEMOUNTABLE RIM. WILLIAM GEO. CANION, Glen Burnie, Md., assignor to The National Manufacturing Company, a Corporation of Maryland. Filed Aug. 27, 1919. Serial No. 320,177. 6 Claims. (Cl. 301—35.)

1. A demountable rim comprising two annular sections, one having slots therein, and bolt engaging wedge fasteners having lugs to engage said slots in the one rim section and hooks to engage the flange of the other rim section.



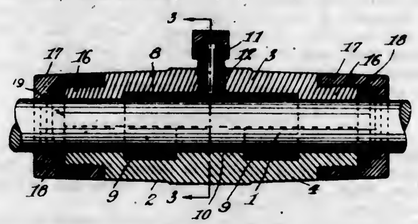
1,389,124. SUPPORT FOR THIRD RAILS. THOMAS W. CASEY, Yonkers, N. Y., assignor to National Pneumatic Company, Chicago, Ill., a Corporation of West Virginia. Filed June 6, 1917, Serial No. 173,141. Renewed July 20, 1921. Serial No. 486,189. 7 Claims. (Cl. 191—32.)

1. A support for third rails comprising a standard, a pair of plates fitting one in the other and respectively engaging at one end the opposite sides of said standard, said plates having their other ends respectively adapted to engage opposite sides of the rail and clamp the rail on the top surface of said standard.



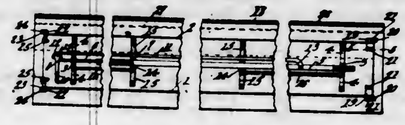
1,389,125. SURFACING-MACHINE. ARTHUR E. CHAPPELL, Chicago, Ill. Filed Oct. 3, 1918. Serial No. 256,672. 7 Claims. (Cl. 51—176.)

4. In a surfacing machine, the combination of a frame provided with an elongated bearing, a shaft, a surfacing cylinder reversibly mounted thereon and adapted in one position to overlap one end of said bearing, means for locking said shaft in the bearing, and detachable means for driving said shaft, said driving means being removable



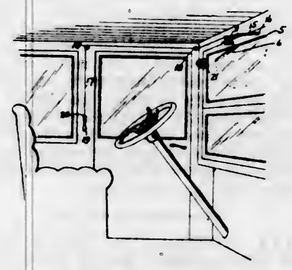
to permit endwise reversal of the shaft so that said cylinder may be disposed at will upon either side of the bearing and reversed endwise upon the shaft.

1,389,126. ELECTRICAL PRECIPITATING SYSTEM. LEWIS W. CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1917. Serial No. 140,768. 5 Claims. (Cl. 171—119.)



1. A source of intermittent voltage, a translating device, transforming means therebetween producing an unsymmetrical wave-form voltage, and means whereby said translating device is charged to a potential equal to not more than one-half the difference between the peak values of the opposite lobes of said wave.

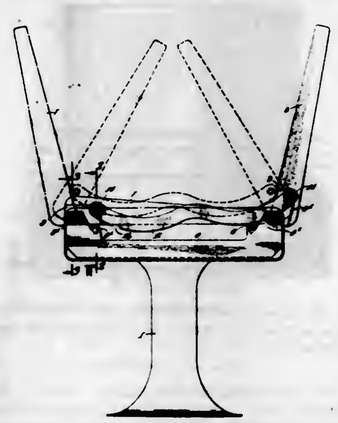
1,389,127. BEARING. NAPOLEON CONSTANT, Manchester, N. H. Filed Sept. 1, 1920. Serial No. 407,296. 3 Claims. (Cl. 64—24.)



1. A bearing comprising two sections, packings disposed between the meeting edges of the sections, the ends of said sections being reduced and threaded, caps threaded upon the ends of the sections, and packing disposed between the ends of said sections and caps.

1,389,128. CONCRETE MOLD OR FORM. THOMAS DE LA MARE, Tooele, Utah. Filed Apr. 20, 1920. Serial No. 375,825. 8 Claims. (Cl. 25—131.5.)

3. In a mold, a contractible shell, means for operating said shell, a second contractible shell surrounding the first mentioned shell, stays attached to the second shell adjacent the ends thereof, the stays at one end having portions for receiving the respective end of the first mentioned shell, and means for detachably securing the other end of the first mentioned shell to the other stays.



1,389,129. WINDSHIELD-CLEANER. ALBERT DELL, Philadelphia, Pa., assignor of one-half to Theodore C. Ulmer, Germantown, Philadelphia, Pa. Filed Dec. 31, 1920. Serial No. 434,363. 3 Claims. (Cl. 15—59.)

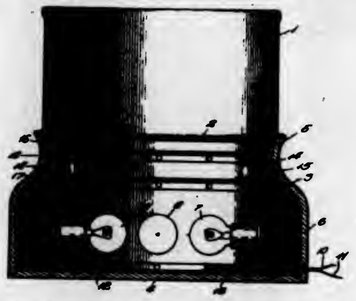
1. A wind shield cleaner comprising the combination of a wiper arm having a right angularly arranged stud adapted to be mounted for turning and endwise motion in an opening provided through the top rail of a pivotal wind shield panel and to protrude inside of the latter, a squeegee hinged at its edge to said arm and adjustable into perpendicular and parallel positions with respect to the plane of the panel to permit of opening the wind shield, means for securing the squeegee in adjusted position, a compression spring mounted on the inwardly protruding portion of the stud and reacting inward from the top rail, a lever adjustably mounted on the protruding portion of the stud and acting on the compression spring to set the tension on the squeegee, and means for turning the lever.

1,389,130. CAR-SEAT. GEORGE W. DEYER, Gardiner, N. Y., assignor, by mesne assignments, to American Motor Body Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 19, 1920. Serial No. 352,342. 8 Claims. (Cl. 155—99.)

1. In a car seat, the combination of supports, a pair of similar members pivotally secured to said supports at opposite sides thereof and each adapted to be positioned as a seat when the other is positioned as a back, and means independent of said supports for causing the movement of one member from seat to back position automatically in consequence of the movement of the other from

back to seat position due to pressure applied thereto in a generally horizontal plane.

1,389,131. FLEXIBLE GARMENT-FASTENER. MARGARET W. EARNSHAW, Glencoe, Ill. Filed Nov. 29, 1920. Serial No. 426,927. 4 Claims. (Cl. 2—142.)

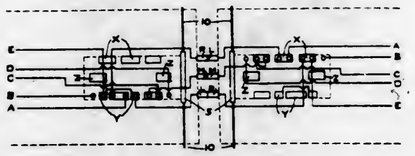


1. The combination with a garment comprising a plurality of overlapping plies provided with alined button holes, of a strip of elastic material extending across the button hole of the inner ply and secured to the inner face of said ply remote from said button hole therein, and a button having an elongated shank extending through said alined button holes and secured to said strip of elastic material, said button hole being adapted to permit a fold of said strip to be drawn therethrough when outward pull is exerted upon the head of said button.

1,389,132. ILLUMINATED LIQUID-CONTAINER. EDWARD GALAVAN, Chicago, Ill., assignor to A. L. Randall Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1918. Serial No. 255,963. 2 Claims. (Cl. 240—2.)

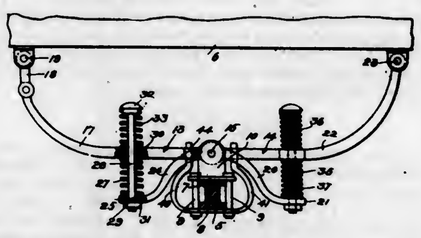
1. In a device of the kind described, a liquid container provided with an inclosing wall pervious to light and a supporting member for said container provided with a wall impervious to light and arranged to support the container

in an elevated position, in combination with a plurality of different colored lights arranged beneath the container,



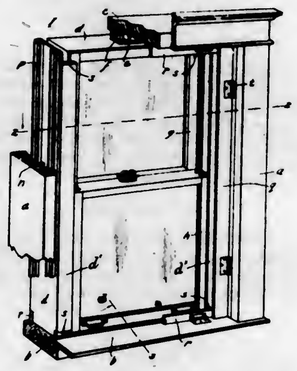
means for automatically lighting said members, and air chambers arranged between the lights and the bottom of the container.

1,389,133. HEAT-RESISTING ALLOY. JOHN T. GLEKLER, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 14, 1920. Serial No. 351,441. 3 Claims. (Cl. 75—1.)



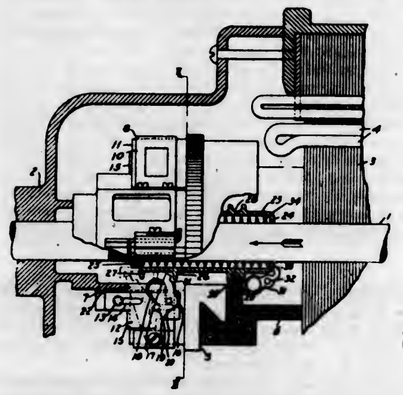
1. An alloy which is substantially nonwarping and nonoxidizing at high temperatures containing as essential ingredients substantially 15 to 40 per cent. of chromium, substantially 1 to 15 per cent. of nickel, the balance consisting principally of iron.

1,389,134. MANUALLY-OPERATED CIRCUIT-CROSSING SWITCH. JOHN B. GROSSWEGE, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1918. Serial No. 249,942. 13 Claims. (Cl. 171—313.)



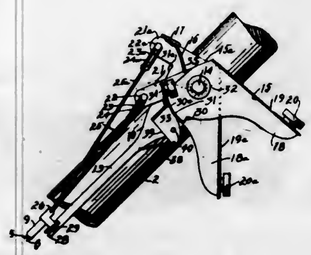
11. The combination with a crossing switch for car line circuits and having one position for direct connections and another position for cross connections, of a cam for operating said switch, and push rods extending to the opposite sides of the car for operating said cam.

1,389,135. VEHICLE-SPRING. CHARLES A. HUNT, Chino, Calif. Filed July 12, 1920. Serial No. 395,558. 2 Claims. (Cl. 267—8.)



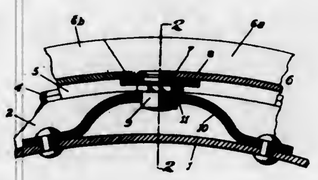
2. A vehicle spring, comprising a pair of levers pivoted in crossed relation to a vehicle axle, one of the ends of each of said levers being secured to a vehicle body, a bolt secured to each of the opposite ends of said levers and passing through apertures in the first mentioned lever ends, a compression spring adapted to surround each of said bolts and interposed between said first mentioned lever ends and said opposite ends, and a compression spring adapted to surround each of said bolts and to be interposed between said bolt heads and said first mentioned lever ends.

1,389,136. WINDOW-FRAME. ARCHIE L. HUTCHINSON, San Francisco, Calif. Filed Sept. 26, 1919. Serial No. 326,661. 9 Claims. (Cl. 20—51.)



1. In a window, comprising a frame in the window opening, a sash-frame pivoted for rotation in said window-frame, and upper and lower sashes slidable in the sash-frame, boxes on the exterior of the sash-frame, means contained in said boxes by which the window sashes are suspended and balanced, weather-strip elements on the exterior of said boxes, and auxiliary weather-strip elements carried by one of said frames and adjustable to cover the crevices between the adjacent members of the window-frame and the sash-frame.

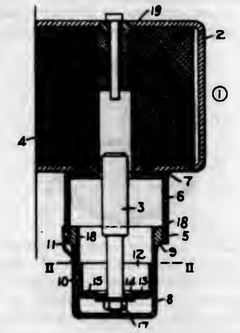
1,389,137. CONTROLLING DEVICE FOR BRUSH-HOLDER MECHANISMS. MAX E. GYSEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1917. Serial No. 200,668. 7 Claims. (Cl. 172—279.)



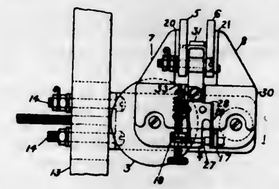
1. In a dynamo-electric machine, the combination with a commutator cylinder, a brush holder and a brush slidably mounted thereon, of a member adapted to exert yieldable pressure in opposite directions from a neutral position to engage, or to be disengaged from, said brush, and automatic means for moving said member through the neutral position.

1,389,138. SIGNAL CONTROL. WILLIAM E. HART, San Jose, Calif., assignor to Hart's Auto Signal Tail Light Co., San Jose, Calif., a Corporation. Filed Oct. 18, 1920. Serial No. 417,816. 9 Claims. (Cl. 74—39.)

1. An actuating mechanism comprising a pair of operating elements, a support for said elements, a pair of levers to which said elements are attached, a common shaft therefor, a resilient connection between each lever and said support, a releasable catch operatively mounted with relation to said levers, and means for effecting the engagement of each lever with said catch when thrown into an operative position.



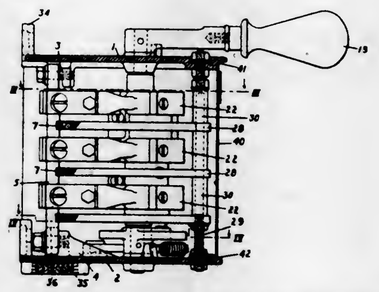
1,389,139. DRIVING-ARCH FOR WHEEL-FELLIES. LOUIS B. HARVEY, Stockton, Calif., assignor to Harvey Rim & Wheel Company, Inc., Buffalo, N. Y. Filed Mar. 8, 1920. Serial No. 364,163. 3 Claims. (Cl. 301—11.)



1. In combination with a sectional rim having a stud on one end of a section and a nut on the stud arranged in connection with a plate to lock adjacent ends of the sections against radial movement, a sleeve extension formed with the nut, the fixed rim of the wheel being provided with an orificed member to receive the said extension.

1,389,140. ELECTROMAGNET DEVICE. CHARLES H. HODGKINS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 18, 1916. Serial No. 132,086. 6 Claims. (Cl. 200—97.)

1. A time-element relay comprising movable and stationary magnetizable members, an internally screw-threaded inclosing casing mounted on the stationary magnetizable member, a movable piston connected to the movable magnetizable member and an externally screw-threaded operating dash-pot member for the piston adapted to be screwed into and out of the inclosing casing for adjusting the load setting of the relay throughout the length of the dash-pot member.



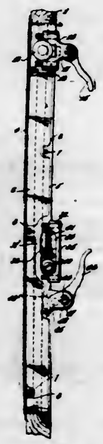
1,389,141. SWITCH. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 8, 1917. Serial No. 206,159. 3 Claims. (Cl. 200—104.)

1. A switch comprising relatively movable contact members, two operatively connected magnetizable members mounted in spaced relation to one another, and a coil disposed on one of said magnetizable member for actuating one of the contact members and for establishing a flux that is carried by the said magnetizable members across the field of movement of the contact members.

1,389,142. CONTROLLER. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 16, 1918. Serial No. 228,863. 4 Claims. (Cl. 200—10.)

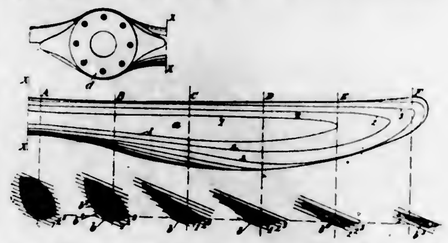
1. In a controller, the combination with an insulating support and a pair of end plates of greater width than said support secured thereto, one of said end plates having an attaching lug upon its inner face, of a drum rotatably mounted in said end plates.

1,389,143. REINFORCED TUBE AND METHOD OF MAKING IT. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1919. Serial No. 273,004. 10 Claims. (Cl. 18—55.)



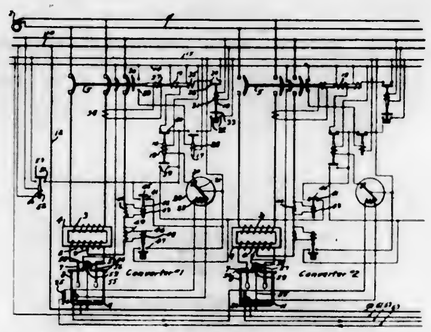
10. A method of making reinforced tubes that comprises superposing layers of sheet material, impregnated with a phenolic condensation product, about a plurality of mandrels, disposing the inclosed mandrels to engage each other, winding sheet material impregnated with a phenolic condensation product about the assembled mandrels, disposing the resulting body in a mold and subjecting it to heat and pressure.

1,389,144. RAILROAD-FROG. ROBERT EMMET KEOUGH, Montreal, Quebec, Canada. Filed July 21, 1920. Serial No. 398,032. 2 Claims. (Cl. 246—468.)



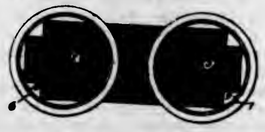
1. A railway frog comprising a point and wing-rails each presenting a leg extending from the throat of the frog to within close proximity of the point and lying at an angle to a side of the point and a contiguous leg lying parallel to such side of the point presenting a relatively great throat and diminished channel for the purpose of relieving the point.

1,389,145. WINDSHIELD. ALBERT L. LAMBERT, Narbeth, and ALFRED BELL, Philadelphia, Pa., assignors, by mesne assignments, to American Motor Body Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 29, 1920. Serial No. 354,834. 8 Claims. (Cl. 296—86.)



1. In a wind shield, the combination of fixed side frame members having guideways, a wind shield having pivots thereon mounted for sliding movement in said guideways, levers pivoted on said frame members and having pivotal connections with said shield, the pivotal points being so located that the operation of said levers in one direction raises said shield and said first named pivots and swings said shield at an angle to the vertical about said first named pivots.

1,389,146. AERIAL PROPELLER. PIERRE LEVASSEUR, Paris, France. Filed July 25, 1918. Serial No. 246,657. 2 Claims. (Cl. 170—159.)



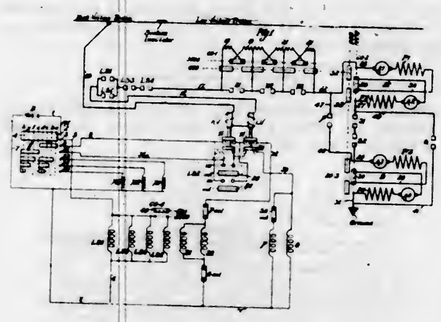
1. In a propeller a plurality of blades, each composed of plane layers of wood disposed in planes parallel to a plane which is approximately perpendicular to the reaction of the air on the blades.

1,389,147. AUTOMATICALLY-CONTROLLED VAPOR-CONVERTER SUBSTATION. WILLIAM V. LOVELL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 3, 1917. Serial No. 194,457. 6 Claims. (Cl. 175—363.)

1. The combination with an alternating-current source and a direct-current consuming circuit, of a plurality of vapor converters and means for selectively connecting one or more of said converters to said source and to said circuit in accordance with the gas pressure within said converters.

1,389,148. TRANSFORMER. WILLIAM M. MCCONAHEY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 8, 1917. Serial No. 173,510. 3 Claims. (Cl. 175—356.)

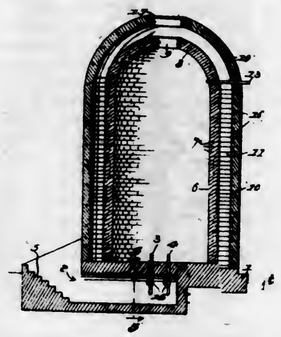
1. The combination with members to be electrically insulated from one another, of an insulating structure



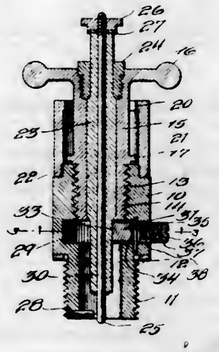
interposed therebetween that is in mechanical contact with certain edges of at least one of said members, and means for subjecting said insulating structure to uniformly distributed dielectric stresses and simultaneously avoiding a short-circuited turn.

1,389,149. INSULATING-COIL AND METHOD OF MAKING SAME. JESSE E. MATEER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1917. Serial No. 189,393. 7 Claims. (Cl. 175—21.)

1. An insulated coil comprising conductors, strips of pervious insulating material separating the conductors from one another, and layers of pervious insulating material surrounding the entire group of conductors, said layers of insulating material being impregnated with a hardened and a mechanically pressed and smoothed phenolic condensation product to form a permanently smooth exterior surface for said coil.



1,389,150. SYSTEM OF CONTROL. HARRY R. MEYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,537. 8 Claims. (Cl. 172—179.)



1. In a system of control, the combination with a plurality of supply circuits of materially different voltages and a dynamo-electric machine, of means for preventing predetermined abnormal operating conditions in said machine during operation from any one of said supply circuits, and means operative only during one type of system operation for preventing effective action of a portion of the first-mentioned means.

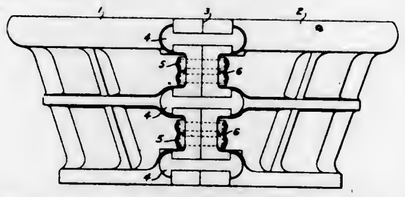
1,389,151. CISTERN. WILLIAM F. MISEGADIS, Lorton, Nebr. Filed July 23, 1920. Serial No. 398,598. 4 Claims. (Cl. 72—9.)

1. A cistern adapted to stand above the ground, comprising a base, a container arranged upon said base consisting of a brick wall, an outer wall completely housing said container and spaced therefrom forming an air space therebetween, flexible truss members arranged between said walls whereby the container will be protected from external pressures, and the outer ends of said truss members being embedded within the adjacent faces of said walls substantially as and for the purpose specified.

1,389,152. SPARK-PLUG. ROBERT WILLIAM MOORE, St. Louis, Mo. Filed Sept. 18, 1919. Serial No. 324,385. 8 Claims. (Cl. 123—169.)

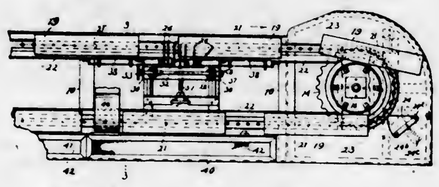
1. A spark plug of the character described, comprising a tubular body portion interiorly screw-threaded and provided with an interior chamber, a tubular carrier having a screw-threaded portion engaging within the tubular body portion, a flange formed upon the carrier and having stop lugs, a stop cap secured to the body portion and having a flange provided with openings for the passage of the lugs, an insulating sleeve held within the carrier, a cleaning element arranged within the interior chamber and engaging the insulating sleeve, and an electrode arranged within the insulating sleeve, and a coacting electrode arranged near the first named electrode.

1,389,153. RESILIENT WHEEL. GEORGE W. MOREHOUS, Callao, Utah. Filed Nov. 19, 1919. Serial No. 339,024. 4 Claims. (Cl. 152—46.)



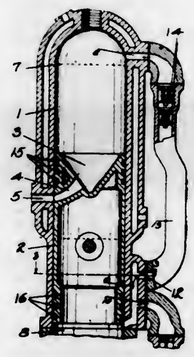
1. A resilient wheel comprising an inner hub, an outer hub including a pair of companion sections, fastening elements extending through the inner hub for uniting the

sections of the outer hubs together, an annular cushioning member interposed between the inner and outer hubs and



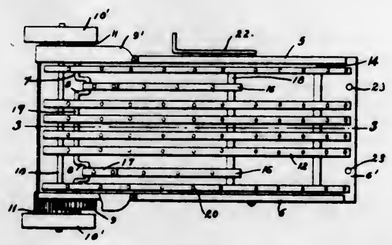
cylindrical pneumatic cushioning members carried by the inner hub for receiving and supporting said fastening elements.

1,389,154. METHOD OF FASTENING. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 5, 1917. Serial No. 206,103. 2 Claims. (Cl. 29—84.)



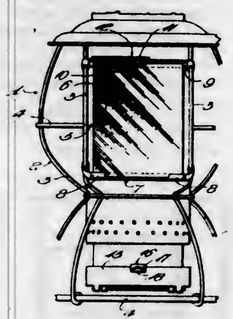
1. The method of fastening together a plurality of elements by means of a hollow connecting member having a pair of adjustable clamping surfaces, by immovably associating the connecting member at its medial portion with said elements whereby free expansion of the member away from said medial portion is permitted, heating the interior of the connecting member to cause expansion of the ends thereof away from said medial portion, adjusting the clamping surfaces toward said medial portion while said member is heated, and permitting said member to contract to draw said elements together.

1,389,155. LEAD-BURNING MACHINE FOR STORAGE-BATTERY PLATES. PAUL E. NORRIS, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Oct. 10, 1918. Serial No. 257,676. 10 Claims. (Cl. 113—59.)



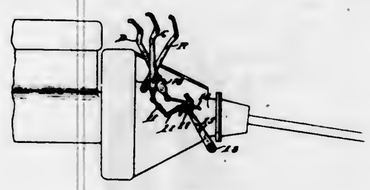
1. In a machine for lead-burning straps to groups of storage battery plates, an elongated conveyer frame, a conveyer in the form of an endless chain traveling in substantially a horizontal path, racks carried by the conveyer adapted to be carried through a closed path, and lead-burning apparatus including flame directing devices located at one side of the frame, and tables for loading and unloading the racks at the opposite side of the frame.

1,389,156. TWO-CYCLE ENGINE. COURTLAND N. PACKER, Battle Creek, Mich. Filed Nov. 10, 1920. Serial No. 423,064. 3 Claims. (Cl. 123—74.)



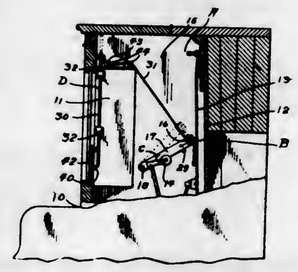
1. In a two cycle engine, the combination of a cylinder and a piston having a centrally disposed inverted conical recess in its head and an exhaust passage leading from the inner end of said recess, said cylinder being provided with an exhaust port with which said piston passage registers when the piston is at the end of its in-stroke, and with an inlet port opening into the cylinder at a point beyond the out stroke of the piston, there being a compression chamber at the inner end of the piston provided with a delivery connection to said inlet port and piston rings at the ends of said piston, the rings at the head end of the piston being at the outer side of the exhaust passage of said piston.

1,389,157. SEED-STRIPPER. WILLIAM J. PARTTRIDGE, Clinton, La. Filed Aug. 12, 1920. Serial No. 402,945. 2 Claims. (Cl. 56—207.)



2. In an attachment for mowers, a seed pan including side members, a power shaft supported by the side members, said power shaft having crank arms, a plurality of agitating arms supported between the side members, relatively short agitating arms associated with the first mentioned arms and having connection with the crank arms of the power shaft, means for supporting the arms in spaced relation with each other, means for transmitting motion to the agitating arms, and means for raising and lowering the seed pan.

1,389,158. SIGNAL-LANTERN. LOUIS D. PETERS, Jackson, Ohio. Filed Oct. 4, 1920. Serial No. 414,590. 2 Claims. (Cl. 240—39.)



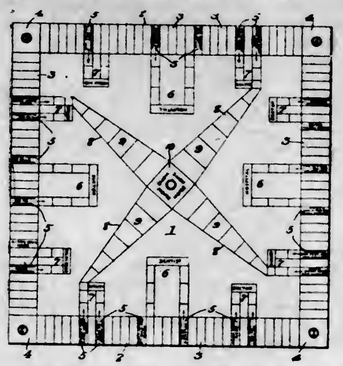
1. In combination, a lantern provided with a chimney guard in the form of an open-work wire cage having a relatively large space in one side, the wires of said cage being disposed horizontally and vertically and spaced from one another, a cross-piece carrying spaced channel seats, said cross-piece being disposed horizontally between and connected to the vertical wires and bounding the lower side of said open space, and an angle-iron spaced above and arranged in parallelism with the aforesaid cross-piece, being disposed between the same vertical wires at the upper side of said space, a piece of colored glass arranged in the aforesaid open space, having its lower edge resting in said seats, its upper end coacting with said angle-iron, the horizontal flange of the latter being notched intermediate its ends, and a spring retainer for the glass carried by said horizontal flange, including a tongue depending through said notch and extending in front of said glass to hold the latter in place.

1,389,159. BRAKE ATTACHMENT FOR AUTOMOBILES. FREDERICK REYNOLD PETERSON, Spokane, Wash. Filed Nov. 22, 1919. Serial No. 339,880. 1 Claim. (Cl. 74—81.)

In an automobile brake mechanism, in combination, a service brake foot pedal, a transverse rocking controller shaft in the rear of said pedal, a speed crank arm on said shaft, and connecting means between the lower end of said pedal and said crank arm, said means comprising a casting including a waist portion having a transverse socket by which it is pivotally mounted on one end of the aforesaid pedal shaft, an upper arm extending from said waist portion in a plane oblique to the longitudinal axis of said casting and against said pedal lever, perforated lugs extending from the opposite edges of the waist portion, a U bolt embracing said pedal lever and adjustably connected at its free ends with said perforated lugs, said upper arm having adjacent its upper end rearwardly bent claws projecting from its opposite edges and engaging the side edges of said pedal lever to prevent lost motion between said arm and pedal lever, a lower arm projecting from the waist portion below the socket, and offset laterally with respect to the longitudinal axis of the casting, said lower arm terminating in an eye or transverse opening, and a link connecting said eye with the aforementioned crank arm, said link comprising a rod having longitudinally bent body portion, a lateral extension at its upper end removably held in said eye, the lower portion of said link offset laterally and terminating in a loop slidably engaging the crank arm below the usual cam carried at the end thereof.

1,389,160. TONE-MODULATING DEVICE FOR PIANOS. ROLAND C. PINDER, Lima, Ohio, assignor to P. & F. Manufacturing Company, Minster, Ohio, a Firm composed of George H. Knostman and Alfred B. Fischer. Filed Sept. 8, 1920. Serial No. 408,811. 5 Claims. (Cl. 84—224.)

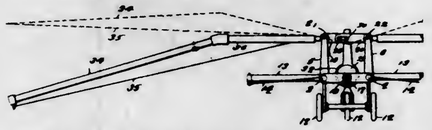
1. The combination with a piano including strings and hammers, of an attachment for the piano including a rail, arms carried by the rail, means pivotally securing the free terminals of the arms to the piano, a plurality of flexible finger strips secured to the rail and arranged between the strings and hammers, a vertically disposed sliding operating rod, friction guides for said rod to hold the same in adjusted position, and a flexible cable connected to the upper end of said rod and to the rail whereby upon movement of the rod, the rail will be raised or lowered.



1,389,161. METHOD OF PRODUCING TRANSPARENT EMULSION. THOMAS M. RECTOR, Baltimore, Md., assignor to Musher & Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Nov. 11, 1919. Serial No. 337,288. Renewed July 23, 1921. Serial No. 487,128. 2 Claims. (Cl. 167—7.)

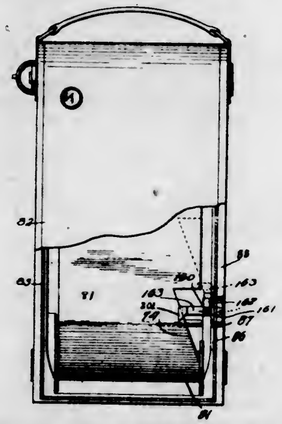
1. The method of producing a transparent emulsion consisting in adding to one or more of the substances to be emulsified, such products soluble therein as will render the refractive indices of the substances identical and then emulsifying the same.

1,389,162. EDUCATIONAL GAME. CHARLES PAUL REED, Indiana, Pa. Filed June 25, 1920. Serial No. 391,588. 3 Claims. (Cl. 46—63.)



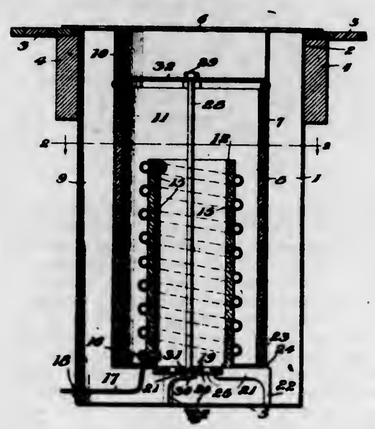
1. In an instructive or educational game, the combination with a game board comprising a continuous main circuit divided into spaces, some of said spaces containing hazards or legends involving certain problems, of a series of sub-circuits or branching off retarding spaces containing penalties, to which the players are directed, and around which they are conducted from, and returned to,

the main circuit, said branches indicating the necessary answers for, or relief from said problems, and a home



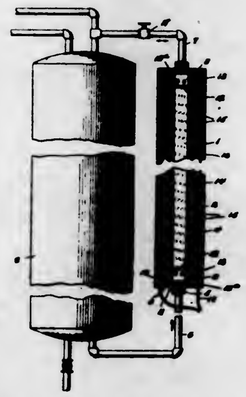
sector furnishing the final objective adapted to be connected to certain selected sub-circuits or branching off sections.

1,389,163. AEROPLANE. PAULUS JACOBUS REUSER, Amsterdam, Netherlands. Filed Jan. 22, 1921. Serial No. 439,224. 5 Claims. (Cl. 244—20.)



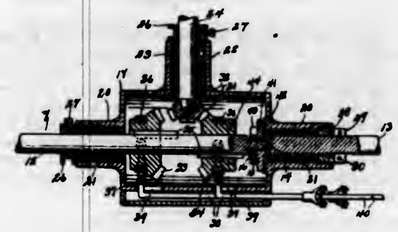
1. In an aeroplane, a tail plane, wings pivotally mounted on longitudinally extending rods, a motor and transmission mechanism between said motor and said wings for oscillating them, each wing consisting of two inflexible connected planes having a frame rigid throughout its length, said planes being at a permanent angle to each other in order that the air may be scooped and compressed by the wing as it descends but cut by the wing as it ascends, without independent movement of any part of the wing.

1,389,164. BACK-LOCK FOR CAMERAS. ANDREW H. ROIKJER, Boise, Idaho. Filed July 1, 1920. Serial No. 393,823. 5 Claims. (Cl. 95—31.)



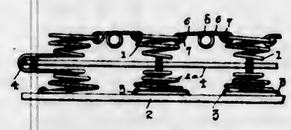
1. In a camera adapted to be used with a film having a cutout or notched portion in its leader, the combination of a spring-controlled locking element adapted to engage the cutout portion of the leader and to be swung from a non-locking to a locking position by the winding of the film, and a camera back having a slotted portion adapted to be engaged by the aforesaid locking element when the leader portion of the film is wound, whereby to lock the camera back to the camera until the completion of the winding of the film.

1,389,165. ELECTRIC HOT-AIR HEATER. OLIVER P. SCOTT, Tacoma, Wash. Filed Sept. 1, 1920. Serial No. 407,391. 7 Claims. (Cl. 219—39.)



1. An electric air heater of the class described including an outer casing, a radiator or grating extending across the top of the outer casing, an inner wall or casing arranged within the outer casing in spaced relation with the walls of the same and having a portion extending entirely up to the said casing to prevent air from passing over the top of the inner wall or casing, and a heating element arranged within the inner wall or casing and adapted to cause a positive circulation through the heater.

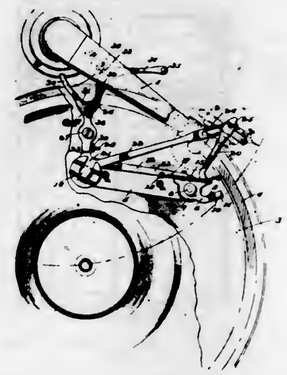
1,389,166. WATER-HEATER. OLIVER P. SCOTT, Tacoma, Wash. Filed Sept. 25, 1920. Serial No. 412,741. 2 Claims. (Cl. 219—39.)



1. A water heater of the class described including inner and outer tubular members spaced apart to provide an intervening water space, heads provided with threaded openings to receive pipe connections and counterbored at the inner portion to form seats for the ends of the inner tubular member, the latter being provided in its terminal portions with openings communicating with the said water space, said outer tubular member being secured to the exterior of the counterbored portions of the heads and the latter being enlarged exteriorly to form seats for the outer tubular member, spaced closures arranged within the inner tubular member and located between the openings, a heating coil, and a body of non-conducting material also supporting the heating coil.

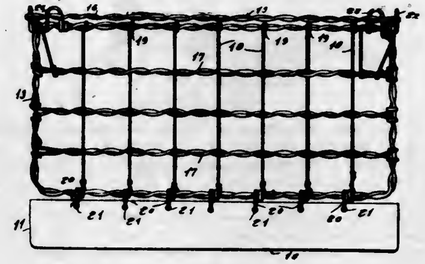
1,389,167. AUTOMOBILE POWER-TRANSMITTING DEVICE. SAMUEL L. SHUSTER and GEORGE J. RIEGERT, St. Joseph, Mo. Filed Dec. 27, 1919. Serial No. 347,823. 3 Claims. (Cl. 74—7.)

1. An automobile power transmitting device, comprising a main auto drive shaft, composed of front and rear sections, a housing forming bearings for the sectional portion of said shaft, a transverse shaft having its outer end provided with a power communicating element, and its inner end journaled in said housing and provided with a beveled gear, a pair of separately and independently sliding beveled gears keyed on the front section of said drive shaft within said housing and upon opposite sides of said first gear, and independent gear shifting means for separately moving either of said pair of gears into engagement with said first gear.



1,389,168. BED-SPRING AND AUTO-CUSHION. ANDREW FREDERIC STURM, Nehawka, Nebr. Filed Sept. 11, 1920. Serial No. 409,530. 4 Claims. (Cl. 5—29.)

2. In a mattress or cushion, the combination with the supporting frame, of coil springs seated on the frame, each spring consisting of two similar portions of greatest diameter at the outer ends, and tapering toward their meeting ends, and connected by a coil offset radially from the axis of the spring, a frame passing through the coils of the outermost springs of the mattress, and resilient connections between the outermost coils of the adjacent springs.

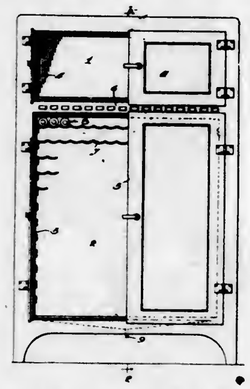


1,389,169. AUTOMATIC STARTING AND STOPPING MECHANISM FOR PHONOGRAPHS. JULIUS C. TORCHIA, Hazleton, Pa. Filed June 9, 1920. Serial No. 387,655. 6 Claims. (Cl. 192—116.)

1. In automatic starting and stopping mechanism for phonographs controlled through the movement of the tone arm, a brake member, a tripping member mounted for oscillatory movement and connected with the brake member, means tending to move the brake member to active position, a detent for holding the brake member in inactive position and adapted to be rendered inactive upon

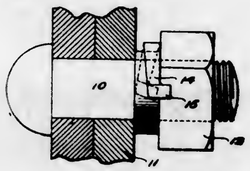
movement of the tripping member in one direction, and an actuating element for movement with the tone arm and for coaction with the tripping member.

1,389,170. POULTRY-CRATE. WILLIAM TUCKER, Fruitvale, Tex. Filed June 4, 1918. Serial No. 238,123. 2 Claims. (Cl. 220—6.)



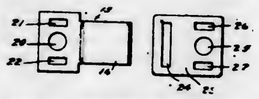
1. A crate having a bottom provided with upwardly extending side and end wall extensions terminating in reinforcing beads, side and end walls having marginal and filler elements of which the latter are extended beyond the lower marginal elements and are provided with eyes or loops passing through openings in the upper edge portions of the wall extensions of the bottom to hingedly connect said walls with the wall extensions of the bottom, and a top or cover having marginal and filler elements and an opening fitted with a displaceable gate, said top or cover being adapted to be nested within said bottom.

1,389,171. REFRIGERATOR. BENDETTO URSO, Watson, W. Va., assignor of one-half to Chester C. Shinn, Fairmont, W. Va. Filed Oct. 30, 1919. Serial No. 334,425. 1 Claim. (Cl. 45—71.)



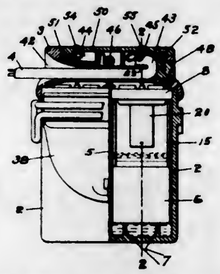
A refrigerator having its interior divided into communicating chambers forming, respectively, an upper ice chamber and a lower storage chamber, an ice-rack between the chambers, a drain in the storage chamber, and a plurality of vertically spaced shelves extending transversely of the storage chambers between the drain and the ice-rack for supporting articles in the path of

the ice-drippings, said shelves provided with means for successively collecting and draining the drip-water from



the articles of a higher shelf to the articles of a lower shelf whereby the drip-water may be brought into direct contact with each article of every shelf.

1,389,172. NUT-LOCK. ERNEST WARD, Independence, Mo. Filed Sept. 7, 1920. Serial No. 408,447. 1 Claim. (Cl. 151—51.)

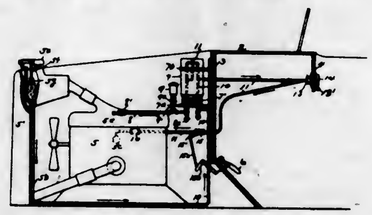


A nut lock comprising a washer formed of a single strip of material and tapering in width at one end and in thickness at its opposite end, the said strip being coiled to provide an annulus having the tapered width end located in the innermost convolution and the tapered thickness in the outermost convolution, whereby the latter may be moved transversely of the width of the washer within said width and a lug carried by the tapered end of the strip and disposed axially of the washer and normally projecting beyond its edge.

1,389,173. SNAP-FASTENER. WILLIAM F. WATKINS, Seattle, Wash., assignor to Watkins Appliance Company, Inc., Seattle, Wash., a Corporation. Filed Sept. 7, 1920. Serial No. 408,427. 6 Claims. (Cl. 24—201.)

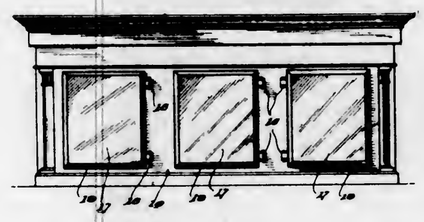
4. A snap fastener comprising a snap member formed of a thin flat piece of resilient metal bent double midway of its length and having its two parts spaced from each other toward the forward end thereof with the terminal end of one hook normally engaging the outer flat face of the other hook, hook members formed by bending the extremities of the two parts of said snap member inwardly at an angle of more than ninety degrees thereby leaving a V shaped guideway that extends across the forward end thereof, and a clip formed of a thin flat piece of metal having a transverse slot near the forward edge thereof within which said hook members may engage.

1,389,174. STORAGE BATTERY. GRANT WHEAT, Marlboro, Mass., assignor to Koehler Manufacturing Company, Marlboro, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1919. Serial No. 315,684. 16 Claims. (Cl. 204—29.)



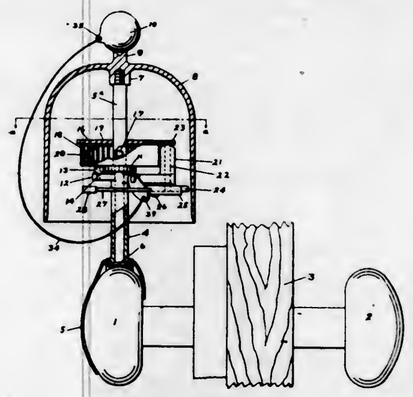
1. A storage battery, having, in combination a casing provided with an open end, battery elements located in said casing, and a seal for said open end comprising a yielding gasket positioned in said end, upper and lower cover plates having marginal portions bearing on said gasket, and screw threaded means for forcing said plates toward each other to expand the gasket into firm engagement with the walls of said opening, said screw threaded means extending into, but not through, said lower cover plate.

1,389,175. MAKINGS-TOBACCO POUCH. THOMAS WRIGHT, Grandview, Manitoba, Canada. Filed Mar. 2, 1920. Serial No. 362,856. 1 Claim. (Cl. 150—0.5.)



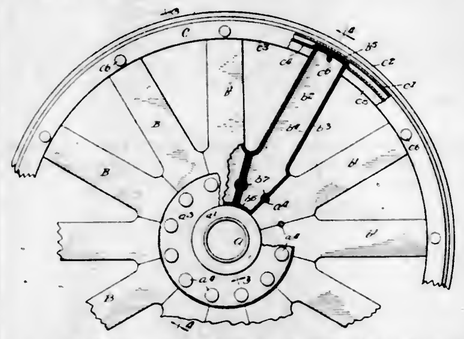
A pouch having foldable members, a tobacco receiving pocket carried by one of said members opening in the direction of the fold line of the members and having its opening arranged in close proximity to said fold line, a narrow flap secured at the fold line of said members for closing said pocket and for use as a guide for directing the tobacco into a cigarette paper, a pocket carried by the other of said members for the reception of a package of cigarette papers and opening in the direction of the fold line of the members and having its opening spaced slightly from said fold line, said package adapted to engage said flap and thereby securely close said tobacco pocket when the members are in their closed relation, and releasable means for securing said members in such relation.

1,389,176. COMBINED LUBRICATOR AND HUMIDIFIER. EUGENE E. YOUNG, Syracuse, N. Y. Filed Sept. 10, 1920. Serial No. 409,462. 5 Claims. (Cl. 123—25.)



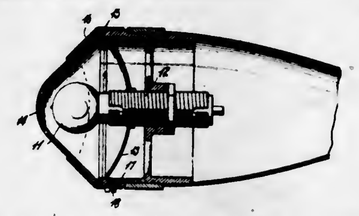
1. The combination with a radiator and a water cooled internal combustion engine having an intake manifold, of a tank adapted to supply a vapor to said manifold, a pipe for conducting hot vapor from the radiator into the bottom of said tank, an oil cup located outside of the tank, a pipe for conducting a portion of the cooling water from the engine and also oil from said cup into the bottom of said tank, a pipe for conducting aqueous vapor impregnated with oil from said tank to said manifold, and a gage for predetermining the volume of the vapor that may be drawn from said tank.

1,389,177. DISPLAY APPARATUS. WILLIAM R. AIMES and GEORGE H. T. SCHAEFER, Atchison, Kans. Filed July 19, 1919. Serial No. 312,004. 13 Claims. (Cl. 40—96.)



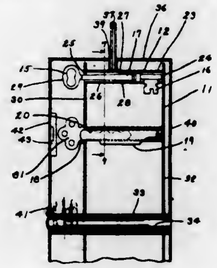
1. In a display apparatus, the combination of a cabinet having a display window therein a door in the back of said cabinet, an endless belt traveling in a plurality of substantially vertical runs within said cabinet, means for moving said belt past said window, the rearmost run of said belt being pivotally supported whereby it may be moved outwardly through the door opening in the rear of said cabinet.

1,389,178. PORTABLE BURGLAR-ALARM. FRANK BACON, Bayside, N. Y. Filed Nov. 23, 1920. Serial No. 425,977. 2 Claims. (Cl. 116—79.)



1. A device of the type described comprising a bell having an open bottom, an upright supporting member projecting through the open bottom of said bell, for attachment to the inner top portion of the latter, a spring clamp secured to the lower end of said supporting member for attachment to the inner knob of a door. clapper mechanism secured to said upright member within the bell, a weight, and a flexible connection between said weight and clapper mechanism for the purpose specified.

1,389,179. METAL WHEEL. GERALD G. BARRY, Chicago, Ill. Filed Aug. 9, 1919. Serial No. 316,513. 6 Claims. (Cl. 301—85.)



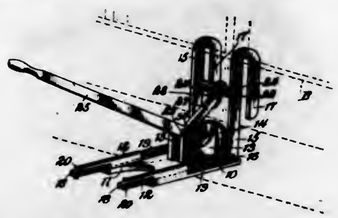
1. In a wheel, the combination with suitable hub and rim members of a supporting structure between the said two members consisting of a series of spokes, each spoke comprising a complemental pair of pressed metal members, the main body plates being spaced apart, an integral flange on each following around the body plate, the flange from one side plate telescoped within the other, and both said flanges extending substantially across the spaced distance between the main plates, substantially as set forth.

1,389,180. ILLUMINATION-LIGHT. ROBERT H. BENNETT, Washington, D. C. Filed Dec. 6, 1920. Serial No. 428,570. 4 Claims. (Cl. 240—48.4.)

1. In a device of the character described, in combination, a lamp casing having an opening, a substantially conical globe covering said opening in the lamp casing, a source of light within the casing and in close proximity to the apex of said globe, a shield operatively associated with the globe having an opening formed by the intersection of two planes permitting the emission of light through a dihedral angle.

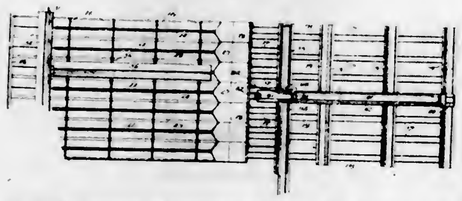
1,389,181. KEY-CABINET. JACOB BENSON, Bristol, Conn. Filed Aug. 26, 1920. Serial No. 406,065. 7 Claims. (Cl. 211—7.)

1. A key cabinet structure comprising a casing having a rear wall that is adapted to be opposed to a supporting



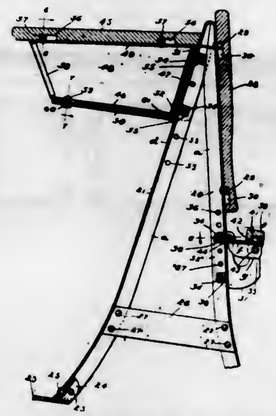
wall, a shaft extended forwardly from said rear wall nd supported therefrom in fixed position, a drum having a plurality of sockets mounted to rotate on said shaft, the receiving ends of said sockets being positioned at the end portion of said drum that is remote from said rear wall, a handle for rotating said drum, and said handle being connected to the drum at the periphery thereof, and in a radial plane intermediate said receiving ends and rear wall.

1,389,182. ROTARY WASHING-MACHINE. GOTTLOB BINDER, Palmyra, N. J. Filed Mar. 31, 1920. Serial No. 370,094. 2 Claims. (Cl. 68—18.)



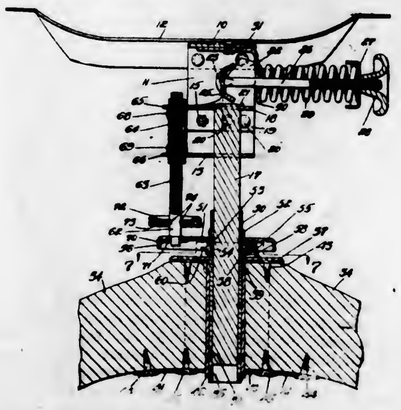
1. A washing machine comprising a cylinder, a plurality of longitudinal ribs extending in a radial direction from the inner face of the cylinder, said ribs being of general oval form, the diameter of said ribs being greater between the ends than at the ends and having longitudinal corrugations arranged to be engaged by articles being washed, the inner face of the cylinder between the ribs being of concave form.

1,389,183. WRECKING-TOOL. EDWARD F. BURKE, Sioux City, Iowa, assignor of one-fourth to John M. Lichty, Sioux City, Iowa. Filed July 20, 1920. Serial No. 397,652. 9 Claims. (Cl. 251—131.)



1. In a wrecking tool, a base or frame, a lever pivotally mounted on the frame, a pulling hook slidably mounted on the frame, means imparting to the hook a normal tendency to remain in a position at one end of the frame and projecting beyond said end whereby the hook may engage over a board without displacement from its normal position, and means connecting the hook and lever whereby swinging the lever slides the hook toward the other end of the frame.

1,389,184. METHOD AND PLANT FOR STORING AND AVERAGING MATERIALS. DAVID COLE and JULIUS BERGMAN, El Paso, Tex. Filed Dec. 3, 1919. Serial No. 342,299. 20 Claims. (Cl. 214—17.)

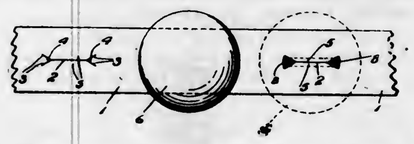


1. That method of conserving heat in the storage of ores in a series of parallel juxtaposed bins, which consists in bedding a series of adjacent bins less than the whole number of bins; thereafter bedding the empty bin adjacent one end of said series and simultaneously reclaiming ore from the full bin at the opposite end of said series, and continuing these bedding and reclaiming operations at opposite ends of the series of bedding bins, the transfer of such operations from bin to bin proceeding in like directions at opposite ends of said series of bedded bins.

1,389,185. COMBINED SCHOOL DESK AND SEAT. DAVID R. COLLINS, Gardner, Mass., assignor to Collier-Keyworth Company, Gardner, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1919. Serial No. 283,360. 1 Claim. (Cl. 45—6.)

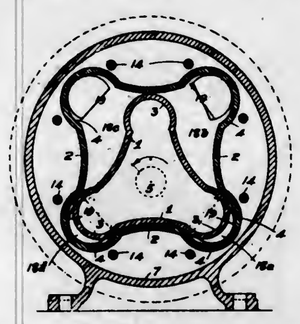
In a school desk, side standards, sheet-metal end walls each having inturned marginal flanges at its upper and lower edges, said flanges being formed with downwardly and upwardly extending lips, respectively, and the upper flange having top-securing studs, a top resting upon the upper flanges and interlocked with said studs, a bottom resting upon the lower flanges and secured thereto, and a front wall embraced by said lips and held thereagainst by said bottom, said end walls having forwardly extended portions secured to said side standards.

1,389,186. CHAIR-IRON. DAVID R. COLLINS, Gardner, Mass., assignor to Collier-Keyworth Company, Gardner, Mass., a Corporation of Massachusetts. Filed Dec. 9, 1920. Serial No. 429,341. 17 Claims. (Cl. 155—93.)



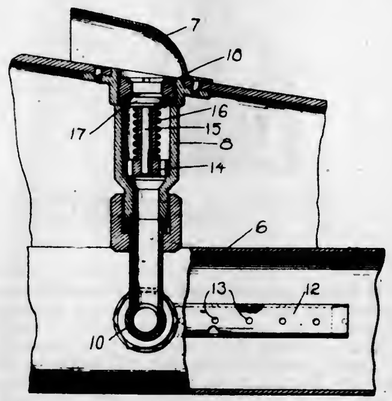
1. In a chair iron, a seat-supporting head, a non-rotatable main hub, a spindle fixed to said head and having a sliding and rotatable engagement with the inner wall of said hub, and head adjusting means parallel to said spindle, resting rotatably on said hub and adapted to rotate with said spindle and to slide said spindle in the hub.

1,389,187. PROCESS FOR THE MANUFACTURE OF VALERIANIC ACID AND OF ALKALINE VALERIANATES. LUCIEN DUPONT, Vincennes, France, assignor to himself and Societe Darrasse Frères, Paris, France. Filed Dec. 20, 1919. Serial No. 346,430. 5 Claims. (Cl. 23—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)



1. A process for making alkali-valerianates and valerianic acid, comprising heating, under super-atmospheric pressure, caustic soda and amyl-alcohol so as to react to form sodium valerianate, the representative temperature limits being 235–250° C.

1,389,188. PACKAGE OF BUTTONS. WILLIAM E. ELLIOTT, Grand Rapids, Mich., assignor to American Button & Fastener Company, a Corporation of Maine. Filed Jan. 17, 1916, Serial No. 72,651. Renewed June 8, 1918. Serial No. 238,061. 21 Claims. (Cl. 218—28.)

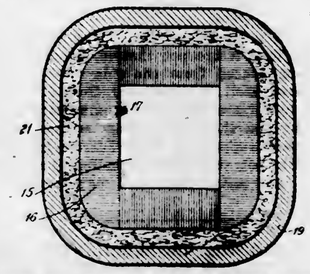


1. In a package of buttons, a member having an elongated cut therethrough with branch cuts at each end of said elongated cut located at an angle to each other, thereby forming a tongue at each end of the elongated cut and a locking tongue at each side of said cut, and a button having a loop attached to said member by the said tongues, substantially as described.

1,389,189. ROTARY MOTOR OR PUMP. ERNEST FEUERHEERD, Walton, England. Filed June 10, 1919. Serial No. 303,198. 3 Claims. (Cl. 103—44.)

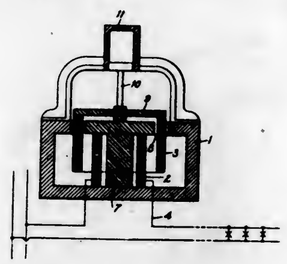
3. In a rotary apparatus, the combination with an outer member of an inner member contained therein and eccentric thereto, said inner member having three or more projections formed with cylindrical surfaces of more than semi-circular cross sections, and said outer member having a number of recesses greater by one than the number of said projections formed with flat surfaces with which the said cylindrical projections engage to form fluid tight pockets of varying capacity, means for mounting the members for relative rotary motion, the said cylindrical projections being formed about axes which pass through the corners of an equilateral polygon and said recesses being formed about axes which pass through the corners of an equilateral polygon having one more side, all of the sides of said polygons being of equal length.

1,389,190. TORPEDO. JAMES A. FLINT, Denver, Colo., assignor to the Government of the United States. Filed Oct. 16, 1920. Serial No. 417,471. 1 Claim. (Cl. 114—20.)



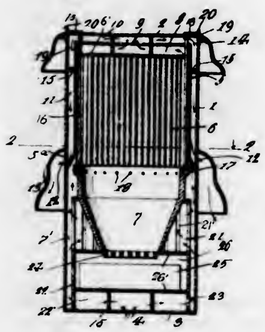
In a torpedo, in combination, two exhaust tubes extending longitudinally at opposite sides of the after-body, a centrally disposed vertical pipe, branch pipes at one end thereof extending to each exhaust tube, spray pipes longitudinally disposed centrally in said exhaust tubes and communicating with said branch pipes, a valve at the opposite end of said vertical pipe, a scoop on the outside of said torpedo adapedt to direct water downwardly into said vertical pipe against the valve and spring means adapted to hold the valve closed until overcome by the pressure of the water thereagainst.

1,389,191. TITANIUM PIGMENT AND METHOD OF ITS PRODUCTION. VICTOR MORITZ GOLDSCHMIDT, Christiania, Norway, assignor to Titan Co. A/S., Christiania, Norway. Filed Sept. 27, 1918. Serial No. 255,960. 14 Claims. (Cl. 134—58.)



1. Process of producing titanium pigments from titaniferous materials, which comprises heating said materials together with a reducing agent until titanium is present in the trivalent form.

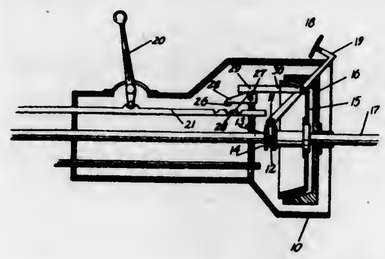
1,389,192. HEATER AND HEAT INSULATION. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed July 26, 1917. Serial No. 182,815. 14 Claims. (Cl. 219—19.)



1. A heat insulating means comprising a porous body of heat insulating material, and means for causing a heat carrying fluid to flow through the body in opposition to the flow which the heat losses tend to produce.

1,389,193. REACTANCE-COIL. GEORGE HARLOW, Altrincham, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 20, 1916. Serial No. 104,793. 4 Claims. (Cl. 171—242.)

1. A reactive protective device for an electrical circuit comprising two relatively movable coils, one of said coils being adapted for connection in the electrical circuit and the other coil being closed upon itself, a magnetic circuit therefor, means for retarding the movement of one of the coils when an increased mutual repulsion between the coils results from abnormal current conditions obtaining in the associated electrical circuit.

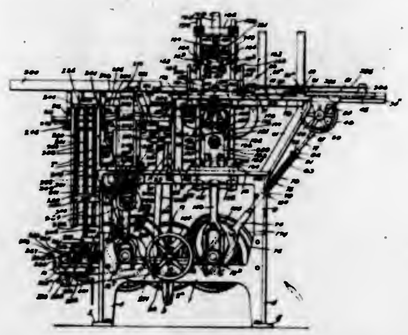


1,389,194. HEATING-STOVE. HENRY H. HARRIS, Peru, Ind. Filed Dec. 6, 1918. Serial No. 265,581. 5 Claims. (Cl. 126—67.)

4. In a heating stove, an outer casing having an opening in its bottom, a fire pot therein, a supporting shell in said casing spaced from the side walls thereof, the bottom of said shell being spaced from the bottom of said casing to form a chamber communicating with the space between the shell and casing, an ash chamber in said shell, said supporting shell surrounding and supporting the fire pot and having openings therein whereby air between said casing and shell may circulate around the fire pot.

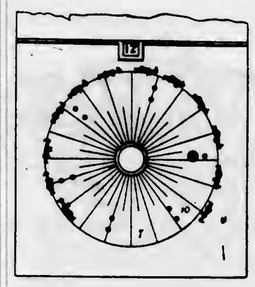
1,389,195. GEAR-SHIFTING MECHANISM. LOREN B. HORR, State College, N. Mex. Filed Feb. 7, 1920. Serial No. 356,970. 2 Claims. (Cl. 74—83.)

1. In a transmission lock-out, gear shifting rods, means for operating the said rods, the said rods having recesses, a dog, means for pivotally mounting the dog whereby it enters the recesses of the rods, serrations on the edge of said dog, a link having teeth engaging the serrations of the



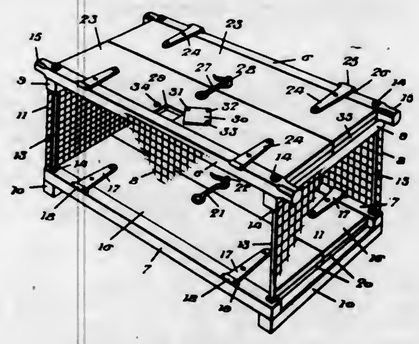
dog, a clutch operating lever, and means whereby the said link and clutch operating member are operated simultaneously.

1,389,196. RIBBON-BRACELET CLASP. RUFUS KING, Plainville, Mass., assignor to Bugbee & Niles Company, North Attleboro, Mass. Filed Mar. 7, 1921. Serial No. 450,358. 4 Claims. (Cl. 24—213.)



1. In a clasp, a male member having upper and lower confronting pairs of ribbon engaging arms and having a longitudinal slot between the arms, a curled clasp borne by each side of the member and disposed central of the length thereof and extending outwardly from the respective opposite sides of the slot, and a female member formed of a blank having a ribbon receiving slot and having an opening with end walls for engagement with the respective clasps, the opening being common to each clasp and receiving both.

1,389,197. TRAY-MAKING MACHINE. ALOYSIUS J. KUSTERER, Richmond, Va., assignor to Consolidated Paper and Box Manufacturing Company, Richmond, Va., a Corporation of Virginia. Filed May 29, 1920. Serial No. 385,361. 61 Claims. (Cl. 93—41.)



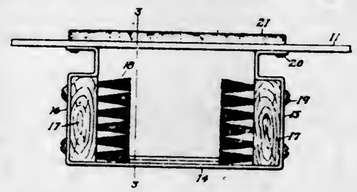
1. In a tray forming mechanism, the combination of forming devices, means for feeding blanks singly to said forming devices including a blank support, means for holding the blanks flat upon said support, guides at opposite sides of said forming devices beneath which the edges of the blanks are adapted to slide, and stops on said guides adapted to register the blanks with the forming devices.

1,389,198. PUZZLE. EMIL LANGE, Montreal, Quebec, Canada. Filed Nov. 29, 1919. Serial No. 341,538. 2 Claims. (Cl. 46—41.)

1. In a puzzle, an outer disk having pictures or characters thereon at the edge portion, a rotatable rear member secured to said disk and a middle sheet member having pictures or characters thereon adapted to complete the aforesaid pictures and characters and formed to limit the travel of the outer disk to bring the parts of the pictures or characters into register on both forward and return rotation.

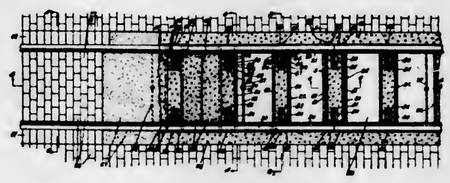
1,389,199. FOLDING CRATE FOR POULTRY AND OTHER PRODUCTS. CASWELL LEE LEONARD, Corinth, Miss. Filed Feb. 27, 1920. Serial No. 361,614. 4 Claims. (Cl. 217—48.)

1. A folding crate having walls, each comprising upper and lower bars and a fabric panel secured at its upper and lower edges to said bars, the bars of the walls having their terminals overlapping one another, a rod at each corner extending through the corresponding terminals of both the upper and lower bars to hinge said bars together, and elements on said bars for holding them in position and for supporting the upper bars by said rods from the lower bars.



1,389,200. WRENCH. AANE LINDE, Macrorie, Saskatchewan, Canada. Filed Sept. 4, 1920. Serial No. 408,400. 2 Claims. (Cl. 81—63.)

1. A wrench consisting of a handle, a head pivotally mounted in one end of said handle, tension means holding said head at an angle to said handle, a means for locking

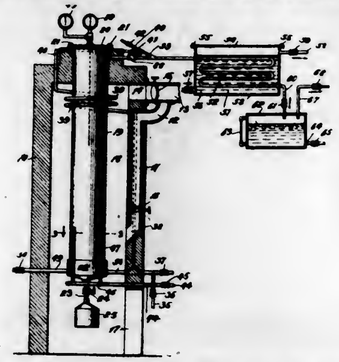


said head at a different angle to said handle and a means for operating said locking means.

1,389,201. SHOE-SCRAPER. ARTHUR P. LINVILLE and CLARENCE E. LINVILLE, Berkeley, Calif. Filed Jan. 2, 1920. Serial No. 348,818. 3 Claims. (Cl. 15—2.)

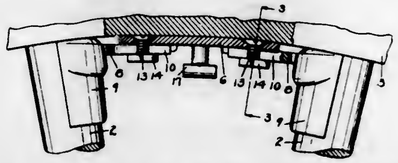
1. In combination with a vehicle step, a pair of spaced hangers depending therefrom, said hangers each having an opposing offset portion, brush members having rigid backs fixed in the offset of each hanger with their brushes projecting toward each other, and sufficiently separated to frictionally allow a shoe to pass between them, and connecting means between the lower ends of said hangers.

1,389,202. TRACK CONSTRUCTION FOR RAILWAYS. THOMAS H. LOVE, Cincinnati, Ohio. Filed Feb. 21, 1921. Serial No. 446,659. 6 Claims. (Cl. 238—7.)



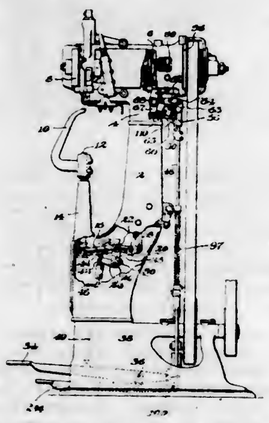
1. A track construction comprising a plurality of concrete ties, rails supported by said ties, means embedded in said ties for securing said rails thereon, integral projections on said ties, and a plurality of bodies of concrete adapted to be poured between said ties and about said integral projections, whereby said ties and said bodies of concrete form an integral support for said rails.

1,389,203. APPARATUS FOR RECOVERING AND SECURING VOLATILE PRODUCTS FROM RELATIVELY FIXED HEAT-RESISTANT SUBSTANCES. HENRI EDWIN LUTZ, Pittsburgh, Pa. Filed Nov. 14, 1918. Serial No. 262,615. 9 Claims. (Cl. 196—19.)



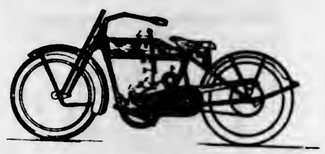
1. An apparatus for distilling carbonaceous material, comprising means for retaining a mass of such material in a relatively thin body, means for heating all parts of said

mass to substantially a minimum distilling temperature, and distillate-emitting passages having an efflux area sub-



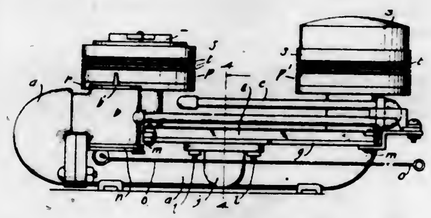
stantially at least as large as the heating surface of the retaining means.

1,389,204. ANTISLIP DEVICE FOR VEHICLE-WHEELS. JOHN MCDERMOTT, Kalamazoo, Mich. Filed Feb. 15, 1921. Serial No. 445,149. 6 Claims. (Cl. 152—14.)



4. In a structure of the class described, the combination of a felly plate having hooks adapted to receive the links of a tread chain, spoke clamps having arms projecting over said felly plate, and bolts for securing said clamping arms to said felly plate.

1,389,205. FASTENING-INSERTING MACHINE. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 10, 1918. Serial No. 257,592. 36 Claims. (Cl. 1—41.)



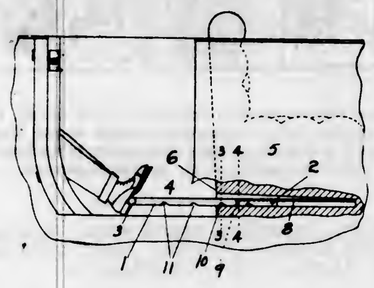
1. In a machine of the class described, in combination, clutch mechanism, a work support, connections between the clutch mechanism and the work support operable to maintain the work support in raised position, and power-operated means for breaking said connections to permit lowering of the work support.

1,389,206. BELT-HOLDER. JOSEPH E. MACMILLAN, Pasadena, Calif. Filed July 6, 1920. Serial No. 394,151. 2 Claims. (Cl. 74—51.)

1. In combination with a motorcycle generator belt, of a member provided with a loop through which said belt freely runs, and means for holding said member between the driving pulleys for said belt, whereby to catch and hold said belt when it jumps from said pulleys, substantially as described.

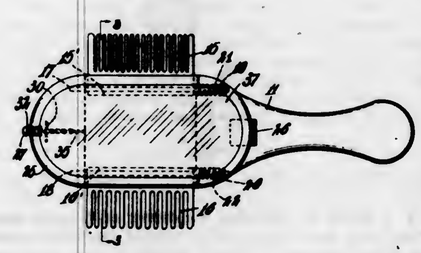
1,389,207. OIL-BURNER. HARRY W. MANNING, Portland, Oreg. Filed Dec. 15, 1919. Serial No. 345,157. 4 Claims. (Cl. 158—61.)

1. In an oil burner of the type referred to, a burner-head comprising a hollow body provided with horizontal circumferentially extending slits, a plate fastened across the open top of the hollow body, such plate having a perimetric perpendicular flange, being provided with parallel slits above such flange, a dome or cap removably seated on the hollow body over said slitted plate, thereby compelling the gas to issue from said circumferential slits of the burner body.



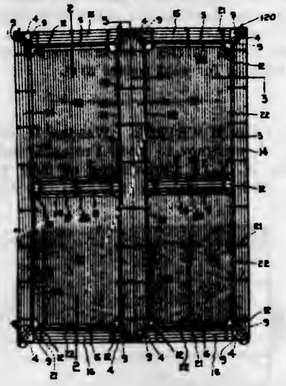
1,389,208. METAL BAND. ALFRED E. MASKREY, Canton, Ohio, assignor, by mesne assignments, of one-half to Kennet Umstead, Salem, Ohio. Filed Nov. 28, 1913, Serial No. 803,519. Renewed Jan. 29, 1921. Serial No. 441,073. 4 Claims. (Cl. 40—31.)

1. A band formed from a strip of pliable sheet metal having a series of spaced recesses in one end portion and a protrusion on the other end portion, and lateral tongues on one of the end portions adapted to be clamped around



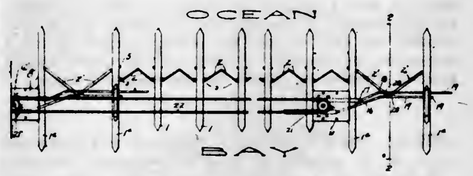
the other end portion to hold the protrusion in engagement with one of the recesses when the end portions are overlapped.

1,389,209. FOOTREST FOR AUTOMOBILES. SAMUEL L. MYATT, St. Louis, Mo. Filed Feb. 14, 1920. Serial No. 358,697. 1 Claim. (Cl. 296—75.)



In combination with the front seat of an automobile an adjustable foot rest for passengers upon the rear seat, same comprising a horizontally extended cavity in the base of the front seat; two vertical slots extended outwardly from said cavity through the back of the seat, one at each side of said cavity; a base board horizontally and rigidly mounted in the upper side of the cavity, same having its rearmost edge curved downwardly to form a stop; a lock bar horizontally and transversely mounted inside the cavity adjacent the said slots; a sliding frame made up of two spaced and parallel side bars notched along their under edges and thus adapted to engage said lock bar, an inner cross bar an outer foot rest rigidly connecting said side bars, said frame being mounted through said slots with the inner cross bar adapted to engage said stop of said base board, and the notches in the side bars adapted to engage said lock bar, for locking the frame at any desired point, while the foot rest depends outwardly.

1,389,210. COMB AND BRUSH. STANLEY NOVINSKY, Braznell, Pa. Filed Mar. 25, 1921. Serial No. 455,406. 4 Claims. (Cl. 132—87.)



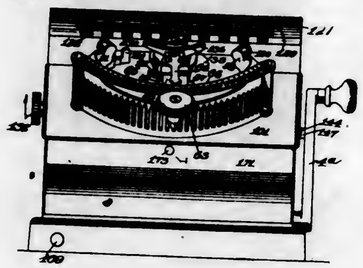
4. A device of the class described comprising a brush including a back having a recess therein, a pair of combs hinged to said back at opposite sides of said recess, springs normally acting to swing said combs to position with the teeth thereof projecting sidewise from the said back, and a removable cover plate adapted to hold said combs against the action of said springs, a pin slidable in said back, a hook on said pin adapted to engage a keeper on said cover plate, and a projecting finger on said pin adapted to engage over the said combs.

1,389,211. MILL-TYPE DOOR. JOHN W. OSBOCK, Montreal, Quebec, Canada. Filed Jan. 24, 1920. Serial No. 358,664. 6 Claims. (Cl. 20—35.)

1. A mill-type door consisting of a metal frame and a multiplicity of wooden strips secured together, the fastenings for securing one strip in place being covered by the next adjacent strip.

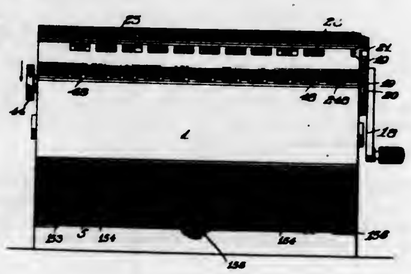
1,389,212. APPARATUS FOR CONTROLLING TIDE-WATERS. ALEXANDER PARKER, Etna Mills, Calif. Filed Aug. 19, 1920. Serial No. 404,562. 4 Claims. (Cl. 61—4.)

1. An apparatus for controlling tides at the entrances of bays which communicate with salt water, comprising a series of spaced parallel piers, gates hinged to said piers at corresponding points thereon, a pair of said gates being disposed between each two piers, each gate being of a length somewhat greater than one-half the distance between the piers between which said pair of gates is disposed, whereby, when said pair of gates is closed, said gates will be inclined to each other, said gates opening out from the bay and automatically closable by the incoming tide.



1,389,213. SNAP-SWITCH. THOMAS L. PARKER, Chicago, Ill., assignor to The Standard Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1918. Serial No. 219,949. 9 Claims. (Cl. 200—69.)

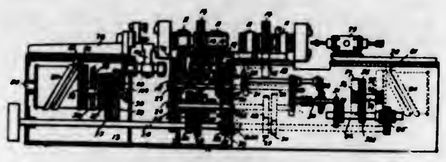
1. In a snap switch of the kind described and in combination, a plate, a pair of spaced bracket arms carried by



said plate, said bracket arms each having bearings projecting from the inner and outer faces thereof, a brush carrier having open bearings and detachably mounted on the bearings at the outer faces of said bracket arms, a rocker arm having open bearings and detachably mounted on the bearings at the inner face of said brackets, a spring connecting said brush carrier and said rocker arm, and cooperating buttons for said rocker arm.

1,389,214. CHECK-WRITER. WALTER B. PAYNE, Rochester, N. Y., assignor to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 4, 1919. Serial No. 280,591. 41 Claims. (Cl. 101—97.)

1. In a printing machine, the combination with a plurality of type wheels and a setting member therefor, of spring actuated means for operatively connecting each of the type wheels with the setting member, means movable with the setting member for coöperating with the spring actuated means to successively disconnect the setting member and type wheels, the setting member having a motion in one direction to shift the type wheels and in another direction to actuate the disconnecting means.



1,389,215. CHECK-WRITER. WALTER B. PAYNE, Rochester, N. Y., assignor to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 4, 1919. Serial No. 280,592. 42 Claims. (Cl. 101—97.)

1. In a printing machine, the combination with a series of type carriers, of a manually operable member for differentially setting the various type carriers, manipulative means for successively connecting and disconnecting the type carriers and the member, and means for indicating the carriers connected and disconnected.

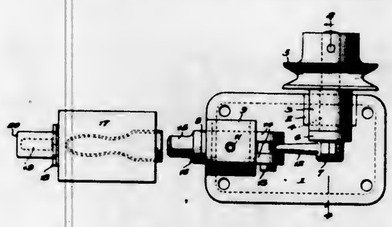
1,389,216. METAL-WORKING MACHINE. JAMES C. POTTER, Pawtucket, R. I. Filed Apr. 12, 1919. Serial No. 289,496. 11 Claims. (Cl. 29—36.)

1. A metal working machine comprising in a unitary organization, a group of independent tool carriers, each having its own path of travel all lying in the same plane, said path being horizontal, means for reciprocating said carriers, a group of horizontal work spindles all lying in the same plane, means for driving each spindle at

various working speeds independent of the others, means whereby one group is movable relative to the other to place the individual spindles successively in working relation with tools carried by the individual carriers.

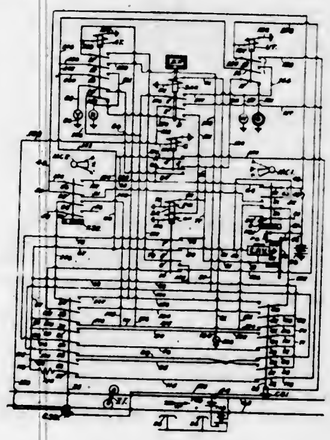
1,389,217. COMPOUND TRACK-RAIL. WILLIAM H. PRIDE, Springfield, Ill. Filed June 2, 1921. Serial No. 474,455. 1 Claim. (Cl. 238—143.)

In a track-rail, the combination of a body comprising a base and a laterally extended longitudinal member; an attaching plate engaging the laterally extended member of the body; a tread-member having a downwardly extended part, an internal longitudinal channel and an inwardly turned longitudinal flange; an attaching plate having a shoulder supporting the downwardly extended parts of the tread member; and connecting devices connecting the attaching plates, the tread member and the body as set forth.



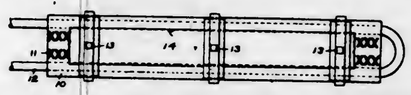
1,389,218. COMBINED COAT AND HAT HANGER. JOSEPH J. PRIMEAU, Worcester, Mass. Filed Feb. 2, 1921. Serial No. 441,986. 8 Claims. (Cl. 45—18.)

1. A device as described consisting of a sheet metal strap being slit at once end to provide oppositely extending arms, hook spurs formed terminally upon said arms and a pair of coat hanger arms pivoted to the lower portion of said hanger and adapted to be folded up and sprung into said hook spurs.



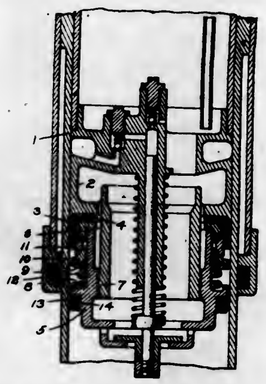
1,389,219. MACHINE FOR FORMING NIPPLES. PAUL A. RAICHE, Providence, R. I., assignor to Davol Rubber Company, Providence, R. I. Filed Feb. 21, 1921. Serial No. 446,809. 7 Claims. (Cl. 18—2.)

1. In a nipple machine, a base, a pair of standards thereon, a drive shaft journaled on one standard and provided with a crank part, a plunger slidable in a bearing on the other standard, a pitman connection be-



tween the rear end of the plunger and the crank part, and a former mounted on the forward end of the plunger for acting on the open end of a gum nipple.

1,389,220. AUTOMATIC TRAIN-CONTROL SYSTEM OR THE LIKE. OSCAR A. ROSS, Brooklyn, N. Y. Filed Jan. 9, 1917. Serial No. 141,404. 32 Claims. (Cl. 246—49.)

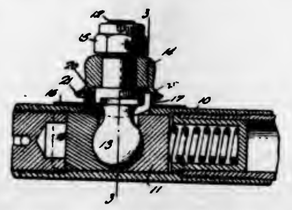


4. In a system of the kind described, a vehicle, a roadway therefor, a normally energized electro-pneumatic valve for automatically stopping said vehicle, a relay controlling said valve, a manually operated circuit controlling device, a circuit for energizing said relay dependent for closure on the deënergization of said valve and manual operation of said circuit controlling device.

1,389,221. PROCESS OF MANUFACTURING VEHICLE-TIRES. AMOS J. ROUSSEY, Fort Wayne, Ind. Filed June 3, 1921. Serial No. 474,845. 3 Claims. (Cl. 18—59.)

1. The process of forming tire treads consisting in pressing the tread in a raw state upon a slightly heated flat mold; then applying the tread to a tire body or raw carcass and securing the same thereon and then subjecting the said body and tread to a vulcanizing heat.

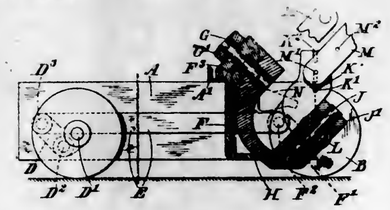
1,389,222. CUP-WASHER EXPANDER. JULIUS G. SABO, New Haven, Conn., assignor to Westinghouse Air Spring Company, a Corporation of Pennsylvania. Filed Nov. 5, 1920. Serial No. 422,103. 5 Claims. (Cl. 74—109.)



1. In an expander for a cup washer, a split ring adapted to be expanded transversely of the axis of the washer, a member adapted to be moved parallel with said axis and provided with a cam surface adapted to expand said ring, and a yielding element tending to move said member as mentioned.

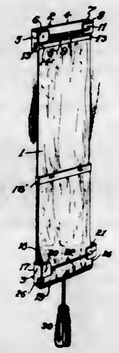
1,389,223. PRINTER'S GALLEY. FREDERICK L. SCHLEY, Brooklyn, N. Y. Filed Jan. 16, 1920. Serial No. 351,797. 3 Claims. (Cl. 276—40.)

2. A printer's galley comprising a base plate, end and side walls extending therefrom, said walls at the base plate providing an internal groove, said walls provided with a second groove at an elevation above the base plate necessary to receive the binding cord of a form of type, and means on the exterior of said walls spaced above the base plate for receiving the fingers in lifting and handling the galley.



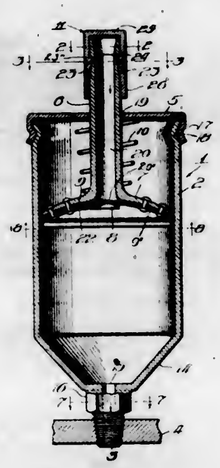
1,389,224. JOINT COVER OR PROTECTOR. CHARLES L. SHEPPY, Buffalo, N. Y. Filed July 22, 1920. Serial No. 398,141. 4 Claims. (Cl. 287—90.)

1. The combination, with a casing member having a lateral opening therein, a second member extending into said opening and adapted to move relatively to said first



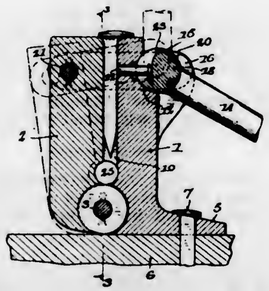
named member, and a head on said second member externally of said casing, of a sleeve member on said casing member and having a projecting collar spaced from and surrounding a portion of said second named member and making a close joint with the inner side of said head.

1,389,225. LIFTING-TRUCK. HAROLD EDWIN SPENCER, Gravesend, England, assignor to Hesco Limited, London, England. Filed Apr. 12, 1920. Serial No. 373,355. 12 Claims. (Cl. 254—10.)



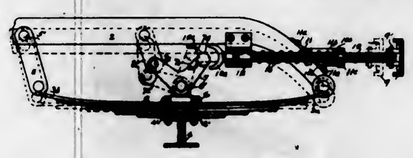
1. A lifting-truck comprising two truck parts, lifting mechanism for moving one part relatively to the other to raise and lower the truck, a steered wheel axle mounted to turn about a vertical axis to steer the truck in a horizontal plane, and a coupling between the lifting mechanism and the steered wheel axle which moves with the lifting mechanism in the lifting operation, is oscillatable relatively thereto, and is constituted by two elements which have three axes of oscillation transverse of one another, the two elements being firstly a pivot in the lifting mechanism and having its axis of oscillation therein about which it can oscillate in relation to that mechanism, and secondly a member which is (*a*) connected to said pivot, and can oscillate in relation thereto about a second axis *i. e.* the axis of such connection, said axis being arranged transversely to the pivot axis, and is (*b*) jointed to the truck wheels by a joint providing the third axis of oscillation *i. e.* an axis which is perpendicular to the second axis aforesaid.

1,389,226. GARMENT-SUPPORTER. MARY STARMER, Newport News, Va. Filed July 16, 1920. Serial No. 396,645. 4 Claims. (Cl. 24—76.)



4. The combination in a garment supporting device with a slotted plate member having spaced rear flanges one of which is perforated, of a fastener comprising a pin member passed through said perforated flange, a pin hook inclosed within the other flange, and bars on said fastener, and ears on the front plate embracing said bars, a base bar, and a frictional roller on said base bar adapted to engage the loop of a web passed through said slotted plate.

1,389,227. LUBRICATOR. RALPH B. STERNBERG and WILLIAM W. WEBB, Chicago, Ill. Filed July 26, 1919. Serial No. 313,585. 4 Claims. (Cl. 184—45.)

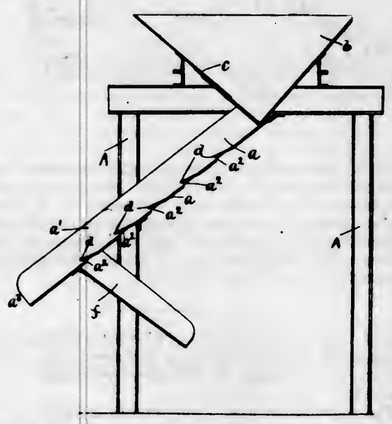


2. A grease cup, comprising a cylindrical casing provided with inlet means at one end and discharge means at the opposite end, a piston operatively disposed in said casing, resilient means to urge said piston continuously toward the discharge means, said inlet means being connected to said piston, a valve being provided for inward opening on the inner side of the movable member in operative relation to the inlet means for admitting grease and preventing its discharge through the inlet means, said valve having a laterally extending leaf spring support secured remotely from the valve body proper to said piston and urging said valve toward its port.

1,389,228. SPIKE-STRAIGHTENER. ALEXANDER W. TABERT, West Allis, and JUNIUS E. TISDALE, Milwaukee, Wis.; said Tisdale assignor to said Tabert. Filed May 14, 1920. Serial No. 381,317. 8 Claims. (Cl. 153—44.)

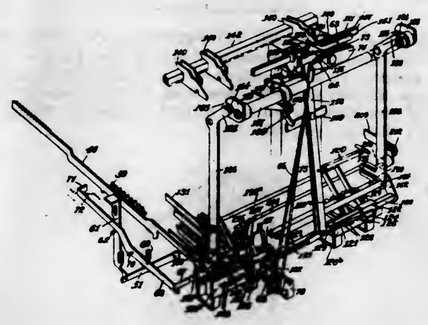
1. In a spike straightener the combination of relatively fixed and movable jaws forming when closed a longitudinal matrix of the shape in cross section of spikes to be straightened and hinged together adjacent one end of the matrix, a lever pivotally connected with the fixed jaw and provided with pintles eccentric to its pivot axis, and links pivoted to the movable jaw and connecting it with the pintles of the lever on opposite sides of the fixed jaw.

1,389,229. BUFFER FOR VEHICLES. WATSON T. THOMPSON, Pelham Manor, N. Y. Filed Apr. 13, 1921. Serial No. 460,921. 8 Claims. (Cl. 293—55.)



2. An automobile buffer comprising in combination a buffer-bar, similar reciprocating rods pivoted at one end to said bar and operatively supported by the side members of the automobile frame, bell-cranks pivotally supported by the main springs of the automobile in line with the said rods adapted to be rocked by said rods whenever said buffer-bar contacts violently with an obstruction, means for yieldingly connecting said bell-cranks with the side members, and resilient means for normally holding said rods out of an engagement with the bell-cranks.

1,389,230. THERMIC TELEPHONE. ROBERT ARNOUT BARON VAN LYNDEN, Utrecht, Netherlands, assignor, by mesne assignments, to American Thermophone Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1917. Serial No. 196,254. 12 Claims. (Cl. 179—101.)



12. In thermic telephones, a wire coil, and conducting contact pieces insulated from one another and engaging the several turns of said coil on its outer surface.

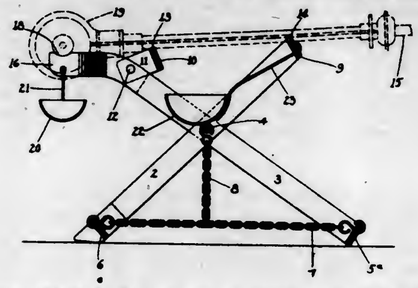
1,389,231. MECHANISM FOR SCREENING OR SIFTING GRANULATED SUBSTANCES. ALEXANDER WALKER, Wallsend-upon-Tyne, England, assignor of one-half to Drakes Limited, Ovenden, Halifax, England. Filed Mar. 30, 1915. Serial No. 18,174. Renewed Jan. 31, 1921. Serial No. 441,502. 4 Claims. (Cl. 83—56.)

1. Mechanism for cleaning and sifting granulated substances comprising a screen formed with alternating bottom portions and openings, each opening extending transversely of the screen, said bottom portions being inclined and lying in the same plane, a plurality of screening fingers on one edge of each bottom portion, said fingers being upwardly inclined relatively to the bottom portion and projecting in the direction of travel of the said substances with their free ends overhanging the adjacent bottom portion beyond the opposing edge thereof, each bottom portion extending for a considerable distance from the finger overlapped edge thereof to its opposite edge, for providing extended flooring sections.

1,389,232. COMBINED TYPEWRITING AND COMPUTING MACHINE. LESTER A. WERNERY, Brooklyn, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1919. Serial No. 273,609. 71 Claims. (Cl. 235—60.)

8. In a computing machine, the combination with a traveling carriage and a series of movable bars, of a cam member, carriage-actuated means for moving said cam member in a direction reverse to that of the carriage movement, and thereby effecting successive engagement of said movable bars by said cam member, and means for preventing such engagement.

12. In a computing machine, the combination with a register, of operating means therefor including numeral keys, a plurality of driving bars, a general operator having connections for motor operation, and a motor-trip device including a latch, a register-shutter, a numeral-key guard, and means rendered effective by said latch for moving said shutter and said guard to their effective positions.



19. In a combined typewriting and computing machine, the combination with tabulating mechanism, subtraction-setting mechanism, motor-trip mechanism, and denomination-selecting mechanism, of a carriage, a series of stops for coöperating with said mechanisms, and a bar, on which said stops are secured, releasably secured to said carriage.

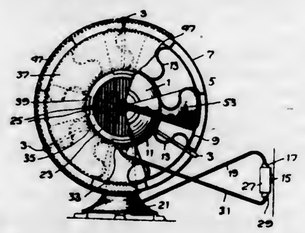
55. In a computing machine, the combination with a series of denominational members, of a selector-dog, a guide on which said dog is slidably mounted, means to effect movement of said dog along said guide for engagement *seriatim* with said denominational members, and means to position said guide to render said dog ineffective with respect to said denominational members.

1,389,233. DIFFERENTIAL RACK. CHARLES JOHAN WEST, Harlem, Mont., assignor to Reed Ekegren & Co., Harlem, Mont., a Corporation of Montana. Filed June 19, 1920. Serial No. 390,215. 4 Claims. (Cl. 29—89.)

1. A differential gear-rack comprising two pairs of legs having their middle portions pivoted one upon the other,

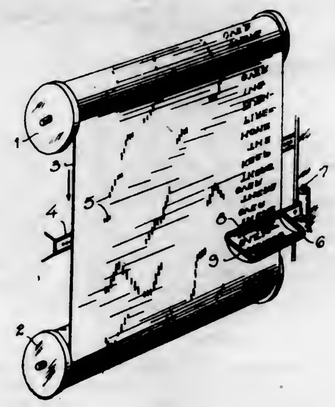
cross bars connecting the legs of the same pair, the legs of one pair having seats for the axle and the legs of the other

pair having a seat for the transmission shaft at right angles to said axle.



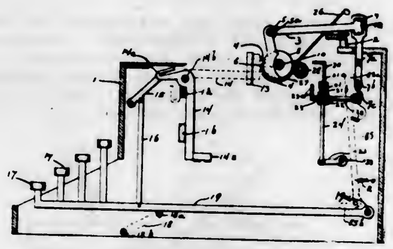
1,389,234. COMBINED TYPEWRITING AND COMPUTING MACHINE. HORATIO WHITING, New York, N. Y., assignor, by mesne assignments, to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed May 6, 1914. Serial No. 836,693. 21 Claims. (Cl. 235—59.)

17. In an algebraic register mechanism, the combination of units, tens and higher order sets, driving mechanism for the sets, carry-over mechanism between the order sets, characteristic indicating mechanism controlled by the carry-over mechanism, and means for causing actuation of the units order set simultaneously with the operation of the characteristic indicating mechanism to cause the resultant indicated to be true and final.



20. The combination with a series of dial wheels, of an endless chain of gears capable of acting one from the other in a continuous cycle, and a boosting device extraneous to said gears for furnishing the power for the endless cycle action.

1,389,235. ELECTRIC DEVICE. JOHN D. ZIMLEY, Summit, N. J., assignor, by mesne assignments, to Universal Interests, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 20, 1918. Serial No. 267,695. 9 Claims. (Cl. 219—39.)

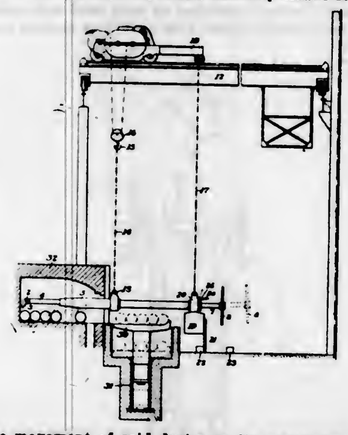


1. An electric device combining an electric fan, braces thereon, a guard supported by the braces and provided with a front inner ring, an electric heater, and means for mounting said heater on said front inner ring.

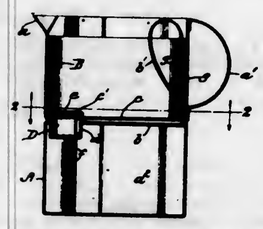
1,389,236. MUSICAL INSTRUMENT AND RECORD THEREFOR. ROBERT S. BLAIR, South Orange, N. J. Filed July 2, 1918. Serial No. 243,006. 8 Claims. (Cl. 84—115.)

1. A record strip for musical instruments combining note sounding means and the words of the song corresponding to the notes to be sounded, said words being arranged along the strip with the words each inverted.

1,389,237. TYPEWRITER. ALEXANDER BLOCK, New York, N. Y. Filed Nov. 5, 1919. Serial No. 335,857. 51 Claims. (Cl. 197—25.)



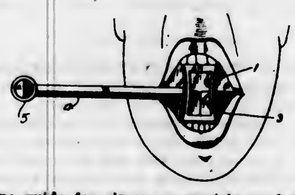
1. In a typewriter, a carriage, an impression bar adapted for movement on said carriage, means for moving said impression bar in a direction to perform the printing operation, manually operable mechanism for controlling the operation of the impression bar, and means for the returning of the impression bar to normal rest position subsequently to the printing operations.



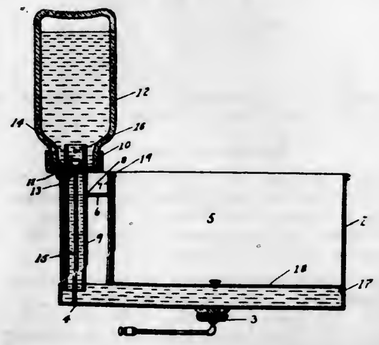
1,389,238. CHARGING APPARATUS FOR ANNEALING-FURNACES. EDGAR E. BROSIUS, Pittsburgh, Pa. Filed Feb. 2, 1920. Serial No. 355,890. 4 Claims. (Cl. 214—23.)

1. The combination with a pipe-annealing furnace having a charging opening and a hearth extending from said opening and forming a roll-way for the pipes, of a combined charging, manipulating and discharging device comprising a rake movable through said opening and over

said roll-way, a movable overhead support from which the said device is flexibly suspended, and stop means for limiting the movement of said device on its suspension in different positions of the overhead support, substantially as described.



1,389,239. COFFEE-PERCOLATOR. BENJAMIN H. CALKIN and FRANCES L. CALKIN, Detroit, Mich.; said Benjamin H. Calkin assignor to said Frances L. Calkin. Filed Mar. 30, 1915. Serial No. 18,014. 2 Claims. (Cl. 53—3.)



1. A percolator comprising a vessel provided intermediate its ends with a shoulder, a second vessel fitted removably within the first vessel and in contact with the shoulder thereof, the bottom portion of said vessel having an opening, and a container for the charge of material, said container having a foraminous top and a foraminous bottom and said container being positioned in register with said opening in the second vessel so as to constitute the liquid inlet to and the liquid outlet from the chamber of the first vessel, whereby the liquid is adapted to flow and reflow through the container and the charge of material in passing into and out the chamber of said first vessel.

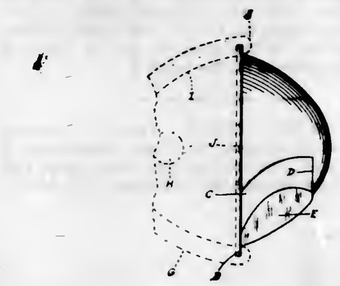
1,389,240. TONE-GUIDE FOR SINGERS. MARY AUGUSTA LEE CLARK, Boston, Mass. Filed Aug. 2, 1920. Serial No. 400,888. 3 Claims. (Cl. 84—466.)

1. A tone guide for singers comprising a head having one dimension adapted for the maximum separation of the teeth of a singer, and another dimension adapted for the medium separation of the teeth, and a stem projecting therefrom having a diameter adapted for the minimum separation of the teeth, said maximum separation being best adapted for singing the vowel A, the medium separation being adapted for the vowel O, and the minimum separation being adapted for the vowel E.

1,389,241. COOKING UTENSIL. CLAUD J. CLEFTON, Owatonna, Minn., assignor, by mesne assignments, of one-half to Guy J. Clefton, Owatonna, Minn. Filed July 25, 1919. Serial No. 313,349. 3 Claims. (Cl. 53—2.)

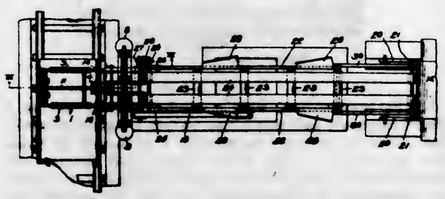
1. The combination, with a kitchen utensil having a lateral extension and adapted to contain a supply of water, said extension having a horizontal wall therein provided with an opening, a tube fitting within said opening and open at the top and bottom, a valve mounted in said tube and adapted to be opened when the tube is inserted into the utensil, a cap mounted on the upper portion of said tube and a water bottle having an exteriorly threaded neck for fitting into said cap.

1,389,242. THERMIC TELEPHONE-TRANSMITTER. PIETER DE LANGE and ROBERT ARNOUT BARON VAN LYNDEN, Utrecht, Netherlands, assignors, by mesne assignments, to American Thermophone Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 29, 1916, Serial No. 81,235. Renewed June 6, 1921. Serial No. 475,554. 9 Claims. (Cl. 179—101.)



9. A thermic telephone transmitter comprising a casing permeable to sound waves, thermic conductors located in said casing and exposed and responsive to said sound waves for altering the current flow therein, and means for connecting said conductors with an electric line circuit.

1,389,243. HEADLIGHT ATTACHMENT. ANDRÉ F. DE VIGAN, Detroit, Mich. Filed Oct. 18, 1920. Serial No. 417,629. 9 Claims. (Cl. 240—48.4.)



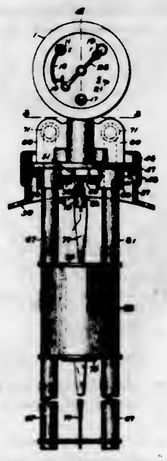
1. In a device of the character described, the combination with a head light, of an anti-glare attachment therefor comprising a substantially imperforate opaque member secured to the front of the headlight, exteriorly thereof,

cutting off radiation from the upper portion of the head light and having an apertured lower portion and having

a shield in its central vertical plane within said aperture for intercepting laterally inclined rays.

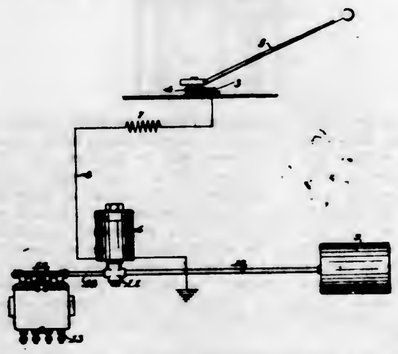
1,389,244. MEANS FOR STACKING SHEET MATERIAL. JOHN W. FREE, Woodlawn, Pa., assignor to Jones & Laughlin Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 19, 1920. Serial No. 397,407. 7 Claims. (Cl. 271—68.)

2. Means for arresting a succession of horizontally advancing sheets and for superposing them in a vertical pile, said means consisting of a frame in which are carried opposite guide plates, and transverse to said guide plates, at one end a yielding stop at the other an oscillating pusher with inclined upper surface, the said members defining a guiding space into which the plates descend by gravity, substantially as described.



1,389,245. MEANS FOR TRANSPORTING OIL BY WATER. MORITZ GAERTNER, New York, N. Y. Filed Mar. 1, 1920. Serial No. 362,386. 6 Claims. (Cl. 114—235.)

1. As a means for transporting oil by water, a series of tanks, means for coupling the tanks end to end, and means for tilting the tanks downward at the stern.

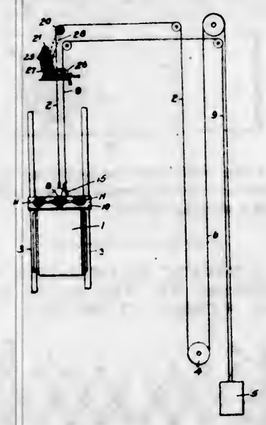


1,389,246. GAGE. GEORGE P. GREGORY and HUGH MACKELVIE, Boston, Mass., assignors to Boston Auto Gage Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1918. Serial No. 228,829. 10 Claims. (Cl. 73—82.)

1. A gage for measuring the depth of liquids, comprising, in combination, a casing having a hollow neck projecting downward therefrom, a base for said neck, a collar for connection with a tank, means for securing said neck base to said collar, a post separate from but connected to said base and projecting up through said neck into said casing, a dial for said casing, an index movable over said dial, a float, means controlled by said float and including a shaft projecting through said post, and gearing carried

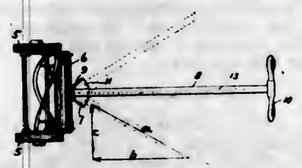
by the latter for imparting movement from said shaft to said index, and means detachably connecting said post to the base of said neck, the latter being sufficiently large to allow said post and gearing to pass therethrough.

1,389,247. ELECTRIC OPERATING MEANS FOR FLANGE-OILERS. CHARLES F. HOOFER, Seattle, Wash. Filed Nov. 22, 1919. Serial No. 340,007. 12 Claims. (Cl. 184—3.)



1. A flange oiling device comprising means carried by a car for placing oil upon the flange, electrical means for controlling the action of said oiling mechanism, and a switch mechanism actuated to close the electrical circuit by the side swing of the trolley.

1,389,248. GOVERNOR FOR ELEVATORS. JOHN HOFFER, Marianna, Pa. Filed Feb. 11, 1920. Serial No. 357,799. 2 Claims. (Cl. 187—90.)

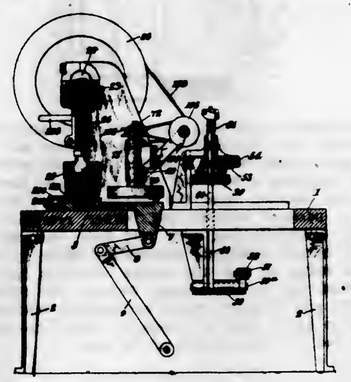


1. In an elevator installation the combination, with a car runway, a car movable in said runway, a sheave, a cable secured to said car and running upon said sheave, and means for shifting said cable to raise and lower said car in its runway, of a centrifugal governor rotated by said sheave, means borne by said car for locking the car

immovably in its runway, a safety cable connected to said locking means, and a clamp adapted to lock immovably

upon said safety cable, said clamp being normally inactive and rendered active by operation of said centrifugal governor, substantially as described.

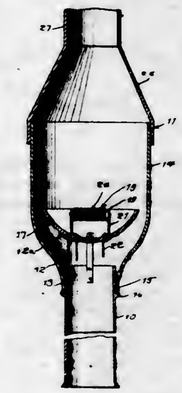
1,389,249. LAWN-MOWER. ROBERT R. KITCHEL, Ridley Park, Pa. Filed Sept. 24, 1920. Serial No. 412,521. 7 Claims. (Cl. 56—253.)



1. In a lawn-mower, a cutting member in combination with a handle, a pivot in a plane normal to the axis of the cutting member, said handles mounted on said pivot to be adjustable sidewise, and means for fixing it in adjusted angular relation to said axis whereby the operator does not follow in the wake of his machine, for use on terraces.

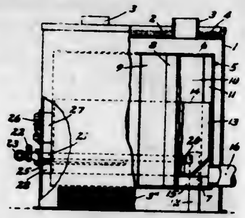
1,389,250. MANUFACTURE OF CELLULOSE ESTERS. JOSEPH KOETSCHET and MAURICE BRUDET, Lyon, France, assignors to Societe Chimique Des Usines Du Rhone (Anciennement Gilliard P. Monnet Et Cartier), Paris, France. Filed Jan. 12, 1921. Serial No. 436,795. 4 Claims. (Cl. 23—24.)

1. In the process of the manufacture of cellulose acetate in which the cellulose is converted into a fluid mass by subjecting it to a preliminary treatment with glucial acetic acid containing 1 to 20 per cent. of acetic anhydrid and sulfuric acid as a condensing agent, maintaining the temperature above 0° C. and below 30° C. during the preliminary process, whereby the product of the acetylation obtained is insoluble in chloroform.



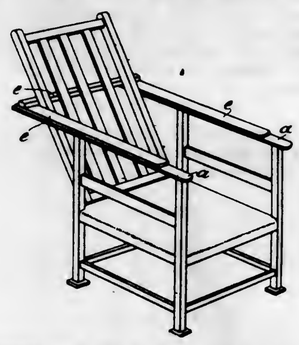
1,389,251. PLATE-PRINTING PRESS. MANUEL LAZARUS, New York, N. Y., and WILLIAM B. DAVIES, Bridgeport, Conn., assignors of one-fourth to Gustave Mendelsohn, Brooklyn, N. Y., and one-fourth to Meyer Trace, Bridgeport, Conn. Filed Jan. 14, 1921. Serial No. 437,187. 17 Claims. (Cl. 101—163.)

1. In a plate printing press, the combination with a horizontally movable support for an engraved plate, of a vertically movable impression counter and means for moving it into and out of operative relation with said support, a vertically movable inking counter provided with reduced inking surfaces corresponding with the positions of the engraved portions of the plate, for inking the engraved portions without inking the entire surface of the plate, a wiping and polishing device located adjacent to the path of the movable support, means for moving the



inking counter into and out of operative relation with said support, means for moving the wiping and polishing device into and out of operative relation with said support, means for imparting to said wiping and polishing device relative motion with respect to said support while in operative relation therewith, and means for moving said support into operative relation with said inking counter, the wiping and polishing device and said impression counter.

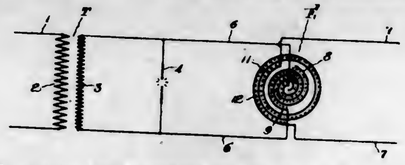
1,389,252. VENTILATOR. ARTHUR W. LUCAS, Fremont, Nebr. Filed Mar. 26, 1921. Serial No. 455,875. 1 Claim. (Cl. 98—25.)



In a ventilator, intake and exhaust conduits, a bell slip joint connecting said conduits, supports secured to the intake conduit and extending into the slip joint, an imperforate concavo-convex radiator plate mounted upon the said supports and disposed within said slip joint, the concave face of said radiator plate being directed toward the exhaust conduit, and a heating element supported by the radiator plate and lying within the concavity thereof.

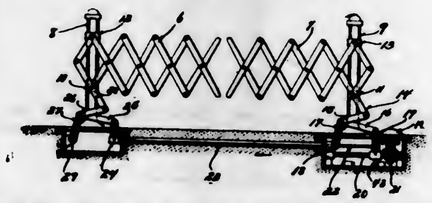
1,389,253. GAS-FURNACE. KARL G. LUNDIN, Los Angeles, Calif. Filed Aug. 17, 1920. Serial No. 404,197. 2 Claims. (Cl. 126—116.)

1. A furnace comprising a closed casing forming a radiator surface and including a central chamber and spaced flues at the sides thereof, a burner receptacle within said casing including a base and side walls, said base being in spaced relation from the bottom of said casing to form a passage beneath the burner receptacle, said passage communicating with said flues, the side walls of said burner receptacle terminating short of the top of said casing so that the burner receptacle is open to said flues and to the passage beneath the burner receptacle, and a closed casing surrounding said radiator casing so as to form air passages around the radiator casing and between the flues of the same.



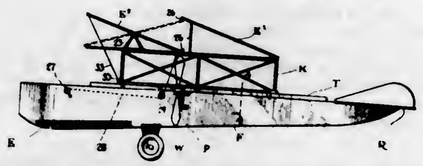
1,389,254. ARMCHAIR. MICHAEL MCCARTHY, London, England, assignor to himself and William Moriarty, London, England. Filed Jan. 6, 1921. Serial No. 435,366. 1 Claim. (Cl. 155—163.)

The combination of an arm-chair having slots extending through the arms and running longitudinally thereof, a series of pins spaced apart and crossing the slots, plates secured to the tops of the arms and having an elongated space between their inner edges, a back hinged to the chair body and a frame for holding the back in adjusted positions comprising horizontal side members resting on the arms but movable vertically to a limited extent and a rear member supporting the chair back, hooks on the side members extending through the slots and between the pins and adapted to engage the pins and headed bolts extending through the spaces between the plates and into the slots which limit the vertical movement of the side members.



1,389,255. HIGH-FREQUENCY ELECTRICAL OSCILLATION APPARATUS. LESLIE R. MCDONALD, Montreal, Quebec, Canada, assignor to William J. O'Leary, Montreal, Quebec, Canada. Filed May 16, 1917. Serial No. 168,916. 6 Claims. (Cl. 250—36.)

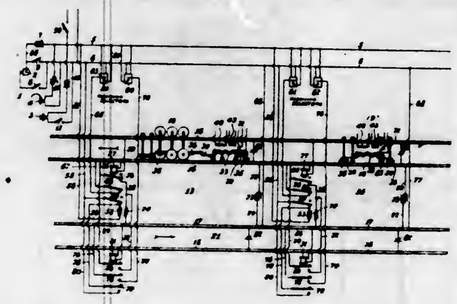
1. Electrical apparatus comprising a high frequency oscillation circuit, and a working circuit, the oscillation circuit having current varying means therein and having bridged thereacross means comprising large amounts of



both capacity and inductance for supplying the necessary capacity to the oscillation circuit and for inducing oscillations into the working circuit.

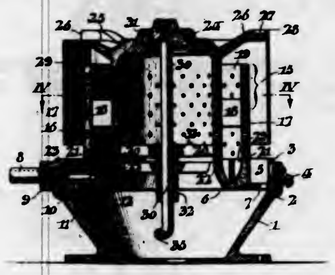
1,389,256. AUTOMATIC RAILWAY-GATE. JAMES R. MCGEE, Milwaukee, Wis. Filed Jan. 24, 1921. Serial No. 439,554. 4 Claims. (Cl. 246—127.)

1. In combination with a gate comprising a pair of lazy tongs, a toggle having one link operatively connected to one arm of the lazy tongs, the other link being pivotally connected to a fixed point, a reciprocable arm having a link connection with the toggle and means for reciprocating said arm to operate said toggle to advance and retract said lazy tongs.



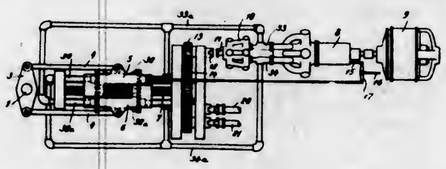
1,389,257. AEROPLANE. THOMAS ANTHONY MACDONALD, Paterson, N. J. Filed May 26, 1920. Serial No. 384,286. 16 Claims. (Cl. 244—14.)

1. An aeroplane comprising, a fuselage, a plane fixed to the fuselage, and a pair of planes movable longitudinally along the fuselage and capable of occupying a lifting position and another position in which they coact to form a parachute.



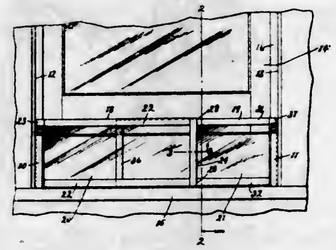
1,389,258. ELECTRICAL SYSTEM OF TRAIN COMMUNICATION. WILLIAM W. MACFARLANE, Philadelphia, Pa., assignor to Macfarlane Communications Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 22, 1917. Serial No. 203,378. 31 Claims. (Cl. 246—7.)

11. A system of communication including: a double traffic track, a car, and an induction coil on the car consisting of a high and a low tension winding, an induction coil along the line of way consisting of a high and a low tension winding, said low tension winding of the wayside coil bridging adjacent rails of the double track at one point, and a conductor bridging said rails at another point so that said low tension winding, the two adjacent rails of the double track and the conductor constitute a circuit with respect to which the car including the low tension coil, when occupying the track, forms a parallel path, a local circuit on the car including the high tension winding of the car-carried



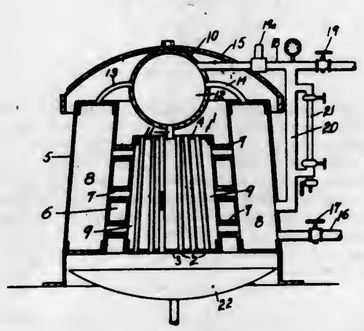
induction coil, line wires along the line of way, and branch conductors connecting the line wires and the high tension winding of the wayside induction coil.

1,389,259. VAPOR-BURNER. JOHN F. MACKAY, Lancaster, Pa. Filed Oct. 13, 1919. Serial No. 330,362. 4 Claims. (Cl. 158—88.)



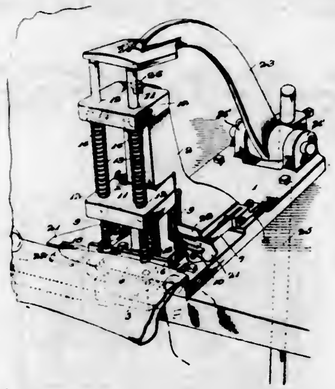
1. In a burner of the character described, the combination of an annular fuel trough; a flue structure superimposed upon said trough, and comprising two integrally united, spaced, concentric cylinders, the interval between the latter forming an annular open top flue communicating with said trough; and a flaring peripheral extension projecting from the inner of said cylinders, and over-hanging the top of the flue, said extension being adapted to deflect the heated combustion gases laterally outward.

1,389,260. STEERING-GEAR. CHARLES M. MANLY, Buffalo, N. Y. Filed Aug. 23, 1917. Serial No. 187,896. 14 Claims. (Cl. 60—53.)



1. In a steering gear, the combination of a reciprocating rudder-operating part, a reciprocating power-driven member connected thereto for operating said part throughout its amplitude of movement, a screw for also operating said reciprocating part, and power operated means for rotating said screw simultaneously with the application of power to said reciprocating power-driven member.

1,389,261. VENTILATOR. HUGH M. MARSH, Chicago, Ill., assignor to Gaylord M. Nelson, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 431,949. 1 Claim. (Cl. 98—31.)



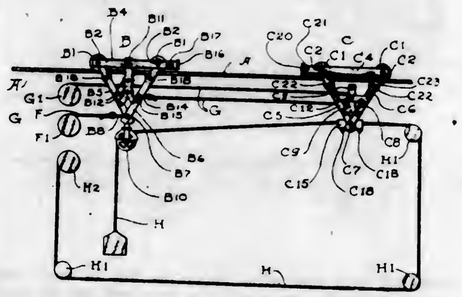
In a ventilator, in combination, a pair of slidingly connected overlapping panels constituting a longitudinally extensible ventilator shield, and a pair of stationary brackets, one at each side of the window, each bracket and the outer end of the panel forming the adjacent part of the ventilator shield being constructed for hooked engagement in any one of a plurality of angularly adjusted positions of the shield whereby the brackets serve to hold the panels against relatively sliding movement in either direction in each of the said angularly adjusted positions of the shield.

1,389,262. STEAM-BOILER. GUSTAVE MILLER, Los Angeles, Calif. Filed June 4, 1919. Serial No. 301,781. 7 Claims. (Cl. 122—481.)

5. A steam boiler, comprising a main boiler, an auxiliary boiler surrounding said main boiler and a superheater mounted above said main boiler, flues connecting the main boiler with the auxiliary boiler and superheater, a cap forming a dome over the main and auxiliary boilers and extending downwardly over the auxiliary boiler and spaced therefrom, a fire box under the main boiler, and fire tubes extending through the main boiler and connecting the fire box with the space under the dome.

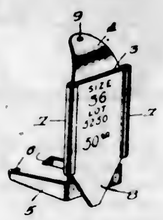
1,389,263. PUNCH-PRESS. THOMAS F. MORRIS, Waterford, N. Y. Filed Oct. 29, 1920. Serial No. 420,466. 16 Claims. (Cl. 164—92.)

1. A fabric punch press having plates between which one section of the fabric is arranged with the other sections of such fabric above one of the plates, and a single punch element carrying means to clamp and perforate both fabric sections.



1,389,264. SHADE-FIXTURE. WILLIAM MCCORMICK NEALE, Greensboro, N. C. Filed May 21, 1920. Serial No. 383,176. 4 Claims. (Cl. 156—34.)

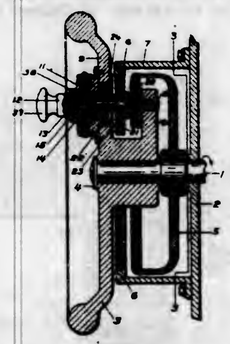
2. In shade roller construction, the combination with the roller, of a reel having a tapered socket at one side, said roller having a housing at one end tapering outwardly and fitting within said tapered socket, said housing provided with spaced openings intermediate its axis and periphery, said reel having offset tongues intermediate its axis and periphery for engaging within the openings of the housing for connecting the reel to the roller when rotated in one direction, and disengaging therefrom when rotated in the reverse direction.



1,389,265. TRAVELING HOIST. RICHARD L. NEUBERT, Knoxville, Tenn. Filed Dec. 20, 1919. Serial No. 346,258. 14 Claims. (Cl. 212—89.)

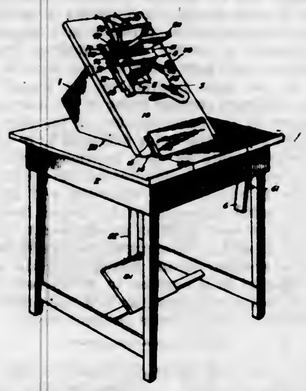
1. In an apparatus of the nature described, the combination with an elevated track and drums, of a clamp carriage supported on said track, a load carriage supported on said track between the clamp carriage and the drums, the load carriage having means for guiding the load line and having means for guiding the clamp carriage line and the clamp carriage having means for immovably clamping the load line to said carriage and having a guide roller for the clamp carriage line, a clamp carriage line having one end attached to the load carriage and extending thence horizontally to and around said guide roller of the clamp carriage and then horizontally back through the load carriage to the clamp carriage line drum, a load carriage line secured by one end to the load carriage and extending thence to the load carriage line drum, and a load line ex-

tending loosely through the guiding means on the load carriage and through the fastening means on the clamp carriage and thence away from said carriage in the direction opposite the direction of the load carriage to a guide roller, and thence to other guiding means and to the load line drum, substantially as described.



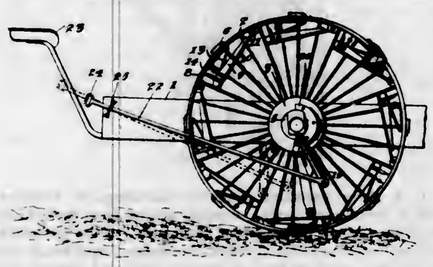
1,389,266. PRICE-TAG HOLDER. ANDRE HUTT NEWTON, Beaumont, Tex. Filed Oct. 7, 1920. Serial No. 415,252. 2 Claims. (Cl. 40—10.)

1. In combination with a garment hanger, of a price tag holder for connection with the hanger, said holder comprising a plate having guides at its opposite side edges for engaging the side edges of the price tag, and having means for attaching it to the hanger, said attaching means comprising a lug at one end of the plate having an opening for receiving the shank of the suspending hook of the hanger, and having at the other end a pair of arms embracing the opposite sides of the hanger, and having spurs for engaging the material of the hanger.



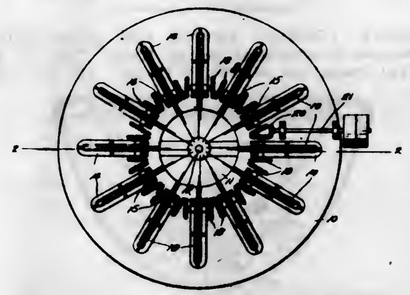
1,389,267. CLUTCH MECHANISM. CHARLES H. NORTON and ALBERT TURNER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Original application filed Sept. 27, 1917, Serial No. 193,600. Divided and this application filed Feb. 9, 1918. Serial No. 216,167. 7 Claims. (Cl. 192—20.)

1. In a clutch mechanism, a support having a bearing aperture therein, a clutch collar rotatably and slidably mounted in said bearing aperture, a shaft rotatable with said collar, a member on said shaft adapted to be engaged by the clutch collar for rotation therewith and means on



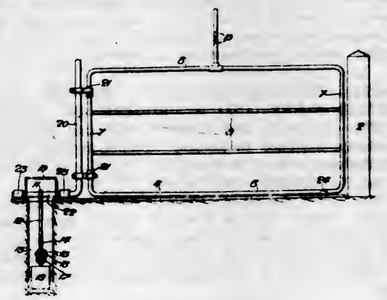
the support for engagement with the clutch collar to prevent rotation thereof.

1,389,268. PHOTOPRINTING-BOX. CLARENCE LE ROY PARKS, Seattle, Wash. Filed June 23, 1919. Serial No. 306,060. 5 Claims. (Cl. 95—73.)



5. A photograph printing machine of the character described comprising a printing box provided with an inclined cover having an opening therein, a translucent plate for said opening, a clamp for holding a film over said plate, a clamp finger for holding a printing paper over said film, a platen movable toward and from said opening, and a type carrying member yieldably mounted in said platen and movable therewith for the purpose set forth.

1,389,269. ATTACHMENT FOR TRACTOR-WHEELS. EMIL LOUIS POLANSKY, Munden, Kans. Filed Mar. 5, 1920. Serial No. 363,417. 3 Claims. (Cl. 301—48.)



1. A wheel of the character specified, comprising a hub, a rim and spokes connecting the hub and the rim, and having in the rim transverse slots, plates hinged to the inner surface of the rim adjacent to the slots and provided at their free ends with spurs adapted to extend through the slots, springs normally pressing said plates inwardly, means for limiting the inward swinging movement of the plates to a point where the blades are within the periphery of the wheel, and manually operated means for engaging the plates as they pass beneath the hub to extend the spurs, said means comprising an arm consisting of sections connected by a rule joint for permitting them to swing freely rearwardly at their joint and for limiting their forward swinging movement to a point where they are in substantial alinement.

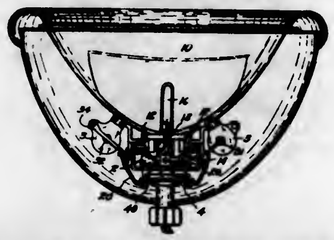
1,389,270. FRUIT-SLICER. FRED C. PRATT, Farmington, Me. Filed Apr. 27, 1921. Serial No. 464,777. 3 Claims. (Cl. 146—11.)

1. In a fruit slicing machine, a vertical guiding rod fitting the cored opening in the fruit, a plurality of cutting knives arranged about said guiding rod and having the peripheries thereof extending adjacent the guiding rod, and means for rotating said knives to cause the peripheries thereof adjacent the guiding rod to travel toward the discharge end of the machine.

1,389,271. SELF OPENING AND CLOSING GATE FOR MOTOR-VEHICLES. CHARLES J. W. ROBERTSON, Yarram, Victoria, Australia. Filed June 14, 1920. Serial No. 388,960. 9 Claims. (Cl. 39—6.)

1. A gate hinged to swing in a horizontal plane in combination with means whereby the gate may be swung in a vertical plane from an upright to a horizontal position under the influence of pressure exerted by a vehicle passing over the gate and means to automatically return the gate from the horizontal to the upright position on removal of said pressure.

1,389,272. CHUCK AND LIKE WORK-HOLDER. JOSEPH DYSON SCAIFE, Newark-on-Trent, England. Filed Nov. 6, 1919. Serial No. 336,035. 8 Claims. (Cl. 279—46.)



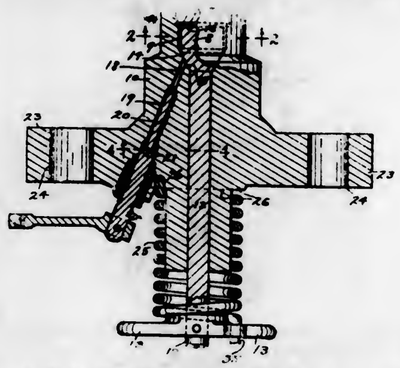
1. A chuck comprising a more or less flexible base thickened at its edge said edge being secured to a rigid

plate, concentric jaws on said disk, binding screws and locating pins in connection with the said jaws and a hand

operated bolt for springing the base and actuating the jaws.

1,389,273. DIMMING DEVICE FOR HEADLIGHTS. WILLIAM A. SCHROEDER, Seattle, Wash. Filed July 14, 1919. Serial No. 310,824. 3 Claims. (Cl. 240—45.)

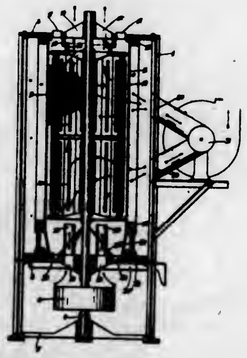
1. A screening device for headlights comprising two screening plates pivoted at opposite sides of the light, said plates being curved and positioned to conform approximately to the curve of the reflector when they are not in screening position, a cam disk mounted to turn about the axis of the headlight, and having its edges forming convolutions, pivoted levers having fingers engaging opposite sides of said cam disk, means connecting said levers with the screening plates, actuating means for said cam disk including a ratchet mechanism for converting a reciprocating movement into an intermittent rotative movement of the cam disk, locking mechanism for the screening plates and means for imparting an initial releasing movement to the locking mechanism and thereafter imparting an operative movement to the cam disk actuating means, substantially as described.



1,389,274. TEXTILE PRODUCT DERIVED FROM ANIMAL FIBER AND A PROCESS OF MAKING SAME. WILHELM HELMUTH SCHWEITZER, Heidelberg, Germany, assignor to Society "Technochemia" Aktiengesellschaft, Glarus, Switzerland. Filed Apr. 28, 1921. Serial No. 465,288. 10 Claims. (Cl. 8—20.)

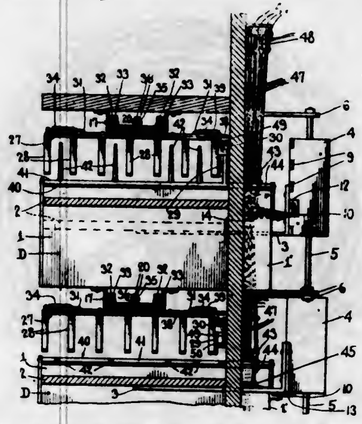
4. The herein described process for the manufacture of a textile product derived from an animal fiber, consisting in treating an animal fiber successively with an oxidizing agent and an excess of alkali and impregnating the fiber finally with a water-proofing and softening substance.

1,389,275. TEXTILE PRODUCT DERIVED FROM AN ANIMAL FIBER AND A PROCESS OF MAKING SAME. WILHELM HELMUTH SCHWEITZER, Heidelberg, Germany, assignor to Society "Technochemia" Aktiengesellschaft, Glarus, Switzerland. Filed Apr. 28, 1921. Serial No. 465,289. 2 Claims. (Cl. 8—20.)



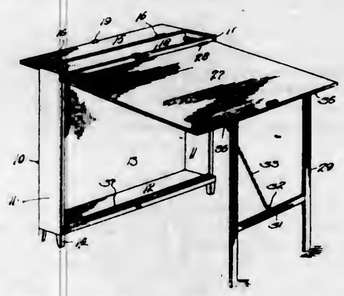
1. The herein described textile product derived from an animal fiber, which results from the treatment of the said animal fiber first with a large excess of an oxidizing agent and afterward with a boiling solution of soap and which shows an increased softness, an increased affinity for dyestuffs and a greater luster.

1,389,276. VALVE MECHANISM. GEORGE A. SCHWER and OTTO E. BORNHAUSER, Sandusky, Ohio. Filed Jan. 5, 1920. Serial No. 349,606. 11 Claims. (Cl. 277—10.)



1. In valve-mechanism, the combination, with a valve-casing having an interior chamber and a passage for feeding fluid to said chamber and also a port spaced from said passage, and an endwise shiftable rotatable member contained in said chamber and having a valve arranged to control communication through said passage and a valve arranged to control communication through the aforesaid port, said port being in open relation with said chamber in the open position of the second-mentioned valve, the aforesaid passage being in communication with said chamber in the open position of the first-mentioned valve, one of said valves being arranged to be moved from a closed position into an open position or vice versa by and during movement of the rotatable valve-carrying member endwise in the required direction and the other of said valves being arranged to be moved from a closed position into an open position or vice versa, by and during rotation of said valve-carrying member in the required direction, of resilient means acting to retain said valve-carrying member in a position in which both valves are closed, and means for operating said valve-carrying member against the action of said resilient means.

1,389,277. PROCESS AND APPARATUS FOR POLISHING GRAIN. JOSEPH A. SMITH, De Witt, Ark. Filed Nov. 11, 1919. Serial No. 337,284. 22 Claims. (Cl. 83—29.)



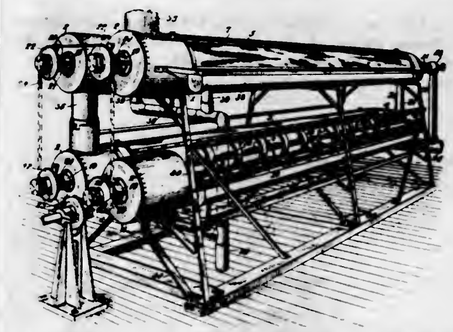
1. A grain polishing machine including, in combination, a foraminous casing, a brush spaced from said casing forming a grain passage-way therewith, means for establishing currents of air through the ends of said brush and across said passage-way, a housing for said casing, and an exhaust port formed in a wall of said housing.

1,389,278. LAUNDRY-DISTRIBUTING MACHINE. JOHN R. SOUSA, Oakland, Calif. Filed Oct. 31, 1919. Serial No. 334,675. 10 Claims. (Cl. 214—11.)

1. A distributing machine comprising a plurality of receiving compartments, means for conveying articles thereto including a carriage, key controlled means for transferring the articles from the carriage to any desired compartment and automatic means for stopping the carriage at the compartment and returning it to its starting point.

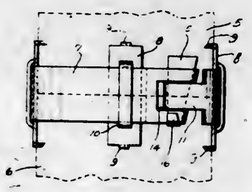
1,389,279. FILING-CABINET. CHARLES R. SOUTHWELL, San Antonio, Tex. Filed July 1, 1920. Serial No. 393,266. 1 Claim. (Cl. 45—2.)

In a filing cabinet for blue prints and the like, the combination with side walls, a back and a bottom, of a transversely extending strip connecting the upper ends of said side walls, at the front thereof a cover horizontally hinged to the rear wall, a lock carried by said transversely extending strip and adapted for engaging said cover, a combined front wall and drop table horizontally hinged to said transversely extending strip, locking means carried by the inner side of said combined drop table and front wall and the inner sides of said side walls and accessible only when the cover is in open position, and means to limit the inward movement of said combined front wall and drop table.



1,389,280. ELECTROMAGNETIC IGNITER. GEORGE H. TILESTON, Chicago, Ill. Filed June 23, 1919. Serial No. 306,214. 44 Claims. (Cl. 123—154.)

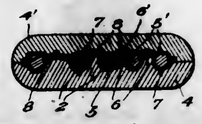
1. In an electro-magnetic igniter, in combination, a plug, an insulating core passing vertically through the plug, an electro-magnet mounted upon the plug, a metallic stem of magnetizable material extending through the said insulating core, said stem connecting with, or in one piece being an extension of, the core of the said electro-magnet, an armature mounted within the combustion chamber, a post limiting the movement of the armature, a second magnet normally holding the armature in closed relation with a stationary contact, and an electric current passing



at intervals through the winding of the said electro-magnet in a direction whereby the same sign of polarity will be presented to the armature as that normally presented by the said second or holding magnet, and whereby the armature will be repelled at its free end to open the ignition circuit.

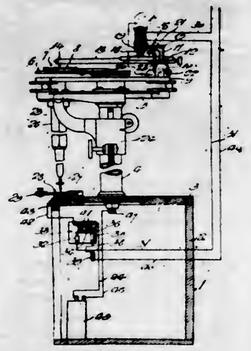
1,389,281. APPARATUS FOR TREATING PULP. OTTO CHARLES WINESTOCK, Perkinsville, Vt. Filed Sept. 11, 1918. Serial No. 253,515. 13 Claims. (Cl. 141—12.)

3. A device of the character described comprising in combination an imperforate trough, screens on each side of said trough, means to agitate pulp within said trough and to spray said pulp with cleansing fluid during the agitation, and means for maintaining the surface of the pulp above the edges of said trough in such manner that a portion of the paper pulp adjacent the surface thereof is supported by the said screens so that the cleansing fluids may escape from the pulp adjacent the surface thereof.



1,389,282. COUPLING DEVICE. HARRY C. YINGLING, Williamsport, Pa. Filed June 7, 1920. Serial No. 387,125. 1 Claim. (Cl. 285—194.)

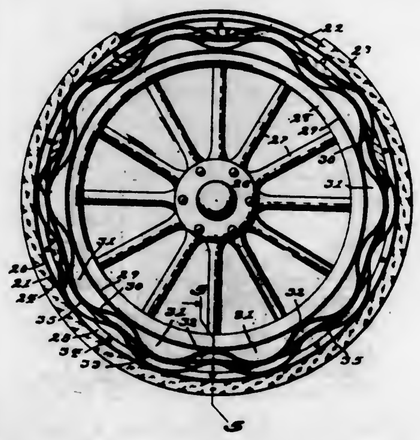
A fastening device for two abutting members comprising a band having a width to cover the joint between said



members, means for connecting the ends of the band, and spurred clips carried by the band, said clips comprising plates having loops through which the band passes, and said plates projecting from the opposite edges of the band, the projecting portions of the plates having inturned spurs adapted to be driven into the parts which the band encircles on opposite sides of the joint therebetween.

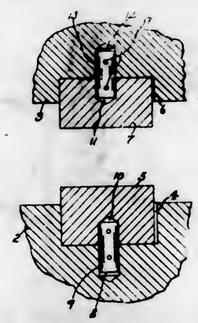
1,389,283. METHOD OF AND APPARATUS FOR MAKING WEBBED GLOVES. ANTHONY K. ZAWADZKI, Wrightstown, N. J. Filed Oct. 26, 1920. Serial No. 419,614. 5 Claims. (Cl. 18—42.)

1. The method of making webbed rubber gloves, consisting in placing a sheet of uncured rubber on each side of a hand-shaped core and with the parts of the sheets between the fingers and thumb in contacting relation to form permanent continuous webs extending across the space between adjacent fingers, conforming the sheets to the core by inclosing the same in a conformable shell, and subjecting the whole to a vulcanizing heat.



1,389,284. ETCHING-MACHINE. HERBERT CLIFTON ALLEN, Richmond, Va. Filed July 6, 1920. Serial No. 394,822. 10 Claims. (Cl. 33—24.)

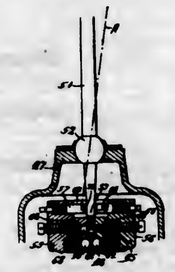
1. In a machine of the class described, the combination of a work bed adapted to hold a work plate, a holder adapted to hold a pattern plate, a needle operable upon the work plate and movable in and out of engagement therewith, a stylus operable upon the pattern plate and movable in and out of engagement therewith, mechanism associated with said stylus and said needle for moving said needle over said work plate upon movement of said stylus over said pattern plate, and electrically operated means for moving said needle in and out of engagement with said work plate, the circuit of said means including said stylus and said pattern plate, whereby said circuit is opened and closed upon movement of said stylus in and out of engagement with said pattern plate.



1,389,285. VEHICLE-WHEEL. AUGUST W. ALTHOFF, Oklahoma, Okla. Filed Mar. 29, 1920. Serial No. 369,773. 3 Claims. (Cl. 152—37.)

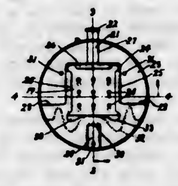
1. In a vehicle wheel, an outer rim portion, and an inner floating portion within and spaced from said rim portion, the inner periphery of the outer portion and the outer periphery of the inner portion being corrugated, and an

endless flexible tensioning member interposed between the two portions.



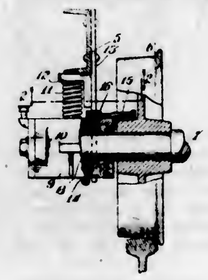
1,389,286. MEANS FOR SECURING DIES IN FORGING APPARATUS. KRISTOFFER A. ANDERSON, Hartford, Conn. Filed May 14, 1920. Serial No. 381,285. 5 Claims. (Cl. 78—44.)

1. Means for securing dies in forging apparatus comprising a base and a hammer both recessed, dies set into the recesses of the base and the hammer, and centering pins associated with the dies, the base and the hammer having counterbores into which the centering pins extend.



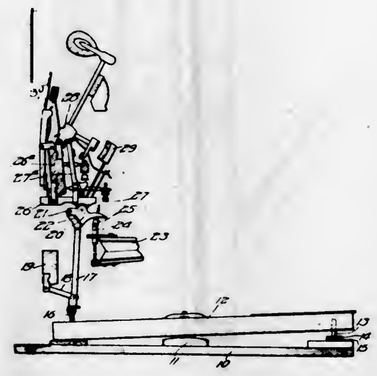
1,389,287. CHANGE-SPEED GEARING. AXEL HJ. ASPROOTH, Rockford, Ill., assignor to Cotta Transmission Company, Rockford, Ill., a Corporation of Illinois. Filed July 2, 1919. Serial No. 308,324. 4 Claims. (Cl. 74—39.)

1. In a shifting device of the character described, the combination of a pair of longitudinally shiftable rods, a stationary dividing plate interposed between the rods, a shifting lever the operated end of which is normally disposed in a recess in said plate, and a yieldable plunger carried by each rod and constantly urged against the adjacent side of said operated end of the lever, the lever being tiltable laterally in either direction whereby to retract the respective plunger and be brought into coöperative rela-



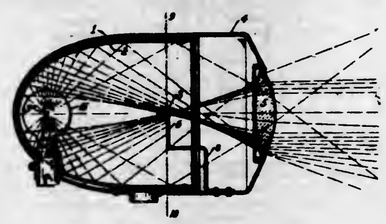
tion with its respective rod for the purpose of shifting said rod longitudinally.

1,389,288. POWDER-BOX. VIRGIL L. BEAUCHAMP, Evanston, Ill. Filed May 5, 1919. Serial No. 294,747. 5 Claims. (Cl. 132—83.)



1. A powder box having a powder compartment, a puff compartment, a closure for said puff compartment, a puff secured to said closure, a foraminous partition separating said compartments, a reciprocating foraminous plate lying closely adjacent said partition, a retaining member having a cutout portion adjacent the central portion of said plate, means to guide the reciprocation of said plate and to space said retaining plate from said bottom, and means external of the box to reciprocate said plate.

1,389,289. DUST-GUARD FOR CAR-AXLES. JAMES D. BENBOW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,389. 6 Claims. (Cl. 64—22.)



1. The combination with an axle and a wheel thereon, of a dust guard, means on the axle adjacent to the wheel upon which means the dust guard rests, and vertically-movable guiding means at the sides of the axle which guiding means have sliding engagement with said dust guard.

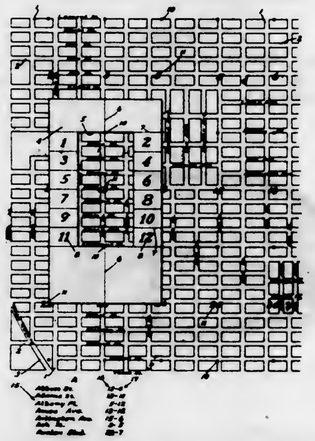
1,389,290. PIANO-ACTION. WILLIAM G. BETZ, Hammond, Ind., assignor to Straube Piano Company, Hammond, Ind., a Corporation of Indiana. Filed Apr. 15, 1918. Serial No. 228,631. 11 Claims. (Cl. 84—34.)

1. A piano action including an abstract having at its upper end a rearwardly and upwardly extending arm provided with a wippen operating shoulder at the upper end of the abstract, a wippen, an action lever intermediately pivoted to the wippen, and abstract and pneumatic connections to opposite ends of the action lever.

1,389,291. HEADLAMP. EVAN P. BONE, Cincinnati, Ohio. Filed Jan. 8, 1920. Serial No. 350,073. 16 Claims. (Cl. 240—41.)

11. In a headlamp of the character indicated, the combination of an electric incandescent source of light, a lens having its rearward focal plane within the headlamp, and a deeply cupped ellipsoidal reflector to direct a preponderance of the light rays toward said lens, said reflector having one focus at said source of light and the other substantially at said rearward focal plane of the lens, and a screen substantially in said focal plane and encroaching upon the area of intense light concentration at one side thereof.

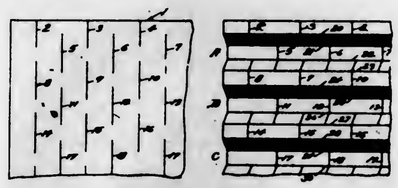
1,389,292. ELASTIC, AUTOMATIC, ADJUSTABLE BLASTING-SHELL. ROBERT LEE BOWMAN, Knoxville, Tenn. Filed Dec. 13, 1920. Serial No. 430,420. 1 Claim. (Cl. 102—6.)



A shell of the character described comprising a tube permanently doubled back upon itself along one of its

longitudinal marginal edges to constitute an expansion fold and having a longitudinal crease extending from

end to end of the tube and constituting a line of fold whereby the capacity of the shell may be varied.

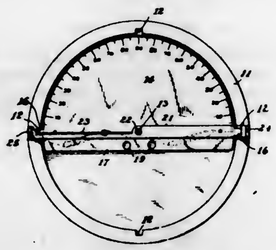


1,389,293. LOCALITY-FINDER FOR MAPS AND THE LIKE. WILLIAM E. BRIDWELL, Los Angeles, Calif. Filed Oct. 11, 1920. Serial No. 415,974. 3 Claims. (Cl. 35—6.)

2. The combination with a map, of a finder adapted to be placed upon the same, said map having points marked thereon adapted to be alined with the finder so that respective divisions aggregating the entire area of the map may be covered by said finder, indicating means upon the map for the respective divisions, said finder having indicating means for subdivisions of the respective divisions.

1,389,294. ARTIFICIAL HONEYCOMB. HARRY B. DEAN, Upland, Calif., assignor of one-half to John D. Howe, Upland, Calif. Filed Aug. 18, 1919. Serial No. 318,388. 8 Claims. (Cl. 6—11.)

1. A honey-comb composed of a sheet, the sheet being slitted, bent on parallel lines crosswise of the slits, bent on the lines of the slits back and forth, and the bent portions folded upon themselves and forming a plurality of tiers of cells.



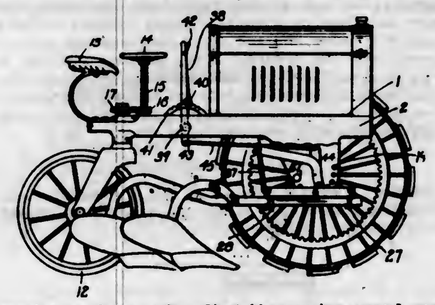
3. A honeycomb composed of a sheet of metal bent to form half cells and folded back and forth upon itself to form complete cells, the complete cells being integrally connected upon alternate sides.

5. A honey-comb composed of a sheet, bent to form half cells and bent back and forth upon itself forming complete cells.

7. A honey comb composed of a sheet of suitable material intermittently slitted in parallel rows, the slits in alternate rows overlapping the contiguous ends of slits of intermediate rows in staggered relation, the spaces between the ends of the slits in the line of their rows being substantially one-third of the length of said slits, said sheet being bent on parallel lines extending transversely of the said slits, and then alternately bent back and forth upon itself along the slits, to form a plurality of tiers of cells.

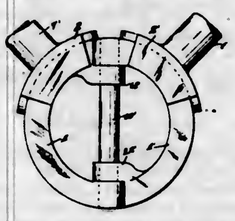
8. A honeycomb composed of a sheet of thin material having formed therein parallel rows of slits, the same being disposed in staggered relation, said sheet being bent along parallel lines at right angles to said slits, and then bent back and forth along the lines of slits to form complete cells.

1,389,295. CHARTING APPARATUS FOR SHIPS. RUDOLF FESTETICS DE TOLNA, New York, N. Y. Filed Oct. 1, 1919. Serial No. 327,705. 3 Claims. (Cl. 33—67.)



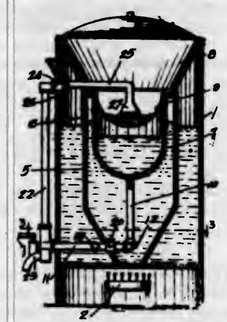
1. In apparatus for the purpose set forth, in combination, a transparent plotting table having a straight edge, and a member having a straight edge connected thereto, said table being movable relatively to said member but only with said straight edges maintained in parallelism, and means for maintaining in parallelism the edges of the plotting table and the member pivotally connected thereto.

1,389,296. AGRICULTURAL-IMPLEMENT FRAME. THOMAS C. DUNCAN, Kansas City, Mo. Filed Nov. 28, 1919. Serial No. 341,251. 6 Claims. (Cl. 97—36.)



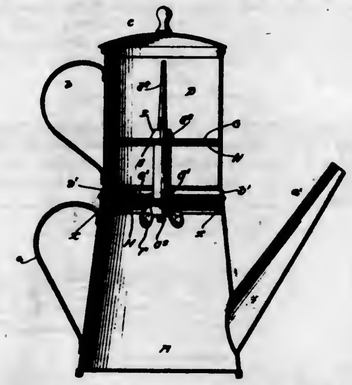
1. In an agricultural machine, a wheeled frame, depending brackets carried by said frame and supporting the wheels thereof, said brackets having an arcuate series of

openings, a substantially rectangular tilting frame, having trunnions at its ends to adjustably engage said



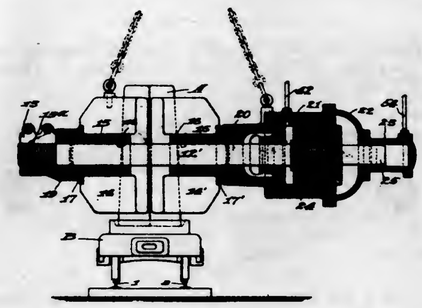
openings, and means for adjustably securing ground working tools to said rectangular frame.

1,389,297. UNIVERSAL JOINT. MAURICE G. DUSSEAU, Los Angeles, Calif., assignor of one-twentieth to D. A. McDaniel, Los Angeles, Calif. Filed Aug. 5, 1920. Serial No. 401,503. 2 Claims. (Cl. 64—91.)



2. A universal joint including interchangeable arcuate members each forming a semi-circle, said memebrs having bearings at one pair of opposite ends thereof and having offset extensions forming bearings at the other pair of opposite ends, a pivot rod journaled in said bearings for diametrically pivoting said members, and interchangeable arcuate members circumferentially slidable upon the pivoted arcuate members.

1,389,298. COFFEE-PERCOLATOR. ROY E. FARMER, Los Angeles, Calif. Filed Mar. 31, 1921. Serial No. 457,335. 6 Claims. (Cl. 53—3.)



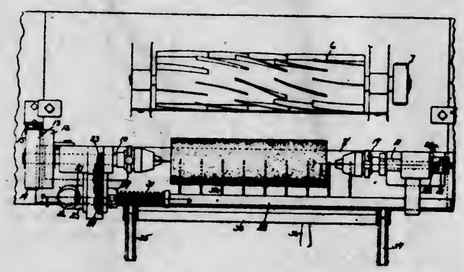
1. A percolator including an inner receptacle, a circulating system through said receptacle, means for pumping fluid through said circulating system, a motor for operating said pumping means, a closure valve in said circulating system, and controlling means for said motor and valve dependently operated.

1,389,299. DRIP-COFFEE POT. EDWIN SAMUEL GARDINER, New Orleans, La. Filed Apr. 27, 1921. Serial No. 465,045. 8 Claims. (Cl. 53—3.)

1. The combination with a coffee pot and a receptacle for coffee, of a coffee holder comprising a support, a plate formed with groups of perforations of different sizes, and a cover plate for covering some of the perforations and exposing others.

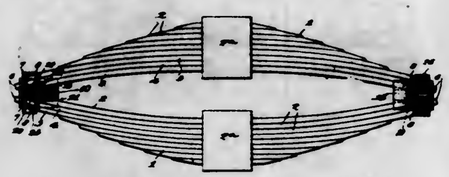
1,389,300. MACHINE FOR PERFECTING INGOTS. FERDINAND G. GASCHE, Chicago, Ill. Filed July 17, 1917. Serial No. 181,006. 17 Claims. (Cl. 138—17.)

1. The herein described improvements in machines for perfecting ingots, comprising in combination a plurality of jaws, a tension rod upon which the jaws are mounted, and a piston directly connected to the tension rod.



1,389,301. WATER-COOLING CONSTRUCTION FOR WELDING-TORCHES. JAMES FRANK GILBERT and THOMAS NEVILLE, Seward, Alaska. Filed Nov. 9, 1920. Serial No. 422,895. 3 Claims. (Cl. 158—27.4.)

1. A torch of the character described having a surrounding water jacket, a hollow hand shield communicat-

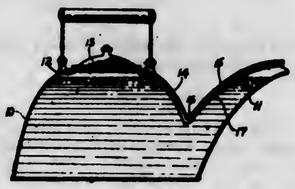


ing with said jacket, a partition in said jacket also dividing the said shield, a water intake and outlet connected to the hollow shield on opposite sides of the division thereof, said intake adapted to be connected to a suitable source of water supply; wherby water may be admitted to the jacket and caused to circulate along one side thereof, and thence along the opposite side and out the outlet.

1,389,302. TRIMMER. ALBERT G. HAGSTROM, East Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 23, 1919. Serial No. 319,304. 11 Claims. (Cl. 15—40.)

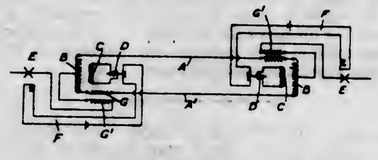
1. A trimmer including trimming knives, a carrier movable toward and from the trimming knives, chucks oppositely mounted on the carrier, chuck rotating means, and means operable by the movement of the carrier to control the rotating movement of the chucks.

1,389,303. SPRING. FRANK F. HOEFFLE, Louisville, Ky. Filed Mar. 10, 1921. Serial No. 451,265. 8 Claims. (Cl. 267—55.)



4. In a leaf spring, an end support comprising a member having on its opposite sides recessed stepped faces, each face providing leaf sustaining surfaces and an intermediate abutment, and opposite disposed leaf spring sections engaged into respective opposite sides of said member, and separated thereby, the primary leaves of each spring section having plane butt ends respectively slidingly supported upon said surface with the main or base spring thereof adapted to engage said abutment.

1,389,304. GARMENT-SUPPORTER. ALBERT H. HOLMES, Natick, Mass. Filed Aug. 25, 1920. Serial No. 405,814. 2 Claims. (Cl. 24—81.)

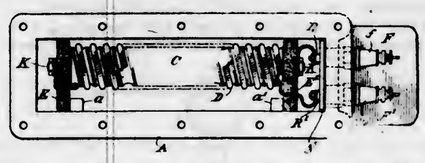


2. A garment supporter composed of a relatively thick oblong body of flexible compressible material, having angular slits cut through portions of the body, and forming inwardly facing gripping surfaces, openings at opposite end portions of the body and flexible integral tongues connected to the body at their inner ends, and having free outer ends forming outwardly facing gripping surfaces adapted to swing into and out of said openings, and cooperate with the inwardly facing gripping surfaces, in gripping parts inserted in said openings; and tongue-confining bands slidable on the body and tongues, and adapted to confine the tongues in gripping position, said bands being provided with tongue-engaging spurs.

1,389,305. KETTLE. HENRY M. HULL, Fairfield, Conn. Filed Oct. 15, 1920. Serial No. 417,189. 3 Claims. (Cl. 53—9.)

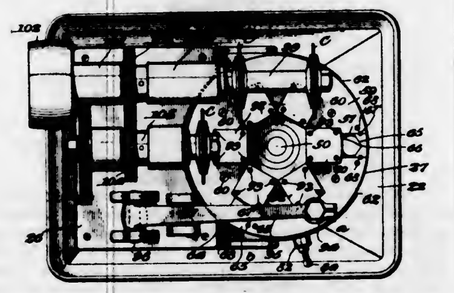
1. A kettle having a mouth, a lid, a spout, and a steam conducting tube entirely within the kettle extending from the steam space beneath the lid downwardly through the body of the kettle and into the spout.

1,389,306. PROTECTIVE ARRANGEMENT FOR ELECTRIC DISTRIBUTION SYSTEMS. PHILIP VASSAR HUNTER, Purley, and JAMES ROBERT BEARD, Benton, England, assignors to Electrical Improvements Limited, Newcastle-upon-Tyne, England, a Company of Great Britain. Filed Mar. 1, 1919. Serial No. 280,054. 5 Claims. (Cl. 175—294.)



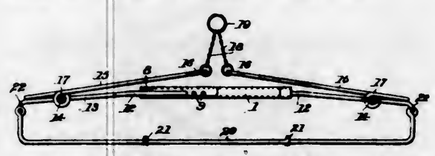
3. In a protective arrangement for split conductor systems of electric distribution the combination with the split or parallel conductors, of a balancing transformer at each end of the split conductors, switches controlling the split conductors, current transformers having their secondary windings in series with the respective split conductors and their primary windings in series with the switches controlling the split conductors and capacity current shielding sheaths interposed between the split conductors so that capacity current produced by the opposed potentials of the secondary windings of the current transformers are prevented from affecting the balancing transformers.

1,389,307. WATERPROOF ELECTRIC HEATER. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed May 27, 1920. Serial No. 384,622. 8 Claims. (Cl. 219—19.)



1. A weatherproof electric heater comprising a casing open at one side, a sealed cover plate secured to the open side of said casing, a longitudinally disposed heating coil within said casing, said coil having its core spaced from the sides and the ends of the casing, metal bushings re-

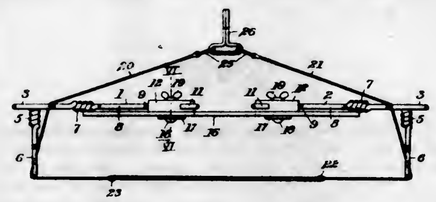
movably engaging one of the end walls of said casing, insulating posts carried by said bushings, metal terminals passed through said insulating posts and provided with



external binding posts, and means for connecting the inner ends of said terminals with the terminals of said coil.

1,389,308. SLOTTING-MACHINE. HERBERT S. JONES, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 6, 1918. Serial No. 232,834. 27 Claims. (Cl. 10—72.)

1. A machine for slotting metal articles having in combination, two parallel cutter shafts, two cutters on one of said shafts, a third cutter on the other shaft, means for driving said shafts, and a work carrier operable to carry the work successively against said cutters.



1,389,309. ADJUSTABLE GARMENT-HANGER. THEODORE KAUFER, New York, N. Y. Filed Oct. 15, 1920. Serial No. 417,098. 2 Claims. (Cl. 211—13.)

1. In a garment hanger, the combination with a central connecting member of channel form open at the top and having series of openings in its lateral walls, of shoulder members to extend into the ends of said channel member and provided with lateral projections to engage any of said openings for adjusting the hanger to fit different sizes of garments, said connecting member being made of sheet metal having its middle portion bent to form the upwardly opening channel and its edge portions bent outwardly, downwardly and inwardly from the upper edges of the walls of the channel to form tubular portions for inclosing the outer ends of the projections on the shoulder members which extend through the openings in said channel walls.
